DEFENSE INTELLIGENCE AGENCY

WASHINGTON, D.C. 20340-5100

U-17-1066/FAC-2A1 (FOIA)

FEB 02 2017

This responds to your Freedom of Information Act (FOIA) request, dated June 20, 2014, that you submitted to the Defense Intelligence Agency (DIA) for information concerning a copy of the Defense Intelligence Agency Style Manual. I apologize for the delay in responding to your request. DIA continues its efforts to eliminate the large backlog of pending FOIA requests. In order to properly respond, it was necessary to consult with another office within the agency.

A search of DIA's systems of records located one document (234 pages) responsive to your request.

Upon review, I have determined that some portions of the one document (234 pages) must be withheld in part from disclosure pursuant to the FOIA. The withheld portions are exempt from release pursuant to Exemptions 3 of the FOIA, 5 U.S.C. § 552 (b)(3). Exemption 3 applies to information specifically exempted by a statute establishing particular criteria for withholding. The applicable statute is 10 U.S.C. § 424. Statute 10 U.S.C. § 424 protects the identity of DIA employees, the organizational structure of the agency, and any function of DIA

If you are not satisfied with my response to your request, you may contact the DIA FOIA Requester Service Center, as well as our FOIA Public Liaison at 301-394-5587.

Additionally, you may contact the Office of Government Information Services (OGIS) at the National Archives and Records Administration to inquire about the FOIA mediation services they offer. You may contact OGIS by email at ogis@nara.gov; telephone at 202-741-5770, toll free at 1-877-684-6448 or facsimile at 202-741-5769; or you may mail them at the following address:

Office of Government Information Services
National Archives and Records Administration
8601 Adelphi Road-OGIS
College Park, MD 20740-6001

You may also exercise your right to file an administrative appeal by writing to the address below and referring to case number 0374-2014. Your appeal must be postmarked no later than 90 days after the date of this letter.

DIA Style Manual
for Intelligence Production

DIA Style Manual for Intelligence Production

Defense Intelligence producers are more than analysts; they are also professional writers. Despite various new media and technological developments, writing is still the principal medium through which the Agency conveys its information, ideas, and concerns to customers. If our written products are to have the impact and inspire the confidence they warrant, they need to be delivered in a well-crafted package.

This manual is the authoritative reference to help us create that package. It sets Agency standards for written intelligence production, minimizing the guesswork on capitalization, numbers, abbreviations, and other style points. Consequently, intelligence producers can focus on crafting effective arguments to support analytic judgments.

The *DIA Style Manual for Intelligence Production* has been in use for decades. The manual's executive agent, the Directorate for Analysis, refines the guidance as Intelligence Community standards develop and the language evolves. The U.S. Government Printing Office *Style Manual* served as the basis for most of the guidance in this manual, and other references provided additional direction, notably *The Gregg Reference Manual.*

As professional analysts, we focus every day on maintaining subject matter expertise, but communicating that expertise requires us to maintain excellent writing skills. DIA must convey a Defense Intelligence message that is concise, precise, and compelling. This manual is a key tool in our arsenal as we execute our mission and ensure we meet the highest possible standards.

CHAPTER 1: Practical Advice for Writers and Editors

In the dark days and darker nights when England stood alone—and most men save Englishmen despaired of England's life—he mobilized the English language and sent it into battle.

—President John F. Kennedy on Winston Churchill

CHAPTER 1: Practical Advice for Writers and Editors

Unlike the rest of this style manual, which focuses on "house style" issues, this chapter presents practical advice for authors and editors to consider in intelligence-related writing.

Be Aware of Grammar Rules Versus Superstitions

Good writers and editors need to be familiar with foundational grammar rules, such as subject-verb agreement, but they also need to recognize what is and is not a hard-and-fast rule. Many people remember learning that they should not split infinitives or end a sentence with a preposition, but both are "rules" modern usage references largely dismiss.

> The organizers decided to immediately address parking for employees and guests.

Moving the adverb "immediately" anywhere else in this sentence would make the meaning less clear. The natural place for an adverb is directly in front of the word it describes. Bottom line: avoid split infinitives if you prefer, but don't make a sentence awkward or confusing by doing so. The same guidance applies to ending a sentence with a preposition.

Consider Style and Context

Similarly, writers and editors need to recognize an error as opposed to a style or context decision.

- Failing to capitalize a word at the beginning of a sentence is an error, but not capitalizing a person's title when it is separated from the name is a style choice (see Chapter 3).
- Spelling out numbers less than 10 in some cases but using numerals for them in others may appear to be a consistency error, but a closer look may show the presentation is in keeping with style guidance to use numerals for all numbers in a sentence when any are equal to or greater than 10 (see Chapter 4).
- Treating words such as *none* and *majority* as plural may appear to be a subject-verb agreement error, but these words can be treated as either singular or plural, depending on the context (see Chapter 5).

This guide offers numerous examples of preferred presentation and answers many questions that come up in intelligence writing, but it does not cover every situation. For additional guidance, use a good all-around reference on the mechanics of writing, such as *The Gregg Reference Manual*. It contains detailed guidance, with numerous examples, on punctuation, grammar, and usage. However, keep in mind that the *DIA Style Manual for Intelligence Production* takes precedence on style issues, such as capitalization and compounding.

Use Short Sentences and Paragraphs

Studies of writing today advise authors to keep both sentences and paragraphs short—not necessarily because readers can't deal with more complex writing, but because shorter sentences and paragraphs are easier to read and can be understood more quickly.

Traditionally, writers have used a paragraph to show the development of a single thought. For a complex thought, though, the paragraph's length could become quite imposing. Moreover, for a publication with type in columns, paragraphs seem even longer because fewer words fit on a line. There's a real risk, then, that several long paragraphs will resemble a solid block of type.

Short Sentences

Short sentences—fewer than 20 words—make your readers' task easier. Use caution, though; too many short sentences can make your writing choppy. Good writers mix long and short sentences for variety. Just wrap it up when those longer sentences reach about 30 words.

The key is to look for minor changes within the thought of the long paragraph and to break the paragraph at those points. The unity and coherence of the thought aren't likely to suffer. Breaking material into shorter paragraphs is simply a better way of packaging ideas—one that uses white space to show readers minor shifts in organization, helping to speed them through their reading.

Get to the Point in Topic Sentences

When organizing material in intelligence products, keep in mind that the topic sentence (first sentence) is the most important part of a paragraph. The topic sentence should be straightforward, encapsulating the message of the paragraph up front. Don't lead a topic sentence with a dependent clause, especially one that begins with a contrary term, such as *although, despite,* or *however.* Such clauses can impede the reader's ability to absorb the main point. Use subsequent sentences in the paragraph to fill out the story.

Focus Headings

A heading can announce the topic of a section, or it can do more—focusing readers' attention on the main point of the section. Avoid labels like "Background" or "Introduction." Look instead for headings that provide the gist of a section, especially headings that express the point in a way that invites readers to continue reading. Don't try too hard to grab attention, though; cute titles or headings can detract from the professionalism of your presentation.

For long studies, there's another consideration: levels of headings. You have to be wary of the organizational complexity you try to portray with the headings. For the most part, writers of books only occasionally go beyond two levels of headings. Readers are likely to become confused if you try to portray three or four levels of headings throughout a long document.

Make your outline as complex as you need to help you organize the points and subpoints in what you write. However, when you actually write, use headings to highlight only the most important points, and focus readers' attention with the wording of those headings.

Limit the Passive Voice

Passive voice is one of the less desirable features of bureaucratic writing. Passive constructions are more wordy than corresponding active constructions and can generate other wordiness—especially sentences beginning with "It is" and "There are." In addition, passive voice is indirect, reversing the natural order of spoken English, and it lacks the vigor inherent in active voice. Finally, passive constructions often mask the actor. Imagine being told, "Your fate will be decided tomorrow." Your reaction is to demand, "By whom?" Passive voice makes it all too easy for writers to omit the "by" part of a thought, and this evasiveness in particular is a mark of bureaucratic writing.

Recognizing Passive Voice

The natural order for an English sentence—actor-action-acted upon—requires active voice:

The sailor	*rowed*	*the boat*
(actor)	(action)	(acted upon)

A sentence in passive voice reverses that order:

The boat	*was rowed*	*by the sailor.*
(acted upon)	(action)	(actor)

Recognizing these constructions in more complicated sentences still is quite simple; that's why grammar-checking software can locate passive verbs quite well. Only a passive sentence will receive "yes" answers to all of the following tests:

- Is the subject of the sentence acted upon?
- Does the sentence combine a form of *to be* with the past participle of a main verb? The simple forms of *to be* are *is, am, are, was,* and *were.* Compound forms are *will be, is being,* and *has been.* Past participles of main verbs usually end in *-ed* or *-en* (except for irregular verbs such as *shot*). Thus, passive verbs look like these: *is divided, was shaken, has been shot.*

Don't Confuse Passive Voice and Past Tense

Both active and passive forms of a verb can appear in present, past, or even future tenses:

Active: takes, took, will take
Passive: is taken, was taken, will be taken

- If the actor appears in the sentence, is it in the prepositional phrase *by someone or something?* Or, if the actor doesn't appear in the sentence, does the sense of the sentence imply *by someone or something?*

Activating the Passive

Far too often, writers accept passive voice because they can't think how to write in the active voice; in such cases, passive is more accidental than intentional. You can prevent this lack of control in your own writing by learning the following three methods to convert passive voice into active:

- Reverse the object and the subject.

Passive: The greatest area coverage is offered by open-wire lines.
But: Open-wire lines offer the greatest area coverage.

- Delete the past participle main verb, leaving the form of *to be* as the only verb.

Passive: The processing plants are located in the north.
But: The processing plants are in the north.

- Change the verb. For example, *received* is an active counterpart of *was given.*

Passive: About 17,000 people are employed in research institutes.
But: About 17,000 people work in research institutes.

Using Passive Voice Effectively

Is passive voice always wrong? No, of course not. Passive constructions have legitimate uses:

- When the object of the action is more important than the actor.
- When the actor is obvious, unimportant, or unknown.

But be careful! You can stretch those justifications to cover most sentences if you try hard enough. Even when the object of an action is more important than the actor, a verb in passive voice may not be necessary. Notice that the second and third methods for activating the passive do not require you to alter the subject of the sentence. Instead, both of these methods change the verb. A good rule of thumb, then, is to use the passive voice only when you have a strong reason.

Rethink Expletive Constructions

Like passive voice, expletive constructions (*it is, it was, it will be, there are, there were, there will be*) lengthen a sentence, delay the point, mask responsibility, and force the subject to follow the verb. The fix is often simple:

Unemphatic: There was a second explosion that killed three soldiers.
Emphatic: A second explosion killed three soldiers.

Unemphatic: It is probable that voter turnout will be heavy.
Emphatic: Voter turnout probably will be heavy.

Avoid Nouns That Stifle Verbs

Strong writing requires strong verbs, so don't bury verbs inside nouns by attaching *-ion, -tion, -ment, -ance,* and *-ence.*

Weak: Chemical attacks are in violation of the treaty.
Strong: Chemical attacks violate the treaty.

Weak: North Korea has made a commitment to resume talks.
Strong: North Korea has committed to resuming talks.

Use Qualifiers Judiciously

Qualifiers are often necessary for accuracy in intelligence writing, but multiple qualifiers impede clarity. Words that already express a degree of judgment—for instance, *imply, indicate,* and *suggest*—should not be combined with qualifiers such as *may, likely,* and *probably.*

Not: The lull in attacks may indicate the rebels are ready to negotiate.
But: The lull in attacks indicates the rebels are ready to negotiate.
Or: The lull in attacks may mean the rebels are ready to negotiate.

Avoid Cliched Concepts and Jargon

When we discuss cliches, we usually think of overused comparisons like "blind as a bat" or "older than dirt"—phrases most of us know to avoid. However, cliches also can be stale words or phrases that indicate concepts in intelligence writing. Watch out for terms such as "paradigm" or "center of gravity"; they can be the words you need at times, but overuse can turn them into unhelpful catchphrases.

Along similar lines, avoid jargon that is familiar to a particular community but not to your entire audience. If an editor needs a term explained, chances are many other readers will as well.

As you choose the terms for your intelligence papers, be sure the concepts are fresh, accurate, and appropriate. Think twice about using a term just because you've seen it in a number of other papers—it may not be the right wording for your product.

Keep Parallel Ideas in Parallel Form

Parallelism is particularly important for headings and bulleted lists. Readers expect headings to be in parallel form. Parallelism is even more important in lists, since their purpose is to emphasize a pattern of organization.

Readers grasp parallel ideas more quickly when they are in parallel form. Nouns should be parallel with nouns, active verbs with active verbs, infinitive phrases with infinitive phrases, subordinate clauses with subordinate clauses, and so on.

Not: The general's success has resulted from the allegiance of his troops and how he has treated the civilians in his region to gain their acceptance. [Noun paralleled with clause.]
But: The general's success has resulted from the allegiance of his troops and the acceptance of the civilians in his region. [Noun paralleled with noun.]
Not: As a soldier he had been in Japan, fighting in Vietnam, and following his general to the Middle East. [Verb paralleled with participles.]
But: As a soldier he had been in Japan, had fought in Vietnam, and had followed his general to the Middle East. [Verb paralleled with verbs.]

When it will help make the parallelism clear, repeat a preposition, an article, a helping verb, the *to* of an infinitive, or the introductory word of a long phrase.

Not: Overextended police forces have done little to protect farmers threatened by strongmen employed by drug dealers, interdict drug shipments, or destroy processing laboratories.

But: Overextended police forces have done little to protect farmers threatened by strongmen employed by drug dealers, to interdict drug shipments, or to destroy processing laboratories.

Put Modifiers in Their Place

Restrictive Modifiers

Placement of restrictive modifiers such as *almost, every, just, merely, most, nearly, only, primarily,* and *principally* requires care. Look at the effect of placement for *only* in "This plant produces lug nuts."

Only this plant produces lug nuts. [No other plant produces them.]
This plant only produces lug nuts. [The plant doesn't do anything else with them, such as marketing.]
This plant produces only lug nuts. [The plant produces nothing else.]
This plant produces lug nuts only. [The plant produces nothing else.]

As a general rule, put modifiers close to whatever they modify. "Close to" can be before or after the thing modified, so long as the sentence makes sense.

Not: The agreement provided for military equipment which was signed recently.

But: The agreement, which was signed recently, provided for military equipment.

Or: The recently signed agreement provided for military equipment.

Danglers

Pay particular attention to a modifier that begins a sentence. Dangling modifiers can occur anywhere in a sentence but are most common at the beginning. Readers expect an introductory word or phrase modifier to refer to the subject of the sentence. When the modifier cannot logically modify the subject, the modifier "dangles."

Not: When completely filled out and checked, the taxpayer should sign the form.

But: When the form is completely filled out and checked, the taxpayer should sign it.

Or: After completely filling out and checking the form, the taxpayer should sign it.

Note, however, that some introductory phrases express a general truth rather than modifying the subject of the sentence. These introductory phrases do not dangle.

Given the importance of the operation, the staff studied a number of scenarios.
To sum up, we all agree to support the change.

Avoid Illogical Shifts Within a Sentence

Sudden, illogical shifts within a sentence or passage obscure the meaning and hamper reading:

Tense

Not: The farmer was intimidated by threats and cultivates coca leaves. [Shift from past tense to present tense.]

But: The farmer was intimidated by threats and began cultivating coca leaves. [Both verbs in past tense, with the second verb implying a continuing action.]

Mood

Not: Determine the margins for the page, and then you should set tabs. [Shift from imperative mood to indicative mood.]

But: Determine the margins for the page, and then set the tabs. [Both verbs in imperative mood.]

Subject or Voice

Not: The troops hurried up the mountain path, and soon the camp came into their sight. [Subject shifts from *troops* to *camp*.]

But: The troops hurried up the mountain path and soon saw the camp. [One subject only.]

Not: The soldier did not relish a reduction in pay, but confinement to barracks was seen as the harsher punishment. [Subject shifts from *soldier* to *confinement* as active voice shifts to passive voice.]

But: The soldier did not relish a reduction in pay but saw confinement to barracks as the harsher punishment. [One subject only and both verbs active.]

Person

Not: Analysts will find the new library hours a great convenience. You will have greater freedom to arrange your research time. [Shift from third to second person.]

But: Analysts will find the new library hours a great convenience. They will have greater freedom to arrange their research time. [Constant third person.]

Number

Not: The United Nations deserves encouragement. Indeed, they deserve more than that. [If *United Nations* takes a singular verb in the first sentence, it cannot take a plural pronoun reference in the second sentence.]

But: The United Nations deserves encouragement. Indeed, it deserves more than that. [*United Nations* and *it* correspond in number.]

Tone or Style

Not: Analysis of the main obstacles to harmony in the United Nations reveals that a group of nations refuses to play ball with the rest of the world. [Shift from formal to colloquial style.]

But: Analysis of the main obstacles to harmony in the United Nations reveals that a group of nations refuses to cooperate with the rest of the world. [Consistent formal style.]

Work Toward a Common Goal: Readability

Most writers and editors in the Intelligence Community have a common appreciation for the need to produce accurate, concise, clear intelligence for their readers, particularly busy policymakers and warfighters. Neither excessive pride of authorship nor heavyhanded editing helps to achieve that goal. Producers should keep two things in mind:

- All analytic products are the work of the Defense Intelligence Agency, not solely of the analyst or office on the byline. Authors need to recognize that just as senior intelligence officers and other reviewers have a responsibility to ensure the quality of the analytic content, technical editors have a responsibility to ensure the readability and professionalism of the presentation.
- At the same time, editors need to keep their changes focused on readability. Rather than altering the author's voice, editors should keep changes to the minimum necessary to ensure clarity, consistency, conformance with DIA style and Intelligence Community standards, and good grammar and usage. Some products require more editing than others to achieve these objectives, but overediting risks introducing errors and should be avoided.

CHAPTER 2: Abbreviations

Do not use initials for the names of organizations or movements unless you are certain the initials will be readily understood. Write things out. Not everyone knows that MADD means Mothers Against Drunk Driving, and even if everyone did, there are babies being born every minute who will someday encounter the name for the first time. They deserve to see the words, not simply the initials. A good rule is to start your article by writing out names in full, and then, later, when your readers have got their bearings, to shorten them.

—Strunk and White, *The Elements of Style*

CHAPTER 2: Abbreviations

Abbreviations can be acronyms, shortenings, brevity codes, or organizational designators. This chapter treats them all generally as abbreviations.

To Use or Not To Use

Abbreviations can simplify presentation in a document, but too many of them make reading and understanding difficult. Readers are faced with a code known to the writer but unfamiliar or unknown to them—a source of irritation at best, but frequently an obstruction to communication. For this reason you should use abbreviations sparingly and only when you can be sure their meaning is clear for your readers.

Even in tables and graphics, where space is a consideration, avoid abbreviating unless the full terms will not fit. Changes in layout or type point size may preclude using abbreviations.

Common sense dictates these rules:

- Use an abbreviation only if it will simplify a document. Just because an abbreviation exists is not justification for using it. Establishing an abbreviation and then using it only once seldom justifies forcing readers to translate your abbreviations. If you are not going to repeat an abbreviation frequently, do not use it.

  Also, keep in mind that making use of context in a paper may eliminate the need to establish an abbreviation when the abbreviation will not be needed repeatedly. Consider the following example:

  > Infrastructure modifications were evident in the Very Important Military District (VIMD), consistent with the VIMD's high priority in defense planning.

  Establishing "VIMD" appears to be justified: the abbreviation will replace four words (a reasonable saving), and clearly the abbreviation is going to be used again, since it appears again in the same sentence. However, in this case rewording the sentence to make use of the context the sentence already establishes will eliminate the need for establishing the abbreviation:

  > Infrastructure modifications were evident in the Very Important Military District, consistent with that district's high priority in defense planning.

- Limit your use of abbreviations to appropriate places. Avoid using all but the most common abbreviations in key judgments or executive summaries, titles and headings, and tables of contents.
- Avoid using an abbreviation for a person's name. For example, refer to Kim Jong Un on secondary reference as Kim, not KJU.

When To Introduce an Abbreviation

Common wisdom says to introduce an abbreviation with the first occurrence of the corresponding term in a document. Taken literally, this leads to unnecessary abbreviations in key judgments and summaries and frequently results in an abbreviation's being introduced long before its next occurrence.

The best time to introduce an abbreviation is the first time you use the corresponding term in a portion of a document in which the abbreviation will appear frequently.

For example, a product dealing with military capabilities often discusses a force's organization—showing relationships among a number of subordinate entities in the force structure—and then each of the subordinate entities. If the writer introduces abbreviations for the entities in the discussion of the hierarchy, readers may be faced with 10 to 20 abbreviations in a few sentences. Expecting readers to absorb those abbreviations and recognize them later is unreasonable. The writer would do better to introduce each abbreviation in the discussion of the subordinate entity, when the abbreviation will reappear shortly after its introduction.

Occasionally readers are more familiar with an abbreviation than they are with the abbreviated term. For example, in a discussion of special forces, readers are more likely to recognize *SEAL* than the full term *sea/air/land* (which communicates little without further explanation). In such a case, use the abbreviation for clarity.

Establishing Abbreviations

The most common way of introducing an abbreviation is to state the full term and then, immediately after it, to include the abbreviation in parentheses.

A motorized rifle division (MRD) reportedly....
The Federal Aviation Administration (FAA)....

When an abbreviation is better known than the term itself, you may want to reverse their positions, placing the term in parentheses after the abbreviation. This may be the case if the abbreviation is derived from the initial letters of a foreign term rather than the English translation.

The Cuban FAR (Revolutionary Armed Forces)....
During operations in Chechnya, Russia's GRU (General Staff Main Intelligence Directorate) ensured....
Subordinate to Algeria's Ministry of National Defense is its Department of Intelligence and Security, or DRS (*Departement de Renseignement et de Securite*).

Sometimes you may need to establish an abbreviation more than once in a document:

- In a long document, when a large amount of text intervenes between the introduction (and first repeated use) of the abbreviation and later repeated use of the same abbreviation.
- In a collection of articles. Because readers often look at only some of the articles or read them in an order different from that of the publication that collects them, abbreviations do not carry over well from article to article. You will need to establish necessary abbreviations in each article, independent of the use of the same abbreviations in other articles.

Forming and Using Abbreviations

Capitalization

Capitalization in an abbreviation does not indicate that the words of the corresponding term also must be capitalized. Capitalize the initial letters of appropriate words in the related term if they are proper nouns, and use lowercase for the words if they are common nouns.

The aircraft returned to Argut Naval Air Station (NAS).
The aircraft returned to the naval air station (NAS).

Authors frequently become confused about capitalization when they write about operational systems. The test still is whether the term is being used as a proper noun or only as a generic term.

The American Multiple-Launch Rocket System (MLRS) differs from other multiple rocket launchers (MRLs).

Capitalization also is an issue in establishing abbreviations. For years two different systems for establishing abbreviations have existed side by side—a situation that sometimes causes confusion. One system capitalizes only letters for important words, leaving those for unimportant words like *of* in lowercase form. The other system capitalizes all the letters in the abbreviation, whether they stand for important or unimportant words.

- Today the predominant system is to use capitals for all the letters in an abbreviation. If you establish an abbreviation in an intelligence product, use capital letters throughout the abbreviation.

Nevertheless, well-established legacy abbreviations with some lowercase letters, such as *DoD* for the U.S. Department of Defense, are still in use today while similar abbreviations, such as *DOE* for Department of Energy, have all uppercase letters.

Italics With Abbreviations

An abbreviation formed from a foreign term is not italicized, though the foreign term may be. Normally you will not italicize the original language or English translation of names of foreign organizations, institutes, governmental bodies, political parties, educational institutes, corporations, Internet service providers, and the like, because our business—assessing intelligence information dealing with foreign governments and their defense and security organizations—uses numerous foreign terms as a part of our writing. However, if you are providing the original language words to explain the formation of an abbreviation, italics are appropriate for the foreign words.

Russia's Spetsnaz (from *voiska spetsialnogo naznacheniya*, or "troops of special designation") had special missions.

Subordinate to Algeria's Ministry of National Defense is its Department of Intelligence and Security, or DRS (*Departement de Renseignement et de Securite*).

Periods in Abbreviations

Very few abbreviations require periods. The exceptions are the traditional nonmilitary ranks or titles (*Mr., Mrs., Ms., Dr., Prof.*) and *no.* (for "number," to distinguish it from the answer or command *no*). In addition, use periods with *U.S.* The abbreviations *i.e.* ("that is") and *e.g.* ("for example") also require periods; however, many people confuse these abbreviations, so using them is discouraged.

Plural and Singular Abbreviations

Most abbreviations are established in the singular form. Therefore, when you introduce (or use) an abbreviation, pay attention to whether the term is singular or plural. If the term is singular, the abbreviation should be as well; if the term is plural, the abbreviation usually will have to be changed to make it plural.

... earth-penetrator weapons (EPWs).

... within the military regions (MRs).

SA-7 and SA-14 surface-to-air missiles (SAMs) are among the world inventory of shoulder-fired SAMs.

Particularly for military forces, an abbreviation often equates to a plural thing—for example, "ANDSF" for "Afghan national defense and security forces." However, usually the abbreviation itself, after it is established, is singular and requires a singular verb.

Afghan national defense and security forces (ANDSF) continue to improve their ability....

Here the subject *Afghan national defense and security forces* requires a plural verb (*continue*) and a plural pronoun (*their*). Thus, "ANDSF" represents a plural entity. Nevertheless, when *ANDSF* itself is used as a subject, the abbreviation is singular and requires a singular verb and singular pronoun:

However, the ANDSF is not yet prepared to hold its own in....

Forming Plurals of Abbreviations

When an abbreviation ends in an uppercase letter, form the plural by adding a lowercase *s*, without an apostrophe.

ICBMs SAMs MiGs INSs

However, if the abbreviation ends in lowercase letters, form the plural by adding *'s* (apostrophe + lowercase *s*).

cy's

These are rare in general military intelligence writing but sometimes occur in scientific or technical publications. Do not confuse them with plurals of lowercase abbreviations for units of measure, which are not changed to plural form.

not 500 km's *or* 500 kms *but* 500 km

Furthermore, even though an abbreviation may stand for an entity that we know to consist of many people, references to the abbreviation cannot be the pronouns *they* or *their*. This problem occurs frequently in intelligence writing in discussion of a political party or organization (which obviously is a group of people):

Not: The CCP decided to implement their decisions after....
But: The CCP decided to implement its decisions after....

When the abbreviation is used instead as a modifier for a plural noun—for example, in *CCP members*—the abbreviation no longer determines the number, so a plural pronoun reference is appropriate to refer to the plural noun:

The CCP members decided to implement their decisions after....

Because of what they stand for, a few abbreviations are only plural. When it stands for "tactics, techniques, and procedures," *TTP* is one of these. Because *TTP* in this sense is plural, we cannot write "A new TTP proved successful." Instead, we would need to write "A new tactic [or technique, or procedure] proved successful."

Possessives and Abbreviations

As with the terms they represent, most abbreviations can be used in the possessive form. If the abbreviation is being used as a singular possessive, add an apostrophe and a lowercase s. If the application requires a plural possessive, add the apostrophe after the lowercase s that forms the plural of the abbreviation.

Singular possessive: The MRD's leaders....
Plural possessive: The MRDs' leaders....

Generally the adjective form of the abbreviation is preferable; it can be substituted for both the singular and plural possessive forms:

Adjective form: The MRD leaders....

When you introduce an abbreviation, avoid establishing it in its possessive form. Usually you can avoid that situation by using the abbreviation as an adjective, or you can put the abbreviation in a prepositional phrase. However, if you do establish an abbreviation when the words for it are in the possessive form, the abbreviation also needs to appear in the possessive form.

Avoid: The Royal Air Force's (RAF's) aircraft....
Use: The Royal Air Force (RAF) aircraft....
Or: The aircraft of the Royal Air Force (RAF)....

Prefixes and Suffixes With Abbreviations

You can join a prefix or suffix to an abbreviation with a hyphen. Do not capitalize the prefix or suffix unless it indicates a proper noun form.

anti-NATO stance
pro-UN position
CFE-mandated reductions
START-related reforms

However, the participial and negative forms of *MIRV* are formed without hyphens:

a MIRVed ICBM
an unMIRVed version of the ICBM
deploying nonMIRVed missiles

Hyphenation When Introducing Abbreviations

When you need to form a multiple-word compound at the same time you are introducing an abbreviation, hyphenate after the parentheses enclosing the abbreviation.

interference with Global Positioning System (GPS)-related technology

If possible, avoid a construction such as this by restructuring the passage: in this case, for example, with "interference with technology related to the Global Positioning System (GPS)."

Articles Accompanying Abbreviations

Depending on how you use an abbreviation in a sentence, a definite article (*the*) or an indefinite one (*a* or *an*) may need to precede the abbreviation. If you would use *the* in front of the term the abbreviation stands for, you usually will need *the* in front of the abbreviation.

The surface-to-air missile was fired....
The SAM was fired....

The ground-controlled intercept operator chooses....
The GCI operator chooses....

Task Force Marte reported....
TFM reported....

Use of *the* with abbreviations is not a hard-and-fast rule, but be aware of common practice. Particularly for organization names, *the* is used with abbreviations pronounced as individual letters (initialisms) more often than with abbreviations pronounced as words (acronyms), especially multisyllable words. For instance, *the* is generally used with *the CMC* and *the FARC* but not with *AMISOM*, *NATO*, and *ISAF*.

For abbreviations representing Intelligence Community and Defense Intelligence Enterprise agencies and organizations (DIA, NSA, CIA, NGIC, etc.) and the combatant commands (USCENTCOM, etc.), delete *the* from in front of the abbreviation for general intelligence writing, including most correspondence.

DIA estimates....
... coordination with CIA, NSA, and USSTRATCOM.

Deleting *the* from in front of an abbreviation also is appropriate for the abbreviation representing the organization of which the writer is a part. For example, an author who is a member of DIA's Directorate for Analysis (DI) could write something like the following:

When dealing with Defense Intelligence Enterprise organizations, DI will....

Using *a* or *an* with abbreviations is trickier. For an abbreviation, including an acronym or letter/number group, pronounced as a word (such as "HOT" and "IMINT"), use *a* if the abbreviation begins with a consonant sound or an aspirated *h* ("a HOT missile") and *an* if the abbreviation begins with a vowel sound ("an IMINT collector"). For abbreviations for which you pronounce the letters and numbers themselves:

- Use *a* when the group begins with *b*, *c*, *d*, *g*, *j*, *k*, *p*, *q*, *t*, *u*, *v*, *w*, *y*, or *z*: "a DIA employee," "a UN worker."
- Use *an* when the group begins with *a*, *e*, *f*, *h*, *i*, *l*, *m*, *n*, *o*, *r*, *s*, or *x*: "an NSC directive," "an SS-25 missile," "an Su-24 aircraft."

A or An?

When choosing between using *a* or *an* with an abbreviation, consider the abbreviation itself, not an expansion of the abbreviation. For example, for discussion of a frequency-hopping (FH) radar, because we would pronounce the letters of the abbreviation, we would write "an FH radar," as *an* is appropriate before an abbreviation beginning with *f*; we would not choose "a FH radar" even though *a* would be appropriate before "frequency."

Avoiding Redundancy

You have to consider the expansion of an abbreviation when deciding what words can follow it. Be careful to avoid redundancy when you use abbreviations.

AC current = alternating current current
START treaty = Strategic Arms Reduction Treaty treaty
LOC lines = lines of communication lines
AWACS system = airborne warning and control system system
CAC card = common access card card

Nix GOx Abbreviations

Avoid using abbreviations like *GOP* for "government of Pakistan [or Panama, Peru, Paraguay, etc.]" in a finished intelligence product. Abbreviations such as this are useful in message traffic and similar reporting, but they are out of place in finished intelligence products, especially those for senior-level customers.

Country Names

Use what *The World Factbook* calls the conventional short form for a country name (rather than the conventional long form): "China" rather than "People's Republic of China," "North Korea" rather than "Democratic People's Republic of Korea," "South Korea" rather than "Republic of Korea," etc. Congo is a bit more complicated because of the need to distinguish between the two countries. For the Democratic Republic of the Congo, establish the abbreviation "DRC," which *The World Factbook* lists as the conventional short form for the country's name; "Congo (Kinshasa)" also is acceptable. For the Republic of the Congo, *The World Factbook* provides "Congo (Brazzaville)" as the conventional short form.

Spell out most country names, whether you use them as nouns or adjectives—except the United States, the United Kingdom, and the United Arab Emirates. Spell out *United States* and *United Kingdom* (and *United Nations*) when you use them as nouns, but use the abbreviations for the adjective forms. If you need multiple references to the United Arab Emirates, establish *UAE* early in a paper.

The United States sold....
U.S. arms sales....
... contracts involving the United Kingdom.
... UK contracts.

Military Rank/Rate

For members of the U.S. military, use rank/rate abbreviations as the individual Military Services use them. For all militaries, use the abbreviation in front of a name, but spell out the rank in lowercase elsewhere: "Maj Gen Gonzales of the Mexican Air Force plans to visit shortly after his promotion to lieutenant general." Also spell out the rank in plural form: "Captains Arroyo and Valdez."

U.S. Army Officers/Warrant Officers

general of the Army (special)	GA
general (O-10)	GEN
lieutenant general (O-9)	LTG
major general (O-8)	MG
brigadier general (O-7)	BG
colonel (O-6)	COL

private (E-1)	PVT

U.S. Navy and Coast Guard Enlisted Personnel

U.S. Navy and Coast Guard enlisted personnel are identified by paygrade (rate) and occupational specialty (rating). These specialties and their combinations with rates are too numerous to list here. For ratings, see NIPRNET <http://www.navy.mil/navydata/nav_legacy.asp?id=259>. Rates are as follows:

master chief petty officer of the Navy (E-9)	MCPON
master chief petty officer of the Coast Guard (E-9)	MCPOCG
fleet/force/command master chief petty officer (E-9)	FLTCM/FORCM/CMDCM
master chief petty officer (E-9)	MCPO
senior chief petty officer (E-8)	SCPO
chief petty officer (E-7)	CPO
petty officer first class (E-6)	PO1
petty officer second class (E-5)	PO2
petty officer third class (E-4)	PO3
seaman (E-3)	SN
seaman apprentice (E-2)	SA
seaman recruit (E-1)	SR

U.S. Air Force Enlisted Personnel

chief master sergeant of the Air Force (E-9)	CMSAF
command chief master sergeant (E-9)	CCM
first sergeant (E-9)	CMSgt
chief master sergeant (E-9)	CMSgt
first sergeant (E-8)	SMSgt
senior master sergeant (E-8)	SMSgt
first sergeant (E-7)	MSgt
master sergeant (E-7)	MSgt
technical sergeant (E-6)	TSgt
staff sergeant (E-5)	SSgt
senior airman (E-4)	SrA
airman first class (E-3)	A1C
airman (E-2)	Amn
basic airman (E-1)	AB

U.S. Marine Corps Enlisted Personnel

sergeant major of the Marine Corps (E-9)	SgtMajMC
sergeant major (E-9)	SgtMaj
master gunnery sergeant (E-9)	MGySgt
first sergeant (E-8)	1stSgt
master sergeant (E-8)	MSgt
gunnery sergeant (E-7)	GySgt
staff sergeant (E-6)	SSgt
sergeant (E-5)	Sgt
corporal (E-4)	Cpl
lance corporal (E-3)	LCpl
private first class (E-2)	PFC
private (E-1)	Pvt

Foreign Military Officers

For foreign military officers, regardless of branch of service, use the following abbreviations for ranks:

admiral	Adm
admiral (first grade)	Adm (1st Grade)
admiral of the fleet	Adm Flt
admiral (second grade)	Adm (2nd Grade)
air chief marshal	Air CMar
air commander	Air Cdr
air commodore	Air Como
air marshal	Air Mar
air vice marshal	Air VMar
army general	Army Gen
brigadier	Brig
brigadier general	Brig Gen
captain	Capt
captain first rank	Capt 1st Rank
captain second rank	Capt 2nd Rank
chief warrant officer	CWO
colonel	Col
colonel general	Col Gen
colonel major	Col Maj
commander	Cdr
commodore	Como
corps general	Corps Gen
director general	Dir Gen
division general	Div Gen
ensign	Ens
field marshal	Fld Mar
first lieutenant	1st Lt
fleet admiral	Flt Adm
flight lieutenant	Ft Lt
flying officer	FO
general	Gen
general-colonel	Gen-Col
general (first grade)	Gen (1st Grade)

general-lieutenant	Gen Lt
general-lieutenant colonel	Gen-Lt Col
general-major	Gen Maj
general of the air force	Gen AF
general of the army	Gen Army
general (second grade)	Gen (2nd Grade)
group captain	Grp Capt
lieutenant	Lt
lieutenant colonel	Lt Col
lieutenant colonel general	Lt Col Gen
lieutenant commander	LCdr
lieutenant general	Lt Gen
lieutenant junior grade	Ltjg
major	Maj
major general	Maj Gen
marshal	Mar
marshal of aviation	Mar Avn
marshal of the Royal Air Force	Mar RAF
marshal of the Soviet Union	MSU
pilot officer	PO
rear admiral	RAdm
second lieutenant	2nd Lt
senior colonel	Sr Col
senior lieutenant colonel	Sr Lt Col
squadron leader	Sq Ldr
squadron vice admiral	Sq VAdm
staff air marshal	Staff Air Mar
staff air vice marshal	Staff Air VMar
staff brigadier general	Staff Brig Gen
staff general	Staff Gen
staff lieutenant general	Staff Lt Gen
staff major general	Staff Maj Gen
staff rear admiral	Staff RAdm
vice admiral	VAdm
vice marshal	VMar
warrant officer	WO
wing commander	Wg Cdr

Units of Measure

Do not abbreviate a unit of measure used in a general or approximate (dataless) sense.

Ranges are in kilometers.

The opening was several meters wide.

As a general rule, write out the units of measure in text when presenting nouns, but abbreviate the units of measure in the adjective form. In tables, abbreviations are appropriate for all units of measure because of space limitations. Abbreviations for units of measure do not have periods and are not changed to plural form. Unit modifiers involving units of measure require hyphens. (For a full explanation of unit modifiers, see Chapter 7; for complete coverage of number usage, see Chapter 4.)

a 50-km road segment
a section of road that stretched 50 kilometers
a 500-NM range
a 3-cm-diameter pipe

Because of the risk of ambiguity, avoid single-letter abbreviations (*g, h, m, L, t, V, W*).

Change:	a segment of 300 m on Route A
To:	a 300-meter segment on Route A
Or:	a Route A segment of 300 meters

Some offices have preferred to use *mt* or *MT* for metric ton(s). These abbreviations, however, present problems.

- As a prefix, *m* equates to "milli," and t is the symbol for metric ton(s), making *mt* equate to "milli-metric ton(s)," which is somewhat nonsensical.
- In addition, using *mt* or *MT* invites confusion with *Mt*, which equates to "megaton(s)."

For these reasons, we need to use the international symbol of t for metric ton(s), even though this abbreviation has only a single character. Of course, using the words *metric ton* or *metric tons* avoids the abbreviation issue.

Percent and Other Symbols

Do not abbreviate or use the symbol for *percent* except to save space in tables or graphics, where the symbol % may be used if required. However, even in these cases do not abbreviate unless the term will not fit. Similarly, do not use symbols such as ~ (*about* or *roughly*), < (*less than*), or > (*greater than*) unless the spelled-out term will not fit. In tables where symbols are appropriate, minimize clutter by putting symbols in column headings if possible, rather than in individual cells.

Months and Days

Do not abbreviate the names of months and days except to save space in tables and graphics. However, even in these cases do not abbreviate unless the full terms will not fit.

Use the following abbreviations if they are required:

Days		*Months*	
Sunday	Sun	January	Jan
Monday	Mon	February	Feb
Tuesday	Tue	March	Mar
Wednesday	Wed	April	Apr
Thursday	Thu	May	May
Friday	Fri	June	Jun
Saturday	Sat	July	Jul
		August	Aug
		September	Sep
		October	Oct
		November	Nov
		December	Dec

Abbreviation List

The list that follows contains abbreviations for use in DIA intelligence products. This list is included for standardization of preferred usage, to show uppercase and lowercase forms, and to permit marking abbreviations that may be used without being introduced in the text of a product. This list does not preclude use of the *Department of Defense Dictionary of Military and Associated Terms* and Intellipedia's "Acronyms" page, which present many abbreviations not covered here.

The following abbreviation list sometimes shows multiple uses for the same abbreviation, and all of them can be considered "preferred" abbreviations. Common sense, however, indicates that you cannot use the same abbreviation for multiple purposes in the same paper. For example, even though *BW* can stand for either "biological warfare" or "biological weapon," it must not stand for both things in the same piece of writing.

The abbreviation list employs two symbols:

- A superscript dagger symbol (†) marks an abbreviation that should be used instead of the words the abbreviation stands for. Very few abbreviations show this marking.
- An asterisk (*) after an abbreviation indicates that you can use the abbreviation without introducing it if you can be certain that intended users of a product will understand the abbreviation. When you have any doubt about whether your consumers will understand an abbreviation, spell out the term on first use in your publication, even if the abbreviation is marked with an asterisk in the following list.

Caution: Because a production element has been reading numerous bits of information that use an abbreviation and analysts from that element are writing a number of papers using an abbreviation, analysts frequently believe that surely everyone else must be familiar with the abbreviations they commonly see and use. However, for perspective, consider the following: The Free Dictionary, on the Internet at <http://www.thefreedictionary.com>, has an "Acronym Finder" that lists expansions for letter sets, and it includes military expansions among the many possible "translations" for an abbreviation. As of 1 December 2015, this website produced 43 expansions for "PTG," one of which equated to the expansion in our listing; 191 expansions for "SSP," none of them matching the one in our listing; and 105 for "ADA," one of which was the one in our listing. For this reason, we need to be careful when deciding whether to establish an abbreviation. Do not consider an asterisk with an abbreviation to be a license to never establish the abbreviation.

- Correspondence going to high-level customers normally will need to have all abbreviations established. For example, the personnel directly supporting the DIA Command Element usually require that all abbreviations be established for papers going to or through members of the Command Element. High-level customers receive large numbers of documents and have little time to review any of them. They are generalists for many subjects, not subject matter experts. Even though they may have been exposed to abbreviations Defense Intelligence analysts commonly see and use, expecting these high-level customers to remember all the abbreviations analysts are capable of using simply is not realistic.
- As an experienced editor in one of the Agency's scientific and technical intelligence production centers has noted, basic documents produced in the centers frequently go to inexperienced customers as well as to those who might be familiar with abbreviations. Establishing most abbreviations in basic intelligence products, therefore, is both a courtesy and a wise course of action.
- You can never go wrong by establishing an abbreviation, whereas not establishing it may cause problems.

A

Å	angstrom(s)
AA*	antiaircraft
AAB	Abdallah Azzam Brigades
AAA*	antiaircraft artillery
AAH	Asaib Ahl al-Haq
AAI	air-to-air intercept
AAIED	antiarmor improvised explosive device
AAM*	air-to-air missile
AAR	air-to-air refueling
AAS	Ansar al-Sharia
AAS-T	Ansar al-Sharia in Tunisia
AAW	antiair warfare
AB*	airbase [in the proper name of a U.S. OCONUS airbase, Air Base—for example, Incirlik Air Base]
ABCCC	airborne battlefield command and control center
ABM*	antiballistic missile
abn	airborne
ABNCP	airborne command post
AC	alternating current
acft	aircraft
ACI	airborne-controlled intercept
ACIC	Army Counterintelligence Center
ACINT	acoustic intelligence
ACP	alternate command post
ACR	armored cavalry regiment
ACRV	armored command and reconnaissance vehicle; artillery command and reconnaissance vehicle
ACV	air-cushion vehicle; armored combat vehicle
ACW	aircraft warning and control; anticarrier warfare
AD	air defense
ADA	air defense artillery
ADATS	air defense antitank system
ADCC	air defense command center
ADD	air defense district
ADF	automatic direction finding
ADG	degaussing/deperming ship
ADIZ	air defense identification zone
ADOC	air defense operations center
adv	advanced
ADX	air defense exercise
ADZ	air defense zone
AE	ammunition ship
AESA	active electronically scanned array
AEV	armored engineer vehicle
AEW	airborne early warning
AEW&C	airborne early warning and control
AF	stores ship
AFB*	air force base
AFC	automatic frequency control
AFDM	medium auxiliary floating drydock (non-self-propelled)
AFIAA	Air Force Intelligence Analysis Agency
AFIOC	Air Force Information Operations Center
AFISRA	Air Force Intelligence, Surveillance and Reconnaissance Agency
afld	airfield
AFMIC	Armed Forces Medical Intelligence Center [now NCMI—National Center for Medical Intelligence]
AFOSI	Air Force Office of Special Investigations
AFOTEC	Air Force Operational Test and Evaluation Center

AFS	combat stores ship
AFSATCOM	Air Force Satellite Communications System
AFTAC	Air Force Technical Applications Center
AFV	armored fighting vehicle
AG	Australia Group; auxiliary general [ship]
AGB	icebreaker
AGE	experimental auxiliary [ship]
AGI	intelligence collection ship
AGOR	oceanographic research ship
AGOS	ocean surveillance ship
AGS	surveying ship
AGZ	actual ground zero
AH	hospital ship
AI	avian influenza; airborne intercept; air interdiction
AIAI	al-Ittihad al-Islamiya
AICV	armored infantry combat vehicle
AIDS*	acquired immunodeficiency syndrome
AIFV	armored infantry fighting vehicle
AIG	addressee indicator group
AIM	air-intercept missile
AIP	air-independent propulsion/ power; air-independent-powered
AIS	automated information system; Automatic Identification System
AIT	American Institute in Taiwan
AK	cargo ship
aka*	also known as
ALCM*	air-launched cruise missile
ALOC	air line of communication
ALRAAM	air-launched long-range air-to-air missile
AM*	ante meridian (before noon); amplitude modulation
AMB	ambassador
AMC	Air Mobility Command [USAF]
AMEMB	American Embassy [U.S. Embassy preferred]
AMISOM	African Union Mission in Somalia
AMR	antimateriel rifle
AMRAAM	advanced medium-range air-to-air missile
ANA	Afghan National Army
ANC	African National Congress; active noise control
ANCOP	Afghan National Civil Order Police
ANDS	Afghanistan national development strategy
ANP	Afghan National Police
ANDSF	Afghan national defense and security forces [formerly ANSF—Afghan national security forces]
ANZUS	Australia-New Zealand-United States [Treaty]
AO	area of operations; oiler
AOB	air order of battle
AOC	air operations center
AOE	fast combat support ship
AOG	gasoline tanker
AOI	area of interest
AOR	area of responsibility; replenishment oiler
AOS	special liquids tanker
AOT	transport oiler
AP	armor-piercing; ammonium perchlorate; access point; transport [ship]
APC*	armored personnel carrier
APEC	Asia-Pacific Economic Cooperation

APOD	aerial point of debarkation; air point of departure
AQ	al-Qaida
AQAP	al-Qaida in the Arabian Peninsula
AQI	al-Qaida in Iraq [now known as Islamic State of Iraq and the Levant (ISIL)]
AQIM	al-Qaida in the Lands of the Islamic Maghreb
AQIS	al-Qaida in the Indian Subcontinent
AR	repair ship
ARABSAT	Arab Satellite Communications Organization
ARC	armored reconnaissance carrier; cable repairing ship
ARENA	Nationalist Republican Alliance [El Salvador]
ARM	antiradiation missile
ARPV	advanced remotely piloted vehicle
ARS	salvage ship
arty	artillery
ARV	armored recovery vehicle; armored reconnaissance vehicle
AS	submarine tender
ASAP*	as soon as possible
ASARS	advanced synthetic-aperture radar system
ASAT	antisatellite
ASBM	antiship ballistic missile
ASCM*	antiship cruise missile
ASDS	advanced SEAL/swimmer delivery system
ASDV	auxiliary SEAL/swimmer delivery vehicle
ASEAN	Association of Southeast Asian Nations
ASF	African Standby Force
ASG	Abu Sayyaf Group
ASL	above sea level
ASM	air-to-surface missile
ASR	alternate supply route; submarine rescue ship
ASRAAM	advanced short-range air-to-air missile
ASROC	antisubmarine rocket
ASSW	antisurface ship warfare
ASUW	antisurface warfare
ASV	armored support vehicle
ASW*	antisubmarine warfare
AT	antitank; antiterrorism
ATA	auxiliary ocean tug
ATACMS	Army Tactical Missile System
ATBM	antitactical ballistic missile
ATC	air traffic control; mini-armored troop carrier
ATF	Bureau of Alcohol, Tobacco, Firearms, and Explosives; fleet ocean tug
ATG	antitank gun
ATGM*	antitank guided missile
AT&L	Acquisition, Technology, and Logistics
ATM	asynchronous transfer mode
ATTU	Atlantic-to-the-Urals [region]
ATV	advanced technology vehicle; all-terrain vehicle
AU	African Union
AUV	autonomous underwater vehicle
AV	armored vehicle
AVB	aviation logistic support ship
AVLB	armored-vehicle-launched bridge
AWACS*	airborne warning and control system
AWOL*	absent without leave
AWT	water transport [ship]
AWX	all-weather

AX	miscellaneous auxiliary [ship]
AXT	training ship

B

b	barrel(s)
BACRIM	criminal band [from *banda criminal*]
BAG	battalion artillery group
BAI	battlefield air interdiction
bcm	billion cubic meters
b/d*	barrel(s) per day
BDA	battle damage assessment
bde	brigade
BE*	Basic Encyclopedia
BENELUX	Belgium, Netherlands, Luxembourg
BGN	Board on Geographic Names
b/h	barrel(s) per hour
BICES	Battlefield Information Collection and Exploitation System
BINUB	United Nations Integrated Office in Burundi
BIOS	basic input/output system
bit/s	bit(s) per second
bldg	building
BLOS	beyond line of sight
BLT	battalion landing team
BMD	ballistic missile defense
BMDS	ballistic missile defense system
BMEWS	ballistic missile early warning system
bn	battalion
BOA	broad ocean area
BONUCA	United Nations Peacebuilding Support Office in the Central African Republic
BRAC	Base Realignment and Closure
BRICS	Brazil, Russia, India, China, and South Africa
BTADS	Border Tunneling Activity Detection System
btry	battery
bu	bushel(s)
BVR	beyond visual range
BW	biological warfare; biological weapon
BWC	Biological Weapons Convention

C

C*	Celsius
C2*	command and control
C3*	command, control, and communications
C4*	command, control, communications, and computers
C3CM	command, control, and communication countermeasures
C3I*	command, control, communications, and intelligence
C4I*	command, control, communications, computers, and intelligence
C4ISR*	command, control, communications, computers, intelligence, surveillance, and reconnaissance
CAA	combined-arms army
CAC*	common access card
CACM	Central American Common Market
CAG	carrier air group
cal*	caliber
CANUKUS	Canada-United Kingdom-United States

CANUS	Canada-United States
CAP	combat air patrol
CAPCO	[former] Controlled Access Program Coordination Office [see SMP]
CARICOM	Caribbean Community
CAS	close air support
cav	cavalry
CBD	chemical and biological defense
CBM	confidence-building measure
CBR	chemical, biological, and radiological
CBRN	chemical, biological, radiological, and nuclear
CBRNE	chemical, biological, radiological, nuclear, and explosives
CBU	cluster bomb unit
CBW	chemical and biological warfare; chemical and biological weapon
CC	command center; command ship
CCB	command and control boat
CCD	camouflage, concealment, and deception; charge-coupled device
CCIR	commander's critical information requirement
CCM	counter-countermeasure
CCMD	combatant command [see COCOM]
CCP	Chinese Communist Party
CCTV	closed-circuit television; China Central Television
CD*	compact disc
CDC	Centers for Disease Control and Prevention
CDCM	coastal defense cruise missile
CDI	Chief of Defence Intelligence [Canada]
CD-R	recordable compact disc
CD-ROM*	compact disc–read-only memory
CD-RW	rewriteable compact disc
CECOM	Communications and Electronics Command
CENTAM	Central America
CEP	circular error probable
CERT	computer emergency response team
CFE	Conventional Armed Forces in Europe
CFV	cavalry fighting vehicle
cg*	centigram(s)
CG	guided-missile cruiser; coast guard [or Coast Guard]
CGN	nuclear-powered guided-missile cruiser
CGS	common ground station
CH	aviation cruiser
CHG	guided-missile aviation cruiser
CHOD	chief of defense
CHOP	change of operational control
CI	counterintelligence
CIA*	Central Intelligence Agency
CIA/CNC	Central Intelligence Agency Crime and Narcotics Center
CIC	combat information center; combat intelligence center
CICA	Conference on Interaction and Confidence-Building Measures in Asia
CIG	Consolidated Intelligence Guidance
CINC	commander in chief
CIOC	Combined Intelligence Operations Center

CIS	Commonwealth of Independent States
CISP	Counterintelligence Support Program
CIWS	close-in weapon system
CJCS*	Chairman of the Joint Chiefs of Staff
CKO	core knowledge online
CL	light cruiser
CLOS	command to line-of-sight
cm*	centimeter(s)
cm2*	square centimeter(s)
cm3*	cubic centimeter(s)
CMC	Central Military Commission [China]
CMF	Cyber Mission Force
CN	counternarcotics
CNA	computer network attack
CNCI	Comprehensive National Cybersecurity Initiative
CND	computer network defense
CNE	computer network exploitation
CNO	computer network operations; Chief of Naval Operations
co	company
CO	commanding officer
COA	course of action
COC	combat operations center
COCOM	combatant command (common usage) [*Note*: The *Department of Defense Dictionary of Military and Associated Terms* reserves *COCOM* for the command authority of a combatant command, using *CCMD* as the abbreviation for combatant command.]
CODEL	congressional delegation
COG	combined operations group; center of gravity
COI	community of interest
COIN	counterinsurgency
COLISEUM	Community Online Intelligence System for End Users and Managers
COMEX	communications exercise
COMINT*	communications intelligence
COMPUSEC	computer security
COMSAT	communications satellite
COMSEC*	communications security
CONOPS*	concept of operations
CONPLAN*	contingency plan; concept plan
CONUS*	continental United States
COOP	continuity of operations
COR	Council of Representatives [Iraq]; contracting officer representative
COTS	commercial off-the-shelf
CP	command post
CPA	Comprehensive Peace Agreement [Sudan]
CPU	central processing unit
CPX	command post exercise
CR	collection requirement
CRBM	close-range ballistic missile
CS	combat support
CSAR	combat search and rescue
CSBM	confidence- and security-building measure
CSG	carrier strike group
CSNP	nonpowered causeway section (non-self-propelled)
CSS	combat service support; Central Security Service [NSA—often shown as NSA/CSS]
CSTC-A	Combined Security Transition Command–Afghanistan
CSTO	Collective Security Treaty Organization

CSX	command and staff exercise
CTA	capstone threat assessment
CTBT	Comprehensive Test Ban Treaty
CTFI	counter-threat-finance intelligence
CTOL	conventional takeoff and landing
CV	multipurpose aircraft carrier
CVA	attack aircraft carrier
CVAN	nuclear-powered attack aircraft carrier
CVH	V/STOL aircraft carrier
CVL	light aircraft carrier
CVN	nuclear-powered multipurpose aircraft carrier
CVRT	tracked reconnaissance combat vehicle
CW	chemical warfare; chemical weapon; continuous wave
CWC	Chemical Weapons Convention
CWIED	command-wired improvised explosive device
CY*	calendar year
cy*	copy

D

DAO*	defense attaché office
DARPA	Defense Advanced Research Projects Agency
DATT*	defense attaché
dB*	decibel(s)
dBsm	decibel referenced to 1 square meter
DC	direct current
DCA	Defense Cooperation Agreement
DCHC	Defense Counterintelligence and HUMINT Center [now DIA Directorate for Operations]
DCI	Director of Central Intelligence [position no longer exists]
DCIPS	Defense Civilian Intelligence Personnel System
DCS	Defense Clandestine Service
DD	deputy director; destroyer
D&D	denial and deception
DDG	guided-missile destroyer
DDH	aviation destroyer (ASW)
DDNI/A	Deputy Director of National Intelligence for Analysis
DDNS	dynamic domain name system
DDoS	distributed denial of service
DDR	disarmament, demobilization, and reintegration
DDR&E	Directorate of Defense Research and Engineering; director, Defense Research and Engineering
DE	damage expectancy; directed energy
DEA*	Drug Enforcement Administration
DEFSMAC	Defense Special Missile and Aerospace Center
deg	degree(s)
DepSecDef	U.S. Deputy Secretary of Defense
dept	department
det	detachment
DEW	directed-energy weapon
DEXCOM	Intelligence Community Deputies Executive Committee
DF	direction finding
DGZ	desired ground zero

DHCP	dynamic host configuration protocol
DHKP/C	Revolutionary People's Liberation Party/Front
DHS	Department of Homeland Security
DI	Directorate for Analysis; Director for Analysis
DIA*	Defense Intelligence Agency
DIAC	Defense Intelligence Analysis Center [now DIA Headquarters]
DIAD	Defense Intelligence Agency directive
DIAI	Defense Intelligence Agency instruction
DIAL	Defense Intelligence Agency Liaison Office
diam	diameter
DIAM	Defense Intelligence Agency manual
DIAP	Defense Intelligence Analysis Program
DIAR	Defense Intelligence Agency regulation
DID	*Defense Intelligence Digest*
DIO	defense intelligence officer; Defence Intelligence Organisation [Australia]
DIS	Defence Intelligence Staff [United Kingdom]
DISA	Defense Information Systems Agency
DISES	Defense Intelligence Senior Executive Service
DISL	Defense Intelligence Senior Level
div	division
DLO	Defense Liaison Office
DMPI	desired mean point of impact
DMS	Defense Message System
DMZ	demilitarized zone [use initial capitalization when spelling out a proper name, such as Korean Demilitarized Zone]
DNA*	deoxyribonucleic acid
DNI	Director of National Intelligence
DOB*	date of birth
DOC	Department of Commerce [or Commerce Department]
DOCEX	document exploitation
DoD*	Department of Defense [or Defense Department]
DoDD	Department of Defense directive
DoDIIS	Department of Defense Intelligence Information System
DoDM	Department of Defense manual
DoDR	Department of Defense regulation
DOE	Department of Energy [or Energy Department]
DOI	date of information; Department of Interior [or Interior Department]
DOJ	Department of Justice [or Justice Department]
DOMEX	document and media exploitation
DOS	Department of State [or State Department]
DoS	denial of service
DOT	Department of Transportation [or Transportation Department]
DOT&E	director of Operational Test and Evaluation
DPI	desired point of impact
DPP	diesel powerplant
DR	director

DRC	Democratic Republic of the Congo
DRFM	digital radiofrequency memory
DSCA	Defense Security Cooperation Agency
DSCS	Defense Satellite Communications System
DSN*	Defense Switched Network
DSP	Defense Support Program
DSRV	deep-submergence rescue vehicle (self-propelled)
DSS	Defense Security Service
DSV	deep-submergence vehicle (self-propelled)
DTA	dynamic threat assessment
DTIP	Disruptive Technology Innovations Partnership
DTO	drug trafficking organization
DTRA	Defense Threat Reduction Agency
DTSA	Defense Technology Security Administration
DUG	deep underground [facility]
DVD*	digital video disc
dwt	deadweight ton(s)
DZ/LZ	drop zone/landing zone

E

EA	electronic attack [formerly ECM—electronic countermeasures]
ECCM	electronic counter-countermeasures [now EP—electronic protection]
ECM	electronic countermeasures [now EA—electronic attack]
ECOWAS	Economic Community of West African States
E&E	escape and evasion
EEI	essential element of information
EEZ	exclusive economic zone
EFP	explosively formed penetrator
EHF	extremely high frequency
EIJ	Egyptian Islamic Jihad
EIU	Economist Intelligence Unit
EKIA	enemy killed in action
ELF	extremely low frequency
ELINT*	electronic intelligence
elm	element
ELN	National Liberation Army [Colombia]
email*	electronic mail
EMCON	emission control
EMINT	emissions intelligence
EMP	electromagnetic pulse
ENDP	exception to National Disclosure Policy
EO	electro-optical; executive order
EOB	electronic order of battle
EOD	explosive ordnance disposal
EORSAT	ELINT ocean reconnaissance satellite
EOSAT	Earth observation satellite
EOW	electro-optical warfare
EP	electronic protection [formerly ECCM—electroniccounter-countermeasures]
EPIC	El Paso Intelligence Center
EPIL	explosively pumped iodine laser
EPL	ELINT Parameter Limits
EPW	earth-penetrator weapon
ER	extended-range

ERP	effective radiated power
ERPAC	Popular Antiterrorist Revolutionary Army of Colombia
ERS	early release of submunitions
ERW	enhanced radiation weapon
ES	electronic warfare support [formerly ESM—electronic support measures]
ESA	European Space Agency
ESDP	European security and defense policy
ESM	electronic support measures [now ES—electronic warfare support]
est*	estimate; estimated
ETA	estimated time of arrival; Basque Fatherland and Liberty
ETF	enhanced tactical fighter
ETIM	East Turkestan Islamic Movement [also called ETIP]
ETIP	East Turkestan Islamic Party [also called ETIM]
ETL	elevate to launch
EU*	European Union
EUFOR	European Union Force
EULEX	European Union Rule of Law Mission
EUTELSAT	European Telecommunications Satellite Organization
EUV	extreme ultraviolet
EW	electronic warfare; early warning
EW/GCI	early warning/ground-controlled intercept
EXCOM	executive committee; Intelligence Community Executive Committee

F

F*	Fahrenheit
FA	field artillery
FAC	forward air controller
FAE	fuel-air explosive
FAI	fuel-air incendiary
FAPSI	Federal Agency for Government Communications and Information [Russia]
FARC	Revolutionary Armed Forces of Colombia
FARDC	Armed Forces of the Democratic Republic of the Congo
FATA	Federally Administered Tribal Areas [Pakistan]
FBI*	Federal Bureau of Investigation
FBIS	Foreign Broadcast Information Service [see OSC]
FC	fire control
FCC	functional combatant command
FCIP	Foreign Counterintelligence Program
FDA	Food and Drug Administration
FDO	foreign disclosure officer
FEBA	forward edge of the battle area
FEMA	Federal Emergency Management Agency
FEP	fuel enrichment plant
FF	frigate
FFAR	folding-fin aerial rocket
FFG	guided-missile frigate
FFL	corvette
FFT	frigate (reserve training)

FGI	foreign government information
FH	frequency-hopping
FIE	foreign intelligence entity
FIR	far infrared
FIS	foreign instrumentation signal; foreign intelligence service
FISA	Foreign Intelligence Surveillance Act
FISINT	foreign instrumentation signals intelligence
FISS	foreign intelligence and security service
FLIR	forward-looking infrared
FLO/FLO	float-on/float-off
FLOT	forward line of own troops
flt	fleet; flight
FLTSATCOM	Fleet Satellite Communication System
FM*	frequency modulation
FME	foreign materiel exploitation
FMF	Foreign Military Financing
FMLN	Farabundo Marti National Liberation Front
FMP	fuel manufacturing plant
FMS	Foreign Military Sales
FNU*	first name unknown
FOB	forward operating base
FOBS	fractional orbital bombardment system
FOC	full operational capability
FOD	foreign object damage
FOFA	follow-on forces attack
FOIA	Freedom of Information Act
FOT&E	follow-on test and evaluation
14FYC	14 February Youth Coalition
FOV	field of view
FPDD	focused police district development
freq	frequency
FROG*	free rocket over ground
FSB	Federal Security Service [Russia]
FSLN	Sandinista National Liberation Front
FSS	forward storage site
FSTEK	Federal Service for Technical and Export Control [Russia]
FSU	former Soviet Union
FSV	fire-support vehicle
ft*	foot; feet
ft2*	square foot; square feet
ft3*	cubic foot; cubic feet
FTE	full-time equivalent; full-time employee
FTI	fixed-target indicator
ft/min	foot (feet) per minute
FTO	foreign terrorist organization
FTP	file transfer protocol
ftr	fighter
ft/s	foot (feet) per second
FTX	field training exercise
FVEY	Five Eyes (United States, Australia, Canada, New Zealand, United Kingdom) [tetragraph for portion markings; in text, spell out, as in "Five Eyes community"]
FY*	fiscal year
FYDP	Future Years Defense Program
FYI*	for your information

G

g*	gram(s); acceleration of gravity
G7	Group of Seven (major industrial nations): United States, United Kingdom, Canada, France, Germany, Italy, Japan
G8	Group of Seven plus Russia
G20	Group of 20: 19 of the world's largest economies plus the European Union
GAD	guards artillery division
gal*	gallon(s)
GBU	guided bomb unit
GCA	ground-controlled approach
GCC	Gulf Cooperation Council; geographic combatant command
GCCS	Global Command and Control System
GCHQ	Government Communications Headquarters [United Kingdom]
GCI	ground-controlled intercept
GCSS	Global Combat Support System
GCTF	Global Counterterrorism Force
GDIP	General Defense Intelligence Program
GDP*	gross domestic product
GEO	geosynchronous Earth orbit
GEOINT*	geospatial intelligence
GHQ	general headquarters
GHz*	gigahertz
GID	General Intelligence Directorate
GIG	Global Information Grid
GITS	General Intelligence Training System
GIUK	Greenland-Iceland-United Kingdom
GLCM*	ground-launched cruise missile
GLOC	ground line of communication
GLONASS	Global Navigation Satellite System
GMI	general military intelligence
GMRD	guards motorized rifle division
GMT*	Greenwich Mean Time [see Coordinated Universal Time (UTC), also called Zulu in the U.S. military]
GNP	gross national product
GOB	ground order of battle
GOCO	government-owned, contractor-operated
GOSP	gas-oil separation plant
GOSSIP	Geotagged Open-Source Search Intelligence Program
GOTS	government off-the-shelf
GP	general purpose
GPS*	Global Positioning System
grp	group
grt	gross registered ton(s)
GRU	General Staff Main Intelligence Directorate [Russia]
GS	General Staff
GSE	ground support equipment
GSM	Global System for Mobile Communications
GSOMIA	General Security of Military Information Agreement
GSTAR	Global Strategic and Tactical Relay
GTD	guards tank division
GTMO	Guantanamo Bay
GTO	geostationary transfer orbit
GTPP	gas turbine powerplant

H

h*	hour(s)
ha	hectare(s)
HAB	hardened aircraft bunker
HADR	humanitarian assistance and disaster relief
HALO	high altitude, low opening
HAMAS†	Islamic Resistance Movement [*Note*: Because the abbreviation is better known and more commonly used than either the Arabic name on which it is based or its English equivalent, shown here, *HAMAS* generally is used without establishing the abbreviation; showing the English equivalent is acceptable for information but is not necessary.]
HARM	high-speed antiradiation missile
HAS	hardened aircraft shelter
HAWK†	Homing-All-the-Way Killer
HAZMAT*	hazardous materials
HCS	HUMINT Control System
HDBT	hardened and deeply buried target
HDTV*	high-definition television
HE	high explosive
HEAT	high-explosive antitank
HEI	high-explosive incendiary
HEL	high-energy laser
helo	helicopter
HEMP	high-altitude electromagnetic pulse
HEO	highly elliptical orbit
HET	heavy equipment transporter
HEU	highly enriched uranium
HF*	high frequency
HF/DF	high-frequency direction finding
HGV	hypersonic glide vehicle
HHW	higher high water
HIG	Hezb-e-Islami Gulbuddin
HIMARS	High-Mobility Artillery Rocket System
HIV*	human immunodeficiency virus
HLA	helicopter landing area
HLA/DZ	helicopter landing area/drop zone
HLW	higher low water
HLZ	helicopter landing zone
HME	homemade explosive
HMG	heavy machinegun
HMMWV	high-mobility multipurpose wheeled vehicle [preferred: Humvee, not spelled out]
HOB	height of burst
how	howitzer
hp*	horsepower
HPM	high-power microwave
HPP	hydroelectric powerplant
HQ*	headquarters
HQN	Haqqani Network
HSC	Homeland Security Council
HSS	high-speed sealift [vessel]
HSV	high-speed vessel
HUD	head-up display
HUJI	Harakat-ul-Jihad-i-Islami
HUJI-B	Harakat ul-Jihad-i-Islami Bangladesh
HUMINT*	human intelligence
HVAC	heating, ventilation, and air conditioning
HVE	homegrown violent extremist
HVI	high-value individual
HVT	high-value target
hwy*	highway
Hz*	hertz

I

IA	information assurance
IADS	integrated air defense system
IAEA	International Atomic Energy Agency
IAW*	in accordance with
IBERLANT	Iberian-Atlantic [region]; Iberian-Atlantic [Command, NATO; now SOUTHLANT]
IBP	Iraqi Baath Party
IC*	Intelligence Community
ICAO	International Civil Aviation Organization
ICBM*	intercontinental ballistic missile
ICC	International Criminal Court
ICD	Intelligence Community directive; imitative communication deception
ICE	Immigration and Customs Enforcement
ICG	International Contact Group
ICJ	International Court of Justice [commonly called World Court]
ICOD	information cutoff date; intelligence cutoff date
ICR	intelligence collection requirement
ICRC	International Committee of the Red Cross
ICTY	International Criminal Tribunal for the former Yugoslavia
ICV	infantry combat vehicle
IDA	International Development Association
IDF	Israel Defense Forces
IDP	internally displaced person
IEA	International Energy Agency
IEC	Independent Election Commission [Afghanistan]
IED*	improvised explosive device
IFCNR	Implementation and Followup Committee for National Reconciliation [Iraq]
IFF*	identification, friend or foe
IFR	instrument flight rules
IFV	infantry fighting vehicle
IG	inspector general; Islamic Group
I-HAWK†	Improved Homing-All-the-Way Killer
IHEC	Independent High Electoral Commission [Iraq]
IICT	Interagency Intelligence Committee on Terrorism
IIR	intelligence information report; imaging infrared
IJU	Islamic Jihad Union
ILS	instrument landing system
IM	info memo
IMET	International Military Education and Training
IMF	International Monetary Fund
IMINT*	imagery intelligence
IMO	International Maritime Organization
IMSAT	imagery satellite
IMU	Islamic Movement of Uzbekistan; inertial measurement unit
in*	inch(es)
in2*	square inch(es)
in3*	cubic inch(es)
IN	information need
INA	Iraqi National Alliance
IND	improvised nuclear device
indef	indefinite

inf	infantry
INF	intermediate-range nuclear force; Intermediate-Range Nuclear Forces [Treaty]
INFOSEC	information security
INMARSAT	International Mobile Satellite Organization [originally International Maritime Satellite Organization]
INR	[State Department] Bureau of Intelligence and Research
INS	inertial navigation system
INSCOM	Intelligence and Security Command [U.S. Army]
Intel*	intelligence
INTELSAT	International Telecommunications Satellite Organization
Interpol*	International Criminal Police Organization
INTREP	intelligence report
INTSUM	intelligence summary
IO	information operations
IOC*	initial operational capability
IOC	International Olympic Committee
IP*	Internet protocol
IPB	intelligence preparation of the battlespace
IPR	intelligence production requirement
IR	infrared
IRA	Irish Republican Army
IRAM	improvised rocket-assisted munition
IRBM*	intermediate-range ballistic missile
IRCM	infrared countermeasures
IRFNA	inhibited red-fuming nitric acid
IRGC	Islamic Revolutionary Guard Corps [Iran]
IRGC-QF	Islamic Revolutionary Guard Corps–Qods Force [Iran]
IRINT	infrared intelligence
IRKS	INHERENT RESOLVE Kinetic Support
IRST	infrared search and track
IRTPA	Intelligence Reform and Terrorism Prevention Act
ISAF	International Security Assistance Force
ISCI	Islamic Supreme Council of Iraq [formerly SCIRI—Supreme Council for the Islamic Revolution in Iraq]
ISF	Iraqi security forces
ISI	Directorate General for Inter-Services Intelligence [Pakistan]
ISIL*	Islamic State of Iraq and the Levant [widely known in the news media as ISIS (for Islamic State of Iraq and Syria) or simply Islamic State]
I-SLIC	improved semisubmersible infiltration landing craft [improved infiltration boat]
ISO	International Organization for Standardization
ISOO	Information Security Oversight Office
ISP	Internet service provider
ISR*	intelligence, surveillance, and reconnaissance
ISTAR	intelligence, surveillance, target acquisition, and reconnaissance
IT*	information technology
ITAR	International Traffic in Arms Regulations
ITAR-TASS	Information Telegraph Agency of Russia

ITSO	International Telecommunications Satellite Organization
ITWA	initial threat warning assessment
IVO	in the vicinity of; in view of
IW	information warfare
I&W	indications and warning
IWG	interagency working group; intelligence working group
IX	unclassified miscellaneous unit [naval]

J

JAC	joint analysis center
JAEIC	Joint Atomic Energy Intelligence Committee
JAG	judge advocate general
JAK	Jund al-Khilafah
JASSM	joint air-to-surface standoff missile
JAT	Jemaah Anshorut Tauhid
JCOFA	joint country force assessment
JCS*	Joint Chiefs of Staff
jct	junction
JCTD	joint capabilities technology demonstration
JDA	joint duty assignment
JDAM	Joint Direct-Attack Munition
JDEC A	Joint Document Exploitation Center–Afghanistan
JEM	Justice and Equality Movement; Jaish-e-Mohammad
JEWC	Joint Electronic Warfare Center
JFCC-ISR	Joint Functional Component Command for Intelligence, Surveillance, and Reconnaissance
JFCC-NW	Joint Functional Component Command for Network Warfare
JI	Jemaah Islamiyah
JIACTF	Joint Interagency Cyber Task Force
JIATF South	Joint Interagency Task Force South
JIC	joint intelligence center
JIDA	Joint Improvised-Threat Defeat Agency [formerly JIEDDO]
JIEDDO	[former] Joint Improvised Explosive Device Defeat Organization [now JIDA]
JIOC	joint intelligence operations center
JIOC-A	Joint Intelligence Operations Center–Afghanistan
JIOWC	Joint Information Operations Warfare Command
JIPOE	Joint Intelligence Preparation of the Operational Environment
JMITC	Joint Military Intelligence Training Center
JOC	joint operations center
JOIIS	Joint Operational Intelligence Information System
JP	jet petroleum
JRTN	Jaysh Rijal al-Tariq al-Naqshabandiyah (Army of the Naqshabandiyah Order)
JS	Joint Staff
JSDF	Japan Self-Defense Force
JSF	Joint Strike Fighter
JSOW	Joint Standoff Weapon

JSTARS	Joint Surveillance Target-Attack Radar System
JTF	joint task force
JTF-GNO	Joint Task Force–Global Network Operations
JTIDS	Joint Tactical Information Distribution System
JUD	Jamaat-ud-Dawa
JUIAF	Joint-Use Intelligence Analysis Facility
JUSMAG	Joint U.S. Military Advisory Group
JWAC	Joint Warfare Analysis Center
JWICS*	Joint Worldwide Intelligence Communications System

K

K*	degrees Kelvin [*Note:* used without degree symbol (°) or word degree]
KDP	Kurdistan Democratic Party [Iraq]
KFOR	Kosovo Force
kg*	kilogram(s)
KGK	Kongra-Gel [also called Kurdistan People's Congress; formerly Kurdistan Workers' Party (PKK)]
KH	Kataib Hizballah
kHz*	kilohertz
KIA*	killed in action
KKV	kinetic-kill vehicle
km*	kilometer(s)
km2*	square kilometer(s)
km3*	cubic kilometer(s)
km/h*	kilometer(s) per hour [see also kph]
kn*	knot(s)
kN	kilonewton(s)
KPA	[North] Korean People's Army
kph	kilometer(s) per hour [see also km/h]
KRG	Kurdistan Regional Government [Iraq]
ksi	kips per square inch
kt	kiloton(s)
kV*	kilovolt(s)
kW*	kilowatt(s)
kWh*	kilowatt-hour(s)

L

L*	liter(s)
lab*	laboratory
LAC	Line of Actual Control [de facto boundary between India and China]
LACM*	land-attack cruise missile
LAF	Lebanese Armed Forces
LAN	local area network
LANDSAT*	Land Satellite (commercial multispectral)
LANTIRN	Low-Altitude Navigation and Targeting Infrared for Night
LAR	light artillery rocket
laser†	light amplification by simulated emission of radiation
LASINT	laser intelligence
LAW	light antitank weapon
lb*	pound(s)
LCA	assault landing craft
LCAC	air-cushion landing craft
LCC	amphibious command ship
LCF	launch control facility

LCM	mechanized landing craft [U.S. Navy definition]; medium landing craft [definition commonly used with navies of other countries]
LCMA	air-cushion medium landing craft
LCP	personnel landing craft
LCPA	air-cushion personnel landing craft
LCS	littoral combat ship
LCU	utility landing craft
LCUA	air-cushion utility landing craft
LCVP	landing craft, vehicle, personnel
LDS	launch-detection satellite
LEA	law enforcement agency
LEF	law enforcement force; Law Enforcement Forces [Iran]
LEO	low Earth orbit
LEU	low-enriched uranium
LF*	low frequency
lg	large
LGB	laser-guided bomb
LGM	laser-guided munition
LGW	laser-guided weapon
LHA	amphibious assault ship
LHD	amphibious assault dock
LHW	lower high water
LIC	low-intensity conflict
LIDAR	light detection and ranging
LIFG	Libyan Islamic Fighting Group
LKA	amphibious cargo ship
LLW	lower low water
LNG	liquefied natural gas
LNI	Library of National Intelligence
LNO	liaison officer
LNU*	last name unknown
LO	low-observable
LOC	line of communication; Line of Control
LOCE	Linked Operations Intelligence Centers Europe
LORAN	long-range aid to navigation
LOS	line of sight
LOTS	logistics over the shore
LOX	liquid oxygen
LPA	amphibious transport
LPAR	large phased-array radar
LPD	amphibious transport dock
LPG	liquefied petroleum gas
LPH	amphibious assault ship (helicopter)
LPV	low-profile vehicle
LRA	Long-Range Aviation [Russia]; Lord's Resistance Army
LRAAM	long-range air-to-air missile
LRCM	long-range cruise missile
LSD	dock landing ship
LSDV	swimmer delivery vehicle
LSM	medium landing ship
LSSC	light SEAL/swimmer support craft
LST	tank landing ship
LT	Lashkar-e-Tayyiba
LTBT	Limited Test Ban Treaty
Ltd*	Limited [as part of a firm's proper name]
LTD	laser target designator
LTTE	Liberation Tigers of Tamil Eelam
LWIR	long-wavelength infrared
LZ	landing zone

M

µ	micro [one-millionth]
µm	micrometer(s)
µs	microsecond(s)
m*	meter(s)
m2*	square meter(s)
m3*	cubic meter(s)
MAAG	Military Assistance Advisory Group
MAD	magnetic anomaly detector
MAGTF	Marine Air-Ground Task Force
MANPADS*	man-portable air defense system(s)
MAP	membership action plan [NATO]
MARV	maneuverable reentry vehicle
MASINT	measurement and signature intelligence
MAT	medium assault transport
max	maximum
MB	megabyte(s)
MBT	main battle tank
MCFI	Multinational Coalition Forces–Iraq
MC&G	mapping, charting, and geodesy
MCIA	Marine Corps Intelligence Activity
MCM	mine countermeasures; mine countermeasures ship
MCP	mobile command post
MCS	mine countermeasures support ship
MD	military district
MDA	Missile Defense Agency
MDCI	multidisciplinary counterintelligence
mdm	medium
MEADS	medium extended air defense system
medevac†	medical evacuation [abbreviation accepted as a standard English word]
MEDINT	medical intelligence
MEF	Marine expeditionary force
MEK	Mujahedin-e Khalq
MEL	mobile erector-launcher
MEO	medium Earth orbit
MEPED	Military Equipment Parametrics and Engineering Database
MERCOSUR	Southern Cone Common Market
MERSHIP	merchant ship
MESF	Middle East Stability Force
METSAT	meteorological satellite
MEU	Marine expeditionary unit
MF	medium frequency
MFO	Multinational Force and Observers
mg*	milligram(s)
MGRS	Military Grid Reference System
MHC	coastal minehunter
MHCA	air-cushion coastal minehunter
MHS	minehunting ship
MHWN	mean high water neaps
MHWS	mean high water springs
MHz*	megahertz
mi*	(statute) mile(s)
mi2*	square mile(s)
MIA*	missing in action
MIB	Military Intelligence Board
MIBN	military intelligence battalion
MICV	mechanized infantry combat vehicle
MIDB	Modernized Integrated Database

MiG*	Mikoyan aircraft [formerly Mikoyan-I-Gurevich Design Bureau]
mi/h*	mile(s) per hour [see also mph]
MIJI	meaconing, intrusion, jamming, or interference
MILF	Moro Islamic Liberation Front
MILSATCOM	military satellite communications
MILSTAR	Military Strategic and Tactical Relay [System]
min*	minute(s); minimum
MINURCAT	United Nations Mission in the Central African Republic and Chad
MINURSO	United Nations Mission for the Referendum in Western Sahara
MINUSTAH	United Nations Stabilization Mission in Haiti
MIP	Military Intelligence Program
MIRV*	multiple independently targetable reentry vehicle
MK V SOC	Mk V special operations craft
mL	milliliter(s)
MLLW	mean lower low water
MLRS	Multiple Launch Rocket System
MLWN	mean low water neaps
MLWS	mean low water springs
mm*	millimeter(s)
MM	minelayer
mm2*	square millimeter(s)
mm3*	cubic millimeter(s)
M-MRCA	medium-range multirole combat aircraft
MMW	millimeter wave
MNF	multinational force
MNF-I	Multinational Force–Iraq [became USF-I on 1 January 2010]
MNLF	Moro National Liberation Front
MNU*	middle name unknown
MOA	memorandum of agreement
MOB	main operating base; missile order of battle; mobilization
MOD	Ministry of Defense [preferred: Defense Ministry]
Mod	modification [used in missile designators, such as "CSS-5 Mod 4"]
MODAFL	Ministry of Defense and Armed Forces Logistics [Iran]
MOGAS	motor gasoline
MOIS	Ministry of Intelligence and Security [Iran]
MON	monitor [riverine warfare craft]
MONUC	United Nations Organization Mission in the Democratic Republic of the Congo
mort	mortar
MOU	memorandum of understanding
MOUT	military operations in urban terrain
MOX	mixed oxide
MP	military police; maritime patrol
MPa	megaPascal(s)
MPA	maritime patrol aircraft
MPFA	maritime pre-positioning ship, aviation
MPFC	maritime pre-positioning ship, cargo
MPFD	maritime pre-positioning ship, dock
mph	miles per hour [see also mi/h]
MPLA	Popular Movement for the Liberation of Angola

MR	military region
MRAP	mine-resistant, ambush-protected [vehicle]
MRBM*	medium-range ballistic missile
MRC	motorized rifle company
MRD	motorized rifle division
MRL	multiple rocket launcher
MRR	motorized rifle regiment
MRTT	multirole tanker transport
ms	millisecond(s)
m/s	meter(s) per second
MSB	minesweeping boat
MSC	coastal minesweeper
MSCO	coastal minesweeper (old)
MSD	minesweeper, drone
MSF	fleet minesweeper (steel hull)
MSH	minehunter
MSI	inshore minesweeper
MSIC	Missile and Space Intelligence Center
MSL	mean sea level; minesweeping launch
MSM	river minesweeper
MSP	money service provider
MSR	main supply route
MSS	specialized minesweeper
MSSC	medium SEAL/swimmer support craft
Mt	megaton(s)
MTCR	Missile Technology Control Regime
MTI	moving target indicator
MTU	master terminal unit
MTZ	motorized infantry
MUSIS	Multinational Space-Based Imaging System
M/V	merchant vessel
MW*	megawatt(s)
MW	mine warfare
MWe	megawatt(s) electrical
MWIR	mid-wavelength infrared
MWL	mean water level
MWR	missile warning receiver
MWt	megawatt(s) thermal

N

NA*	not applicable; not available
NAC	North Atlantic Council
NAFTA	North American Free Trade Agreement
NAI	named area of interest
NAM	Nonaligned Movement
NAMRU	Naval Medical Research Unit [U.S.]
NAS*	naval air station
NASA*	National Aeronautics and Space Administration
NASIC	National Air and Space Intelligence Center
NATO*	North Atlantic Treaty Organization
NAVAID	navigation aid
NAVSAT	navigation satellite
NBC	nuclear, biological, and chemical
NCA	national command authority; nuclear command authority
NCIC	National Counterintelligence Center
NCIS	Naval Criminal Investigative Service
NCMI	National Center for Medical Intelligence [formerly AFMIC—Armed Forces Medical Intelligence Center]
NCO*	noncommissioned officer
NCOIC	noncommissioned officer in charge

NCPC	National Counterproliferation Center
NCR	National Capital Region
NCS	National Clandestine Service
NCTC	National Counterterrorism Center
NCW	network-centric warfare
NDP	national disclosure policy
NEO	noncombatant evacuation operation
NFI*	no further information
NFIB	National Foreign Intelligence Board
NFZ	nuclear-free zone
NGA	National Geospatial-Intelligence Agency [formerly DMA (Defense Mapping Agency) and later NIMA (National Imagery and Mapping Agency)]
NGIC	National Ground Intelligence Center
NGL	natural gas liquids
NGO*	nongovernmental organization
NIC	National Intelligence Council
NICB	National Intelligence Collection Board
NIC C	National Intelligence Coordination Center
NIE	national intelligence estimate
NIO	national intelligence officer
NIP	National Intelligence Program
NIPF	National Intelligence Priorities Framework
NIPRNET*	Nonsecure Internet Protocol Router Network
NIR	near-infrared
NIST	National Intelligence Support Team; National Institute of Standards and Technology
NIT	national intelligence topic
NIU	National Intelligence University
NJOIC	National Joint Operations Intelligence Center
NLL	Northern Limit Line [Koreas]
nm	nanometer(s)
NM*	nautical mile(s)
NMD	national missile defense
NMEC	National Media Exploitation Center
NMI*	no middle initial
NMIC	National Maritime Intelligence Center
NMN*	no middle name
no.*	number
NOB	naval order of battle
NORAD	North American Aerospace Defense Command
NPA	New People's Army
NPT	Nonproliferation Treaty
NR	submersible research vehicle (self-propelled)
NRO	National Reconnaissance Office
NRT	near-real-time
ns	nanosecond(s)
NSA*	National Security Agency
NSA/CSS	National Security Agency/ Central Security Service
NSC	National Security Council
NSG	Nuclear Suppliers Group
N-SILC	nonsubmersible infiltration landing craft [small speedboat]
NSIP	NATO Security Investment Program
NSW RHIB	naval special warfare rigid-hull inflatable boat
NTM	national technical means
NTM-A	NATO Training Mission–Afghanistan

NTO	nitrogen tetroxide [N2O4; also shown as dinitrogen tetroxide]
NUCINT	nuclear intelligence
NVD	night-vision device
NVG	night-vision goggles
NWFP	North-West Frontier Province [Pakistan] [now Khyber Pakhtunkhwa]
NWFZ	nuclear-weapons-free zone
NWSS	nuclear weapon storage site

O

OAS	Organization of American States
OB	order of battle
OBE*	overtaken by events
OCA	offensive counterair
OCONUS*	outside the continental United States
OCU	operational conversion unit
ODNI*	Office of the Director of National Intelligence
OECD	Organization for Economic Cooperation and Development
OEF	Operation ENDURING FREEDOM
OHCHR	Office of the High Commissioner for Human Rights
OHR	Office of the High Representative
OIC	officer in charge; Organization of the Islamic Conference
OIF	Operation IRAQI FREEDOM
OJT	on-the-job training
O&M	operations and maintenance
OMG	operational maneuver group
OMLT	operational mentoring and liaison team
OMS	Office of the Martyr Sadr
ONI	Office of Naval Intelligence
ONIR	overhead nonimaging infrared
OOA	out of area
OPCW	Organization for the Prohibition of Chemical Weapons
OPEC*	Organization of Petroleum-Exporting Countries
OPFOR	opposing force(s)
OPI	office of primary interest
OPIR	overhead persistent infrared
OPLAN	operation plan
OPR	office of primary responsibility
OPSEC*	operations security
OPTEMPO*	operational tempo
OPTINT	optical intelligence
OSC	Open Source Center [formerly FBIS—Foreign Broadcast Information Service]
OSCE	Organization for Security and Cooperation in Europe
OSD	Office of the Secretary of Defense
OSINT*	open-source intelligence
OT&E	operational test and evaluation
OTH	over-the-horizon
OTH-B	over-the-horizon backscatter [radar]
OTHR	over-the-horizon radar
OTHT	over-the-horizon targeting
OTU	operational training unit
OUSD(I)	Office of the Under Secretary of Defense for Intelligence
oz*	ounce(s)

P

P5	permanent five members of the UN Security Council (United States, United Kingdom, France, China, Russia)
P5+1	permanent five members of the UN Security Council plus Germany
PA	Palestinian Authority; probability of arrival
PAL	permissive action link
PAP	People's Armed Police [China]
PAR	precision-approach radar; phased-array radar
Patriot†	phased-array tracking radar intercept on target
PAWS	Phased-Array Warning System
PB	patrol boat
PBA	air-cushion patrol boat
PBD	drone patrol boat
PBG	guided-missile patrol boat
PBH	hydrofoil patrol boat
PBR	river patrol craft
PBT	training patrol boat
PBV	postboost vehicle
PC	personal computer; coastal patrol craft
PCF	fast patrol craft
PCFA	fast air-cushion patrol craft
PCFG	fast guided-missile patrol craft
PCFH	fast hydrofoil patrol craft
PCFS	fire-support patrol craft
PCH	hydrofoil patrol craft
PCS	permanent change of station
PD	probability of damage; pulse duration
PDA	personal digital assistant
PDB	President's Daily Brief
PDF	portable document format
PED	personal electronic device
penaid	penetration aid
PFLP	Popular Front for the Liberation of Palestine
PFLP-GC	Popular Front for the Liberation of Palestine–General Command
PFP	Partnership for Peace
PG	patrol combatant
PGG	guided-missile patrol combatant
PGGA	air-cushion guided-missile patrol combatant
PGH	hydrofoil patrol combatant
PGM	precision-guided munition
Ph.D.	doctor of philosophy
PHM	patrol combatant missile (hydrofoil) [hydrofoil guided-missile patrol combatant]
PHOTINT*	photographic intelligence
PIJ	Palestine Islamic Jihad
PIR	passive infrared; priority intelligence requirement
PII	personally identifiable information
PKI	public key infrastructure
PKK	[former] Kurdistan Workers' Party [see KGK]
PKO	peacekeeping operation
PLA	People's Liberation Army [China]
PLF	Palestine Liberation Front
PLO	Palestine Liberation Organization
plt	platoon
p/m	part(s) per million
PM*	post meridian (after noon)

PM	river monitor [naval craft]; perception management
PMO	project management office; program management office
POC*	point of contact
POE	port of entry
POL*	petroleum, oils, and lubricants
Polisario†	Popular Front for the Liberation of Saguia el-Hamra and Rio de Oro
POMCUS	pre-positioning of materiel configured to unit sets
POTUS*	President of the United States
POW*	prisoner of war
PPRC	Palestinian Popular Resistance Committees
PR	production requirement
PRA	Performance Review Authority [DCIPS]
PRF	pulse repetition frequency
PRI	pulse repetition interval
PRT	provincial reconstruction team
PS	large patrol ship
PSG	guided-missile patrol ship
psi*	pound(s) per square inch
PSI	Proliferation Security Initiative
PSP	pierced-steel planking
PST	training patrol ship
PSTN	public switched telephone network
PSYOP	psychological operations
pt*	pint(s)
PT	torpedo boat
PTD	drone torpedo boat
PTF	fast patrol craft
PTG	missile attack boat
PTGA	air-cushion missile attack boat
PTGH	hydrofoil missile attack boat
PTH	hydrofoil torpedo boat
PTT	push to talk
PUG	partially underground
PUK	Patriotic Union of Kurdistan [Iraq]
PV	physical vulnerability
PWHQ	primary war headquarters

Q

Q&A*	question(s) and answer(s)
QC	quality control
QDR	Quadrennial Defense Review
qt*	quart(s)

R

RAD	radiation absorbed dose
radar†	radio detection and ranging
RADCOM	radio communications
RADINT	radar intelligence
RADREL	radio-relay
RAM	radar-absorbing material; random access memory
RC	regional command
RCA	riot-control agent
RC Capital	Regional Command Capital [Afghanistan]
RC East	Regional Command East [Afghanistan]
RCIED	radio-controlled improvised explosive device
RCLR	recoilless rifle
RC North	Regional Command North [Afghanistan]
RCS	radar cross section

RC South	Regional Command South [Afghanistan]
RC West	Regional Command West [Afghanistan]
rd	round(s)
R&D*	research and development
RDA	research, development, and acquisition
RDD	radiological dispersal device
RDF	radio direction finding
rd/min	round(s) per minute
RDT&E	research, development, testing, and evaluation
REC	radioelectronic combat
recon	reconnaissance
ref*	reference
regt	regiment
Ret*	retired [used with rank]
RF	radiofrequency
RFI	request for information
RFID	radiofrequency identification
RFP	request for proposal
RFW	radiofrequency weapon
RGF	remote ground facility
RHAW	radar homing and warning
RHIB	rigid-hulled inflatable boat
RIF	reduction in force
RL	rocket launcher
RM	response memo; risk management
RMR	rock-mass rating
ROE	rules of engagement
RO/RO	roll-on/roll-off
RPG*	rocket-propelled grenade
rpm*	revolution(s) per minute
RPV	remotely piloted vehicle
RRF	rapid-reaction force
RSMA	RESOLUTE SUPPORT Mission Afghanistan
RSP	render-safe procedure
RSS*	Really Simple Syndication
RSTA	reconnaissance, surveillance, and target acquisition
rte	route
RTP	rail transfer point; rail transshipment point
RTU	remote terminal unit; remote telemetry unit
RV	reentry vehicle
RWR	radar warning receiver
rwy	runway

S

s*	second(s)
SACEUR	Supreme Allied Commander, Europe [NATO]
SACLANT	Supreme Allied Command(er), Atlantic [NATO]
SACLOS	semiautomatic command to line-of-sight
SADC	Southern African Development Community
SAFF	safing, arming, fuzing, and firing
SAM*	surface-to-air missile
SAMOB	surface-to-air missile order of battle
SAP	special access program
SAR	search and rescue; synthetic aperture radar
SARS	severe acute respiratory syndrome
SASM	strategic air-to-surface missile
SATCOM	satellite communications
SATNAV	satellite navigation

SATRAN	satellite reconnaissance advance notice
SBIRS	Space-Based Infrared System
SBL	space-based laser
SBR	space-based radar
SCADA	supervisory control and data acquisition
SCI*	sensitive compartmented information
SCIF	sensitive compartmented information facility
SCIRI	Supreme Council for the Islamic Revolution in Iraq [now ISCI—Islamic Supreme Council of Iraq]
SCO	Shanghai Cooperation Organization
SCRM	supply chain risk management
scuba†	self-contained underwater breathing apparatus
SDIA	senior defense intelligence analyst
SDR	source-directed requirement
SDV	SEAL/swimmer delivery vehicle; strategic delivery vehicle
SEAD	suppression of enemy air defenses
SEAL†	sea/air/land
SecDef	[U.S.] Secretary of Defense
SEDENA	Secretariat of National Defense [Mexico—includes Mexico's Army and Air Force]
SEMAR	Secretariat of the Navy [Mexico]
SERE	survival, evasion, resistance, and escape
SERER	survival, evasion, resistance, escape, and recovery
SES	Senior Executive Service
SF	special forces
SFOR	Stabilization Force
SHAPE	Supreme Headquarters Allied Powers, Europe [NATO]
SHF	superhigh frequency
ShLBM	ship-launched ballistic missile
SHORAD	short-range air defense
SI	special intelligence; International System of Units [commonly called the metric system]
SIA	senior intelligence analyst
SIGINT*	signals intelligence
SILC	semisubmersible infiltration landing craft [infiltration boat]
SIM*	subscriber identity module
SINCGARS	single-channel ground and airborne radio system
SIO	senior intelligence officer
SIOP	Single Integrated Operational Plan
SIPRNET*	Secret Internet Protocol Router Network
SITREP	situation report
SL	Sendero Luminoso [or Shining Path]
SLAM	standoff land-attack missile
SLAR	side-looking airborne radar
SLBM*	submarine-launched ballistic missile
SLCM*	sea-launched cruise missile
SLEP	service life extension program
SLF	superlow frequency
SLM/A	Sudanese Liberation Movement/Army
SLOC	sea line of communication
SLV	space launch vehicle
SLWT	side-loadable warping tug
sm	small

SME	subject matter expert
SMEB	significant military exercise brief
SMP	Security Markings Program [formerly CAPCO]
SMS	short message service
SNF	short-range nuclear force; spent nuclear fuel
SNS	social networking site
SOB	space order of battle
SOC	sector operations center
SOC-R	special operations craft, riverine [riverine special operations craft]
SOF	special operations forces
SOFA	status of forces agreement
SOG	special operations group
SOI	Sons of Iraq
SO/LIC	special operations/ low-intensity conflict
sonar†	sound navigation and ranging
SOP	standard operating procedure
SORT	Strategic Offensive Reduction Treaty
SOSI	space object surveillance and identification
SOUTHLANT	Regional Command Southeast Atlantic [NATO; formerly IBERLANT]
SP	self-propelled
SPAAG	self-propelled antiaircraft gun
SPADOC	space defense operations center
SPG	self-propelled gun
SPOD	seaport of debarkation; sea point of departure
SPOT*	Satellite pour l'Observation de la Terre
SPSS	self-propelled semisubmersible [vessel]
sq*	square
sqdn	squadron
SRAM	short-range attack missile
SRBM*	short-range ballistic missile
SRF	Strategic Rocket Forces [Russia]
SRO	sensitive reconnaissance operation
SS	diesel-powered attack submarine
SSA	auxiliary submarine
SSB	ballistic missile submarine; single sideband
SSBN	nuclear-powered ballistic missile submarine
SSC	coastal submarine
SSG	cruise missile attack submarine
SSGN	nuclear-powered cruise missile attack submarine
SSLP	transport submarine
SSM	surface-to-surface missile; midget submarine
SSMOB	surface-to-surface missile order of battle
SSN	nuclear-powered attack submarine
SSP	air-independent-powered attack submarine
SSR	surface-to-surface rocket
SSRP	Sensitive Source Reporting Program
SSS	staff summary sheet; source summary statement
SST	training submarine
SSTR	stability, support, transition, and reconstruction
St*	street; saint

S&T	scientific and technical; science and technology
STANAG	standardization agreement [NATO]
STAR	system threat assessment report
START*	Strategic Arms Reduction Treaty
S&TI	scientific and technical intelligence
STO	special technical operation
STOL	short takeoff and landing
STOVL	short takeoff and vertical landing
STP	Strategic Transition Plan [South Korea]
STSS	space tracking and surveillance system
STU	secure telephone unit
SUBROC	submarine rocket
SUW	surface warfare
SVBIED	suicide vehicle-borne improvised explosive device
SVIED	suicide vest improvised explosive device
SVR	Foreign Intelligence Service [Russia]
SWAPO	Southwest Africa People's Organization
SWC	special warfare craft
SWCL	special warfare craft, light
SWCM	special warfare craft, medium
SWHQ	static war headquarters
SWIR	short-wavelength infrared

T

t*	metric ton(s) (tonne[s])
T2	technology transfer [see also TT]
TA	tank army
TAA	tactical air army
TACAN*	tactical air navigation
TARE	telegraph automation relay equipment
TARM	tactical antiradiation missile
TASM	tactical air-to-surface missile
TASMO	tactical air support for maritime operations
TBA*	to be announced
TBD*	to be determined
TBM	theater ballistic missile; tactical ballistic missile; tunnel-boring machine
TBMD	theater ballistic missile defense
TCM	tactical cruise missile
TCP/IP	transmission control protocol/Internet protocol
TD-2	Taepo Dong 2
TDM	time-division multiplexed
TDMA	time-division multiple access
TDY*	temporary duty
T&E	test and evaluation
TECHINT	technical intelligence
TEL	transporter-erector-launcher
TELAR	transporter-erector-launcher and radar
TELINT	telemetry intelligence
TFG	Transitional Federal Government [Somalia]
TFLIR	targeting forward-looking infrared
TFR	terrain-following radar
tgt	target

THAAD	terminal high-altitude air defense
TIC	toxic industrial chemical
TIDE	Terrorist Identities Datamart Environment
tk	tank
TLAM	Tomahawk land-attack missile
TLAM/C	Tomahawk land-attack missile/conventional
TLAM/N	Tomahawk land-attack missile/nuclear
TLAR	transporter-launcher and radar
TLE	treaty-limited equipment
TMD	theater missile defense
TNF	theater nuclear force
TOA	time of arrival
TO&E	table of organization and equipment
TOR	term of reference
TOT	time on target
TOW†	tube-launched, optically tracked, wire-guided [antitank missile]
tpd	metric ton(s) per day
TPP	thermal powerplant
TR	tank regiment
TRA	temporary restricted area
TRADOC	Training and Doctrine Command [U.S. Army]
TRB	technical reconnaissance bureau
TSA	Transportion Security Administration
TSMO	Threat System Management Office
TT	technology transfer [see also T2]
TTBT	Threshold Test Ban Treaty
TTP	tactics, techniques, and procedures; Tehrik-e Taliban Pakistan
TV*	television
TVD	theater of military operations
TWJWA	al-Tawhid wal-Jihad in West Africa [also known as Movement for Unity and Jihad in West Africa (MUJWA)]

U

UAE	United Arab Emirates
UAV*	unmanned aerial vehicle
UC	under construction
UCAV	unmanned combat aerial vehicle
UCF	uranium conversion facility
UCP	Unified Command Plan
UDMH	unsymmetrical dimethyl hydrazine
UDT	underwater demolition team
UEF	uranium enrichment facility
UF_4	uranium tetrafluoride
UF_6	uranium hexafluoride
UFAC	Underground Facility Analysis Center
UG	underground
UGF	underground facility
UGV	unmanned ground vehicle
UHF*	ultrahigh frequency
UI*	unidentified
UK*	United Kingdom
ULCC	ultralarge crude carrier
ULF*	ultralow frequency
ULV	unmanned launch vehicle
UMOPAR	Rural Mobile Patrol Unit [Bolivia]
UN*	United Nations
UNAMA	United Nations Assistance Mission in Afghanistan
UNAMI	United Nations Assistance Mission for Iraq

UNAMID	African Union–United Nations Hybrid Operation in Darfur
UNASUR	Union of South American Nations
UNC	United Nations Command
UNDOF	United Nations Disengagement Observer Force
UNDP	United Nations Development Program
UNEP	United Nations Environment Program
UNESCO	United Nations Educational, Scientific, and Cultural Organization
UNFICYP	United Nations Peacekeeping Force in Cyprus
UNFPA	United Nations Population Fund
UNHCR	United Nations High Commissioner for Refugees
UNICEF	United Nations Children's Fund
UNIDO	United Nations Industrial Development Organization
UNIFIL	United Nations Interim Force in Lebanon
UNIOSIL	United Nations Integrated Office in Sierra Leone
UNIPSIL	United Nations Integrated Peacebuilding Office in Sierra Leone
unk*	unknown
UNMIK	United Nations Interim Administration Mission in Kosovo
UNMIL	United Nations Mission in Liberia
UNMIN	United Nations Mission in Nepal
UNMISS	United Nations Mission in South Sudan
UNMIT	United Nations Integrated Mission in Timor-Leste
UNMOGIP	United Nations Military Observer Group in India and Pakistan
UNOCI	United Nations Operation in Cote d'Ivoire
UNODC	United Nations Office on Drugs and Crime
UNOGBIS	United Nations Peacebuilding Support Office in Guinea-Bissau
UNOMIG	United Nations Observer Mission in Georgia
UNOPS	United Nations Office for Project Services
UNOWA	United Nations Office for West Africa
UNPOS	United Nations Political Office for Somalia
UNRCCA	United Nations Regional Centre for Preventive Diplomacy in Central Africa
UNRWA	United Nations Relief and Works Agency for Palestinian Refugees in the Near East
UNSC	United Nations Security Council
UNSCO	Office of the United Nations Special Coordinator for the Middle East Peace Process
UNSCOL	Office of the United Nations Special Coordinator for Lebanon
UNSCR	United Nations Security Council resolution
UNTSO	United Nations Truce Supervision Organization
URL†	uniform resource locator
U.S.*	United States

USA*	United States of America [United States or U.S. preferred]; United States Army
USAF*	United States Air Force
USAFRICOM*	United States Africa Command
USAID	United States Agency for International Development
USCENTCOM*	United States Central Command
USCG*	United States Coast Guard
USDA	United States Department of Agriculture [or Agriculture Department]
USDAO*	United States Defense Attaché Office
USD(I)	Under Secretary of Defense for Intelligence
USEUCOM*	United States European Command
USF-I	United States Forces–Iraq [formerly MNF-I]
USFK	United States Forces, Korea
USGS	United States Geological Survey
USJFCOM	United States Joint Forces Command
USMC*	United States Marine Corps
USN*	United States Navy
USNORTHCOM*	United States Northern Command
USPACOM*	United States Pacific Command
USPER*	U.S. person
USSOCOM	United States Special Operations Command
USSOUTHCOM*	United States Southern Command
USSTRATCOM	United States Strategic Command
USTRANSCOM	United States Transportation Command
USV	unmanned surface vehicle
USW	undersea warfare
UTC	Coordinated Universal Time [also known as Greenwich Mean Time and as Zulu]
UUV	unmanned underwater vehicle
UW	unconventional warfare
UWB	ultrawideband

V

V*	volt(s)
VBIED	vehicle-borne improvised explosive device
VDS	variable-depth sonar
VDT	video display terminal
VDV	Russian Airborne Troops
VFR	visual flight rules
VGW	variable-geometry wing
VHF*	very-high frequency
VIP*	very important person
VISINT	visual intelligence
VISOB	visual observer
VLCC	very large crude carrier
VLF*	very-low frequency
VN	vulnerability number
VOIED	victim-operated improvised explosive device
VOIP	Voice Over Internet Protocol
VOR*	very-high-frequency omnidirectional range
VORTAC*	colocated VOR and TACAN
VSAT	very-small-aperture terminal
V/STOL	vertical/short takeoff and landing
VTOL	vertical takeoff and landing
VTR	tracked recovery vehicle

W

W prefix for ship designators	[Adding an initial W to an abbreviation for a naval ship or craft indicates a coast guard ship or craft; thus, a WLCU is an LCU (utility landing craft) assigned to a coast guard or coast-guard-like force.]
W*	watt(s)
WAN	wide-area network
WARM	wartime reserve mode
WB	wideband
WFP	World Food Program
Wh	watt-hour(s)
WHO	World Health Organization
WHQ	war headquarters
WIA*	wounded in action
WIG	wing-in-ground effect
WLL	wireless local loop
WMD*	weapons of mass destruction
WRM	war reserve materiel
WRMS	war reserve materiel stock
WSSIC	Weapon and Space Systems Intelligence Committee
WTO	World Trade Organization
WUNM	weapons-usable nuclear material
WWW	World Wide Web

X

XA	executive assistant
xmtr	transmitter
XO	executive officer

Y

yd*	yard(s)
yd2*	square yard(s)
yd3*	cubic yard(s)
yr*	year(s)

Z

Z*	Zulu [see Coordinated Universal Time (UTC); also known as Greenwich Mean Time]
ZIB	Ziyad al-Jarrah Battalions

CHAPTER 3: Capitalization

Social Security is a government program; *social security* might refer to whether you have a date Friday night.

—Bill Walsh, *Yes, I Could Care Less: How to Be a Language Snob Without Being a Jerk*

CHAPTER 3: Capitalization

The trend in American publishing has been to reduce the amount of capitalization in text. Proper nouns still are capitalized, of course, but often words derived from them are printed with lowercase without damage to clarity or significance.

Beginnings

Begin each sentence with a capital letter.

Begin each item in an indented listing with a capital letter. This applies to bulleted lists, lists marked with em- or en-dashes or other symbols in place of bullets, numbered lists, and nonbulleted lists—and it applies whether the items are full sentences, clauses, phrases, or single words.

The rule applies to the following types of indented lists:

- Lists marked with bullets (•), numbers, or other symbols (such as >) that are equivalents of bullets.
- Lists marked with em (—) or en (–) dashes.
- Lists that are indented but that lack initial markings.

Note: This rule generally has not been applied in this style manual so that fragmentary samples can illustrate desired combinations of uppercase and lowercase letters.

Proper Names

Capitalize proper names, also known as proper nouns.

Many authors feel a need to treat a common noun (the type of noun that identifies one or all of the members of a class of persons, places, things, qualities, or actions) as a proper noun (the type of noun that identifies a unique person, place, thing, quality, or action) because the author is writing about the thing or things a common noun represents. For example, an author discussing activities at a forward operating base in Afghanistan may feel a need to capitalize *forward operating base* because that type of thing is the focus of the author's attention. Nevertheless, the noun (or noun phrase) remains a common noun—and should not be capitalized—unless the author uses the name of a specific item from the class (a proper noun), such as *Forward Operating Base Kala Gush*.

Capitalizing Plurals

Capitalize the plural form of a common noun when it follows the proper adjective portion of two or more proper names.

Baltic and Black Seas
Tigris and Euphrates Rivers
Helsinki and Turku Naval Bases
Helmand and Kandahar Provinces

Forward Operating Base Kala Gush
but a forward operating base; three forward operating bases

Ninawa Reconstruction Team
but a provincial reconstruction team; two provincial reconstruction teams

Karbala Provincial Council
but a provincial council; affecting all provincial councils

UN Security Council Resolution 1600
but a UN Security Council resolution; UN Security Council resolutions

Most decisions on capitalizing names are concerned with common nouns that occur as parts of proper names, derivatives of proper names, and particles with names.

Common Nouns in Proper Names

Capitalize common nouns as parts of proper names but *not* when the common noun is separated from the rest of the name by a word or phrase or when the common noun stands for the name of the place or thing.

- The Persian Gulf is an exception because of its prominence in military writing. Thus, we write "the Gulf War," "Gulf states," etc. Use lowercase for *gulf* as a common noun referring to any other gulf—for example, "Operations in the Gulf of Aden have increased because of pirates' activities in the gulf."

Quebec Province; Province of Quebec; Quebec, Canada's separatist province; the province
the Panama Canal; the canal
the Volga River; the river
Volgograd Command Post and Barracks; the command post; the barracks in Volgograd
Gwadar Port; the port
Puerto Quetzal; the port
Target Intelligence Conference; the conference
the Gulf of Aden; the gulf
the English Channel; the channel
Korean Peninsula; the peninsula

Capitalize *treaty* when it is part of the proper noun title or shortened title of a signed treaty; however, use lowercase for the word *treaty* when it is part of the name of an agreement that is not yet signed. Use lowercase for *treaty* when it stands alone for an agreement.

the Conventional Armed Forces in Europe Treaty; the CFE Treaty; the treaty
A conventional forces in Latin America treaty has never been developed.
The treaty was signed in 1973 but was not approved by the legislatures of all participating nations until 1984.
treaty-limited equipment

Use lowercase for *constitution* in most cases; use initial capitalization only when referring to the U.S. Constitution.

Derivatives of Proper Names

Capitalize the proper name portion of names that retain an association with their origin.

Bailey bridge [a bridge type]	Internet websites	neo-Stalinism
Castroite sympathies	Islamization	Patton tank
degrees Celsius	Leninist doctrine	Ponzi scheme
degrees Fahrenheit	Marxism	Trojan horse
Doppler effect	Morse code	World Wide Web

Use lowercase for derivatives of proper names when they have acquired independent meanings. (The U.S. Government Printing Office *Style Manual*, available on NIPRNET, contains a more extensive list.)

anglicize	india ink	pitot tube
angstrom unit	italicize	plaster of paris
arabic numerals	italic type	quisling
arctic clothing	jeep [as vehicle type, not trade name]	quixotic
artesian well	joule	quonset hut
bohemian	macadamized road	roentgen

bowie knife	mach	roman candle
braille	madras cloth	roman numerals
degaussing	manila envelope	roman type
diesel engine	mason jar	sanforize
fuller's earth	mecca [as place of interest, not city]	utopia
gargantuan	molotov cocktail	vaseline
gauss	neon light	venturi tube
german silver	newton	vulcanize
gothic type	pasteurize	watt
herculean task	philistine	website
holland cloth	pitman arm	zeppelin

Capitalize trade names that have not been forced into the generic language. However, unless you know a particular item is the genuine trade article, you'll do better to substitute the generic term.

air-cushion vehicle or hover craft [unless it is a real Hovercraft]
fiberglass [unless it is Owens-Corning Fiberglas]
a copy or photocopy [unless it is a Xerox copy]
a vacuum container [unless it is a real Thermos]
clear thermoplastic sheet [unless it really is Plexiglas]

Use lowercase for international and national currencies, even though a number of them may appear to be based on proper names, such as the euro, the bolivar, and the balboa.

afghani	dollar	peso
balboa	euro	pound
bolivar	franc	ruble
deutsche mark	lira	rupee

Particles With Proper Names

Capitalize *the* or its equivalent in a foreign language when it is part of an official name. When the name is used as an adjective, an uncapitalized *the* may precede it—despite the redundancy for a non-English name.

The Hague; the Second Hague Conference
El Salvador; the El Salvador situation
The Bahamas; the Bahamas Tourist Office
The Gambia; the Gambia mapping project

For many place names, convention calls for a lowercase *the*, especially with names of regions, island groups, rivers, and mountain ranges; place names that are in plural form; and place names that are adjective-noun compounds.

the North Caucasus	the Ural Mountains
the Midwest	the Netherlands
the Spratly Islands	the United States
the Tigris River	the United Kingdom

Do not capitalize *the* when it begins the name of a newspaper or other periodical; the name of a vessel, aircraft, or train; or the name of a firm. This rule applies even though *The* may appear as part of a newspaper's name on its masthead, as part of a vessel's name, or as part of a business's name.

the *Washington Post*
the *Times*
the *Los Angeles* [proper name of a ship]
the Hershey Company

In many European names, *d', de, della, den, du, la, l', van, vander, von,* and so forth normally are not capitalized except at the beginning of a sentence. The convention for the same particles for individuals born in English-speaking countries varies widely; try to find out how the individual capitalizes his or her name, but use the lowercase form if that information is not available.

Arabic Persons' Names. When *al-* is part of a person's name in Arabic, include the *al-* when writing out the individual's full name the first time, as in "DIA judges that Iraqi Prime Minister Haydar al-Abadi will modify the plan." For subsequent references to the same individual, drop the *al-*, as in this secondary reference in the same paper: "Diplomats have noted that Abadi expects the plan to include three phases." Also, note the hyphen with the *al* in "Haydar al-Abadi":

> Intelligence Community (IC) guidance requires first that IC agencies follow spellings of individuals' names as they appear in *The World Factbook* no matter what transliteration practices might indicate. For the many Arabic names that do not appear in *The World Factbook*, IC guidance directs that agencies follow an IC standard for transliteration of Arabic. This standard calls for hyphens to "connect name elements within a name," as in "Abd-al-Rahman" and "Abu-al-Bashar." However, hyphens are not used in names that include *Allah* as part of the name (as in "Abdallah" or "Nasrallah") or names marked by the lineage/family marker *Al* (as in "Al Saud"), though this latter situation is rare and occurs mostly with names of individuals in Gulf Arab royal houses.
>
> *The World Factbook* is available on JWICS at <https://www.cia.us.qlat/DI/Factbook/index.html>.

Arabic Place Names. Presentation of *al* and similar elements associated with place names in Arabic follows different rules—those of the Board on Geographic Names (BGN), which the National Geospatial-Intelligence Agency (NGA) uses for most of the Middle East. For Arabic place names, *al* appears with an uppercase A, and no hyphen joins *Al* to the rest of the name, as in "Al Basrah" and "Al Qanbariyah" in Iraq.

> A further difference exists between the IC standard for presenting Arabic personal names and the BGN's standard for spelling Arabic place names that include *al*. The IC standard for personal names transliterates the definite article *al* as it is *written* in Modern Standard Arabic (MSA)—*alif lam*. The BGN transliterates the definite article *al* in place names as it is *pronounced* in MSA. In MSA pronunciation, *al* is "assimilated" when followed by one of the 14 "sun letters." When preceding the letter *nun*, for example, *al* is pronounced "an"—*alif nun*. Therefore, the BGN renders an Iraqi city as "An Najaf" rather than "Al Najaf." Similar examples are "As Sulaymaniyah," "Ar Ramadi," "Ash Shamiyah," "Ad Diwaniyah," and so forth.
>
> NGA maintains a searchable database of place names using BGN standards on NIPRNET: <http://www.geonames.nga.mil/namesgaz/>. Search this database with "Options" set for "No Diacritics" and "BGN Standard" when you are seeking only BGN-approved spellings of place names.

Arabic Business/Organization Names. For names of businesses or business-related organizations with Arabic portions in their names, follow the presentation style for *al-, al, Al,* or *Al-* as that element appears in the source of the information. Businesses and business-related organizations use a variety of styles for presenting such an element, as company literature, business websites, and business directories demonstrate. If multiple sources show conflicting styles for the same business or organization and you have no way of finding out what the company or organization itself prefers, use *Al-* as the default.

Dresser Al-Rushaid Valve & Instrument Ltd	Dallah al Baraka Group
Ras Al Khaimeh Gas Commission	Dr. Al-Oufi Law Firm

A'amal Al Nashi Transportation Est.
Al-Arabiyah [television network]
Al-Furat [television network]

A M Al Khorafi Est.
Al Jazeera [television network]
Al-Furat [newspaper]

Arabic Names Occurring Within Sentences. When an Arabic name with *al-* as part of the name begins a sentence, the first letter of *al-* must be capitalized. However, when a name with *al-* as part of the name occurs within a sentence, keep the *al-* in its lowercase form. Of course, if *Al* has initial capitalization, as in a place name, the *Al* will have initial capitalization whether it begins a sentence or occurs within the sentence.

Al-Qaida in Iraq had maintained a presence since....
When al-Qaida in Iraq sent fighters into....
Operations in Al Basrah began during....

Arabic Names in Titles or Headings. When an Arabic name with *al-* as part of the name appears in a title or heading, keep the *al-* in lowercase form unless the name begins the title/heading or appears immediately after a colon that connects a subtitle/subheading to a main title/heading:

Al-Qaida in the Arabian Peninsula Resizing Its Forces in the South
A Volatile South: Al-Qaida in the Arabian Peninsula Resizing Its Forces
Iraqi Government Operations Against al-Qaida Fighters

Organized Bodies

Governmental Bodies

Capitalize the proper name of a *national* governmental body as well as the shortened form of the proper name. Use lowercase for generic equivalents of the proper names and for shortened forms of the names of administrative bodies.

the U.S. Congress; the Congress; a congressional delegation
the British Parliament; the Parliament; the British legislature
the Colombian Congress; the Congress; the Colombian legislature; the Colombian parliament
the Icelandic Althing; the Icelandic parliament; the Icelandic legislature
the Ecuadorian National Congress; the Congress; the legislature
the Austrian Federal Assembly; the congress; the parliament
but the Pakistani Ministry of Law and Justice; the ministry
the Mexican National Public Safety Council; the council

Use lowercase for *government* (except *U.S. Government*) or its equivalent and for *administration*.

the U.S. Government; the British government; the government of Italy; the national government; the Brown government; the government; the Obama administration; the administration

For the United States only, use initial capitalization for *Cabinet*.

the U.S. Cabinet; President Obama's Cabinet; the Cabinet

Parliament
Capitalize *Parliament* if it is the actual name of a country's legislature, but use lowercase *parliament* if the legislature actually has a different name. Check *The World Factbook* if you are uncertain about a legislature's proper name.

For the United Kingdom and the Commonwealth of Independent States, capitalize *Commonwealth* as part of the proper name and standing alone as a substitute for the full name.

the British Commonwealth; the Commonwealth; Commonwealth negotiations
the Commonwealth of Independent States; the Commonwealth; Commonwealth military issues

For *subnational* governmental bodies, capitalize only the full proper name; avoid shortened forms that might be confused with shortened forms of national equivalents.

the Commonwealth of Virginia; the commonwealth
the Maryland House of Delegates; the state legislature
the Quebec Parliament; the provincial parliament
the Jerusalem Municipal Council; the municipal council
the Karbala Provincial Council; the council

Military Forces

The names of a nation's military and police forces or services depend on how the nation's forces are structured. Do not assume that a nation's force names mirror those of the United States.

For the United States, capitalize *Armed Forces* when the term appears with the nation's name, but use lowercase if the name is separated from it.

the U.S. Armed Forces; the Armed Forces of the United States; the capabilities of the U.S. Armed Forces
but The capabilities of the armed forces have improved.

For the rest of the world, use lowercase for *armed forces*, unless *armed forces* is part of the proper name.

the Argentine armed forces; the armed forces of Argentina; the armed forces
the Lebanese Armed Forces; the armed forces

Note: This guidance also applies when an acronym is being established for use in subsequent references to the military:

The structure of the Argentine armed forces (AAF)....

Capitalize the full proper name of a military force, military service, or national police force as well as a shortened form of the proper name. Use lowercase for generic terms related to force names and for names of forces that are being considered but that have not yet been developed. Terms such as *army, navy, air force,* and *marines* will be generic labels if a nation's proper names for its forces use other terms or if a nation's military structure is too small to include a developed army, navy, and so on.

the U.S. Army; the Army; Army fighting vehicles [controlled by the U.S. Army]
the U.S. Navy; the Navy; Navy surface ships [controlled by the U.S. Navy]
but naval; naval weapons [generic reference]; naval vessels [generic reference]
the U.S. Marine Corps; the U.S. Marines; the Marines; a Marine; a Marine landing craft [controlled by the U.S. Marines]; a marine amphibious craft [generic reference to a vessel type]; development of marine tactics [generic reference]
the U.S. Air Force; the Air Force; Air Force fixed-wing aircraft and helicopters [controlled by the U.S. Air Force]
the U.S. Coast Guard; the Coast Guard; a Coast Guard rescue vessel [controlled by the U.S. Coast Guard]
the Egyptian Army; the Army; the Egyptian ground forces; army equipment [generic reference to an equipment type]; army, division, or regiment level
the People's Liberation Army; the PLA; the Chinese Army; the Army; Chinese ground forces; the People's Liberation Army Air Force; the Air Force
the French Navy; the Navy; naval units [generic reference]; naval combatants [generic reference]

the Royal Air Force; the Air Force; an Air Force pilot [controlled by the Royal Air Force]
the Syrian Arab Air and Air Defense Forces; the Air and Air Defense Forces; Air Defense units [controlled by the Syrian Air and Air Defense Forces]; air defense guns and missiles [generic reference to weapon types]
the Spanish Guardia Civil [the Spanish form of the proper name]; the Spanish Civil Guard [the English equivalent for the proper name]; Spain's national police; the national police
the Barbados Coast Guard; the Coast Guard; the navy of Barbados
the Jamaica Air Wing; the Air Wing; Jamaica's air force; the air force

The Russian military has six combat arms: the Ground Forces, the Navy, the Air Forces, the Airborne Troops, the Strategic Rocket Forces, and the Space Troops. In this structure, *army* is a generic reference:

the Russian Ground Forces; a Ground Forces unit; the Russian army; an army unit

Use lowercase for shortened forms of individual unit names.

the 1st Army; the army
the 6th Fleet; the fleet
the 1028th Brigade; the brigade
I Corps; the corps

Use lowercase—other than for proper names—for military services as a group, for general references to one kind of service in the plural form, or for the plural form of a military service type for more than one country.

the British military establishment
NATO naval forces; NATO navies
Central European air forces
British-supplied air force, naval, and ground equipment
but Greek and Turkish Navies; British, Indian, and French Air Forces [the plural form of the common noun following the proper adjective portion of two or more proper names]
the armies of the United States and the United Kingdom

U.S. Military Services and Combatant Commands

For the U.S. military, use initial uppercase for *Military Service(s)* but lowercase for *service(s)*, *unified command(s)*, *specified command(s)*, and *combatant command(s)*.

Do not capitalize these terms in connection with the militaries of other countries or for U.S. commands below the combatant command level (except as part of the full name of a command).

International Organizations

Capitalize the full proper name of an international organization and its subelements; use lowercase for shortened forms of the names and for use of the terms in general senses.

the UN General Assembly; the assembly
the International Bank for Reconstruction and Development; the bank
representatives from a number of international banks

Diplomatic and Consular Units

Capitalize the name of a specific embassy, mission, or consulate. Use lowercase for shortened forms of those words and for their use in general senses—except for U.S. diplomatic entities, which should appear with initial capitalization.

the British Embassy in Washington; the embassy
the French Consulate in New York; the consulate

reports from African embassies
members of diplomatic missions
the U.S. Embassy Rome; the Embassy; the U.S. Consulate General Naples; the U.S. Consulate in Naples; the Consulate; the U.S. Mission; a spokesman for the Mission

DIA-Specific Capitalization

This manual is consistent with the DIA *Correspondence Guide* on initial capitalization for several terms used frequently in correspondence and in papers dealing with DIA structural issues related to analysis.

The Agency

Use initial capitalization for *Agency* when it is a substitute for the "Defense Intelligence Agency."

- Use initial capitalization for *Federal* (as in "Federal agencies"), *Government*, and *Nation* for passages dealing with the United States only.
- Capitalize *Directorate*, *Office*, and *Center* when discussing those specific DIA structural elements, but use lowercase for generic senses. Do not capitalize *division*, *branch*, *section*, or *team* unless they are part of the full name of an Agency element.
- Use initial capitalization for *Defense* when referring to the U.S. Defense Intelligence Community: "developments in Defense Intelligence"; "Defense initiatives"; "the Defense Intelligence Enterprise"; "the Defense Intelligence Community."

Political Parties and Philosophies

Party Names

Capitalize the full or shortened name of a political party, but not the word *party* standing alone.

the Chinese Communist Party; the CCP; the Communist Party; the party
the Italian Socialist Party; the Socialist Party; the party

Philosophies

Capitalize words referring to members of organized parties, but use lowercase for words referring to political philosophies and their adherents.

a Socialist; a Communist; a Liberal; a Labourite; a Conservative; a Tory; a Christian Socialist [party members]
a British socialist belonging to the Labour Party
Eurocommunism; noncommunist countries; communist countries; anticommunist movement; a procommunist organization; a communist party called the Socialist Unity Party
liberal parties of Western Europe
but Christian Democrat, Christian Democracy, and Christian Democratic
[The *D* is capitalized as well as the *C* to prevent confusing adherents of Christian Democracy with Christians who adhere to democracy.]

Religious Terms

Capitalize names of religions, specific religious bodies, and terms for religious adherents and their writings.

Christianity
Catholicism
Catholic Church; the Church
the Bible; Biblical text
a Protestant
Judaism
Talmudic scholar
Quranic law
a Muslim
an Islamist
the Musa Qala Shura
but shura members
Ansar al-Sunnah Sharia Council
but sharia law; sharia court; a sharia council

Use lowercase for religious terms used in nonreligious senses.

a bible for intelligence writing
her catholic approaches to English usage

Geographic Terms

Use lowercase for terms denoting direction or position on the Earth.

north	northerly	northern Norway
west	north-northwest	the polar region
southwest	east coast	polar icecap
eastward	southern France	

Capitalize geographic terms for definite regions and geographic features. For political or administrative groupings, capitalize the term for the political/administrative grouping when it is used with a geographic term to form a proper name—for example, *province* in Kandahar Province or *governorate* in Diyala Governorate—but use lowercase for the political or administrative term when it is used generically—for example, in "European countries," "the Maghreb states," "Afghan provinces," and "Iraqi governorates."

the North Atlantic	Korean Peninsula
the West	Gaza Strip
the East	East-West dialogue
the Western Hemisphere	Mediterranean coast
the Middle East	Midwestern states
the Continent [continental Europe]	Western countries
Caribbean Basin	Persian Gulf states; Gulf states
North Pole	Baltic states
Holy Land	former Soviet republics
Equator	Helmand Province
San Andreas Fault	An Najaf Governorate
North and South Poles	South Sudan
	but northern Sudan

For individual studies, particular attention may be focused on a locality, and a name may be coined to distinguish that locality; in such a case, capitalize the coined name. This capitalization does not apply to general references to localities.

the cocaine industry in Peru's Upper Huallaga Valley [designating a particular locality for focused attention]
but farming along the lower Orinoco [a general reference to a locality]

Capitalize geographic terms used to divide the world into groups of countries for intelligence writing.

Middle East; Middle Eastern	Western Europe; West European
North Africa	Eastern Europe; East European
Sub-Saharan Africa	Central Europe; Central European
West Africa	Latin America
East Africa	Middle America
South Asia	Central America
East Asia	*but* southern Afghanistan
Central Asia	central Russia
	northern France

Capitalize the names of the celestial bodies the Sun, the Moon, and the planets (including, of course, the Earth). When the name of one of these bodies is used in a sense not associated with its being a celestial body, use lowercase.

Earth orbit; near-Earth orbit; orbit the Earth; position on the Earth; the Earth's crust;
but digging in the earth [here *earth* is equivalent to *dirt*, not the name of the planet]
Moon landing, moonlight
orbit the Sun, the Sun's rays; sunshine

Use lowercase for descriptive geographic terms.

tropical temperature
arctic conditions; arctic nights
polar exploration

Nationalities, Tribes, and Other Groups of People

Capitalize the names of racial, linguistic, and religious groupings, but use lowercase for terms based on racial origin, color, or local usage. In most cases, lowercase the word *clan*; capitalize it only in the Scottish context when preceding the clan name.

African-American
Indo-European
Jewish
Maori
Native American
Darod clan
Shia; Shiite
Sunni
aborigine
black
white
but Clan MacArthur

Coined Names

Capitalize full proper forms of coined names for military, economic, political, or other groupings. Use lowercase for the shortened forms of the names and for generic references.

the former Warsaw Pact; the pact; pact countries
the North Atlantic Treaty Organization; NATO; the alliance; allies; allied
the European Community; the community
the European Union
the Big Four
the Muslim World; Muslim countries
the Arab World
the former Soviet Bloc; the bloc
Six-Party Talks
the Developing World
the Greens
the Intelligence Community [U.S.]; the community
the Defense Intelligence Community [U.S.]; the community

Capitalize holidays, religious feasts, and names coined to designate historic or political events.

New Year's Day
the New Year
the Feast of the Passover
the Great Leap Forward
the Holocaust
the Battle of the Bulge
the Islamic Revolution
the Great Depression
the Rose Revolution
the New Deal

Capitalize the names of wars, including coined names designating wars, but use lowercase for the word *war* when it stands alone or is used in a generic sense.

World War II
post-World War II
World War I
the Civil War
the Six-Day War; 1967 Arab-Israeli War
the Yom Kippur War; the October War
the Korean War
the Vietnam War
the Iran-Iraq War
the Cold War
the Global War on Terrorism
the first Persian Gulf War; the first Gulf War; the first Iraq War
but the war; in the second world war; during two world wars; a civil war

Titles of Persons

When an individual's title *immediately precedes* the person's name, capitalize the title. However, when the title follows the name, including being in apposition to it, or replaces the name, use lowercase for the title. Do not confuse a description with a title. Similarly, capitalize only valid titles; use lowercase for terms identifying illegitimate actors.

Prime Minister David Cameron; Prime Minister Cameron; the prime minister
Defense Minister Juan Carlos Pinzon; Defense Minister Pinzon; the defense minister; Juan Carlos Pinzon, Colombia's defense minister
a meeting of the defense ministers of all the region's nations
special emissary Habib
al-Qaida emir Zawahiri
Taliban shadow governor Salam

The U.S. President

For U.S. presidents only, capitalize *President* except when using the term in a general sense or in a general reference to a group of U.S. presidents.

President Barack Obama; President Obama; Barack Obama, the U.S. President; the President
but a meeting of all living U.S. presidents; the presidential election

Chief of the Defence Staff Lt Gen Thomas Lawson; the chief of the Defence Staff; Thomas Lawson, the chief of the Defence Staff; the Defence Staff chief; the chief
Chilean Army Commander in Chief Gen Juan Miguel Fuente Alba; Commander in Chief Gen Fuente Alba; the commander in chief; Gen Fuente Alba, the commander in chief of Chile's Army
101st Airborne Division Commander Maj Gen James McConville; Maj Gen James McConville, commander of the 101st Airborne Division; the division commander; the commander
but the Supreme Allied Commander, Europe; the commander
the Chairman, Joint Chiefs of Staff [U.S.]; the chairman; the general

In official correspondence, use initial capitalization for titles of high-level officials, with or without a name.

the Deputy Under Secretary of Defense for Policy
but the workforce development program manager

Capitalize *Acting* if it is part of an official title. Use lowercase for *former*, the prefixes *ex-* and *then-*, and the suffixes *-designate* and *-elect*.

Acting Party Chairman Spelling; the acting party chairman; the acting chairman
former Communist Party General Secretary Gorbachev; former party chief Gorbachev
Prime Minister-elect Fields; the prime minister-elect
then-President Shorter; the then-president

Titles and Headings

For titles of publications (books, journals, magazines, newspapers, newsletters, reports, etc.), articles in publications, television and radio programs, sections, chapters, headings, figures, tables, and headings and subheadings within tables, follow these guidelines:

- Capitalize the first and last word and the first word following an em-dash or colon; nouns, pronouns, verbs (including the *to* of an infinitive), adjectives, adverbs; prepositions and conjunctions longer than three letters; and parts of compounds that would be capitalized standing alone.
- Use lowercase—except for the first or last word or the first after a colon or em-dash—for the articles *a, an,* and *the;* prepositions shorter than four letters (*at, by, for, in, of, on, to,* and so on); conjunctions shorter than four letters (*and, as, but, if, or, nor*); and the second element of a compound numeral.

Spotting Terrorists: What To Look for and Where To Look
Warlords and Other Militant Leaders
Pacific Alliance—The United States and Japan
"Nothing but Trouble: Divisions Within the Party"

Cross-References

In cross-references, use initial capitalization for the common noun portion of numerical or letter designations of chapters, parts, sections, phases, stages, graphics, tables, appendixes, and so on.

covered in Chapter 3
included in Appendix B
expected in Phase 3
(see Figure 13)
detailed in Table 5

Word Equivalents of Abbreviations/Acronyms

The capitals used for an abbreviation—including an acronym—do not necessitate capitals for their word equivalents. If the abbreviation/acronym is for a proper name, use capitals for the words; otherwise, use lowercase.

the Strategic Arms Reduction Treaty (START)
the Intermediate-Range Nuclear Forces (INF) Treaty
a treaty applying to all intermediate-range nuclear force (INF) operations within ground-controlled intercept (GCI) coverage

Emphasis

Avoid using capitals for emphasis. Boldfaced type, italics, and placement (centering or indenting) are more effective, less distracting means to provide emphasis.

Seasons

Use lowercase for the seasons of the year. [*Note: the … of* is not necessary in passages dealing with a season of a specific year: *not* "a conference in the spring of 2007," *but* "a conference in spring 2007."]

a meeting in summer 1999
no later than fall 2008

Military Equipment Designators

Use initial capitalization for the nicknames for aircraft, ships, and other weapon systems, including NATO-designated nicknames for military equipment. Use *class* with the name of a class of ships to indicate that the name is for the entire class, not just the first ship from the class; however, *class* is

optional when context makes clear that a name is for the ship class. Use italics for the proper name (but not the type or class) of an individual ship, aircraft, or spacecraft; do not use italic type for the nation indicator when you include it with the proper name.

Yankee class submarine; two Yankees; Polaris class submarine; Polaris submarine
Sovremennyy class guided-missile destroyer; Sovremennyy destroyer
MiG-29 Fulcrum fighter; L-39 Albatros
AA-10 Alamo air-to-air missiles
Tu-22M Backfire bomber
Ka-25 Hormone helicopter
SA-4 Ganef surface-to-air missile
Scud surface-to-surface missile
Knife Rest radar
Alouette III helicopter
HMS *Ark Royal*; USS *Enterprise*; the *Spirit of St Louis*
the Kiev class aircraft carrier *Admiral Gorshkov*; the *Admiral Gorshkov*; the *Gorshkov* task group
the *Soyuz-3*; the latest Soyuz TMA spacecraft
the Concorde; a Leopard tank

Military Exercises, Operations, and Special Projects

Use all uppercase for codenames or covernames assigned to military exercises, operations, and special projects or programs.

during Exercise SOYUZ-85; the SOYUZ-85 exercise
Exercise ULCHI FOCUS LENS
Operation ENDURING FREEDOM
the STONE'S THROW test project
BYZANTINE HADES information

Academic Degrees

Use initial capitalization for the names of academic degrees, but use lowercase for references to degrees in a general sense.

Doctor of Law; Doctor of Veterinary Medicine; doctor's degree in law; doctorate
Master of Arts in English; Master of Arts in the humanities; master's degree in education
Bachelor of Science in computer science; bachelor's degree
associate's degree in communication applications

Chemical Elements and Isotopes

Show the names of chemical elements and compounds in lowercase as words but with initial uppercase for chemical symbols. (By international agreement, in technical symbology the mass number of an isotope appears in superscript form to the left of the symbol for the element; that is, technically the symbol for uranium-235 is ^{235}U. However, for less technical writing, such as intelligence papers, the more common rendering of the symbol is U-235.)

sodium chloride; NaCl
sodium citrate; $Na_3C_6H_5O_7.2H_2O$
uranium; U; uranium tetrafluoride; UF_4; uranium hexafluoride; UF_6
uranium-235; U-235; uranium-238; U-238

Plant and Animal Genus and Species

Use uppercase for a plant or animal genus and lowercase for the species (even in titles and headings). (Both genus and species also appear in italics.) After the first use of a genus, it can be abbreviated (but it remains uppercase and italic). Higher divisions of plants and animals—phylum, class, order, and family—are capitalized but shown in roman type.

Clostridium botulinum; C. botulinum [on subsequent use]

Giardia lamblia; G. lamblia [on subsequent use]

Escherichia coli; E. coli [on subsequent use]

Anthropoda [phylum]

Mammals; Mammalia [class]; destruction by some sort of mammal [generic reference, not a reference to the class]

Rodentia [order]

Hominidae [family]

CHAPTER 4: Numbers

It is stylistically poor to begin a sentence—or a paragraph—with a numeral *<1997 saw the publication of no fewer than 3,700 mystery novels>*. Some journals, such as *The New Yorker*, would make that sentence begin, *Nineteen ninety-seven saw. . . .* But most writers and editors would probably simply begin the sentence some other way, as by writing, *In 1997, no fewer than 3,700 mystery novels were published.*

—Bryan A. Garner, *A Dictionary of Modern American Usage*

CHAPTER 4: Numbers

Numbers can appear in writing as numerals (numeric symbols, like 1, 2, 3 or I, II, III) or as words or groups of words. Most rules for presenting numbers have to do with determining which form—numerals or words—is more appropriate for a particular situation. This chapter provides a set of basic rules that cover most circumstances and other rules for special situations or factors related to using and presenting numbers.

Writers sometimes try to reduce guidance for using numbers to only two rules: spell out numbers below *x*, but use numerals for numbers *x* and above. As appealing as that logic is in its simplicity, it just does not account for the variety of situations in which writers use numbers in their text and tables. As cumbersome as the rules in this chapter may appear at first, they provide a logical and consistent appearance for numbers in publications.

As *The Chicago Manual of Style* points out, several factors affect whether numbers should appear as numerals or words:

- The size of a number (our most basic rule has to do with whether a number is less than 10 or equal to or greater than 10).
- The kind of entity a number represents (another basic rule deals with units of measure, time, or money).
- Whether a number is exact or indefinite (we treat numbers differently if they are nonliteral or indefinite).
- The context in which a number appears (for example, a number that starts a sentence receives special treatment, and we vary treatment of numbers somewhat when they appear in tables rather than text).

The basic rules and all of the variations of the basic rules are related to these factors.

Basic Rules

1. **Except at the beginning of a sentence, show numbers 10 or greater as numerals.** If a number is the first word of a sentence, however, spell it out.

   The job took 12 workers 30 days.
   Forty-three workers built the bridge.

- We make an exception for a number that is the first "word" of a sentence or sentence fragment in a comments or remarks field in a table. Such a number can appear as a numeral rather than a word. See "Numbers in Tables" below for an illustration of this exception.

2. **Except for units of measurement, time, and money, spell out numbers less than 10.**

   The shipment consisted of three tanks and two armored personnel carriers.

3. **For specific units of measurement, time, and money, use numerals, regardless of whether a number is less than, equal to, or greater than 10.** (Rules related to those types of numbers will be treated in greater detail following these basic rules.)

   In the past 11 years, no new incidents have occurred.
   In the past 3 years, no new incidents have occurred.

4. **When numbers 10 or greater are mixed with numbers less than 10, follow either rule 4a or 4b below for numbers within a sentence.** The rule that applies depends on whether any of the numbers are for measurements, time, or money.

   a. When a sentence contains both numbers less than 10 and numbers equal to or greater than 10, use numerals for all the numbers. The following examples have both numbers less than 10 and numbers equal to or greater than 10, but none of the numbers are for measurements, time, or money.

      The attack involved 60 soldiers, 5 tanks, and 2 helicopters.
      The attack involved five tanks and two helicopters.

In the first example, *5* and *2* are numerals because of the *60* in the same sentence. In the second example, *five* and *two* are words because the sentence does not contain a number 10 or greater.

b. Units of measurement, time, and money—which should appear as numerals—do not affect the other numbers in a sentence and are not affected by them. Those other numbers continue to follow rule 4a above.

> In the past 11 years, only two attacks and seven casualties have occurred.
>
> In the past 11 years, 2 attacks and more than 120 casualties have occurred.
>
> In the past 3 years, 2 attacks and more than 120 casualties have occurred.
>
> In the past 3 years, only two attacks and seven casualties have occurred.

The *11 years* (a measure of time), though greater than 10, does not affect the form of the other numbers in either of the first two sample sentences. In the third sample, the *120* does not affect the *3 years*; the numeral *3* is appropriate simply because it is for a measure of time. In the first sample, *two* and *seven* are words because each of them is less than 10 (and *11 years* has no bearing on the form in which those numbers appear). In the fourth sample, *3 years* has no bearing on the form for the other numbers in the sentence, which are words because both of them are less than 10. In the second and third samples, both *2* and *120* are numerals because of the *120* in each sentence.

Turning Off Superscripting for Ordinal Numbers

Word 2007's default autocorrection settings automatically superscript the endings of ordinal numbers as you type unless you turn this feature off. To turn it off, follow these steps:

1. Click on the "Word Options" selection at the bottom of the drop-down box that appears when you select the round Microsoft Office logo, which is in the upper-left corner of all Word ribbons.
2. Select "Proofing" in the list at the left side of the "Word Options" drop-down box.
3. Select "AutoCorrect Options," near the top of the available selections.
4. Select the "AutoFormat" tab in the drop-down box.
5. Deselect "Ordinals (1st) with superscript" and click on "OK."
6. Select the "AutoFormat As You Type" tab in the drop-down box.
7. Deselect "Ordinals (1st) with superscript" and click on "OK."
8. Click on "OK" in the "Word Options" box to clear it from your screen.

This will prevent Word from putting the endings of ordinal numbers in superscript form as you type. It will not automatically change superscripted ordinals that have been saved in a document, but it will make correcting text easier.

However, spell out a number less than 10 if it is clearly unrelated to the other numbers in a sentence.

> At one hearing, all 15 local members of the group pressed for a 1-week delay to allow members from outside the country to arrive.

Other Number Rules

Ordinal Numbers

Ordinals indicate order in a series: 1st, 2nd, 3rd, 4th, etc. The basic rules generally apply to ordinal as well as cardinal numbers (1, 2, 3, etc.)—except for designators for military units. However, when ordinal and cardinal numbers appear in the same sentence, the basic rules apply to each type of numeral independently: ordinals do not affect cardinals, and cardinals do not affect ordinals.

> The third group contained two items.
>
> The third group contained 12 items.
>
> The 3rd and 10th groups contained three items each.
>
> The 3rd and 10th groups contained 3 and 11 items, respectively.

- Ordinal numbers should appear with the *nd, rd, st,* or *th* portion on the line, rather than in superscript form ("22nd" rather than "22nd").

Military Unit Designators. Except for the exceptions below, present the designators for foreign military units using arabic numerals (rather than roman numerals or words) and in ordinal form (for example, "the 115th Infantry Division" rather than "the 115 Infantry Division"). Use these presentation forms no matter how the foreign military itself presents the designators. Abbreviating the word portion of unit designators is acceptable in tables and graphics when space is a limitation, but write out the words in text.

323rd Fighter Wing
451st Motorized Rifle Division

- Exception 1: Use roman numerals for U.S. Army corps (but not for foreign corps).

XII Corps
XVIII Airborne Corps

- Exception 2: In text, use words for China's Second Artillery Corps.

Numbers in Tables

Except within footnotes to a table, all numbers within a table will be numerals, even if the table contains textual remarks. If a remarks or comments column contains sentences or sentence fragments, those can begin with numerals (see the final portion of the second remarks entry in the following sample). Within footnotes to a table, however, follow the basic rules for numerals in text, and do not begin sentences with numerals.

Wharf Reference	*Months*	*Cargo-Handling Equipment*	*Remarks*
South Pier	Breakbulk 2G	2 mobile jib cranes; [1] portal jib crane	Discharge 680 t/d breakbulk.
North Pier	Container 36-C	2 straddle cranes	Discharge 10,000 t/d container. 30-meter RO/RO ramp planned.[1]

[1] Currently the port has no RO/RO capability. Construction of one ramp here and two at nearby Port Manatil will open the country's Pacific coast to RO/RO shipping.

Numbers at Beginnings of Sentences

If you cannot avoid beginning a sentence with a number, spell it out. That spelled-out number, however, will have no effect on the form (numeral or word) of other numbers in the same sentence; they will continue to follow the basic rules as if the opening number did not exist.

Fifty kilometers away, rising to 3,500 meters, is Mount Finch.
Fifty kilometers away, along a 7-km ridge line, were three guerrilla bases.

Metric Units

In response to U.S. public law, DIA has used metric units for most measurements since 1976. The International System of Units (SI), which we commonly call the metric system, is the standard for scientific disciplines, is used commonly among the Military Services, and is the standard of allies with whom we collaboratively produce products and to whom we release intelligence.

Preferences exist for which units are to be used with which quantities. In addition, some nonmetric units still are appropriate.

- Cubic meters and kilograms are preferred for volume and mass, but liters and metric tons are preferred for fuel capacity and bulk mass (wheat, coal, and others). Bushels, barrels, and barrels per day may be used.
- Use square meters for floor areas within buildings and for other covered structures, including caves, and small open-air storage areas less than 10,000 square meters. Use hectares for large open storage areas (equal to or greater than 10,000 square meters, since 1 hectare equals 10,000 square meters) and cropland (except for small gardens), forests, etc. Use square kilometers for land areas of large political units (urban areas, districts, provinces, states, countries, etc.), for areas of military operations, and for enclosed bodies of water (unless the body of water is so small, as with a pond, that showing square meters is more appropriate).
- Use kilotons and megatons for nuclear weapon yields.
- Weights for standard U.S. bombs usually are given in pounds rather than kilograms—for example, "a 5,000-lb penetrating warhead."
- Use degrees (rather than radians) for azimuth, beamwidth, inclination, reentry angle, and other angles for which degrees customarily have been used.
- For very short distances and very small pressures, use micrometers, not microns.
- Preferred units for radius, range, speed, and altitude vary depending on the applications:
  - Nautical miles and knots or mach continue to be used for naval and aircraft-related parameters and for radius, range, or distance associated with aircraft and ship operations. Showing metric units in addition is not required but sometimes may be appropriate. If altitudes are associated with distances in nautical miles, those altitudes should be in feet.
  - Use nautical miles for ranges of territorial waters and economic zones at sea.
  - Use meters for wave heights (showing feet in parentheses also may be appropriate).
  - Metric units (kilometers and kilometers per hour) should be used where more appropriate, such as when discussing flight activity originally reported in kilometers, when describing radar scopes and other items calibrated in kilometers, when citing data from foreign documents with distances in kilometers, and when reporting estimates originally calculated in metric units. Showing values in nautical miles in addition to values in kilometers is not required; however, key characteristics—maximum range, maximum speed, and others—should be stated in nautical miles and knots as well as in metric units. Altitude capability should be expressed in meters (rather than kilometers).
  - Use kilometers for ballistic missiles and space-related parameters such as range, apogee, and perigee.
  - Use meters for circular error probable (CEP). CEP is a measure of locational accuracy; it represents the radius of a circle into which half of the projectiles—bombs, missile warheads, bullets, etc.—are expected to impact.
  - Use meters per second for velocity and g for acceleration.
  - Use kilometers and kilometers per hour where statute miles and miles per hour customarily would have been used, such as for highway and rail travel, landline distances, and "roadmap" distances between sites. Use meters for altitude for land-related locations.

Metric and Nonmetric

Take particular care within a document not to mix metric and nonmetric units unnecessarily so that readers are left with confusing data. For example, in discussions of air-land operations, do not mix nautical mile data for aircraft and kilometers for units and objects on the ground. If you indicate that a target is 500 kilometers from Airbase X and that the combat radius of the fighter-bombers at that base is 300 nautical miles, can the aircraft reach the target without refueling? Because the units of measure are mixed, the answer is not obvious. In such cases, convert all measurements to metric data or provide both metric and nonmetric measurements for the data customarily expressed in nonmetric units.

- Other nonmetric units still in wide use—such as standard atmosphere, millibar, and roentgen—should be used in contexts for which departure from traditional units would impair communication.

Online Conversion Tools. Such tools are available for many measurement conversions. On the DIA homepage on JWICS, select "Resources," and from there select "Tools" and then "Misc Calculators" and "Metric Converter."

In addition, the appendix provides conversion factors for units of measure commonly used in intelligence products.

Measurements

Use numerals for any number expressing a measurement unless you are stating an indefinite quantity. As a general rule, write out the units of measure in text when presenting nouns, but abbreviate the units of measure in the adjective form: for example, "a section of road that stretched 5 kilometers," but "a 5-km section of road." In tables, abbreviations are appropriate for all units of measure because of space limitations. Never abbreviate the units with an indefinite quantity. Avoid abbreviating units when the result is a single-letter abbreviation ("a 3-meter stream" rather than "a 3-m stream").

The missile exploded 500 kilometers downrange.
The vehicle has an estimated 500-km range without refueling.
Each aperture is protected by a 2-meter shield.
The platoon advanced several hundred kilometers. [*not* "several 100 kilometers," and *not* "several hundred km"]

Age

Use numerals for ages. In many instances, using the terms *age* or *aged* is unnecessary (as in the first three samples below) because context usually will make clear that the numeral is for an individual's age.

The general is 60. [or "60 years old," *not* "60 years of age"]
The general is in his 60s.
The general, 60, is retiring soon. [*not* "aged 60"]
The draft now applies to 17-year-olds.

Dates

Use numerals for days and years. In intelligence products, give dates in military format (day-month-year order); in official correspondence, use traditional format (month-day-year order). Only the day and month are necessary if the year is obvious from context. Ordinal numbers may be used after the month is clearly established. Do not abbreviate the month or year in text, though abbreviating for tables may be appropriate because of space limitations.

India's independence was declared on 15 August 1947. [*not* "15 Aug 47"]
All signers had left by the 22nd.
A class of pilots graduated in June 1989. [*not* "June, 1989"]

For a date in a classified product's classification authority/declassification block, Information Security Oversight Office and Department of Defense guidance requires the date to be all in numerals and in YYYYMMDD form.

Declassify on: 20351117

Time

Use numerals for units of time: seconds, minutes, hours, days, weeks, months, and years. However, if the expression of time is nonliteral or indefinite, use words instead.

The work usually requires 2 hours of labor.
She worked for the company for 7 months and 2 days.
but lasted more than four decades
in a day or two
finish by the eleventh hour

From, Between, and Dashes

Do not combine *from* or *between* with years joined by an en-dash (use *to*, *through*, or *and* instead of the en-dash).

He visited the embassy twice between 2008 and 2009. [*not* "between 2008–09"]
He visited the embassy twice from 2008 to 2009. [*not* "from 2008–09"]

Years

Except in indefinite or nonliteral expressions, use numerals for years.

Pilot candidates study general sciences for 1 year, followed by 2 years of flight training.
but Data for any one year will show that the plan was ineffective.

Also use numerals for fiscal years.

fiscal year 2010	FY 2010–12
FY 2010	from FY 2010 to 2011

For numerals designating a *continuous* period of 2 or more years, use an en-dash to mean "to and including" or "through." Never use an en-dash to join separate years not representing a continuous period; to indicate 2 years without indicating a continuous period, use *and* instead.

He worked at the embassy during 2004–06.
He worked at the embassy during 2006 and 2007.
The first two submarines were launched in 1990 and 1991. [*not* "1990–91"]

Use a slash (or virgule) to show a period occurring partially in one year and partially in another.

production in FY 2010/11
He flew three illegal flights in 2008/09.

Notice that the numerals and slash are run together without spaces around the slash.

Decades/Centuries

For decades, use the numerals of the initial year followed by an s (1980s). You can show centuries the same way (1800s), but ordinal numbers are more common (19th century).

This estimate covers the mid-to-late 1980s.

However, if you are discussing decades or centuries in a general or nonliteral sense, use words instead of numerals.

during three decades	from one century to the next

Clock Time

Use numerals and the 24-hour system.

The managers met at 0745.
The meeting has been postponed to 1725.

Money

Express values in U.S. money with numerals preceded by a dollar sign. Indicating *U.S.$* (or *USD*) is not necessary unless foreign dollars could be understood. If you need to show foreign currency, follow it with the dollar amount in parentheses. Use words, not symbols, when indicating foreign currencies. Hyphenate unit modifiers involving money just as you would other unit modifiers involving numerals. Use the word *dollars* (or *cents* for amounts less than a dollar) when you are giving generalized or indefinite amounts.

The missile system cost the Iranians nearly $500 million.
The military purchased $5 million worth of radio-relay equipment.
The group paid 5 million South Korean won ($4,325) for safe return of the hostage.
The equipment cost the government nearly 100 million pounds (about $156 million). [*not* £100 million]
The company offered its workers a $1.53-per-hour increase in wages.
He called the conference a $50-million boondoggle.
He paid about 40 cents tax on every dollar he earned.
The work cost the firm thousands of dollars.

Percentages

Use numerals with percentages. Write out the word *percent* in text. The percent sign (%) is acceptable in tables and graphics if space is tight, but normally write out *percent* in the text portions of tables and graphics, and especially in footnotes to them.

The plan projects a 5-percent increase by 1990.
He formed a joint venture that was 59 percent Chinese and 41 British.
Agricultural products make up 20 to 25 percent of the country's imports.

Times Phrases

For expressions showing the relationship of a larger quantity to a smaller one (often accompanied by the word *times* or its equivalent), follow the basic rules for numbers less than or equal to or greater than 10 unless a decimal is involved; for such expressions with decimals, use numerals.

five times as large
2.5 times faster
10 times greater

The number of tanks is five times greater than before the war.
Missiles increased to 100 in 1991, 5 times the previous total.

Ratios, Odds, Returns

Use numerals.

The pilot-to-aircraft ratio is 1.2:1.
He had a 50–50 chance of winning.
The measure passed with a 50–to–1 vote.

BE Numbers

For Basic Encyclopedia (BE) numbers, use *BE*, a space, and the number. In a table with "BE Number" as a column heading, show only the number in the column (omitting *BE*).

BE 0254-08342 BE 0254CA8342

Separate a BE number from any associated O-suffix with a slash.

BE 0613DJ0002/DJ003

If such data will appear in a table, use a column heading of "BE Number/O-Suffix."

Geographic Coordinates

Use hyphens between degrees, minutes, and seconds, and leave a space between latitude and longitude. Show all three places for degrees for longitude.

The village was at 60-17-44N 135-20-16E.
The border crossing was at 22-12-17N 015-34-10W. [*not* "15-34-10W"]

Portraying decimal coordinates may imply an accuracy that is not correct and is unnecessary for most intelligence products. Decimal-second accuracy is important for targeting lists and databases of ground features when a high degree of accuracy is necessary for precise locations. For these reasons, decimal coordinates should be reserved for those limited cases for which such accuracy is critical and should not be used with general intelligence publications.

Mathematical Expressions

Use numerals when referring to numbers in mathematical expressions, no matter the size of the number.

multiplied by 3
divided by 4
Data points are rounded to the nearest 10th.
The estimate could be off by a factor of 2 or 3.

Numerical Designators

Use arabic numerals for designators for tables, graphics, footnotes, endnotes, parts of publications, and so forth. (However, appendixes to publications have letter designators: "Appendix A," "Appendix B," etc.)

Table 1 Figure 3
Part 4 Section 5

Numbers in Proper Names

Treat numbers appearing as parts of proper names as they commonly appear for those names; do not apply basic numbers rules to such names.

Three Rivers, Pennsylvania Air Force One
1st Army

Indefinite and Nonliteral Numbers

Do not apply the basic rules to indefinite or nonliteral numbers; instead, spell them out.

a tenfold increase
The project will cost tens of millions.
She addressed several thousand people.
She is famous for eleventh-hour decisions.
He is the number-two man in the regime.

Approximation

Do not use *about, around, approximately,* or any other word of approximation with exact numbers—"approximately 5,600" but not "approximately 5,613."

Terms such as *nearly, about, around,* and *approximately* do not by themselves reflect indefinite expressions. Normally such terms indicate rounding, but a rounded number remains more definite than an indefinite or nonliteral number.

Millions, Billions, and So Forth

Round numbers greater than 999,999 unless an exact number is necessary. Spell out *million, billion,* and so forth and precede the word with a numeral rounded usually to no more than two decimal places.

The population is about 240 million.
More than 12.35 million Americans served in World War II.
The program calls for funding of $5.2 billion.

Ranges

See page 80 under "Years" for en-dashes with ranges of years. Take particular care in joining range numerals (other than years and page references) so readers cannot be confused by the figures shown. En-dashes may be used (though not required) in ranges in the millions and multimillions—but note particularly the placement within money figures in the second sample below.

The march covered 10–15 kilometers. [*or* "10 to 15 kilometers"]
The program will cost $12 million to $14 million. [*or* "$12–14 million," but *not* "$12 to $14 million," which implies "12 dollars to 14 million dollars"]
Gas reserves are estimated at 10–15 billion cubic meters. [*or* "10 to 15 billion cubic meters"]

Do not combine *from* and *between* with numbers joined by an en-dash (use *to, through,* or *and* instead of the en-dash).

Estimates range from 10 to 30. [*not* "from 10–30"]
Bids fell between $10 million and $14 million. [*not* "between $10–14 million"]

For ranges in temperature, show the degree sign and the type of temperature scale only once if the parts of the range appear together, but repeat the sign and scale if other text separates the parts of the range. Note in the following examples that a space should appear between the number for the temperature and the indication of the temperature scale.

average in the high 20 °Celsius (80 °Fahrenheit)
drop to 8 to 12 °Celsius (upper 40 to lower 50 °Fahrenheit)
around 5 °C (low 40 °F)
exceed 30 °C (upper 80 to 90 °F)
rise to near 10 °C (upper 40 °F) in April and reach a high of 20 °C (80 °F) in June

For ranges of inclusive page numbers, show all numbers up to 100 (3–4; 4–12; 54–55). Thereafter, reduce the second number of a set to two digits (253–54; 601–09, 1901–02, 2614–15) unless the hundred or thousand changes (499–501; 2998–3002).

Commas With Numbers

Use commas to separate numerals in the thousands, millions, and so on—except for years, military unit designators, clock time, most serial numbers, fractional portions of decimal numbers, page numbers, and radiofrequencies in the thousands of kilohertz.

There were 1,087,143 casualties.
A force of 20,000 was needed.

but

during 2009
the 1028th Brigade
1400 hours
job number 518225/10
3.1416
3,732.14592
pages 3614 and 3617
1812 kHz [*but* 15,117 kHz and 1,832 MHz]

Numbers With x To Stand for by

When you use *x* to stand for *by* in commonly used numerical expressions, such as equipment designators, run the numerals and the lowercase *x* together without intervening spaces.

4x4
8x8

Possessive Case With Numbers

Numerical expressions including possession require an apostrophe but not an en-dash or hyphen. (Do not be concerned with the argument that inanimate nouns cannot possess things. The form being used is the genitive case, which came to be called the possessive case in the 18th century, and does not involve possession.)

After 5 years' planning, the project was scrapped.
The new regime bought several million dollars' worth of equipment. [*but* "$10 million worth of equipment"]

Decimals

Use numerals for numbers requiring a decimal point. For numbers less than 1.0, precede the decimal point with *0* (except for designations of gun bore or ammunition). Omit zeros from the end of a decimal number unless you are showing an exact measurement.

0.25 centimeter
1.25 centimeters
silver 0.900 fine [exact measurement]
a .22-caliber cartridge

In the samples above, notice that when the numeral for a unit of measure is equal to or less than 1.0, the word for the units—when written out—is singular (0.25 centimeter), but it is plural when the numeral is greater than 1.0 (1.25 centimeters). The same is not true for abbreviated units, however; they appear only in the singular form: 0.25 cm, 1.25 cm, 10.25 cm.

Fractions

Convert fractions to decimals whenever reasonable. Otherwise, write out fractions, with a hyphen in both noun and adjective forms.

0.75 kilometer [preferred over "three-quarters of a kilometer"]
one-half year
a two-thirds majority; a majority of two-thirds
first quarter FY 2009 [note no hyphen in "first quarter"]

Mixed Numbers

Avoid combinations of whole numbers and fractions by converting to decimal quantities whenever reasonable.

5.5 percent [*not* "5 1/2 percent"]

Otherwise, spell out phrases in nonstatistical contexts.

two and a half years ago	a two-and-a-half-year trial period

In statistical contexts, use mixes of whole numbers and fractions (5 1/2, 4 1/4) if converting to decimals is not appropriate.

Numbers in Unit Modifiers

Use hyphens with numerical unit modifiers.

20-km march	23-meter-wide river
105-mm guns	eleventh-hour decision
7-meter limit	two-story building; 10-story building
3-million-member Army	6-percent increase; 6- to 7-percent increase
20-NM range	
one- to two-story structure	

Numbers Side by Side

To avoid confusion, avoid placing cardinal numerals side by side.

Twenty-five divisions were identified by 2006. [*not* "In 2006 25 divisions were identified."]

However, when the second number is part of a unit modifier, the hyphen of the unit modifier prevents misreading, so placement of numbers side by side is acceptable:

14 152-mm guns

Singular and Plural Units With Numbers

When the word for a unit of measure is written out, use the singular form with a number less than or equal to 1.0; use the plural form with numbers, including fractions or decimals, greater than 1.0.

0.75 meter	1 meter
1.25 meters	7 meters

However, when the unit of measure is in its abbreviated form, use only the singular form.

a 0.75-km road segment	a 1-km road segment
a 1.25-km road segment	a 7-km road segment

Quantities and Numbers as Subjects

When a number is the subject of a clause, the number is singular or plural (and takes a corresponding singular or plural verb) depending on whether it designates a quantity (something measured as a unit, as in length, area, volume, mass, temperature, or time) or a number of things (things counted individually).

- Quantities, which are measured, are singular and are the most common numerical subjects.

  Four gallons of milk was all the machine would hold. [*Four gallons* in this passage is a measure of volume and is singular because it represents a single unit.]

- A number of individual things is plural.

  Four gallons of milk were sitting in the dairy case. [The *four gallons* in this passage are being discussed as individual things—four 1-gallon containers of milk—making the subject plural.]

Beware of becoming confused by the seemingly plural nature of the unit of measure (*gallons* in the samples above). Although the measure sounds plural, it designates a unit—a single thing.

Twenty kilometers of track was all the crew could lay in 8 hours.
Nearly 2 million barrels of capacity was destroyed in the first attacks.
Over 2 metric tons of cocaine was seized in the drug raid.

In each of these sentences, the unit of measure sounds plural (*kilometers*, *barrels*, and *metric tons*) but actually indicates the amount of a single thing—length, volume, and mass.

Do not confuse quantities and numbers as subjects with words that express a *portion of a whole*—words such as *percent* or *half* (and other fractions). These words can take either a singular or a plural verb, depending on the sense of the rest of the sentence (or of surrounding sentences):

Thirty percent of the forest was destroyed by yearend. [The *30 percent* is singular in this passage because it is being discussed as a single unit.]
Thirty percent of the trees were loaded onto trucks. [Because the trees would be loaded individually, or perhaps in multiple small groups, this *30 percent of the trees* is plural.]

For further discussion, see *all, any, half (and other fractions), more, most, none, part, percent, percentage, some* in Chapter 5.

CHAPTER 5: Current Usage

UNCLASSIFIE

nauseated/nauseous. It's the difference between sick and sickening. You are made sick (nauseated) by something sickening (nauseous). Never say, "I'm nauseous." Even if it is true, it's not something you should admit.

—Patricia T. O'Conner, *Woe is I: The Grammarphobe's Guide to Better English in Plain English*

UNC ASS

CHAPTER 5: Current Usage

This chapter provides guidance on troublesome words and phrases. Some are frequently confused or misused; some are overused and should be replaced with more vigorous expressions; some show preference for usage among related words or phrases. A thesaurus can be a valuable tool when you are stuck on a word or phrase, but pay attention to the differing shades of meaning among the choices, especially to connotations that may present nuances that make some word choices inappropriate for the passage you are considering.

Word Choices

a, an. The choice between *a* and *an* depends on the initial sound of the next word or abbreviation, not on whether its initial letter is a vowel or consonant.

- With words.
  - Use *a* before a word beginning with a consonant sound or an aspirated *h* (such as "hill," "habitual," "historic").
  - Use *an* when the following word begins with a vowel sound or a silent *h* (such as "honest," "hour," "honor").
- With numerical expressions. When the following expression begins with a numeral, choose between *a* and *an* on the basis of the pronunciation of the numerical term, applying the rules for words above: "a 12-year-old ship"; "an 11-year-old airframe."
- With abbreviations, including acronyms and letter/number groups. The initial sound test still applies.
  - For acronyms pronounced as words (such as "BMEWS," "HOT," "IMINT," "OCONUS"), apply the rules for words above: "a BMEWS installation," "a HOT missile," "an IMINT collector," "an OCONUS military base."
  - For acronyms and other letter/number groups (such as "SS-25") for which you pronounce the letters and numbers themselves, apply the following rules:

    Use *a* when the group begins with *b, c, d, g, j, k, p, q, t, u, v, w, y,* or *z*: "a DIA employee," "a UN worker."

    Use *an* when the group begins with *a, e, f, h, i, l, m, n, o, r, s,* or *x*: "an NSC directive," "an SS-25 missile," "an Su-34 aircraft."
  - When choosing between *a* and *an* with an abbreviation, consider the abbreviation itself, not the expansion of the abbreviation. For example, for discussion of a fuel-air explosive (FAE) device, because we would pronounce the letters of the abbreviation, we would write "an FAE device," since *an* is appropriate before an abbreviation beginning with *f*; we would not choose "a FAE device" even though *a* would be appropriate before "fuel."

ability, capability, capacity. Regarding people, *ability* is the power to do something; *capacity,* like aptitude, is the inherent facility to acquire an ability. A person can acquire ability but already must possess capacity. For people, *capability* refers to having the talent or potential for development. For things, *ability, capacity,* and *capability* are synonymous—all referring to having the potential to be used for a particular purpose. Although some people believe only a person (not a thing) can have an ability, dictionaries do not support this distinction.

about, around. In the sense of approximately, use *about* rather than *around.* In a sentence such as "The unit strength is estimated at about 2,500," the writer does not need both *estimated* and *about.* The sentence can be simplified to "The unit strength is about 2,500" or "The unit strength is estimated at 2,500"; the first choice usually is preferable because the second is in passive voice, but

the second choice is preferable if the writer is conveying that the number is an estimate rather than a generally accepted fact. Do not use any word for approximation with an exact number: "about 5,600" but not "about 5,613." For *about*, see also *as to* and *approximately, about, roughly, some*.

above, below. *Above* is accepted as meaning "previously mentioned" and *below* as "mentioned later." Use of either term to refer to text elsewhere in a document should be infrequent (overuse sounds legalistic), and the references should be clear ("the description above of command bunkers" rather than "the description above") so readers cannot be in doubt about what is being addressed. *Above* is preferable to the legalistic *abovementioned* or *aforementioned*.

absolute. Because the term shows a perfect, complete, unrestricted state, most modifiers and comparisons are illogical: "very absolute," "too absolute," "more absolute." However, *nearly* is an acceptable modifier ("nearly absolute acceptance"). Also see *very*.

access, assess. *Access*, as a noun, is a means of approaching, entering or exiting, or communicating; the ability to do one of these; or the act of doing such a thing. As a verb, especially in relation to computers, to *access* is to obtain entry. *Assess* is a verb dealing with determining value (as for taxation), setting the amount for taxation or special payment, or actually charging such a payment. For sports, to *assess* is to charge with a penalty. Finally—and most important for intelligence writing—to *assess* is to determine the value or significance of something: "We assess that changes in the Army's force structure will result in a more mobile force."

accidental, fortuitous, contingent, incidental, opportune. Related adjectives, these have varied shades of meaning: *Accidental* carries the idea of chance. *Fortuitous* strengthens the sense of chance; it can suggest luck or good fortune, but it does not lose the associated sense that the good fortune was unplanned. (Saying "The president's choice of Stein for prime minister was fortuitous," then, implies that the president's choice came from dumb luck, not brilliant insight.) *Contingent*, in its sense of "accidental," suggests something that may happen but that is uncertain because causal factors, including chance, are unknown. *Incidental* suggests an association that may or may not be accidental. *Opportune* suggests an element of chance mixed with timeliness: being in the right place at the right time.

actual, real, virtual. *Actual* emphasizes fact as it is or has become at the moment, whereas *real* emphasizes fact as it always has been or has been for a long time. *Virtual* means "having the effect but not the form" (as with a "virtual leader" when an actual leader exists).

adapt, adopt. *Adapt* is to adjust oneself or something to a new or changed situation. *Adopt* is to accept or choose a new course of action.

adit, entrance, entryway, entranceway, portal. An *entrance* is an opening allowing entry. An *entryway* is a passage serving as an entrance; this term is preferable to *entranceway*. In general English, a *portal* is a two-dimensional entrance or doorway; an *adit* is an entryway, mostly horizontal, leading into a mine or other underground facility. For intelligence writing related to hardened structures and underground facilities, however, both *portal* and *adit* have more precise engineering definitions; see the Defense Resources and Infrastructure Office's *Lexicon of Hardened Structure Definitions and Terms*, <http://www.dia.ic.gov/intel/world_wide/dird/DIA-13-1110-170_REL_TO_FVEY.html>.

adjacent, contiguous, colocated. In a general sense, *adjacent* and *contiguous* are interchangeable. However, *adjacent* means "close to" or "lying near"; *contiguous* means "touching" or "sharing an edge or boundary." *Colocated* means "placed together"; it is appropriate for two organizations that share a building, facility, or complex, as in "the headquarters of the 32nd Battalion and the 48th Battalion are colocated at Steinmark Barracks."

advance, advanced. As an adjective, *advance* emphasizes precedence in position or time ("advance party," "advance payment"); *advanced* implies having a position forward of or superior to a norm ("advanced thinking," "advanced training"). In "advance planning," *advance* is redundant and should be deleted.

adverse, averse. Both adjectives mean "opposed," but their points of view differ: something *adverse* is opposed or hostile to a subject's will or interests ("The prime minister has been subjected to adverse criticism"); *averse* is opposition or reluctance on the subject's part ("The prime minister is averse to believing his critics").

affect, effect. Except in psychology, *affect* is always a verb and usually means "to influence," "to cause a response," or "to cause a change" in a person or thing. As a verb, *effect* means "to bring about or accomplish" or "to cause to occur."

The government's policy change will affect worker productivity. [The change will influence the workers in a way that will change their productivity.]

The government's policy change is a means to effect increased worker productivity. [The change is a means to bring about increased productivity.]

Effect as a noun refers to a result or consequence—"something brought about by a cause or agent": "Increased productivity was one effect of the government's policy change."

afterward, afterwards. *Afterward* is preferred.

all, all of. Except when a personal pronoun follows, *of* usually is unnecessary: "The change affected all the production facilities" rather than "... all of the production facilities." Beware of sentences that say "all of something did not do something," as such sentences are ambiguous. For example, in "All the regiments did not move forward," does the writer mean that none of the regiments moved forward or that only some did?

all, any, half (and other fractions), more, most, none, part, percent, percentage, some. Each of these words can take either a singular or a plural verb, depending on the sense of the rest of the sentence (or of surrounding sentences). Frequently that sense includes either quantity or number. A reference with a quantity of something requires a singular verb: "Some of the water was leaking." A reference with a number of things requires a plural verb: "Some of the plants are poisonous." In other cases (particularly with *any* and *none*) the verb determination depends on whether the writer has in mind one person or thing (requiring a singular verb) or two or more (requiring a plural verb): "None of the protesters was willing to risk arrest" (*not one* was willing). "None of the protesters were willing to risk arrest" (*not any* were willing).

allegedly, reportedly, reputedly. The three mean "supposedly," but they have slightly different shades of meaning: *Allegedly* carries the sense of "claimed or charged but not proved." *Reportedly* implies that the information has been reported formally. *Reputedly* means "generally considered or estimated but not necessarily claimed openly." See also *qualifiers*.

all ready, already. *All ready* means that everyone or everything is ready; *already* means "before" or "previously."

all right, alright. *All right* is the correct term; *alright* is substandard.

all together, altogether. *All together* means "collectively" or "in unison." *Altogether* means "entirely, completely." *Note:* When *all together* is appropriate, the words in the sentence can be rearranged so that *all* and *together* are separated by other words: "The workers arrived all together" can be changed to "All the workers arrived together."

almost. See *most, mostly* and *only*.

alongside, alongside of. *Alongside* is adequate without *of*.

along with. This phrase (and others such as *as well as, in addition to, like,* and *together with*) frequently follows immediately after a subject of a sentence. The prepositional phrase and its object(s) do not affect whether the verb in the sentence is singular or plural. For example, in "The governor, along with members of his staff, is traveling to the coast," the verb is singular *(is)* because the subject

(governor) is singular and the prepositional phrase *along with members of his staff* has no impact on whether the subject and verb are singular or plural. If, however, a writer were to state that same idea like this—"The governor, and members of his staff, are traveling to the coast"—the verb must be plural *(are)* because the subject is plural *(the governor and members of his staff)*; the presence of commas around *and members of his staff* does not keep the subject from being compound and therefore plural. (Moreover, the commas should be removed.)

a lot, alot. Use *a lot*, as *alot* is not a word.

alternate, alternately, alternative, alternatively. *Alternate* and *alternately* usually refer to occurring successively or by turns. *Alternative* and *alternatively* refer to one from a set of possible courses of action or choices. Although traditionalists would limit alternatives to only two possibilities, use in connection with multiple choices is acceptable.

although, though, even though, while. *Although*, *though*, and *even though* are often interchangeable for the sense of "in spite of the fact that." *Although* is more formal than *though* as a conjunction, but *though* can also serve as an adverb, as in "They raised objections, though." *Even though* emphasizes the sense of "in spite of" or "regardless." *While* has become a common substitute for *although* in informal usage; however, in this sense *while* means "at the same time that," and in writing it should be reserved for sentences requiring a sense of time.

altitude, elevation. Use *altitude* in relation to something in the air—for example, "The missile was ineffective at altitudes below 5,000 meters." *Elevation* is in relation to the ground or sea level—for example, "The facility is at an elevation of 75 meters."

amid, amidst, among, amongst. *Amid* and *among* are preferred.

among, between. [See tone box.]

amount, number. Use *amount* with things involving weight, bulk, or sums—things measured with a total; use *number* with things that must be counted individually: "the amount of water in the mixture," "the amount of the gross national product," "the number of gantry cranes in the port."

ample, enough. Although these commonly are interchanged, *ample* carries a second meaning of "abundant, more than enough." Therefore, phrases such as "more than ample," "barely ample," or "scarcely ample" are nonsensical.

an. See *a, an.*

and/or. This combination with the slash refers to one or the other or both. Avoid its use, especially with more than two alternatives.

any. See *all, any, half (and other fractions), more, most, none, part, percent, percentage, some.*

Among and Between

Between is appropriate when just two entities are involved—for example, "an agreement between France and the United Kingdom." Numerous writers have insisted that *among* always should be used when more than two entities are involved, but current English usage and modern dictionaries do not support this position. When more than two entities are being considered, choosing between *among* and *between* depends on whether the writer is discussing separate entities acting independently or entities considered collectively.

- In "conflicts between the four nations," each nation is considered to be acting independently of the others, with conflict one on one.
- "Conflicts among the four nations" allows for coalitions, including the possibility of the coalitions changing over time.
- In "rockets struck between the entrance to the compound, portal 1, and portal 3," the rockets are considered to have impacted literally between the named points without hitting any of them.
- In "rockets struck among the entrance to the compound, portal 1, and portal 3," the rockets are considered to have impacted in the general area of the named entities and may or may not have struck them.
- If named points or entities define the extent of an area, use *between*, as in "the rockets impacted in the area between the entrance to the compound and portals 1 and 3."

anyone, anybody. Each of these usually is written as one word (except in the sense of "any one of a group"). They take singular verbs and singular pronoun references. If you have trouble remembering that these words are singular, try thinking of them as "any-single-one" and "any-single-body."

apparent, evident. These words share a sense of "obvious" or "open to view" but differ slightly: *apparent* suggests use of reasoning; *evident* suggests a basis of facts or external signs. *Apparent* also means "seeming but not necessarily true." Before a noun that meaning is clear ("her apparent concern"); however, after a form of *to be*, *apparent* can mean either "obvious" or "seeming," so the context needs to be worded to make the meaning clear.

apparently. See *qualifiers*.

approximately, about, roughly, some. Do not use any word of approximation with an exact number: "approximately 5,600" but not "approximately 5,613." See also *about, around*.

apt, liable. Although these words are interchanged in informal usage, their meanings remain distinct. Reserve *apt* for instances in which the subject has a natural tendency: "He is apt to settle the issue without consultation." In this sense, *liable* means "susceptible" and suggests a probability for something unwanted or burdensome: "Temperatures are liable to drop below freezing in higher elevations."

arch-, arched-. *Arch-* can be used with *shaped* in a unit modifier: "an arch-shaped structure." Modifiers in names of structural components use *arched-* ("arched-roof segments"), whereas the name of the completed structure uses *arch-* ("an arch-roofed bunker").

around. See *about, around*.

as, because, for, since. *Because* is the strongest of these conjunctions expressing cause or reason; *since*, the next most strong; and *as*, the weakest. Use caution with *since*, which may be read as meaning "from a specific time." *As* works best with a dependent clause that ends a sentence; a comma precedes it when *as* appears as a conjunction showing a causal relationship. *For*, a coordinating conjunction, shows a causal relationship between independent clauses.

as if, as though, like. Both *as if* and *as though* are acceptable as conjunctions (for example, "The exterior of the building looked as if it had been raked by gunfire"). Either is preferable to *like* for introducing a clause.

as per, as regards. Replace these with *according to, concerning,* or *about*.

assess. See *access, assess*.

as such. *As such* requires an antecedent, as in "Applicants will not be treated as U.S. persons unless identified as such" [identified as U.S. persons]. Avoid using *as such* to mean "therefore"; don't write "As such, we expect a dropoff in applicants."

assure, ensure, insure. Similar in the sense of making certain, these words require different usages. *Assure* refers to a person—setting that person's mind at ease by making him or her certain of something. Use *ensure* for the sense of making a thing certain. Reserve *insure* for guaranteeing life or property from risk.

as to. This phrase should be replaced or deleted. In a sentence such as "She was uncertain as to the proper answer," replace *as to* with *about*. In expressions such as *as to whether, as to where,* or *as to which*, the *as to* is unnecessary.

as well as. See *along with*.

attributive nouns. See *nouns as adjectives*.

average, median, mean. *Average* is that which is midway between two extremes. Common usage has made it synonymous with an arithmetic mean (the result of dividing the sum of a series of figures by the number of figures). *Mean* is a more precise term when you actually want to refer to a mathematical result,

but *average* is acceptable for general usage. A *median* is the middle figure in an arithmetically arranged list of figures; half the numbers are less than the median, and half are greater than the median. Each of the three terms refers to a single figure, so a sentence such as "The tide averages between 2 and 4 meters" should be replaced by "The tide averages 3 meters" or "The mean tide is 3 meters."

averse. See *adverse, averse.*

awhile, a while. *Awhile* is an adverb meaning "for a time"; *while* is a noun meaning "a period of time." Both imply a *short* time. *For* is a part of the sense of *awhile* and should not be used with it. Thus, "stay for a while" is correct, but "stay for awhile" should be "stay awhile."

back of, in back of, behind. Use *behind* in place of *back of* and *in back of.*

bad, badly. *Bad* (the adjective) is correct after linking verbs such as *feel* and *look.*

because. See *as, because, for, since.*

because (reason is). In "The reason is because ...," replace *because* with *that* when the following material is a clause.

begin, commence, start, initiate. *Begin, commence,* and *start* usually are interchangeable; in general senses, *commence* is less desirable than either of the other two because it is more formal. However, *commence* has a stronger sense of initiative—of some person or force initiating an action. *Start* is particularly appropriate when action must begin following a period of inactivity. *Initiate* refers to taking the first steps in a process and does not refer to what follows.

believe. Avoid using "DIA believes." Assessing or judging requires weighing the data; believing does not. By contrast, *believe* can be appropriate when describing what the *subject* of DIA analysis thinks about something: "The defense minister probably believes that the arms purchase will strengthen the military."

below. See *above, below.*

beside, besides. Use *besides* for the senses of "except for" and "in addition to": "No vehicles were present besides one staff car outside the headquarters building." "Besides the commander, the chief of staff also attended." *Beside* means "at the side of." Thus, "No one entered the room beside me" and "No one entered the room besides me" state different things.

between. See *among, between.*

biannual, biennial, bimonthly, biweekly. In standard usage, *biannual* means "happening twice each year" or "semiannual," whereas *biennial* means "happening every second year" or "lasting for 2 years." However, both *biannual* and *biennial* have secondary meanings that can greatly confuse the timeframe. *Bimonthly* means "once in 2 months," and *biweekly* means "once in 2 weeks." Because of the possibility for confusion, writing "occurring every other year," "occurring twice a year," "every 2 weeks," "twice a week," and so on, is safer.

blatant, flagrant. *Blatant* means "unpleasantly noisy" or "offensively conspicuous"—stressing offensiveness and noisiness. *Flagrant* emphasizes wrongdoing or evil intent. Thus, the difference between a "blatant act" and a "flagrant act" is the degree of intent.

blond, blonde, brunet, brunette. *Blond* and *brunet* should be used with either gender; avoid *blonde* and *brunette.*

boat, ship. A *ship* is large and travels the sea lanes. A *boat* is relatively small, stays mostly in shallow or sheltered waters, and can be carried on a ship. *Boat* also is acceptable in reference to a submarine.

border. When identifying the border between two countries, use the noun rather than the adjective form of the countries' names: *Libya-Tunisia border* instead of *Libyan-Tunisian border.*

born, borne. Both of these words are correct spellings for the past participle of the verb *bear.* However, *born* is used only as a passive construction in relation to birth: "She was born in the former Soviet Union." *Borne* is used for the active voice in relation to birth ("She had borne three children before entering politics."), as well as for all other senses of *to bear* ("a vehicle-borne improvised explosive device").

both. In sentences such as "Both sides have reached agreement on the plan," *both* is redundant; use "The two sides have reached agreement...."

boycott, embargo. A *boycott* is a refusal to buy or use a product or service. An *embargo,* a legal restriction on trade, can apply to either buying or selling.

but also. See *not only ... but also.*

cadre, cohort. A *cadre* is a core of trained personnel around which a larger unit is to be built or a member of such a group. A *cohort* can be a united band or group, or it can be a companion or associate. Current usage no longer restricts these terms to just groups rather than individuals.

capability, capacity. See *ability, capability, capacity.*

capital, capitol. *Capitol,* a noun, has only one meaning—the building in which a legislature meets. As a noun, *capital* has to do with wealth or resources, an uppercase letter, or a town or city that is the seat of government; the latter meaning, of course, is the one that generates confusion with *capitol.*

capital standing for nation. In intelligence writing we commonly substitute the name of a nation's capital for the name of the nation and use either to represent the national government. For example, we might write either "The United Kingdom anticipates withdrawing...." or "London anticipates withdrawing...."

- A notable exception is Israel. Avoid using either Tel Aviv or Jerusalem to represent Israel.

casualty. A *casualty* could be injured, captured, missing in action, or killed.

cement, concrete. *Cement* as a powder is a component used in making *concrete.* Concrete is made from aggregate (sand, gravel, and so forth), cement, and water (and possibly additives to enhance the concrete properties). The concrete gains its strength from a chemical reaction between the cement and the water.

censor, censure. To *censor* is to examine and remove objectionable material. To *censure* is to find fault or condemn.

center around. Because it is a point, *center* can be paired with *on, upon, in,* or *at*—but not with *around.*

certain, some. *Certain* means "fixed" or "definite." In some instances it equates more generally to "some." Problems come with the general sense in an expression such as "modifications of certain procedures." This statement begs for an explanation of just what procedures are to be modified. Replacing *certain* with *some* reduces the strength of the expression but does not totally eliminate the need for further explanation. If you do not intend to define which procedures are to be modified, omitting the adjective may be a better choice.

China, Chinese, Taiwan, Taiwanese. *China* and *Chinese* refer to the mainland country and its people. The offshore island is *Taiwan;* its adjective form also is *Taiwan. Chinese* is the noun and adjective for people on Taiwan in general; *Taiwanese* refers only to the indigenous inhabitants of the island. To distinguish the people on Taiwan from those on the mainland, use people "on Taiwan," "from Taiwan," or "of Taiwan."

cite, sight, site. These words sometimes are confused because they are homonyms. *Cite*, a verb, has several meanings: to quote or mention as an authority or example; to officially praise or formally honor, especially for military merit; or to summon before a court. *Sight*, a noun or verb, has to do with seeing. A *site* is a location or setting; in relation to computers and the Internet, *site* also is a variant of the more specific *website*.

claim. To *claim* means to assert that something is the case, typically without providing evidence or proof. *Claimed* can have a slightly negative connotation, so consider whether *stated* or *reported* would work better in context.

clearly. See *qualifiers*.

climactic, climatic. *Climactic* refers to the climax, the highest point. *Climatic* refers to weather.

close proximity. *Proximity* is redundant in this phrase.

cohort. See *cadre, cohort*.

collective nouns. A collective noun—such as *committee, company, enemy, group, team*, and the like—takes a singular verb when the group acts as a whole but a plural verb when its members or parts act separately.

> The committee has decided to recommend banning chemical weapons. [The committee's decision is a collective action.]
>
> The committee have returned to their offices. [Each member must act separately in such a situation.]

The second construction sounds awkward to many ears, though, so a better choice may be to insert a plural noun, as in "The committee members have returned to their offices." Be particularly careful to ensure that the verb connected to a collective noun and any pronoun reference to the same collective noun are either both singular or both plural—as with *have* and *their* in the second example.

colocated. See *adjacent, contiguous, colocated*.

combined, joint. In reference to military exercises, a *combined* exercise involves forces from more than one country; a *joint* exercise involves forces from two or more services of the same country.

commence. See *begin, commence, start, initiate*.

communication, communications, telecommunication, telecommunications. Both the singular and the plural forms are acceptable as modifiers: "the communication system," "the communications system." The singular forms (*communication* and *telecommunication*) are preferable for most uses, especially when the next word in a sentence begins with s ("telecommunication system"). Either form is preferable to *communicational*.

comparatively, relatively. Use these modifiers only when the comparison they refer to is clear. In "There was relatively little debate about the president's proposal," what does *relatively little* really mean?

compare, contrast. *Compare to* points out similarities between inherently dissimilar things; *compare with* points out both similarities and differences. *Contrast with* points out differences.

complement, compliment. *Complement* refers to something that completes. A *compliment* is flattery or praise.

Compose, Comprise, Constitute, Include

Comprise means "to consist of" or "to contain"—the whole comprises the parts. *Compose* means "to constitute or make up"—the parts compose the whole. *Constitute* is interchangeable with *compose*. *Include* is similar to *comprise* in the sense of containing parts; *comprise* should be used when all parts are named and *include* when only some of them are named. Never use *is comprised of* or *are comprised of*.

complex, complicated. Both refer to things with many interrelated parts that are hard to understand or operate. *Complex* emphasizes the number of varying parts, whereas *complicated* emphasizes the elaborate relationship of parts rather than their number.

compose, comprise, constitute, include. [See tone box.]

conceivably. See *qualifiers.*

concept, conception. A *concept* is a general idea or understanding, whereas a *conception* is a particular mental picture or understanding of a concept.

concrete. See *cement, concrete.*

condition. Authors frequently use *condition* in connection with another descriptive term when the other term, or a form of it, can stand by itself. For example, use "The building was damaged" rather than "The building was in a damaged condition" and "He was weak" rather than "He was in a weakened condition."

conduct. Writers overuse *conduct* by combining it with a noun to describe an action when the verb equivalent of the noun will work on its own. For example, change "officials conducted an inspection of the facility" to "officials inspected the facility."

consensus. This is opinion held collectively or generally, not simply by a majority. In *consensus of opinion,* delete *of opinion.*

consequence, effect, implication. A *consequence* is the result of an event that has occurred, but the term implies only a weak causal relationship. An *effect* results from a causative act or agent. An *implication* is a possible future effect or result and is preferable to "potential consequence."

constitute. See *compose, comprise, constitute, include.*

contact. Use of *contact* as a noun equating to "source" is acceptable in intelligence writing (for example, "His contact was a member of the resistance group").

contiguous. See *adjacent, contiguous, colocated.*

contingent. See *accidental, fortuitous, contingent, incidental, opportune.*

continual, continuous, continued, ongoing. *Continual* refers to something that occurs intermittently or repeats at intervals: "Arguments over procedures were continual." *Continuous* refers to something that occurs without interruption in space or time: "Rainfall during the day was continuous." Something *continued* has remained in the same state (persisted), has existed for a long time (lasted), or has begun again after an interruption (resumed). Something *ongoing* is occurring at the moment—in progress or evolving.

continues, remains. Writers overuse these two terms. A sentence such as "Drug trafficking continues to provide most funds for the insurgents" can be stated more directly with "Drug trafficking provides most funds for the insurgents" because the present tense verb *(provides)* establishes that the activity is continuing. Similarly, a sentence such as "The insurgency remains concentrated in the south" can be stated simply as "The insurgency is concentrated in the south."

contrast. See *compare, contrast.*

convince, persuade. Though related, these words differ in application: we *convince* someone of the truth of a statement but *persuade* the person to act in a particular way.

could, may, might. These are low-confidence assessment terms and should be used with care in intelligence writing. Limit *could* to discussions of capability: "The missile could be targeted against the city" (the city is within the missile's range). Use *may* or *might* for judgments or predictions: "The missile may be targeted against the city" (possibly the enemy intends to employ the missile for that purpose). *Might* traditionally expresses a stronger sense of doubt than *may* or a contrary-to-fact hypothetical: "The city might

have been targeted if the rebels had captured more missiles." All three terms include the idea of possibility and should not be accompanied by modifiers such as *possibly* or *conceivably*.

council, counsel. *Council*, a noun, refers to a deliberative assembly, its work, or its members. *Counsel*, either a noun or a verb, refers to advice and the person(s) giving it.

country names. Except when making a point about the full formal name of a nation, use the common English name for a country rather than its formal name—what *The World Factbook* calls the "conventional short form" name rather than the "conventional long form" name. For example, use *Bulgaria* rather than *Republic of Bulgaria*; *China* rather than *People's Republic of China*; *South Korea* rather than *Republic of Korea*; *North Korea* rather than *Democratic People's Republic of Korea*; and so on. (See also *capital standing for nation* and *China, Chinese, Taiwan, Taiwanese.)*

country, nation. Both are neuter and require gender-neutral pronouns (for example, *it* or *its*).

credible, creditable. *Credible* means "believable" or "plausible." *Creditable* means "deserving credit or praise."

crisis. Reserve *crisis* for actual or potential international conflict, not for minor national or international disruptions. A *governmental crisis* is the period between the fall of a parliamentary government and the election of a new one.

> Data
>
> Although for years writers have insisted that *data* can be used only in the plural (because *data* is the plural of *datum* in Latin, the source of the English word), in current usage *data* appears primarily in the singular, in the sense of a body of information, as in "When we receive the data, we can interpret it" or "Little test data is available." Use of *data* as a plural noun still occurs, particularly in scientific or technical writing, though this usage is becoming less common.

current, currently. Analysts frequently include these terms when they do not need them. For example, in "current status," *current* is superfluous, since readers will expect to learn about the current state unless the writer establishes a different timeframe. If the context of a passage indicates that an activity is ongoing, *currently* is superfluous. In "A pilot project currently is testing the system," *is testing* indicates that the pilot project is ongoing, so *currently* is unnecessary and should be deleted.

dangling modifier, dangling participle. See *participles*.

data. [See tone box.]

dates as modifiers. Be careful in using dates as modifiers. "The 1973 Middle East War" is acceptable because it distinguishes a particular war in the region from others in other years. However, "his 1988 death" implies that he has died more than once—an absurdity.

definite, definitive. Although both mean "clearly defined," *definitive* carries the additional meaning of "authoritative and complete."

defuse, diffuse. To *defuse* is to remove the fuze from an explosive device or to reduce tension, hostility, or danger. To *diffuse* is to spread around or scatter.

degenerate, deteriorate. Although both refer to a decline in quality, *degenerate* refers particularly to a loss of worth or virtue, whereas *deteriorate* refers to a wearing away or weakening.

desires, feels, hopes. In intelligence writing, be careful with words that have an emotional connotation, such as *desires*, *feels*, and *hopes*. If the source material does not give an emotional context, try instead more neutral terms, such as *seeks*, *thinks*, or *plans*.

device, devise. The noun *device* refers to an implement that serves a particular purpose, especially a machine to perform a task. Except in its unique senses in law related to property, *devise* is a verb meaning to plan or arrange.

different from. Use this rather than *different than* or *different to.*

dilemma. This applies to a choice between evenly balanced alternatives (normally all are unattractive). Do not use *dilemma* when you mean merely a "predicament" or a "problem."

directional terms. See *east, eastern (and similar directional terms).*

disburse, disperse. To *disburse* is to pay out, as from a fund. To *disperse* is to scatter or spread widely, disseminate, or make disappear.

disclose, divulge, expose, reveal. *Disclose* refers to making public something that has been private. *Divulge* refers to making public something that has been secret. *Expose* refers to making public something reprehensible. *Reveal* implies unveiling something not previously known.

discreet, discrete. Often confused because of the similarity in their spellings and pronunciation, these words have no meanings in common. *Discreet* is "lacking pretension" or "showing a judicious reserve in one's speech or behavior." *Discrete* means "constituting a separate thing" or "consisting of unconnected distinct parts."

disinterested, uninterested. *Disinterested* means impartial. *Uninterested* means not having interest in something.

due to. *Due to* modifies nouns and is normally used after a form of the verb *to be*, as in "The minister's fall was due to a bribery scandal." It works the same way as *attributable to.* Avoid using *due to* to modify verbs ("The minister fell due to a bribery scandal"); try *because of* instead.

during, over. Although one of the lesser meanings for *over* is "throughout the duration of something," this is the primary meaning of *during*, which is preferable for a passage such as "during the past 3 years."

each. As a subject, *each* takes a singular verb and singular pronoun references: "Each has separate duties." However, when *each* follows a plural subject, it does not affect the verb; the verb remains plural to correspond with the plural subject: "The president and the vice president each have separate duties."

east, eastern (and similar directional terms). Indefinite or general directional references end with *-ern:* "In the eastern part of the country." Definite directional references use the shorter form: "on the east bank of the river," "in the east end of town."

economic, economical. *Economic* is an adjective pertaining to finance or production and management of material wealth. *Economical* is an adjective pertaining to prudent or thrifty management—that which is not wasteful.

Endemic, Indigenous, Native

Something that is *endemic* occurs commonly in a place or region or among a particular people. How the thing or person became endemic, whether by birth or creation or movement, is not at issue. A disease can be *endemic in* or *endemic to* a geographic area, but a geographic area cannot be *endemic for* a disease. Someone *indigenous* originates in a place rather than moving into or being brought into it. Something *indigenous* to a locale occurs there naturally, so *indigenous* should not be used to refer to things produced in a locale; instead, refer to domestic production. *Native* emphasizes birth or creation in a particular place, region, or country.

effect. See *affect, effect* and *consequence, effect, implication.*

either ... or, neither ... nor. When both parts of an *either ... or* or *neither ... nor* construction are singular or plural, the corresponding verb is singular or plural, respectively. However, when one element is singular and one plural, the verb corresponds with the number of the nearer part: "Either the president or his advisers want the conflict to continue." You can avoid an awkward (albeit correct) sentence by

ensuring that the plural part of the construction is nearer the verb. Also, if you combine *not* with *either*, the companion construction uses *or*, not *nor*: "The guerrillas were not interested in either the deserted camp or the remains of the shack that has served as its headquarters."

elevation. See *altitude, elevation.*

embargo. See *boycott, embargo.*

emigrate, immigrate. *Emigrate*, to leave a place permanently, usually is followed by *from*: "He emigrated from Germany." *Immigrate*, to come to a place permanently, usually is followed by *to*: "He immigrated to Wisconsin." When a sentence includes the idea of both, *immigrate* can be eliminated: "He emigrated from Germany to Wisconsin."

eminent, imminent. A person who is *eminent* is prominent, of high rank, noteworthy, distinguished, or well known. Something that is *imminent* is impending, about to occur.

employ. See *usage, use, employ, utilize.*

endemic, indigenous, native. [See tone box.]

enemy. See *collective nouns.*

enough. See *ample, enough.*

ensure. See *assure, ensure, insure.*

entrance, entryway, entranceway. See *adit, entrance, entryway, entranceway, portal.*

equal, equivalent. *Equal* emphasizes quantitative likeness: "The weapon inventories of the two countries are nearly equal." *Equivalent* applies to qualitative similarities: "Although their inventories are not equal, the combat capabilities of the two countries are roughly equivalent."

every. See *only.*

everyone, everybody. Although these words have a plural sense, they are singular and require singular verbs and singular pronoun references. If you have trouble remembering that they are singular, try thinking of them as "every-single-one" and "every-single-body."

evident. See *apparent, evident.*

evidently. See *qualifiers.*

execute. Writers overuse *execute* by combining it with a noun to describe an action when the verb equivalent of the noun will work on its own. For example, change "insurgents executed an attack" to "insurgents attacked."

explicit, implicit. *Explicit* refers to something clearly stated rather than implied. *Implicit* is the opposite—something implied, not expressly stated.

explosive, explosives. Use *explosive* for a specific reference to a bursting or propelling charge: "a high-explosive round." Normally use the plural form in an expression such as "explosives storage area."

expose. See *disclose, divulge, expose, reveal.*

extort. To *extort* is to obtain (something) by coercive means; the thing is extorted, not the person who has it. Write "Militants extorted money from villagers" rather than "Militants extorted villagers."

farther, farthest, further, furthest, furthermore. *Farther* and *farthest* refer to physical or literal distance. *Further* and *furthest* are concerned with figurative or notional distance—degree, time, quantity. *Furthermore*, an adverb meaning "moreover" or "in addition," is preferable for a passage such as "Furthermore, the Shia are likely to...."

fewer, fewer than, less, less than. Use *fewer* and *fewer than* with numbers or units counted individually: "fewer gantry cranes," "fewer than seven main battle tanks." Use *less* and *less than* with quantities of things measured with a total (weight, bulk, sums) or conceptually: "less water," "less gross national product," "less enthusiastic," "less than 125 metric tons of stainless steel plates." See also *amount, number.*

financial, fiscal, monetary. *Financial* is the broadest of these terms, though it sometimes refers more specifically to large-scale transactions. *Fiscal* applies to governmental policies and procedures related to money. *Monetary* applies to the money itself—to the coinage and currency or to the policies relating to their circulation.

first, second, third, and so on. Use these terms for reference to a list or sequence rather than *firstly, secondly, thirdly,* and so forth.

flagrant. See *blatant, flagrant.*

flaunt, flout. To *flaunt* is to show off; to *flout* is to show contempt.

flounder, founder. To *flounder* is to struggle clumsily or helplessly, as in confusion. To *founder* is to cave in or sink, as in a ship filling with water and sinking.

foot, feet. Use *foot* with a modifier preceding a noun: "a 6-foot pole." Use *feet* if the modifier follows the noun: "a pole 6 feet long." (However, keep in mind that in most circumstances DIA intelligence products should be using metric units.)

for. See *as, because, for, since.*

forego, forgo. To *forego* is to precede in time or place; to *forgo* is to do without something.

foreword, forward. A *foreword* is a prefatory or introductory note. *Forward* usually is a directional reference for "at or near the front," although it has a number of other meanings. In a publication, a *foreword* is an introduction that comes forward of the main body of the publication.

former, latter. These terms refer to one of a series of two things, not more than two. In referring to parts of a series of three or more things, use terms such as *first* or *last.*

fortuitous. See *accidental, fortuitous, contingent, incidental, opportune.*

for which. See *where, in which, for which.*

from ... to, from ... through. An expression such as "paid from 13 July to 7 August" does not include the final day ("7 August" in this instance). Using *through* rather than *to,* however, would include the final day.

further, furthest, furthermore. See *farther, farthest, further, furthest, furthermore.*

geographic, geographical. Use the simpler *geographic.*

governmental crisis. See *crisis.*

group. See *collective nouns.*

half (and other fractions). See *all, any, half (and other fractions), more, most, none, part, percent, percentage, some.*

hanged, hung. Use *hanged* for the past tense of *hang* when referring to executions. For other senses, use *hung.*

headquarters. *Headquarters* is a plural noun that can take either a singular or plural verb. Use of a plural verb is more common, especially when the emphasis is on location: "The company's headquarters are in Washington, DC." Use of a singular verb is common when the emphasis is on authority: "Corporation headquarters has issued new rules for trading commodities."

helicopter, rotary-wing aircraft. Avoid the wordy *rotary-wing aircraft* when you mean *helicopter*. *Rotary wing* is acceptable in uses such as "rotary-wing UAV."

historic, historical. Although their meanings overlap, common usage restricts *historic* to famous or particularly important events in history and applies *historical* to general events of the past and to things related to history or its study. "Gettysburg, Pennsylvania, was the site of a historic battle." "The president hoped emblems in his office would suggest comparison of him with historical leaders from the nation's past." "She is doing historical research in open sources."

if, whether. In informal usage, either *if* or *whether* can introduce a clause that expresses uncertainty, but for general usage, *whether* is preferable for introducing such a clause. "We cannot confirm if a suitable candidate has been selected" should be written instead as "We cannot confirm whether a suitable candidate has been selected."

immigrate. See *emigrate, immigrate.*

imminent. See *eminent, imminent.*

impact. *Impact* is usually a noun: "The impact of these changes will be clearer in time." As a verb, it means to strike forcefully: "The missile impacted downrange." Avoid using *impact* as a verb to mean "affect": "These changes will impact [affect] all employees."

impending. See *pending, impending.*

implication. See *consequence, effect, implication.*

implicit. See *explicit, implicit.*

imply, infer. To *imply* is to state something indirectly. To *infer* is to draw a conclusion or deduce something.

important, importantly. To introduce a second, more worthy consideration, use *more important* rather than *more importantly*. "Hoarding has decreased; more important, shops now have items that have been unavailable for months."

in addition to. See *along with.*

in back of. See *back of, in back of, behind.*

incident. Reserve *incident* for minor occurrences of momentary importance. "An incident took place last month when traffickers fired on a police outpost." *Incident* is not suitable for a major conflict or catastrophe.

incidental. See *accidental, fortuitous, contingent, incidental, opportune.*

include. See *compose, comprise, constitute, include.*

indigenous. See *endemic, indigenous, native.*

initiate. See *begin, commence, start, initiate.*

in order to. This phrase can often be whittled down to just *to*, especially at the beginning of a sentence. However, *in order to* can be helpful when the sentence contains another infinitive nearby: "The speaker plans to delay in order to reach a wider audience after the holiday."

inside of. See *outside of, inside of.*

Instead of, Rather Than, Vice, Versus

Instead of and *rather than* are synonyms, and either is preferable to *vice* or *versus* as a preposition—"The insurgent fired a rocket-propelled grenade rather than an antitank guided missile at the tank" instead of "The insurgent fired a rocket-propelled grenade vice an antitank guided missile at the tank."

instead of, rather than, vice, versus. [See tone box.]

Insure. See *assure, ensure, insure.*

Interagency. This term is a problem because an "Interagency" does not exist. When *Interagency* is used as a noun, the passage frequently is something like "interaction among DIA, CIA, NGA, and the Interagency"; in this context *Interagency* means, roughly, "other U.S. Government organizations." When the term is used in relation to liaison or coordination, writers generally mean liaison or coordination with DIA's counterparts throughout the Federal Government. No matter how it is used, *Interagency*, as the proper name for some sort of body, lacks a clear definition and should not be used. However, *interagency*—without the initial capitalization—is an acceptable adjective associated with something involving two or more agencies, so "interagency coordination" is fine, but "Interagency coordination" is not. The bottom line: whereas *interagency* is acceptable as an adjective, do not use *Interagency* as a noun.

Leaders, Leadership

Using *leadership* as a collective noun for the leaders of a nation or organization implies that the leaders act as a unit. If the people at the top are not in agreement or are acting independently, especially against each other, *leaders* is the better choice. Change a passage such as "supporting other national leadership" to "supporting other national leaders." In addition, beware of a sentence such as this: "The leadership has shown interest in arms deals that produce kickbacks to line their pockets"; *leadership* cannot take both a singular verb (*has shown*) and a plural pronoun reference (*their*).

in which. See *where, in which, for which.*

in, within. These terms are generally synonymous, but *within* emphasizes being "inside" or "in the inner part of." For this reason, write the more general "an incident in Georgia" rather than "an incident within Georgia" unless you need to emphasize that something is occurring well inside the country.

Islamist, Islamicist, Moslem, Muslim. An *Islamist* is a person following Islamic beliefs, especially one who has Islamic fundamentalist beliefs and holds that they apply to politics as well as to religion; the term applies especially to followers of Islamic revivalist movements. Of *Islamist* and *Islamicist*, *Islamist* is the simpler and preferred term for such a follower of Islam. Of *Moslem* and *Muslim*, *Moslem* is the older spelling but today is considered outdated and possibly offensive; *Muslim* is preferred for an adherent of Islam.

it is, there are (and similar expressions). Avoid beginning a sentence with one of these phrases. They are indirect, delaying the point; are inherently wordy; usually invert the sentence structure; and frequently are connected with passive voice. "It is clear that…." just adds words to "Clearly…." We can change "There are several conclusions that can be drawn from these hypothetical scenarios" to "Several conclusions can be drawn from these hypothetical scenarios" just by deleting *There are* and *that*. Then we can improve the sentence further by correcting the passive voice that the writer used with the inverted sentence structure: "We can draw several conclusions from these hypothetical scenarios."

its. *Its* is the possessive form of *it*. *It's* is the contraction for "it is" or "it has."

-ize. Use caution with words that end in *-ize*, which can be trendy but not widely accepted. Some of these terms, such as *economize*, *jeopardize*, and *terrorize*, are well established and fine to use in formal writing, but avoid new words with the *-ize* suffix, such as *incentivize* and *Afghanize*.

Joint. See *combined, joint.*

Just. See *only.*

last, latest, past. *Last* indicates finality, especially in referring to things that come at the end of a chronology or sequence: "This report is the last he prepared before retiring." *Past* refers to things gone by or in recent time; it is preferable in a passage such as "violence during the past 3 years" because this deals with an occurrence in time recently gone by rather than the end of a grand chronology or sequence. *Latest* can mean only "most recent": "This report is the latest on the subject."

latter. See *former, latter.*

lay, lie. *Lie* is an intransitive verb (the kind that does not take an object) meaning to recline (its most common usage) as well as to occupy a position or to remain in a given condition: "He wants to lie on the beach for a week"; "The paper lies on the desk"; "The facility lies 15 kilometers south of Baghdad." *Lay* is a transitive verb (it requires an object) meaning to place something: "Lay the report on the desk after you read it"; the past tense is *laid*: "She laid her timesheet in the inbox." Most confusion between the two verbs results because *lay* also is the past tense of *lie*: "He lay on the beach for a week"; "The paper lay on the desk."

leaders, leadership. [See tone box.]

less, less than. See *fewer, fewer than, less, less than.*

liable. See *apt, liable.*

likely. Preferred usage for *likely* as an adverb is with a modifier such as *most* or *quite*: "He most likely will decide tomorrow." As an adjective, however, it does not require modification: "He is likely to decide tomorrow."

like, such as. *Like* introduces a comparison: "Hills in this part of the country are low and rounded like those near the coast." *Such as* introduces an example from a group: "hills in the Midwest such as those along the Ohio River." For *like* as a conjunction introducing a clause, see *as if, as though, like*. See also *along with.*

located. An overused term in intelligence writing, *located* often can be omitted: "The factory is located 60 kilometers west of Karachi" can become "The factory is 60 kilometers west of Karachi."

logistic, logistics, logistical. *Logistics* is the noun form. For the adjective, either *logistic* or *logistics* is acceptable, though *logistic* is preferred. Either is preferable to *logistical.*

long term, short term. Use these terms only when the context gives the reader an idea of the timeframe. Otherwise, be more specific, such as "within 5 years." See also *near term.*

loose, lose. *Loose* means not attached, restrained, or confined. *Lose* means mislaying something, not having it anymore, being unable to control something, or failing to win.

majority. Meaning "the greater part of something" or "more than half of a total," *majority* by itself is not synonymous with *most*, which in this sense means "the greatest part." When modifiers such as *great* and *vast* are used with *majority*, the combined sense corresponds with that of *most*, and *most* is an effective substitute. When *majority* refers to a vote total, the term is singular: "The prime minister's majority in parliament for health care was only three votes." However, when it refers to a group of people or things, *majority* is a collective noun that can take either a singular or a plural verb. If the sense is oneness, use a singular verb: "The majority of parliament supports the legislation." If members of the majority are acting as individuals, use a plural verb: "The majority of the members of parliament represent working class districts."

material, materiel. *Material* is any substance from which something is made. *Materiel* refers to arms, ammunition, and equipment.

may. See *could, may, might* and *qualifiers.*

meantime, meanwhile. *Meantime* is usually a noun: "In the meantime, she waited." *Meanwhile* is usually an adverb: "Meanwhile, she waited."

media. *Media* is the plural of *medium* (*mediums* also is an acceptable plural) and usually takes a plural verb. However, when *media* is used with *the*, it is a collective noun equating roughly to "the press" or "the press and other mass communication entities." As a collective noun, *media* can take either a singular or plural verb, depending on whether the collective group is acting as a unit (singular) or as separate parts (plural): "The national media has consistently supported the prime minister, but the local media have begun to demonstrate differences, with some supporting the prime minister and some supporting the opposition."

median, mean. See *average, median, mean.*

merely. See *only.*

methodology. If you mean *method, means,* or *system,* use one of those words rather than *methodology* (the study of the science of methods or a group of procedures or rules for an inquiry or branch of study). For example, change "The oil company has not found an effective methodology for cleaning the spilled oil from the beaches" to "The oil company has not found an effective means for cleaning the spilled oil from the beaches." However, *methodology* is appropriate in "The professor explained his students' methodology for surveying the people's satisfaction with the wage supplement."

Not Only ... But Also

The difficulty in using these correlative conjunctions is maintaining the parallel structure of the pieces that follow them: specifically, the part of speech or grammatical construction following *but also* should parallel the part of speech or construction following *not only*. For example, a noun should parallel a noun; an infinitive, an infinitive; a clause, a clause. Therefore, "The unit not only sent the message to its higher headquarters but also to the main directorate" should be changed to "The unit sent the message not only to its higher headquarters but also to the main directorate." Here "to the main directorate," following *but also*, parallels "to its higher headquarters," following *not only*. The sentence also could be changed so that the parallel pieces are "sent the message to its higher headquarters" and "sent the message to the main directorate." In addition, *also* is optional, especially when the pieces following the correlative conjunctions are short.

might. See *could, may, might* and *qualifiers.*

militate, mitigate. *Militate* means "to have weight or effect" for or against: "The facts militate against your interpretation." *Mitigate* means "to moderate or alleviate": "The new social order will mitigate the suffering of the poor."

monetary. See *financial, fiscal, monetary.*

more. See *all, any, half (and other fractions), more, most, none, part, percent, percentage, some.*

more important. See *important.*

more than one. Although plural in sense, this phrase almost always takes a singular verb: "More than one factor was involved in her decision."

Moslem. See *Islamist, Islamicist, Moslem, Muslim.*

most. See *all, any, half (and other fractions), more, most, none, part, percent, percentage, some; majority;* and *only.*

most important. See *important.*

most, mostly. *Most* is not an appropriate substitute for *almost:* "almost everyone" rather than "most everyone." *Most* rather than *mostly* is the correct word to mean "to the greatest degree": "those most affected" rather than "those mostly affected." *Mostly* means "for the greatest part" or "usually": "The attacks were mostly unplanned."

Muslim. See *Islamist, Islamicist, Moslem, Muslim.*

nation. See *country, nation.*

native. See *endemic, indigenous, native.*

near-, nearly. Use *nearly* rather than *near-* to modify most adjectives—for example, "a nearly complete proposal" rather than "a near-complete proposal." An exception is *near-* in *near-real-time*—"near-real-time detection." Also see *only.*

near term. This expression is open to broad interpretation—does it mean days, weeks, months, even years? When possible, replace "in the near term" with more precise language, such as "in the next 3 to 6 months." See also *long term, short term.*

neither ... nor. See *either ... or, neither ... nor.*

none. See *all, any, half (and other fractions), more, most, none, part, percent, percentage, some.*

not only ... but also. [See tone box.]

> Parliamentarian
>
> This is an expert on parliamentary rules and procedures or a member of a parliament, though "member of parliament" is preferred for that second meaning.

nouns as adjectives. Nouns used as adjectives (*attributive nouns*) are part of standard English usage: for example, "communications intelligence" is preferable to the cumbersome "communicational intelligence." Normally you should not use a noun as an adjective when an adjectival form of the word is available—provided the two words mean the same thing. Often they do not: clearly a "cloud chamber" differs from "a cloudy chamber." In general, stringing a number of attributive nouns together is undesirable; for example, the string "weapon system development and acquisition cost reductions" should be broken up, becoming "cost reductions from weapon system development and acquisition."

number. When *the* precedes *number*, *number* takes a singular verb: "The number of mistakes has decreased." When *a* precedes *number*, *number* takes a plural verb: "A number of mistakes result from carelessness." See also *amount, number.*

obsolete, obsolescent. *Obsolete* means "no longer in use"; *obsolescent* means "becoming outdated or out of use." Thus, something *obsolescent* is becoming *obsolete.*

obviously. See *qualifiers.*

offload. *Unload* is preferable.

off of, out of. *Of* generally is unnecessary when *off* or *out* is used in the sense of motion: "jump off the roof" or "jump out the window," but "move out of the building."

ongoing. See *continual, continuous, continued, ongoing.*

onload. *Load* is preferable.

only. Place *only* close to the word it limits, usually so it adjoins the word. Observe the change in meaning when *only* is shifted within the following sentence:

Only the soldier fired the gun. [No one else fired it.]
The only soldier fired the gun. [No other soldiers were involved with this incident.]
The soldier only fired the gun. [He did nothing else with it or to it; for example, he did not load it.]
The soldier fired only the gun. [He fired nothing else.]
The soldier fired the only gun. [No other gun was associated with this incident.]
The soldier fired the gun only. [He fired nothing else.]

The most common placement problem—one almost all of us commit when we speak—is placing the limiting word in front of a sentence's verb (as in the third sample above). Rarely do we actually

mean to limit the meaning of the verb; usually we intend to limit the meaning of the verb's direct object (as in the fourth sample above).

Similarly, take care with placing *almost, every, just, merely, most, nearly, primarily, principally,* and *scarcely.*

opportune. See *accidental, fortuitous, contingent, incidental, opportune.*

oral, verbal. *Oral* refers to spoken words; *verbal,* to either spoken or written words.

ordinance, ordnance. An *ordinance* is an order, a command, a regulation, or a statute. *Ordnance* is military materiel, cannon or artillery, supplies (particularly explosives) used with the military materiel, or the department responsible for weapons and their supplies. An EOD team is an explosive ordnance disposal team, not an "explosive ordinance disposal" team.

out of. See *off of, out of.*

outside of, inside of. When *outside* is a preposition, *of* is unnecessary: "outside the building," "outside the realm of possibility." The same is true of *inside.*

over. See *during, over.*

pair, pairs. For more than one pair, *pairs* is preferable: "two pairs of antennas."

parliamentarian. [See tone box.]

part. See *all, any, half (and other fractions), more, most, none, part, percent, percentage, some.*

Predominant, Predominate, Predominantly, Predominately

Predominant is an adjective meaning having the greatest importance, influence, or authority, especially for a particular period: "the predominant weapon during the early days of the insurgency." *Predominate* is a verb meaning to prevail, to gain power or authority: "His views predominate in all government decisions." *Predominantly* is the preferred adverb.

participles. The chief usage problem connected with participles is with participial phrases that open sentences. Readers expect a modifier that begins a sentence to refer to the subject of the sentence. When a participial phrase cannot logically modify the subject of the sentence, we say the modifier "dangles"—a dangling participle or dangling modifier. In "Popping up from behind the hill, the tank was fired upon by the helicopter," the participial phrase dangles because it cannot modify the subject *tank.* The sentence should read "Popping up from behind the hill, the helicopter fired on the tank."

past. See *last, latest, past.*

pending, impending. *Pending* means "yet to come" or "not yet settled." *Impending* has a similar basic meaning but also connotes a sense of threat or menace.

people, persons, personnel. *Persons* is applicable to a specific, relatively small number: "He killed 10 persons." *People* is acceptable in this sense as well and is the word of choice for a large number of individuals, whether collectively or individually. *Personnel* is a collective noun referring to employees of an organization or members of a group. It should be avoided as a substitute for *people* or *persons*: "six persons" or "six people" rather than "six personnel exited the building." See also *populace, population* for related usage issues.

percent, percentage. See *all, any, half (and other fractions), more, most, none, part, percent, percentage, some.*

perhaps. See *qualifiers.*

period of time. *Period* almost always conveys a sense of time, so *of time* generally is unnecessary.

persuade. See *convince, persuade.*

populace, population. *Population* refers to all the people in a specific area or to the number of people in a group, class, or race in a specific area. *Populace* refers particularly to the masses—the general public—and

is not a good substitute for *population* in a statement such as "the population of the lower White River valley speaks a variant of French." See also *people, persons, personnel* for related usage issues.

portal. See *adit, entrance, entryway, entranceway, portal.*

portend, presage. *Portend* means "to serve as an omen or warning." *Presage* connotes a feeling or premonition, a presentiment. Therefore, *portend* is preferable for use with something inanimate, such as an event: "An increase in security violations could portend more serious problems within these forces."

possibly. See *qualifiers.*

practical, practicable. *Practical* indicates useful, effective, or sound. *Practicable* applies to things or concepts that are feasible or achievable and cannot apply to persons.

predominant, predominate, predominantly, predominately. [See tone box.]

presage. See *portend.*

preventive, preventative. Use *preventive.*

primarily. See *only.*

principally. See *only.*

principal, principle. *Principal* is an adjective meaning "most important" or a noun referring to a key official or to money. *Principle*, always a noun, refers to a standard of conduct, an essential element, or a general truth.

prioritize. To *prioritize* is to arrange items in order of priority, as in "prioritize work, school, and family." Avoid using *prioritize* with a single item; in that case, try "place a priority on" or "give priority to."

probably. See *qualifiers.*

pronouns for countries or ships. Use the gender-neutral forms *it* or *its.*

proved, proven. *Proved* is the preferred past participle for the verb: "The story has proved false." *Proven* is the preferred adjective: "a proven success."

provided, providing. Either term is acceptable as a conjunction: "You can use this method, provided [providing] your supervisor agrees." Neither should be used when the word *if* expresses a simple possibility: "The ceremony will be canceled if the rain continues."

publically, publicly. Use *publicly.*

purportedly. See *qualifiers.*

purposely, purposefully. *Purposely* means "intentionally." *Purposefully* indicates determination to reach a goal.

quagmire. *Quagmire* raises particular problems in intelligence writing. The standard definition is a difficult, precarious, or entrapping position. However, the word is so strongly associated with Vietnam that readers may question the parallels with that conflict. Try *predicament* or *quandary* instead.

qualifiers. Intelligence analysts must use qualifiers to remain objective and accurate. They should not, however, habitually hide judgments behind words such as *allegedly, apparently, conceivably, evidently, likely, may, might, perhaps, possibly, probably, purportedly, reportedly, reputedly, seemingly,* and *virtually.* Conversely, they should not strengthen judgments based on weak evidence with words such as *obviously, undoubtedly,* and *clearly.* Moreover, multiple qualifiers (for example, *may possibly*) are never justified.

Represent

This means "to depict" or "to symbolize," not "to constitute." "The dotted line represents the department boundary" is proper usage. "South African gold represents most of the world's output" is not.

question as to whether. See *as to.*

quote, quotation. Except in informal usage, *quote* is a verb; *quotation* is the noun. *Quote* should not be used as a noun to replace *quotation* in general writing.

range, vary. In the elements of their meanings for which *range* and *vary* are similar, *range* refers to changing or differing within limits, whereas *vary* refers to changing in succession. "Elevations range between 500 and 1,500 meters above sea level." "Temperatures vary from season to season."

rare, scarce. Both mean "infrequently occurring" or "uncommon." *Rare* connotes high value. *Scarce* connotes that supplies are insufficient.

rather than. See *instead of, rather than, vice, versus.*

real. See *actual, real, virtual.*

rebut, refute. Though these terms are somewhat synonymous, *rebut* means "to offer opposing arguments," whereas *refute* connotes success in winning an argument.

recurrence, reoccurrence. *Recurrence* has the sense of happening repeatedly or periodically, whereas *reoccurrence* suggests simply happening again.

regards. *In regards to* is substandard. Use *in regard to, with regard to, regarding, about,* or *on.*

rein, reign. A *rein* is a strap attached to a bridle, used to control a horse—hence the expressions "take the reins" and "rein in." Do not confuse it with *reign*, which refers to a monarch's rule.

relatively. See *comparatively, relatively.*

reluctant, reticent. *Reluctant* means "unwilling to act." *Reticent* means "uncommunicative" or "reserved."

remains. See *continues, remains.*

reportedly. See *allegedly, reportedly, reputedly* and *qualifiers.*

represent. [See tone box.]

reputedly. See *allegedly, reportedly, reputedly* and *qualifiers.*

respectively. *Respectively* means "one at a time, in the order indicated." It is particularly useful for matching sets of data, as in this example: "Terrorists attacked markets in Baghdad and Basrah with a vehicle-borne improvised explosive device and rocket-propelled gre-

Omitting *That*

Some writers routinely eliminate *that* when it is a relative pronoun introducing a dependent clause. Leaving out *that* generally works well when the dependent clause simply modifies another word in the sentence. For example, in "The building that the team was watching was unoccupied," omitting *that* causes no problem for readers: "The building the team was watching was unoccupied." We might even argue that the sentence is easier to read without *that*. However, when the dependent clause is the direct object of a sentence's verb, omitting *that* may cause momentary problems for some readers. Consider the following versions of the same thought:

> Moderate Muslim clerics emphasize Islam does not condone terrorism.
>
> Moderate Muslim clerics emphasize that Islam does not condone terrorism.

Omitting *that* from the first version of the sentence causes many readers to initially read "Moderate Muslim clerics emphasize Islam." Because the sentence continues and because that initial thought is simplistic (as Muslim clerics of course "emphasize Islam"), those readers quickly reread the beginning of the sentence to look for a clause that clarifies the thought. This momentary disruption does not occur with the second version of the sentence because the relative pronoun *that* is a marker readers have learned to recognize; it alerts readers to look for the clause that follows. Using *that*—rather than leaving it out—provides the marker readers are accustomed to seeing and alerts them to the structure of the sentence.

nades, respectively." Here *respectively* tells readers that the vehicle-borne improvised explosive device attack was against the market in Baghdad, while the rocket-propelled grenade attack was against the market in Basrah. *Respectively* serves little useful purpose if used at the end of a single set of data—"Terrorists attacked markets in Baghdad and Basrah, respectively"—and usually should be deleted.

reticent. See *reluctant, reticent.*

reveal. See *disclose, divulge, expose, reveal.*

rotary-wing aircraft. See *helicopter.*

roughly. See *approximately, about, roughly, some.*

Sahara desert. Because *Sahara* is Arabic for "desert," use simply *Sahara* or *the Sahara.*

sanction. *Sanction* has meanings that are almost in opposition: from approval and encouragement to penalty or coercion. Therefore, use *sanction* only if context will make its meaning clear.

scarce. See *rare, scarce.*

scarcely. See *only.*

second. See *first, second, third, and so on.*

seemingly. See *qualifiers.*

-shape, -shaped. Use *-shaped,* rather than *-shape,* in a unit modifier: "an H-shaped administration building," "an L-shaped lot." Do not combine either *-shape* or *-shaped* with a modifier that already names a shape; for example, change "a square-shaped structure" to "a square structure." In addition, use "irregularly shaped" rather than "irregular-shaped."

ship. See *boat, ship.*

short term. See *long term, short term.*

should. In intelligence writing, limit *should* to cases that carry a sense of obligation or duty. Use *if* to express a condition. Instead of "Should the outer defenses fail, guards will respond," write "If the outer defenses fail, guards will respond."

sight. See *cite, sight, site.*

significant, significantly. These words suffer from overuse in intelligence writing, especially when applied to ordinary activities or momentary changes. The alternative is to state the facts and let their significance speak for itself.

since. See *as, because, for, since.*

site. See *cite, sight, site.*

situation. Authors frequently use *situation* in connection with another descriptive term when the other term, or a form of it, can stand by itself. For example, use "emergency" by itself rather than "emergency situation" and "deteriorating security" rather than "deteriorating security situation."

-size, -sized. Use *-sized* in a phrase such as "medium-sized barrel."

some. See *all, any, half (and other fractions), more, most, none, part, percent, percentage, some; approximately, about, roughly, some;* and *certain, some.*

stalemate. This term may mislead some people because in chess, a stalemate is permanent and cannot be broken. When referring to a predicament that might be resolved eventually, try *impasse* instead.

start. See *begin, commence, start, initiate.*

stationary, stationery. Something *stationary* is still, not capable of moving, or unchanging. *Stationery* refers to paper for writing, or more generally paper and envelopes or office supplies.

such as. See *like, such as.*

suppose, supposed. *Suppose* is the present tense of a verb that means to assume, to believe, or to consider something to be likely. *Supposed* is the past tense and past participle of the same verb. As the past participle, *supposed* is an adjective that means presumed, intended, expected, or permitted: "The missile was supposed to fly at least 250 kilometers, but it failed shortly after launch."

table. As a verb, *table* can mean "to introduce something for consideration" or "to set an issue aside." If you use *table* as a verb, be sure the context is unmistakable, or use a different verb.

Taiwan, Taiwanese. See *China, Chinese, Taiwan, Taiwanese.*

team. See *collective nouns.*

telecommunication, telecommunications. See *communication, communications, telecommunication, telecommunications.*

that, which, who. Use *that* to introduce a restrictive (defining) clause—one with information that is necessary for full identification of the person or thing the clause modifies. "The platoon that was pinned down held its position" implies that although two or more platoons were involved, only one of them was pinned down, so "platoon that was pinned down" clearly defines which platoon is being discussed. Use *which* with a nonrestrictive (nondefining) clause—one with information that is not essential to fully identify the thing the clause modifies. "The platoon, which was pinned down, held its position" indicates only one platoon is being identified; it cannot be confused with any other platoons, so "which was pinned down" is not required to fully identify the platoon under discussion. Notice that a set of commas accompanies the nonrestrictive clause to set it off from the main part of the sentence; these commas are required in standard English usage. Use *who* only when people are involved; *who* can be used with either restrictive or nonrestrictive modifying clauses, so commas are essential to set off the nonrestrictive uses. Do not use *who* to introduce clauses modifying organizations; an organization is a thing, even though it represents a group of people. In some sentences with restrictive clauses, *that* and *who* may be omitted to tighten wording, although their sense will still be present. See also tone box "Omitting *That*."

there are. See *it is, there are (and similar expressions).*

third. See *first, second, third, and so on.*

though. See *although, though, even though, while.*

ties. Use *ties to* rather than *ties with. Relations with* often works as an alternative.

together with. See *along with.*

to include. *To include* has become a bureaucratic way of saying *including*. The infinitive is appropriate in a sentence such as "The Army will expand training to include live-fire exercises." Otherwise, *including* is preferred: "The regime has supplied militias with military equipment, including [not *to include*] rockets."

toward, towards. Use *toward.*

undoubtedly. See *qualifiers.*

uninterested. See *disinterested, uninterested.*

unknown, uncertain, unclear, undetermined. As an adjective, *unknown* can mean both "not known to anyone" and "not part of the writer's/speaker's knowledge." The usage problem for intelligence writing occurs when someone obviously must know whatever is being discussed but the context suggests that no one knows. One solution to this problem is to substitute *uncertain, unclear,* or *undetermined,* though those terms

will not always improve the situation. The preferred fix is to clearly identify that the author does not know, with something like "DIA does not know whether…." or "We do now know whether…." Serious shortfalls in the knowledge base can be addressed in a tone box dealing with intelligence gaps.

usage, use, employ, utilize. In the most basic sense, these terms are interchangeable; *use*, the shortest term, is the best choice except when you need the more specialized connotation of one of the other terms. *Usage* fits for the way a language or its elements are used, interrelated, or pronounced: "She studied usage of French in Canada." *Employ* is particularly applicable for obtaining or maintaining the services of an individual or object: "During World War II, U.S. companies employed many women in manufacturing." *Utilize* is suitable for something's being useful for a new function, including for an unintended purpose: "He utilized a chair to reach the top shelf."

vary. See *range, vary.*

verbal. See *oral, verbal.*

very. As an adverb, *very* means "in or to a high degree" and often is used to intensify adjectives or other adverbs: "very happy," "very annoyed," "very concerned," etc. The problem comes with overuse of *very* for this purpose, especially with terms for which degrees of intensity are questionable. Few people would argue with dropping *very* from a phrase such as "very complete," as something either is or is not "complete." However, what real meaning does *very* add if we write "very nearly complete"? Even if the author has a difference in mind between "nearly complete" and "very nearly complete," are readers likely to understand that difference in intensity? When you see *very* modifying an adjective or another adverb, ask yourself whether *very* adds anything useful or should be deleted.

vice, versus. See *instead of, rather than, vice, versus.*

virtual. See *actual, real, virtual.*

virtually. See *qualifiers.*

way, ways. Use *way*: "She was a long way from home."

weapon, weapons. Both singular and plural forms are acceptable as modifiers, though the singular (*weapon*) is preferred in most instances, especially when using *weapons* would duplicate the s sound in both modifier and word modified: for example, *nuclear weapon storage* rather than *nuclear weapons storage*; *chemical and biological weapon problems* rather than *chemical and biological weapons problems.*

website. See *cite, sight, site.*

where, in which, for which. Because *where* is associated with locations, *in which* and *for which* are better choices than *where* when the context of a passage has nothing to do with a place or places. "In other cases, where U.S. involvement is not a factor, the working group recommends…." would be better written as "In other cases, in which U.S. involvement is not a factor, the working group recommends…." Similarly, "individuals involved in special assignments, where overtime requirements are likely to exist, should…." would be better as "individuals involved in special assignments, for which overtime requirements are likely to exist, should…."

whether. See *if, whether.*

which, who. See *that, which, who.*

while. See *although, though, even though, while.*

with. Avoid using *with* as a conjunction similar to *and*. For example, write "Attention has focused on maritime security, and the president has signed an order to create a coast guard" instead of "Attention has focused on maritime security, with the president signing an order to create a coast guard."

within. See *in, within.*

Economy of Words

Concise wording makes reading easier. The key is compression, not omission. In particular, watch for unnecessarily wordy phrases that have become habitual in our writing. One small connecting word often can do the work of several. In addition, watch for redundancies—eliminating the duplicative idea compresses and sharpens the expression.

For	*Try*
abortive coup attempt	abortive coup
absence of	no
absolutely essential	essential
acute crisis	crisis
adequate enough	adequate
a distance of 14 kilometers	14 kilometers
advance planning	planning
afford an opportunity	let, permit, allow
after the conclusion of	after
aggregate total	total
a large portion of	many, much of
all-time record	record
along the lines of	like, such as
am (is, are) going to	will
a myriad of details	myriad details

with the exception of	except, except for
with the result that	so
worst ever famine	worst famine

Simple Words

Keep writing simple and direct. In many cases using the following simple words will strengthen the writing and make it easier to read.

For	*Try*
accomplish	do
adequate	enough
advantageous	helpful
advise	report, say, tell
ameliorate	improve, better
approximately	about, nearly, roughly, some
ascertain	learn, find out
assistance	help, aid
attempt	try
citizenry	citizens
commence	begin, start
concerning	about, on
construct	make, build
contradistinction	opposite
customary	usual
deem	think
demonstrate	show
dialogue	conversation, discussion, talks
dispatch	send
dwell	live
effectuate	cause
endeavor	try
evince	show
exacerbate	aggravate, worsen
fabricate	make, build
facilitate	ease, help
finalize	complete, finish, conclude
frequently	often
heretofore	before, until now
impact	effect
implement	carry out, fulfill, do
inaugurate	begin, start
individual flotation device	lifejacket
induce	persuade
initial	first
initiate	begin, start
innumerable	many
materialize	happen, appear
maximum	most, greatest
minimum	least, smallest

For	*Try*
necessitate	force, cause
notwithstanding	although, despite
obfuscate	hide, mask
objective	goal, aim
opine	think, believe
optimum	best
output	product, yield
per	a, each
perceive	believe, see
populace	people

terminate	end, finish
transmit	send
transpire	take place
ultimate	final
upon	on
utilize	use
vice	instead of, rather than
virtually	almost
weaponry	weapons
whenever	when

CHAPTER 6: Punctuation

UNCLASSIFIED

What the semicolon's anxious supporters fret about is the tendency of contemporary writers to use a dash instead of a semicolon and thus precipitate the end of the world. The main reason people use the dash is that they know *you can't use it wrongly*—which, for a punctuation mark, is an uncommon virtue.

—Lynn Truss, *Eats, Shoots & Leaves*

UNCLASSIFIED

CHAPTER 6: Punctuation

Punctuation is intended to promote readability. It helps clarify the structure of written material and provides clues for how to read material aloud. Sometimes punctuation is critical for readers' understanding of what an author intended to say.

Apostrophe

For Possessives

The Basic Rule. Form the possessive case of singular nouns, indefinite pronouns, and abbreviations by adding an apostrophe and a lowercase s. For most plural nouns add only an apostrophe; however, for irregular plurals (ones that do not end in s), add an apostrophe and a lowercase s.

boy: the boy's book	boys: those boys' books
woman: the woman's briefcase	women: the women's briefcases
Jones: the elder Jones's papers	Joneses: the Joneses' home
Thai: that Thai's passport	Thai: those Thai's passports
CO: the CO's orders	COs: those COs' orders
Shiite: the Shiite's factory	Shia: those Shia's neighborhood
each other: each other's territory	

The basic rule applies to proper names and abbreviations ending in sibilants (the hissing sound of an *s*, *x*, or *z*). However, leave off the *s* after the apostrophe if the extra sibilant is not normally pronounced.

Gibbons: General Gibbons's tactics	Marx: Marx's manifesto
Juarez: Juarez's troops	Berlioz: Berlioz's music
CBS: CBS's broadcasting	Damascus: Damascus's intentions
HAMAS: HAMAS's activities	*but* the Netherlands' policy
	the Philippines' interest

Some Complexities. One exception is for common nouns ending in *s* or *ce* when followed by a word beginning with *s*: in these cases the possessive of the common noun is formed with only an apostrophe.

for goodness' sake	for convenience' sake

For *corps* (both singular and plural and whether as a common or proper noun), add only an apostrophe.

the corps' barracks	the two corps' mission
11th Corps' field hospital	the Second Artillery Corps' strategic missiles

For compound titles, make the last word—the word closer to the thing possessed— possessive.

the secretary general's speech	the secretaries general's speeches
the commander in chief's decision	the commanders in chief's decisions
the assistant chief of staff's policies	the assistant chiefs of staff's policies

To show joint possession for two or more nouns, make only the last one possessive.

Phil and Dick's collaboration on the Sudan report was a success.

However, to show individual possession, make each noun possessive.

Phil's and Dick's draft reports on Sudan did not agree on two key points.

Follow the form of the original for geographic names; names of firms, organizations, and institutions;

and titles of publications. Of note, most place names today—but not all—do not include apostrophes, and some that did at one time (such as Harper's Ferry in the beginning) no longer have the apostrophe.

Harpers Ferry	Martha's Vineyard
Lloyds Bank; follow Lloyds's lead	Lloyd's insurance; follow Lloyd's lead
Johns Hopkins University	*Reader's Digest*

What we call the possessive case often is used when ownership is not involved. Do not be concerned with the argument that inanimate nouns cannot possess things. The form being used is the genitive case—which came to be called the possessive case in the 18th century—and does not involve possession. These forms are perfectly acceptable.

2 hours' pay	a dollar's worth
the room's furnishings	the airplane's speed
for pity's sake	for old times' sake

Do not use an apostrophe with the possessive form of personal pronouns. Be particularly careful not to confuse the possessive *its* with the contraction *it's* (for "it is" or "it has"). Generally avoid contractions in intelligence writing.

his	ours
hers	yours
its	theirs

Apostrophes and Descriptives

Do not use an apostrophe after the name of a state, country, or most other bodies ending in s, or after words more descriptive than possessive, except when the plural does not end in s.

Massachusetts laws	*but*	children's hospital
Bureau of Ships report		Commission on the Status of Women's headquarters
writers guide		Congress's priorities
officers club		
commanders conference		
dockworkers strike		

For a date, be careful to distinguish between the plural (formed with a lowercase s, as in *1970s*) and the possessive (formed with an apostrophe and a lowercase s for a singular date, as in *1970's*, or with just an apostrophe for the plural possessive, as in *1970s'*). The plural *1970s* refers to the years in that decade (1970 through 1979), whereas the possessive *1970's* refers to something belonging to that year and the plural possessive *1970s'* to something belonging to that decade.

For Some Plurals

Except as noted in the exceptions below, use an apostrophe and a lowercase s to form the plural of an abbreviation that ends in a lowercase letter or to form the plural of a single letter or digit.

cy's	7's and 8's
dotting i's and crossing t's	

- Do not use an apostrophe for the plural for an abbreviation that is treated as a word:

emails	lasers
medevacs	radars
scubas	sonars

- Do not use an apostrophe and a lowercase s for the plural of a unit of measure, as units of measure appear the same for both singular and plural instances.

  67 km (*not* 67 kms) 550 t (*not* 550 t's)

- Do not use an apostrophe for the plural of an abbreviation ending in an uppercase letter or a number.

  ICBMs SS-25s
  MiGs H-IIs

Brackets

Square Brackets

Use square brackets—[ ]—for the following:

- To enclose a parenthetical expression inside a set of parentheses.

  The temperature in the room (20 °Celsius [80 °Fahrenheit]) was the main reason the meeting broke up early.

- To enclose an interpolation, such as an editorial remark, within a direct quotation. However, a parenthetical remark that is part of the original material being quoted and that is within parentheses would remain in parentheses.

  The defense minister stated that he would "resolve the apparent policy shift with him [the prime minister] before the meeting."

If you need to label a mistake, such as a misspelling or wrongly used word, within a direct quotation, you can show *sic* (in roman rather than italic type) within square brackets immediately following the error you are labeling.

The article seemed to be cursed from the start, as its title first appeared as "Elections in Chili [sic] Likely To Topple President."

This interpolation tells readers that you are aware of the mistake and did not introduce it. Use this technique sparingly, however, as readers also may wonder why you felt the need to quote erroneous material. A better alternative, if it is available, is to present the quotation in a way that will allow you to omit the erroneous text.

Angle Brackets

Use angle brackets—< >—for Intelink and Internet URLs (uniform resource locators), email addresses, and account names when you present them in text, but omit angle brackets with live links. This technique was devised to clearly distinguish between punctuation that is part of an electronic address and punctuation for the sentence. It also allows for a break to be made in a URL that is too long to appear on a single line; make such a break at internal punctuation within the URL, and do not add any sort of punctuation at the break in the line. You may have to insert the angle brackets a second time to make them appear in text if Word automatically converts the URL to a hyperlink.

The World Factbook is available on JWICS at <https://www.cia.us.qlat/DI/Factbook/index.html> and on NIPRNET at <https://www.cia.gov/library/publications/the-world-factbook/>.

Angle brackets are unnecessary when referring to a website name, even if ".com" is part of the name.

The group used Twitter to spread word of the demonstration.
The online newspaper *Boston.com* carried a photo of the suspect.

Bullets

Marking Bulleted Items

Use a bullet (•) or caret (>), depending on the product line, to set off each item of an indented list. Using subordinate levels below the bullet level is discouraged. If subbullets are necessary in publications and correspondence, mark each with an en-dash (–), which Word makes available for this type of bullet.

- The first item in a bulleted list.
- The second item in the bulleted list.
  - A subbullet.
  - A second subbullet.
- The third item in the bulleted list.

Keep indentation as formatted in DI's current product line templates for bulleted lists. However, for correspondence, such as info memos, action memos, and response memos, align bullets with the left margin. The left end of the en-dash that marks a subbullet should be aligned on the left with the start of the text for the primary bullets.

Presenting Bulleted Items

For textual products (but not briefing slides), use an initial capital letter for the first word of the material in each bulleted item (or each subbulleted item), and end the material with a period (unless the context calls for different ending punctuation, such as a question mark). Use this form regardless of whether a bulleted item is a word, phrase, or full sentence. Of course, a bulleted item also could have multiple sentences, and these would be punctuated as normal sentences. Most of the formats DIA uses for both substantive products and correspondence call for blank lines before and after each bulleted item.

For briefing slides, DIA uses slightly different presentation. Each bulleted item begins with an initial capital letter, but the bulleted items have no end punctuation unless a bulleted element has multiple sentences; then only the final sentence has no end punctuation.

Colon

Use a colon (:) for the following:

- At the end of a sentence to point to material that summarizes or expands on the thought in the preceding portion of the sentence. Any grammatical unit can follow the colon: a word or phrase, a series of words or phrases, a dependent clause or clauses, or even a sentence or series of sentences.

  The foreign delegation visited three cities in the United States: New York, Chicago, and Los Angeles.

  The general is well qualified to serve as Army commander: he has served 5 years as the vice commander and previously held key leadership posts in each of the military districts.

  If a single sentence follows a colon for this purpose, begin that sentence with a lowercase letter—essentially linking it to the previous sentence, as in the second sample above. However, if a series of sentences follows the colon, begin each of them with a capital letter.

- To introduce a list set off from the rest of the text by indentation (as with the colon in the last example in the box below).
- To introduce some direct quotations. A colon is the normal punctuation mark to introduce a direct quotation when a long quotation is indented as a block to separate it from a paper's body text or after a formal introduction such as "as follows" or "the following."

The prime minister said the following in a speech outside the parliament building on 27 March 2010:

> My government is not responsible for the tragic events of 25 March. Irresponsible individuals rioted, destroyed public property, and endangered all our citizens. The government had no choice except to stop these illegal activities.

Improper Colon Use

Do *not* use a colon between a verb and its objects or between a preposition and its objects, unless the colon sets off an indented list.

Not: The Army wants several U.S. military systems, such as: attack helicopters, Patriot missiles, and Humvees.

But: The Army wants several U.S. military systems: attack helicopters, Patriot missiles, and Humvees.

Or: The Army wants several U.S. military systems, such as attack helicopters, Patriot missiles, and Humvees.

Or: The Army wants several U.S. military systems:

- Attack helicopters.
- Patriot missiles.
- Humvees.

For the introduction to the indented list above, the sentence could have been written like this: "The Army wants several U.S. military systems, such as"; even though this introduction would not be grammatically wrong, the *such as* is unnecessary, as the colon by itself is sufficient to introduce the list that follows.

Punctuation for Source Reference Citations (Endnotes) in Intelligence Products

Placement of Reference Numbers in Text in Relation to Sentence Punctuation. Endnote references in the text of a product are numbered sequentially, beginning with 1, and should be placed as close as reasonably possible after the text to which the number refers—but always at the end of a clause or phrase and after ending punctuation (comma, semicolon, period, and quotation marks). Often the endnote reference number can go at the end of a sentence, as in the first sample below.

... end of sentence.[1] New sentence....

Two days later the so-called Green Revolution began;[2] young members of the People's Progressive Party rioted in the capital.

Although the prime minister insisted that his administration was not responsible for the rioting in the capital,[3] he offered little justification for the brutality of the repressive measures he is believed to have ordered to bring quiet to the city's streets.

Punctuating Multiple Reference Numbers in the Same Location. For writing in academia, authors almost never need multiple footnote or endnote reference numbers in the same location. Instead, they use a single reference number, which corresponds to a footnote or endnote presenting information for the multiple sources. This practice is not practical for DIA's intelligence products, however, because of the coding DIA uses for posting products and because selected endnotes may have to be sanitized for some dissemination. As a result, DIA products sometimes have multiple endnotes in the same location. Multiple reference numbers should be separated with a comma and a space after each reference number.

... end of sentence.[4, 5, 6] New sentence....

Note, however, that other punctuation marks, such as a comma or em-dash (or no punctuation at all), also may be appropriate before a direct quotation, depending on how the quoted material fits into the writer's sentence pattern. For example, the sample above could have been written like this instead:

In a speech outside the parliament building on 27 March 2010, the prime minister said that his administration was

> not responsible for the tragic events of 25 March. Irresponsible individuals rioted, destroyed public property, and endangered all our citizens. The government had no choice except to stop these illegal activities.

(See also page 130 for use of a comma to introduce a short quotation.)

- Between a title and a subtitle.

  "Russia: Outlook for Key Military Reforms"

An em-dash can fulfill this same function, though a colon is more common. Moreover, if you need to join elements associated with a complex title and subtitle, use a colon for one punctuation mark and an em-dash for the other rather than using two colons or two em-dashes.

"Captives: A Month With the Taliban—What They Saw and Heard"

- To show a ratio. If the ratio is used as an adjective, however, use hyphens and *to*.

  Her chances are 15:1.
  but She has a 15-to-1 chance.

Comma

Use a comma (,) for the following:

- To separate two words or figures that otherwise might be misunderstood.

  Of the total, profit from the first sale raised the most concern.
  In 2009, 870 tractors were completed. (*But:* In 2009 only 870 tractors were completed.)

- After every item in a series except the last item. This rule applies whether the items in the series are single words, phrases, or clauses.

  Exports include copper, lead, zinc, and tin.
  Copper, lead, zinc, and tin are exported.

If any item within a series itself requires commas, use semicolons to separate the items of the series. However, the same rule still applies for semicolons for the major parts of the series and for commas within any of the parts.

Three major NATO commands are subordinate to Allied Command Operations, with headquarters in Brunssum, Netherlands; Naples, Italy; and Lisbon, Portugal.

Targeting requires the ability to locate targets; identify them, determine their vulnerability, and evaluate potential weapon effects against them; deliver appropriate weapons to a target; and evaluate the resulting damage.

Serial Comma

Note that DIA uses a comma after the next-to-last item in a series (serial comma). Advocates of "open" punctuation leave out the comma after the next-to-last item in a series of three or more things—a style some popular periodicals employ. Generally, however, this is a disservice to readers. Because items within a series may be compound, if you leave out the comma after the next-to-last item, readers cannot tell when they see *and* or *or* in a series whether that word joins parts of a compound element within the series or whether it precedes the final item of the series. Always providing the comma after the next-to-last item in the series will eliminate the need for rereading to correctly understand the series.

- Before a coordinating conjunction that joins two independent clauses (full sentences). Coordinating conjunctions are *and, or, nor, for, but,* and sometimes *so* and *yet.*

  Traffickers smuggle in both cocaine and marijuana, but domestic marijuana is available in small quantities.

  Note: Do not confuse a coordinating conjunction that joins independent clauses with one that joins verbs in the same clause. No comma is required before *and* in the following sentence:

  He served in the Air Force until 1988 and has worked for DIA since then.

- After a dependent clause that begins a sentence.

  Because they needed funds to expand their operations, the insurgents became involved with drug trafficking.

  A comma usually is not necessary before a dependent clause that ends a sentence, especially a dependent clause that is closely related to the meaning of the main clause. In the following example, for instance, the ending dependent clause explains why the main clause is true.

  The insurgents became involved with drug trafficking because they needed funds to expand their operations.

  However, a dependent clause that follows a sentence's main clause and is not essential to the meaning of the main clause—usually because it provides additional information or departs from the main clause in a new direction—may require a comma at the start.

  Insurgents in the mountains are well protected, whereas those attempting to operate in the lowlands are more vulnerable to interdiction.

- After a dependent clause immediately following a coordinating conjunction that joins two independent clauses. (The coordinating conjunction in the following example is *but.*)

  The Army commander initially claimed that guerrillas had attacked the convoy, but after operational details appeared in the press, he revealed that friendly troops had fired on the trucks.

  Note: Advocates of "close" punctuation also would use a comma between *but* and *after*—at the beginning of the dependent clause that follows the coordinating conjunction—because the dependent clause interrupts the primary flow of thought in the sentence. That way of punctuating the sentence, however, would result in commas on both sides of *but,* which many readers find excessive, so most writers and readers today are more comfortable with the comma at the end of the dependent clause (following *press*) but would not use a comma at the start of the dependent clause (before *after*).

- After a long phrase that begins a sentence. No clear guidance defines *long* for this purpose. The role of the comma is to aid readers—by pointing out where the sentence changes from introduction to main clause—so look at the sentence as readers would. Usually you'll want a comma after an introductory phrase of more than three words. A comma is optional but may aid readability after a short introductory phrase followed by a capitalized word.

  Because of his need for control, he expanded the operations of his organization.
  After his operation he retired from the firm.
  In March, Andorra announced the establishment of a national riverine surveillance system.

- Both before and after a long phrase or clause that occurs between the subject and the verb of a sentence.

  The platoon, having been ordered to prepare to disable the bridge, attached explosive charges to the bridge supports.

  A clause or phrase such as this one between a sentence's subject and verb may interrupt the flow of thought too much and may make a sentence unnecessarily complex. Moving the interrupting clause to the beginning of the sentence (or occasionally to the end) may result in a better sentence.

Watch for Dangling Modifiers

When a sentence includes a modifying phrase or clause but lacks a word the modifier can reasonably modify, the modifier "dangles."

- The most common dangling modifier occurs at the beginning of a sentence. Readers expect a modifier at the start of a sentence to modify the sentence's subject. When that relationship is not reasonable, the modifier dangles.

Consider the following:

> Arriving at the forward operating base after the attack had begun, the perimeter was quickly secured by the company.

This sentence literally says that the perimeter arrived at the forward operating base after the attack had begun. Because that is nonsensical, the opening long modifying phrase dangles. One way to repair the sentence is to put the appropriate term in the subject position:

> Arriving at the forward operating base after the attack had begun, the company quickly secured the perimeter.

Be particularly careful with sentences beginning with *Based on ...*, especially when such a sentence opening is paired with a passive voice construction, like this one:

> Based on the sequence of operations just prior to the failure, the system design is considered to have caused the failure.

This sentence says that the system design based something "on the sequence of operations just prior to the failure." We cannot tell from this sentence who assessed the failure on the basis of the sequence of operations, but we know it was not the system design itself. The sentence needs to be rewritten.

> Having been ordered to prepare to disable the bridge, the platoon attached explosive charges to the bridge supports.

- To set off a nonrestrictive word, phrase, or clause. *Restrictive* material is essential for the definition of whatever it modifies and is not set off from it. *Nonrestrictive* material is not essential for definition of whatever it modifies, interrupts the flow of the sentence, and is separated from the thing modified with a comma or set of commas.

> She briefed on three topics that were of high interest.
>
> She briefed on three topics, which were of high interest.

Marking Interruptions

Three types of punctuation marks can set off interrupters: commas, parentheses, and em-dashes. Choosing among them depends on the amount of emphasis you want to give to the interrupter:

- Commas set off the interrupting material, marking it as nonrestrictive, without affecting the emphasis on the interruption. That is, commas provide standard emphasis.
- Parentheses take emphasis away, making the words set off like a whispered aside.
- Em-dashes add emphasis to the words they set off.

The first of those sentences *implies* that more than three topics existed and says that three of them were high-interest topics. Because *that were of high interest* restricts the definition of *three topics*, the modifier is essential to the meaning and is not set off with a comma. The second sentence *says* three topics existed; no more definition is required, though the sentence adds the nonrestrictive information that the three topics were highly interesting. If the nonrestrictive material had come in the middle of the sentence, it would have needed commas on both sides.

> The supervisor, who was dismissed in 1972, was rehired the next year.

What if more than one supervisor had been fired—one in 1972 and one in 1978? Then *who was dismissed in 1972* would be necessary for the definition of *supervisor* and the sentence would have no commas:

The supervisor who was dismissed in 1972 was rehired the next year.

- To set off a nonrestrictive word, phrase, or clause used in apposition to a noun. An appositive (the material in apposition to the noun) is a special type of interrupter that provides an explanatory equivalent for the noun it follows. Like other interrupters, it can be either restrictive or nonrestrictive, depending on whether the appositive is necessary for understanding the noun it accompanies. Nonrestrictive appositives are set off from the noun for which they are equivalents—usually with a set of commas (though parentheses or em-dashes could be used instead)—whereas no punctuation should be used to set off a restrictive appositive.

  Two of Saddam Husayn's children, Uday and Qusay, died on 22 July 2003 in a firefight with troops from the 101st Airborne in Mosul.

  The appositive *Uday and Qusay* is nonrestrictive because we can understand the main point of the sentence, that two of Saddam's children were killed, without the names of which children died in the firefight.

  Saddam's children Uday and Qusay died on 22 July 2003 in a firefight with troops from the 101st Airborne in Mosul.

  Here the appositive *Uday and Qusay* is restrictive—and not set off with commas—because not all of Saddam's children died in the firefight.

Beware of Comma Splices

A comma splice—a misuse of the comma—occurs when a writer joins two independent clauses with only a comma.

He worked for the company for 20 years, he took a leave of absence from 1952 to 1954.

Few authors in DIA would make that mistake. A more common error introduces a comma splice when a conjunctive adverb comes between the two clauses but the writer uses only a comma before the conjunctive adverb:

He worked for the company for 20 years, however he took a leave of absence from 1952 to 1954.

or

He worked for the company for 20 years, however, he took a leave of absence from 1952 to 1954.

A conjunctive adverb and a comma or commas cannot join two independent clauses in that fashion. Changing the first comma to a semicolon is one way to correct the error.

He worked for the company for 20 years; however, he took a leave of absence from 1952 to 1954.

- To set off a contrasting statement in a sentence.

  Stanley, not Jameson, won the trophy.

  Workers completed construction, but neither on time nor within the budget.

- After a conjunctive adverb unless it is the last word in the sentence. Conjunctive adverbs are words like *however, moreover, nevertheless,* and *therefore*. A conjunctive adverb in the middle of a clause needs commas on both sides; if it is the last word in a sentence, it will be preceded by a comma.

He worked for the company for 20 years. However, from 1952 to 1954 he took a leave of absence.
He worked for the company for 20 years; however, from 1952 to 1954 he took a leave of absence.
He worked for the company for 20 years;
from 1952 to 1954, however, he took a leave of absence.
He worked for the company for 20 years;
from 1952 to 1954 he took a leave of absence, however.

- To separate coordinate adjectives (unless they are joined by *and*).

  It will become a neutral, nonaligned state.

  Coordinate adjectives independently modify a noun or noun phrase. In the sample sentence above, both *neutral* and *nonaligned* modify *state* independently. This is not the case with cumulative adjectives. In "illegal drug trafficking," *illegal* modifies not just *trafficking*, but *drug trafficking*. Therefore, *illegal* and *drug* are not coordinate, so no comma should go between them.

Coordinate and Cumulative Adjectives

Because of the independence of coordinate adjectives, you can check for two characteristics that help distinguish them.

- Coordinate adjectives are reversible; cumulative adjectives are not. You could write *nonaligned, neutral state*, but *drug illegal trafficking* just sounds peculiar.
- *And* fits naturally between coordinate adjectives, but not between cumulative adjectives. You could write *neutral and nonaligned state* but not *illegal and drug trafficking*.

Of course, modifier chains can include both coordinate and cumulative adjectives. Consider the modifiers in the following sentence.

Several short, swift tributary streams crossed the clearing.

Short and *swift* are coordinate adjectives; both modify *tributary streams* separately and are separated by a comma. However, *several* modifies *short, swift tributary streams*, and the *short, swift* combination modifies *tributary streams* (not just *streams*), so no comma comes after *several* or after *swift*.

- To introduce some direct quotations. A comma is the normal punctuation mark to introduce a short direct quotation, separating it from the identification of the speaker.

  The minister said, "We must avoid hostilities."
  "We must avoid hostilities," the minister said.

  However, do not use the comma with a quotation that is only part of a sentence. A sentence that includes a partial quotation requires only punctuation that would be normal for the sentence itself—with nothing besides quotation marks to set off the quoted material.

  The minister said his nation "must avoid hostilities."

  In addition, do not use a comma to set off an indirect quotation. An indirect quotation captures the thought from the original material through a summary or paraphrase but does not directly quote the original.

  The minister said his nation needed to steer clear of fighting a war.

  (See also page 124 for use of a colon to introduce a long quotation indented as a block or a quotation that follows a formal introduction.)

- To indicate that a word or words have been omitted.

  Profit in 2008 was $4 million; in 2010, $10 million.

- To separate an individual's title and an organization's name when *of* and *of the* are not present.

  John Smithson, director, Research Department, Stockton Company....

- To set off a province, state, or country from a city name; *Jr.*, from a person's name; and *Inc, Ltd,* or *SA,* from a corporate name.

  Born in Baltimore, Maryland, Franco Garibaldi, Jr., now directs Recycling, Inc.

- To separate digits in the thousands, millions, and so on—except for years, military unit designators, clock time, most serial numbers, fractional portions of decimal numbers, page numbers, and radiofrequencies in the thousands of kilohertz.

2,973	*but*	during 2009
3,946,834		the 1028th Brigade
		1400 hours
		job number 518225/10
		3,732.14592
		pages 3614 and 3617
		1812 kHz (*but* 15,117 kHz and 1,832 MHz)

Dashes and the Hyphen

Dashes—the em-dash and the en-dash—and the hyphen differ in length. Theoretically a hyphen is half the length of an en-dash, which is half the length of an em-dash. However, various typefaces do not necessarily produce these length relationships exactly. The most we can be sure of is that an em-dash (—) is longer than an en-dash (–), which is longer than a hyphen (-).

More important are the differences in uses for these punctuation marks. This chapter covers em- and en-dashes. Hyphens are used in compounding, which Chapter 7 covers in detail.

All three marks are produced without spaces on either side:

em-dash:	She participated in this attack—as she did in four earlier attacks.
en-dash:	13 December 2009–5 January 2010
hyphen:	self-propelled

Dashes

Em-Dash

Use an em-dash (—) for the following:

- As with commas or parentheses, to set off an interrupter in a sentence. If the interruption ends the sentence, only one dash, at the beginning, sets off the material. When an interrupter occurs inside a sentence, a set of dashes is required. Em-dashes that set off interrupting material emphasize the interrupter. The interrupter could be an appositive that the writer wishes to emphasize, as in the third sample below, or a point that abruptly changes the flow of thought in a sentence, as in the fourth sample.

  He was a key player in upsetting the coup attempt—as he was with two previous attempts.

  In this coup attempt—as with two previous attempts—he was a key player in upsetting the work of the coup plotters.

  Before Saddam Husayn was captured, his two sons who were significant in his regime—Uday and Qusay—died in a firefight with U.S. troops in Mosul.

  Workers completed construction in April—almost half a year later than projected.

Do not use an em-dash as a substitute for a semicolon simply to connect two independent clauses. Clauses connected with an em-dash should have a stronger connection than the following example demonstrates:

The minister traveled to Rome—later he continued to Istanbul.

- As with a colon, at the end of a sentence to point to material that summarizes or expands on the material in the preceding portion of the sentence. A word or phrase, a series of words or phrases, a dependent clause, or an independent clause can follow the dash. Unlike the colon, however, a dash would not precede a series of sentences.

  The foreign delegation visited three cities in the United States—New York, Chicago, and Los Angeles.

- Like a colon, between a title and a subtitle.

  "Russia—Outlook for Key Military Reforms"

A colon is more common for that purpose. However, if you need to join elements associated with a complex title and subtitle, use a colon for one punctuation mark and an em-dash for the other rather than using two colons or two em-dashes.

"Captives: A Month With the Taliban—What They Saw and Heard"

En-Dash

Use an en-dash (–) for the following:

- To connect two parts of continuing or inclusive numbers, whether page references, dates, or time. When continuing numbers are joined in this manner, the range means "to and including" or "through."

pages 1214–33	August–September 2010
1400–1430 hours	13 December 2009–5 January 2010

However, do not use an en-dash (or a hyphen) to replace *to* in "from x to y" or *and* in "between x and y":

not	from 10–12 August	*but*	from 10 to 12 August
	between 2008–10		between 2008 and 2010

- To replace *to* in election results, scores, and directions. This is similar to the use above in continuing or inclusive numbers, but the en-dash no longer occurs in a numerical range.

  The election resulted in a 153–13 vote.
  The game ended in a 2–2 tie.
  The Rome–Naples rail line was flooded 17 kilometers southeast of Rome.

- In place of a hyphen to connect two parts of a compound term when one part of the compound is hyphenated or consists of more than one word. However, as the examples below illustrate, the width difference between a hyphen and an en-dash is not dramatic, so using *to* may be preferable to using an en-dash to connect compound terms when one part is hyphenated.

  first-stage–third-stage operations [better: first-stage to third-stage operations]
  pages 6-3–6-5 [better: pages 6-3 to 6-5]
  post–Operation ENDURING FREEDOM
  Joint Intelligence Operations Center–Afghanistan
  United States Forces–Iraq

Ellipsis

An ellipsis—three spaced periods (. . .)—marks an omission of a word or words within a direct quotation. When a quotation clearly is not a complete sentence, you do not need an ellipsis to show that material has been left out at the beginning or end of the quotation. No ellipsis is needed with the following quotation because *must avoid hostilities* obviously does not constitute a complete sentence:

> The minister said his nation "must avoid hostilities."

However, when your editing results in what appears to be a complete sentence, use an ellipsis at the beginning, end, or both (depending on where you cut material) to show that you have modified the original. Consider the following source paragraph:

> Writing in 1890 about Custer's defeat on the Little Bighorn River in 1876, Charles King described three factors that appeared to have contributed to Custer's mistakes. Dividing his command into columns to converge on the Indian village from different directions was a tactic that had worked for Custer and the 7th U.S. Cavalry at the Battle of Washita River against the Southern Cheyenne in 1868. The terrain Custer's force was passing through toward the Little Bighorn River hid much of the Sioux encampment from sight, making the village appear smaller than it was. Finally, when he saw evidence of heavy activity where he expected the Sioux village to be, Custer interpreted actions taken to get the Indian women and children to safety as a sign that the Indians were rapidly fleeing, justifying an immediate attack.

Using "Custer interpreted actions taken to get the Indian women and children to safety as a sign that the Indians were rapidly fleeing" from that source passage would appear to quote a complete sentence, so the quotation would need an ellipsis at the beginning and one at the end to make clear that the quotation truncates the original:

> In analyzing Custer's mistakes at the Little Bighorn, Charles King indicated that "... Custer interpreted actions taken to get the Indian women and children to safety as a sign that the Indians were rapidly fleeing...." For that reason he attacked without conducting thorough reconnaissance of the battle area. Unfortunately for Custer and the 7th Cavalry, the Sioux were preparing to fight rather than retreating.

This sample also demonstrates the two primary format styles associated with using an ellipsis:

- When an omission occurs inside a sentence or at the beginning, the result looks like the following or like the first ellipsis in the preceding sample.

  > "Tin and lead . . . are the primary exports."

- When an omission occurs at the end of a sentence, use four spaced periods without a space in front of the first period (a period for the sentence plus the three spaced periods for the ellipsis).

  > "Exports are primarily tin and lead.... Imports include copper and zinc."

Exclamation Point

Because of the impartial tone that characterizes intelligence writing, the exclamation point normally is not useful for DIA products.

Italics

Use *italic type* for the following:

- To emphasize a word or words in a passage.

  Do *not* use a colon between a verb and its objects or between a preposition and its objects, unless the colon sets off an indented list.

- For titles of works published separately, including online—titles of books or pamphlets, periodicals (magazines, journals, and newspapers), or works of art (plays, films, radio and television programs, paintings, and sculptures).

  an article in the *Defense Intelligence Digest*
  an issue of the *Washington Post*
  a news story on *Today*
  an opinion piece in *Slate*

  Note: For source reference citations, to simplify the source endnotes, DIA eliminated both italics for titles of works published separately and quotation marks for titles of things published as a part of longer works. Therefore, the guidance above for using italics with document titles, etc., does not apply to source reference citations.

- For foreign words.

  The *adhan* (Islamic call to prayers) issued from the mosque five times a day.

  Foreign terms whose meanings have become commonly understood can be used without translation. However, for a non-English term that may not be understood, show the term in italics and follow it with a translation or explanation in parentheses, as above.

  Do not use italic type or diacritical marks for the following terms, which were "foreign" but which have been brought into English:

ad hoc	cabana(s)
aide-de-camp, aides-de-camp	cafe(s)
aide-memoire [singular and plural]	cafeteria(s)

sharia	zakat
Shiism	

Do not use italic type for the following terms, which were "foreign" but which have been brought into English, but do use diacritical markings as indicated, as these terms have entered English with diacritical markings from the original languages:

attaché	émigré(s)
chargé d'affaires, chargés d'affaires	entrepôt(s)
déjà vu	exposé (s)
démarche(s)	précis [singular and plural]
détente(s)	raison d'être, raisons d'être
	résumé(s)

- For *imeni* ("named after") in names of Russian organizations or institutes.

  the Leningrad Naval Institute *imeni* A.K. Popov

However, do *not* italicize the original language or English translation of names of foreign organizations, institutes, governmental bodies, political parties, educational institutes, corporations, Internet service providers, and the like when a name is being used as if it were an English-language name for a similar type of entity. Because DIA's writing focuses on foreign information, we of course write about numerous foreign organizations, businesses, etc., as a normal part of our production. For most of these foreign proper names, then, we treat them as if they are in English and do not italicize elements of the proper names that are in or translated from a foreign language.

The Russian natural gas company Gazprom	debated in the Bundestag
the Cuban news agency Prensa Latina	the Parti Quebecois
the Buddhist organization Soka Gakkai	the Al-Aqsa Mosque

Nevertheless, if you clearly are providing the foreign language translation for something, show the foreign words in italics even though the subject of the discussion may be a foreign organization, institute, governmental body, political party, educational institute, corporation, Internet service provider, etc.

Gazprom is a contraction from *Gazovaya Promyshlennost*, or "gas industry."

The Gestapo (*Geheime Staatspolizei*, or "Secret State Police") was Nazi Germany's official secret police organization.

Subordinate to Algeria's Ministry of National Defense is its Department of Intelligence and Security, or DRS (*Departement de Renseignement et de Securite*).

In addition, do not italicize the original language or English translation of names of geographic features (mountains, rivers, islands, etc.) or place names.

At the time of the Bay of Pigs invasion, the large island off the southwest coast of Cuba was named the Isla de Pinos (Isle of Pines), but in 1978 it was renamed the Isla de la Juventud (Isle of Youth).

- When citing a letter as a letter, a word as a word, or a phrase as a phrase. That is, these items are italicized when they are being used not for their meanings but as things or terms.

  For the possessive, add an apostrophe and a lowercase *s*.
  Do not confuse the possessive *its* with the contraction *it's*.
  Along with and other phrases such as *as well as, in addition to, like,* and *together with* frequently follow immediately after a subject of a sentence.

- For the proper name (but not the type or class) of a ship, aircraft, or spacecraft.

	seizure of the *Pueblo*	*but*	the Dolgorukiy class SSBN *Yuriy Dolgorukiy*
	the USS *Wisconsin*		the Chinese Shang class SSN
	the *Spirit of St Louis*		the Indian Talwar II class FFG
	launched the *Soyuz-3*		a Soyuz-series space launch vehicle

- For a plant or animal genus and species. The genus also has initial capitalization, though the species does not. After first use of a genus, it can be abbreviated, though it still is uppercase and in italics. Higher divisions of plants and animals—phylum, class, order, and family—have initial capitalization but appear in roman type.

Clostridium botulinum; C. botulinum		*Escherichia coli; E. coli*
but	Anthropoda [phylum]	Mammals; Mammalia [class]
	Rodentia [order]	Hominidae [family]

- To mark the family name with the first use of a person's name (such as one in Spanish) for which the family name may not be obvious. This is not a style for general use in most intelligence products but is intended for special use in products such as military leadership profiles or papers with a protocol function, as this presentation device indicates the name to be used to refer to the person. If only a first name and family name are cited, no italics are required, since the family name then is obvious. Subsequent use of a family name should not continue the italic face.

  One trafficking organization reportedly employed Juan *Carlos* Martinez to pilot several illegal flights. Carlos and a companion, Pedro Rodriguez, also were reported to be dealing with ranchers to establish runways on their properties.

When the format for a product calls for italic type for a portion and you need to use italics for an element within that portion, make that "italic" element roman instead. For example, the following passage might occur in the opening paragraph of a report for which the product format requires the first paragraph to be in italic type; the reference to *Escherichia coli* within the paragraph then appears in roman type (the reverse of italic type):

Dr. Harriet Smith has studied the effects of exposure to pathogenic Escherichia coli *from contaminated food. This research may prove useful for developing foodborne biological agents.*

Parentheses

Use a set of parentheses—( )—for the following:

- As with commas or dashes, to set off an interruption within a sentence. When parentheses are used with an interruption, they reduce the emphasis on it, making it like a whispered aside.

  The country's exports (tin and lead) are not sufficient for a favorable trade balance.
  The country's trade balance suffers from inadequate exports (tin and lead only).

  In the second example above, the final parenthesis precedes the sentence period. If a complete sentence (or sentences) is used parenthetically, the end punctuation goes inside the final parenthesis, as in the following:

  The country's trade balance suffers from inadequate exports. (Only tin and lead were exported in 2009, and those were at low levels.)

  For a parenthetical expression within a parenthetical element, see the rules for using square brackets (page 123).

- To enclose a cross-reference.

  Exports of tin were only slightly greater than those for lead (Figure 2).
  Exports of tin were only slightly greater than those for lead. (See Appendix A.)

- To enclose numbers or letters that mark items in a series within a sentence.

  The Defense Ministry wants to acquire (1) attack helicopters, (2) Patriot missiles, and (3) main battle tanks.

  Note: This example is to illustrate the mechanics of presenting the parenthetical elements; such a simple series normally does not need numbering of its items.

- To enclose translations or explanations, particularly for foreign expressions.

  Memories of the *Anschluss* (Nazi Germany's annexation of Austria) still influence Austrian politics today.
  Subordinate to Algeria's Ministry of National Defense is its Department of Intelligence and Security, or DRS (*Departement de Renseignement et de Securite*).
  Be particularly careful not to confuse the possessive *its* with the contraction *it's* (for "it is" or "it has").

Period

A period brings a reader to a full stop at the end of a sentence. DIA also uses periods for the following:

- For bulleted material as part of a product's body text. For textual products (but not briefing slides), end each bulleted item (or each subbulleted item) with a period (unless the context calls for different ending punctuation, such as a question mark). Use this form regardless of whether a bulleted item is a word, phrase, or full sentence. If a bulleted item has multiple sentences, punctuate these as normal sentences.

  - The first item in a bulleted list.
  - The second item in the bulleted list.
    - A subbullet.
    - A second subbullet.

  For briefing slides, although each bulleted item begins with an initial capital letter, the bulleted items normally have no end punctuation. If a bulleted element has multiple sentences, only the final one has no end punctuation.

- At the end of an in-paragraph heading. In-paragraph headings normally are bolded, and the period that ends such a heading also should be bolded. For example, the following is the beginning of a passage from Chapter 3 of this style manual and uses an in-paragraph heading.

Arabic Persons' Names. When *al-* is part of a person's name in Arabic, include the *al-* when writing out the individual's full name the first time, as in "DIA judges that Iraqi Prime Minister Haydar al-Abadi will modify the plan." For subsequent references to the same individual, drop the *al-*, as in this secondary reference in the same paper: "Diplomats have noted that Abadi expects the plan to include three phases."

DIA normally does *not* use periods for the following:

- With standalone headings. In-paragraph headings end with a period because body text immediately follows on the same line. Standalone headings, however, should have no such ending punctuation. See for example the first-level heading that comes below for "Question Mark." The rare heading that is a question, however, should end with a question mark.
- With table headings and for short comments within a "remarks" or "comments" type of table cell. However, if remarks are sufficiently lengthy or complex to require divisions within the comments, punctuation such as commas, semicolons, or even periods may be needed to separate parts of the table's comment field. Moreover, if periods are needed for one comments-type cell in a table, then use periods for all of that type of table cell in the same table.

Question Mark

Use a question mark (?) for the following:

- At the end of a direct question.

  How can the funds be raised?

  However, do not use a question mark with an indirect question.

  He asked how the money could be raised.

- To show uncertainty or ignorance. In a table this can be done by using a question mark rather than information in a data field. A similar application can be used in text, although such use should be avoided as much as possible.

  The country's first prime minister, Dodson Wainwright (?–1721), began the custom.

- For a title that asks a question.

  "Military for Sale: Can Commercial Ventures Save the Armed Forces?"

Quotation Marks

Double Quotation Marks

Use a set of double quotation marks (" ") for the following:

- To enclose a direct quotation.

  The minister said, "We want to avoid hostilities."

  "At all cost," the minister said, "we want to avoid hostilities."

  "We want to avoid hostilities," the minister said.

  When a long quotation is set off by block indentation within the margins of a page or within a text column, the indentation serves as a set of quotation marks, so none is required unless the passage has internal quoted material. The block-indented passage below is a direct quotation, but the material has no quotation marks because the indentation represents a set of quotation marks. If something within the indented passage had quotation marks in the original, then double quotation marks should appear with that internal quotation.

In a speech outside the parliament building on 27 March 2010, the prime minister said that his administration was

> not responsible for the tragic events of 25 March. Irresponsible individuals rioted, destroyed public property, and endangered all our citizens. The government had no choice except to stop these illegal activities.

U.S. Versus British Use of Quotation Marks

Conventions for using double and single quotation marks differ between U.S. and British publishing. The most striking differences are these:

- British use of double and single quotation marks generally is the reverse of U.S. use.
- The rules for how other punctuation marks appear relative to quotation marks also differ somewhat.

Epigraphs. An epigraph is a quotation related to body text—usually to suggest a theme—but not a part of it; although epigraphs can appear at the beginning of a chapter or section, they are more common at the start of a document. Epigraphs occasionally occur in intelligence products, including in briefings, though by no means are epigraphs usual elements of our products. Wherever it appears in a document, an epigraph is a special type of block quotation. An epigraph generally leaves out some elements of other direct quotations: because epigraphs often quote a well-known source, they usually attribute the quotation to only the person's name or to the person's name and the work in which the original passage occurred, and other documentation is eliminated. Presenting an epigraph in a classified product presents a special formatting problem because putting "(U)" at the start of a quotation from, say, Sun Tzu looks a bit silly. Follow these formatting rules for presenting an epigraph:

- Present the quotation without quotation marks (unless quotation marks are needed within the epigraph).
- Double-space after the quotation to find the line for naming the author, right-justify the author's name or the author's name and the work in which the quotation appears, and precede the author's name with an em-dash.
- To avoid having to show a portion classification marking on the quotation in the epigraph, put the epigraph in a tone box and mark the quotation outside the box in the upper left corner. Generally you will not show a title for the tone box (though one could be used if needed).

UNCLASSIFIED

> Native agents are those of the enemy's country people whom we employ.
>
> —Sun Tzu

UNCLASSIFIED

> Native agents are those of the enemy's country people whom we employ.
>
> —Sun Tzu, *The Art of War*

- To enclose the titles of works that are published as parts of longer works—poems, short stories, songs, articles, notes, essays, headlines, chapter titles, and other parts of a book or periodical. Online works follow this rule as well.

  "Russia: Outlook for Key Military Reforms" was an article in a recent issue of the *Defense Intelligence Digest*.

  Note: For source reference citations, to simplify the source endnotes, DIA eliminated both italics for titles of works published separately and quotation marks for titles of things published as a part of longer works. Therefore, the guidance above for using quotation marks with article titles, etc., does not apply to source reference citations.

Spacing Between Colocated Single and Double Quotation Marks

Occasionally material will require single and double quotation marks to appear in a line together—for example, "a quotation that includes a 'quoted word'"—which looks strange. You can modify this spacing to improve readability by inserting a thin space between the single and double quotation marks. Two ways are available to add the thin space in Word 2007:

Using the Insert Symbol Function

1. Place the cursor where you want the thin space added—between the single and double quotation marks.
2. On Word 2007's Insert ribbon, at the far right side, select Symbol.
3. In the drop box, select More Symbols.
4. In the box that opens, change the font to Arial Unicode MS.
5. In the Character code box type 2009.
6. Choose the Insert button, followed by the Close button.

Using a Keyboard Shortcut

1. Place the cursor where you want the thin space added—between the single and double quotation marks.
2. Type 2009, followed immediately by Alt+x; the 2009 will change into the thin space.

The result should look like this: "a quotation that includes a 'quoted word' "—with a thin space between the single and double quotation marks.

- To set off a word or phrase used in a special sense (a meaning different from the normal sense) or to indicate the standard meaning of a word or phrase.

  The refugees were offered "voluntary" repatriation.
  He invited me for a "working lunch," but I did all the work and he ate all the lunch.
  Do not confuse *its* (the possessive of it) with *it's* (a contraction for "it is" or "it has").

  Use caution when presenting a word or phrase in a special sense. The quotation marks with the term indicate something is unusual about it, but readers must easily understand the special sense of the material. Using this device to be clever may result instead in a failure to communicate.

- To set off words or phrases following terms such as *entitled, named, endorsed, signed, cited as,* or *referred to as* (unless rules for using italics call for italic type instead).

  The document was signed "G. Washington."
  Rome's Leonardo da Vinci International Airport also is referred to as "Fiumicino," the suburb of Rome where the airport is located; failure to know both names can get a driver lost, as road signs for the airport sometimes show one name and sometimes the other.

  However, quotation marks usually are not necessary for expressions following terms such as *known as, called,* or *so-called.*

  The change is not likely to affect the so-called extremist Islamic states.
  Beryllium is known as glucinium in some European countries.
  The system is called profit and loss, but the profits may not be apparent.

  Even after these terms, however, quotation marks may be used to give special emphasis to the quoted or verbatim nature of an expression, especially if irony, sarcasm, or bad grammar is involved.

  The government's antiterrorism battalion nearly eliminated the village with an operation staged under its so-called "pacification" program.

Single Quotation Marks

Use a set of single quotation marks (' ') to enclose quoted material within a quotation that already is marked with double quotation marks. (A quotation within a block-indented quotation would take double rather than single quotation marks.)

He said, "I think you should read 'Russia: Outlook for Key Military Reforms.' "

Some U.S. writers believe they should use only single quotation marks around a single word or short phrase used in a special sense. That convention is true for British use of quotation marks but not for U.S. use. Instead, see the third bulleted guidance above for double quotation marks.

Punctuation With Quotation Marks

Place periods and commas inside quotation marks.

He said, "I think you should read 'Russia: Outlook for Key Military Reforms.' "
"I think you should read 'Russia: Outlook for Key Military Reforms,' " he said.

Place semicolons and colons outside quotation marks.

He said I should read "Russia: Outlook for Key Military Reforms"; he thought it would be good for me.
He said I should read "Russia: Outlook for Key Military Reforms": he thought it would be good for me.

Place a question mark or exclamation point inside quotation marks if the quotation is a question or exclamation; this rule applies whether or not the sentence as a whole is a question or exclamation. However, put the question mark or exclamation point outside quotation marks if the sentence is a question or an exclamation but the quotation is not.

She asked, "Do you remember reading the article?"
The author also wrote "Why Can't Johnny Read?"
Why should I read "Russia: Outlook for Key Military Reforms"?

Semicolon

Use a semicolon (;) for the following:

- To separate the elements in a series when one or more of the series elements itself requires commas. Semicolons generally are not needed if only the last element has internal commas.

  Three major NATO commands are subordinate to Allied Command Operations, with headquarters in Brunssum, Netherlands; Naples, Italy; and Lisbon, Portugal.

  Targeting requires the ability to locate targets; identify them, determine their vulnerability, and evaluate potential weapon effects against them; deliver appropriate weapons to a target; and evaluate the resulting damage.

  Rescue workers focused on building temporary shelters, securing potable water, and gathering blankets, medical supplies, and food.

- To separate two independent clauses closely related in meaning but not joined by a coordinating conjunction.

  He served in the Army until 1988; he has worked for DIA since then.
  He worked for the company for 20 years; from 1952 to 1954, however, he took a leave of absence.

- To separate two independent clauses when the second one is joined to the first with a conjunctive adverb. Common conjunctive adverbs are *first (second, etc.), for example, for instance, furthermore, however, moreover, nevertheless, nonetheless, therefore,* and *thus.*

  He worked for the company for 20 years; however, he took a leave of absence from 1952 to 1954.

Slash

Use a forward slash (/)—also called a virgule—for the following:

- To indicate a period occurring partially in one year and partially in another.

  FY 2010/11

  He flew three illegal flights in 2008/09.

- For two special commonly used representations.

  9/11 24/7

- To represent *per* in an abbreviation.

  km/h rd/min

- To separate alternatives.

  Many factors need to be considered in program/budget decisions.

  Note: In this application the slash is intended to mean "and/or." Thus, the sample above refers to "program decisions or budget decisions or program and budget decisions." However, a caution is necessary here: some writers use this punctuation device to avoid making a decision about what term is correct. In "our goal/objective is," no useful distinction exists between the alternatives, so the writer should pick one rather than demonstrating indecision.

- To indicate a word combination when one or both of the elements in the combination already contain a hyphen.

  The insurgents were armed with Cuban-/Russian-supplied weapons.

  Again the slash equates to "and/or": thus, the sample refers to "Cuban-supplied and/or Russian-supplied weapons." If the writer wants only an "or" or an "and" relationship, then the sentence should be recast:

  The insurgents were armed with Cuban- or Russian-supplied weapons.

  The insurgents were armed with Cuban- and Russian-supplied weapons.

- To indicate azimuthal direction.

  ENE/WSW runway

CHAPTER 7: Spelling and Compounding

In large letters, [a dentist sign] gives this command: Fear Free Dentistry. Maybe these dentists intend to scare people away from free dentistry. Probably, though, they intend to advertise fear-free dentistry. The hyphen changes it to dentistry that is free of fear. (How many customers do you think their omission scares away? Who would want someone that sloppy coming at them with a drill?)

—Mignon Fogarty, *Grammar Girl's Quick and Dirty Tips for Better Writing*

CHAPTER 7: Spelling and Compounding

The spelling and compounding list that makes up the bulk of this chapter combines preferred spellings (when alternative spellings exist) and spellings for compound words in their various functions in a sentence (as nouns, verbs, adjectives, unit modifiers, and so on). These words are combined into a single list with more than 10,000 entries.

The word list can help with the following types of spelling decisions:

- Choosing between alternative spellings. (Should you use *analog* or *analogue?*)
- Determining whether to double the consonant at the end of a word when you add a suffix. (Should you use *canceled* or *cancelled?*)
- Determining whether to use an anglicized spelling of the plural of a Latin word or the Latin spelling. (Should you use *forums* or *fora* as the plural of *forum?*)
- Choosing between possible spellings for a compound word or phrase: as two (or more) words, with a hyphen (or hyphens), or solid as a single word. (Should you use *time consuming, time-consuming,* or *timeconsuming?*)

The following guidance includes points that cannot be covered adequately by entries in a word list. In addition, spelling and compounding rules are provided for users who need to understand the logic applied in the choices in the word list, especially for compounding.

Spelling Rules

Geographic Names

The authority for spellings of place names is the U.S. Board on Geographic Names (BGN). The National Geospatial-Intelligence Agency provides a text-based BGN search function on JWICS at <http://names.nga.ic.gov/namesgaz/> and on NIPRNET at <http://geonames.nga.mil/namesgaz/>. Another useful source is *The World Factbook.*

The National Geospatial-Intelligence Agency's Geographic Names Server reflects foreign place names sanctioned by the BGN. This database provides "Approved" spellings (which generally have diacritics and often special endings for some names), "Variants" (which normally will include a spelling without the diacritical marks), and, when they exist, "Conventional" spellings (which reflect the spelling commonly used in English).

Diacritical Marks

Although diacritical marks appear in the place names on some maps and sometimes in *The World Factbook*, we generally will not use them in text for intelligence publications. Diacritical marks indicate phonetic distinctions, whereas writing for which precise pronunciation is not particularly important normally uses conventional, commonly used spellings instead.

Numerous spellings typically come up in a BGN search for a place name. Check the "Feature Designation" column first; "primary administrative division" generally indicates a province or governorate, and "populated place" indicates a city or town. In the appropriate row, look for either the "Conventional" or the "Approved" spelling.

- If the search result shows a "Conventional" spelling for a place name, we generally will use that spelling. Thus, instead of *Moskva*, the "Approved" spelling, use the "Conventional" name of *Moscow*. Instead of the "Approved" spelling for North Korea's capital—*P'yŏngyang*—use the "Conventional" spelling of *Pyongyang*.
- When an "Approved" spelling has diacritical marks, use that spelling without the diacritics. Thus, instead of *Islamabad*, the "Approved Short" spelling for the capital territory in Pakistan, use *Islamabad*. Do not confuse apostrophes with diacritical marks; retain the apostrophe in place names such as N'Djamena.

When possible, spellings in text and on maps should agree. For example, beware of showing *Rhodes* in text but showing *Rhodos* or *Rhodus* on an accompanying map.

American Versus British Spellings

When American and British spellings of *common* English words differ, use the American spelling. However, when the words are part of a *proper name* for a party, organization, office, etc., use the British spelling, but only within the proper name.

labor relations of the Labour Party
defense intelligence reports from the Australian Defence Intelligence Organisation
Industrialisation Board rulings on industrialization issues

Plurals of Compound Terms

For plurals of compound terms, form the plural on the significant word or words. If no word is significant or all parts are equally significant, form the plural on the last word.

significant word first:	adjutants general, aides-de-camp, courts-martial, goings-on
significant word in middle:	deputy chiefs of staff, assistant surgeons general
significant word last:	major generals, provost marshals, trade unions
both words equally significant:	gentlemen farmers, women writers
no word significant:	also-rans, go-betweens, pick-me-ups

Compounding Rules

Compounding conveys an idea by combining two or more words to form a thought. The result can be separate words in an unconnected sequence, words linked with a hyphen or hyphens, or words joined as a solid, single word. Current language trends lead to closing up many word sets that have become associated in readers' minds through frequent use.

General Rules

Separate Words

One compounding form is to write words in sequence, without joining them or linking them with a hyphen, if this form causes no ambiguity in sense or sound.

blood pressure	real estate
early warning	training ship

Joined or Hyphenated Words

Often words are joined (written solid) or linked with hyphens to express ideas that would not be as clear if the words remained unconnected.

bookkeeping	cross-reference
newsprint	do-gooder
whitewash	right-of-way

Derivatives

Derivatives of a compound usually retain the hyphenated or solid form of the original.

footnote, footnoting	cost-effective, cost-effectiveness
praiseworthy, praiseworthiness	ill-advised, ill-advisedly

Solid Compounds

When two nouns form a compound that has only one primary accent, the compound is written solid, especially when the prefixed noun has only one syllable or when one of the elements loses its original accent.

bathroom	*but*	bomb bay
bookseller		coal mine
pipeline		night shift

Parts of Speech and Compounding

A noun formed from a short verb and an adverb usually is written solid, but it is hyphenated when the solid compound would interfere with comprehension. The verb form usually remains two words.

breakdown (verb: break down)	cut-in (verb: cut in)
buildup (verb: build up)	run-in (verb: run in)
setup (verb: set up)	tie-in (verb: tie in)

Compounds beginning with the following nouns usually are solid.

book (bookstore)	school (schoolteacher)
eye (eyeglasses)	shop (shopworn)
horse (horseplay)	snow (snowbank)
house (housekeeping)	way (wayside)
mill (millcourse)	wood (woodland)
play (plaything)	work (workday)

Compound terms *beginning with cyber* may be written either solid or as multiple separate words, depending on meaning. When cyber terms began appearing in English-language dictionaries, the dictionaries showed solid terms, treating *cyber* as a combining form requiring solid compound words. The *Yahoo! Style Guide*, published in July 2010, treats the terms similarly, indicating that *cyber* usually would be combined with root words except when the root word begins with a capital letter. Typical early dictionary and Yahoo! entries included *cyberattack, cybercrime, cybernetics, cyberphobia, cyberpunk, cyberspace,* and *cyberterrorism.*

- Because of the growing importance of cyber terms for U.S. security operations, Defense Intelligence has a need to consider a multitude of terms dealing with infrastructure, funding, resources, and other aspects of managing intelligence operations related to the cyber realm. Most likely many of these terms will never appear in English-language dictionaries. Consider just one of these terms—how to label intelligence analysts dedicated to cyberintelligence. Should such an analyst be a *cyberanalyst* or a *cyber analyst*? Showing *cyberanalyst* as a solid word would seem to suggest that the analyst exists in cyberspace, an ethereal analyst, like an avatar, rather than a flesh-and-blood analyst. For things or concepts such as this, multiple separate words are more appropriate.
- For this reason, we make a distinction for cyber terms based on meaning:
  - Cyber terms related predominantly to *things inside or integral to the cyber realm*—for which we join *cyber* with the root word to form a solid term: for example, *cyberactivity, cyberattack, cybercrime, cyberoperation, cybersecurity, cyberterrorism, cyberthreat.*
  - Cyber terms related predominantly to *things about the cyber realm or managing it*—for which we keep *cyber* separate, resulting in multiple separate words: for example, *cyber analyst, cyber collection, cyber community, cyber doctrine, cyber offensive and defensive operations.*

Less frequently, *cyber* also may be joined by a hyphen to another word when the combined term is being used as a unit modifier—for example, *cyber-related data*. When in doubt, follow the current trend of joining the terms as a solid word.

Compounds ending in the following usually are solid when the initial word has one syllable. (When the initial word has multiple syllables, the compound is less often solid: spaceborne, *but* satellite-borne, helicopter-borne.)

board (cardboard)
boat (rowboat)
book (textbook)
borne (bloodborne; foodborne; spaceborne; waterborne; *but* tick-borne; vector-borne; food-, water-, and vector-borne)
bound (landbound)
box (gearbox)
boy (lowboy)
craft (aircraft)
field (airfield)
fish (crawfish)
girl (schoolgirl)
grower (foodgrower)
headed (clearheaded)
hearted (halfhearted)
holder (shareholder)
house (boathouse)
keeper (beekeeper)
keeping (bookkeeping)
land (farmland)
light (moonlight)
like (boxlike)
line (pipeline)
load (boatload)
maker (automaker)
making (cementmaking)
man (airman)
mate (teammate)
monger (scaremonger)
over (crossover)
owner (homeowner)
person (salesperson)
piece (fieldpiece)
plane (airplane)
power (airpower)
proof (blastproof)
room (chartroom)
shop (toolshop)
site (damsite)
smith (gunsmith)
stone (lodestone)
store (bookstore)
tight (airtight)
time (halftime)
ward (homeward)
water (bluewater; freshwater [adjective]; groundwater; saltwater; seawater; wastewater; *but* drinking water; fresh water [noun]; surface water; well water [noun and adjective])
way (seaway; waterway)
wide (worldwide)
wise (edgewise)
woman (spokeswoman)
wood (firewood)
work (artwork)
worker (pieceworker)
working (woodworking)
worm (ringworm)
worthy (seaworthy)
writer (speechwriter)
writing (checkwriting)
yard (shipyard)

Write solid the compounds of *any, every, no,* or *some* with *body, thing,* or *where*. When *one* is the second element, write the compound as two words if it means a particular person or thing. Always write *no one* as two words to avoid mispronunciation.

anybody
anything
nowhere
someone

but: Anyone can be in charge, and any one of you can volunteer.

Unit Modifiers

Authors frequently encounter problems with compound modifiers that immediately precede the words they modify. When the words make sense only as a unit, the compound is a unit modifier and usually is written with a hyphen.

- In "short, swift streams," both *short* and *swift* modify streams independently (they are coordinate adjectives), and no hyphen is used to join the modifiers. (There is a comma, however, because the adjectives are coordinate; see comma usage in Chapter 6.)
- In "short tributary streams," *tributary* modifies streams, and *short* modifies *tributary streams*; the adjectives are cumulative, and no special mark is used to join them. Note, however, that each adjective logically *could* modify the noun separately; that is, "short streams" and "tributary streams" both make sense, even if these are not what the writer means.
- In "40-horsepower engine," neither *40* nor *horsepower* logically can modify *engine* by itself; the modifiers make sense only as a unit—hence the term "unit modifier."

A Caution About Modifier Strings

Beware of stringing so many modifiers in front of a noun that your thought becomes difficult to comprehend. For example, "weapon system development and acquisition cost reductions" is hard to understand; the modifier string should be broken up, becoming "cost reductions from weapon system development and acquisition."

Part of the confusion for many authors is that a compound modifier receives different treatment when it follows the word it modifies:

I bought an engine that is rated at *40 horsepower.*
I bought a *40-horsepower engine.*
As a result of the conference, we now have *standards* that are *agreed upon.*
As a result of the conference, we now have *agreed-upon standards.*

Thus, the special treatment for a unit modifier is situational. Users of the word list in this chapter must bear this in mind. *A compound modifier marked* um *in the list and linked with a hyphen retains the hyphen only when it precedes the word it modifies.*

Hyphenated

Unit modifiers immediately preceding the word or words they modify *usually* are hyphenated.

drought-stricken area	state-of-the-art technology
English-speaking nation	U.S.-owned property
fire-tested material	1-inch diameter
lump-sum payment	2-inch-diameter pipe
most-favored-nation clause	4-percent increase

Use a hyphen in a unit modifier with an ordinal number in its literal sense (unless the modifier is a proper noun).

first-stage booster	second-class treatment
fourth-quarter earnings	third-party statement

In addition, use hyphens in unit modifiers containing prepositional phrases.

fly-by-night establishment	quality-of-life incentives
out-of-area operations	under-the-counter sales

Joined

Some unit modifiers are written solid rather than being hyphenated.

aboveground shelter	indepth assessment
airdrop mission	lookdown angle
blackout curtains	mineclearing equipment
breakaway republics	onboard computer
broadband radio	sealane defense
deadweight tons	sweptwing fighter
firsthand experience	understrength division

Unhyphenated

Especially when the compound is a well-established phrase, hyphens sometimes are omitted from a unit modifier, and the modifier is written as separate words.

air defense artillery	ground support aviation
air intercept regiment	hard currency loan
ballistic missile submarine	law enforcement efforts
broad gauge railroad	mine warfare task force
drug trafficking organization	missile support unit
early warning radar	nuclear delivery system
free market system	open pit mining
general purpose vehicle	throw weight equivalent

No hyphens are needed for most compounds that are linked by conjunctions.

command and control echelons	middle or late 1980s
medium and high altitudes	warm but cloudy day

However, improvised compounds that contain conjunctions do use hyphens.

bread-and-butter issues	hard-and-fast rule

Predicate Adjectives

As indicated in the introduction to unit modifiers, compound predicate adjectives usually have no hyphens.

Unit Modifier	*Predicate Adjective*
The attack took place on U.S.-owned property.	The property where the attack took place was U.S. owned.
She gave an indepth assessment.	The assessment she gave was in depth.
We are to get a 4-percent raise.	The raise is to be 4 percent.

The word list in this chapter contains some hyphenated compound adjectives (*adj*); they retain their hyphens when they are predicate adjectives.

The study used all-source intelligence.	The intelligence in the study was all-source.
We watched a combined-arms exercise.	The exercise we watched was combined-arms.

Comparatives and Superlatives

Hyphens usually are omitted from two-word modifiers when the first word is a comparative or superlative.

little-developed country	low-priced model
less developed country	lower priced model
least developed country	lowest priced model

Note that *lower* is the comparative of *low*, with *lowest* the corresponding superlative. However, *lower* also is the opposite of *upper*, which is not a comparative and has no superlative (*uppest?*). In its sense opposing *upper*, *lower* is joined (solid) or linked (with a hyphen) to the other words in a modifier.

uppercase letters	lowercase letters
upper-class neighborhood	lower-class neighborhood
upper-middle-class housing	lower-middle-class housing

Hyphens also are retained in many three-word modifiers that include a comparative or superlative.

higher-than-market price	most-favored-nation clause
less-than-perfect solution	most-sought-after assignment
lighter-than-air craft	

Adverbs Ending in *-ly*

Do not use a hyphen in a two-word unit modifier when the first word is an adverb ending in *-ly*. (Do not confuse adjectives ending in *-ly* with adverbs.)

eagerly awaited moment	*but*	only-child complex
recently designed building		lonely-hearts club
wholly owned subsidiary		

Sometimes a comparative or superlative needs to be combined with the word it precedes to ensure clarity. If we write "older technology mines," the phrase can be misunderstood as indicating "technology mines" that are "older." Adding a hyphen to connect *older* and *technology*—"older-technology mines"—makes clear that we mean mines employing older technology.

Three-Word Modifiers

Do not use hyphens in a three-word unit modifier when the first word is an adverb modifying the second word.

unusually well preserved specimens
very well defined usage

exceptions:
very-high-frequency broadcast
very-low-frequency transmission

However, if the first word of a three-word modifying phrase modifies the other two words as a unit, use a hyphen between those two parts of the unit.

a nearly right-angle corner
a formerly well-known person

Foreign Phrases

Do not use a hyphen in a unit modifier consisting of a phrase of foreign origin.

bona fide transaction	ex officio member
carte blanche policy	per capita tax
ad hoc tasking	

Proper Nouns

Do not use a hyphen or en-dash in a compound proper noun or capitalized coined name used as a unit modifier (unless the basic noun form includes a hyphen or en-dash).

Cold War tension	*but*	Spanish-American heritage
Latin American states		French-English descent
Iraqi Army operations		Franco-Prussian War
World War II period		North American–South American sphere

Quotation Marks

Do not use hyphens in a unit modifier enclosed in quotation marks unless the modifier normally is hyphenated, and do not use quotation marks in lieu of hyphens.

a "spare the rod" approach to parenthood
the "one-man woman" plots of many operas
but a right-to-work law

Chemical Terms

Do not use a hyphen in a unit modifier composed of chemical terms.

carbon monoxide poisoning	methyl bromide solution

Letter or Number Elements

Except in established military equipment designators, do not use a hyphen in a unit modifier with a letter or numeral as its second element.

Annex B maps	*but*	An-22 transport
Article III provisions		MiG-29 fighter
Mod 3 missile		T-80 tank
Number 2 fuel oil		

Common Basic Elements

When two or more hyphenated compounds in a series have a common basic element and this element is omitted in all but the last or first term, retain the hyphens.

2- or 3-year period	*but*	mid- and late 1990s *but* mid-to-late 1990s
8-, 10-, and 16-km segments		early or mid-1990s *but* early-to-mid 1990s
ground- and air-launched missiles		
U.S.-owned and -operated companies		
low- to high-altitude coverage		
medium- to long-range missiles		

Suspending Hyphens

When two or more solid compounds in a series have a common basic element and this element is omitted in all but the last or first term, use a suspending hyphen with the incomplete forms.

first- and secondhand access
low- and midlevel operatives
postearthquake and –tsunami operations

but

oil and gas fields or oilfields and gasfields (not oil and gasfields)

Prefixes and Suffixes

Prefixes (except *ex, self, quasi,* and *vice*) and suffixes (except *free, designate,* and *elect*) usually form a solid compound with a noncapitalized word.

With Prefixes

byproduct
cooperate
counterintelligence
hydroelectric
multipurpose
neofascist
nonferrous

ex-serviceman
self-centered
quasi-military
vice-chairmanship

With Suffixes

clockwise
fourfold
lifelike
northward
forcewide
geocentric
but youth-centric, brigade-centric, etc.

rent-free
minister-designate
President-elect Jones
councilor-elect

However, retain hyphens that appear in proper names.

Directorate General for Inter-Services Intelligence

Except for the short prefixes *co, de, pre,* and *re*—which generally are written solid—use a hyphen to avoid doubling a vowel when adding a prefix or tripling a consonant when adding a suffix.

With Prefixes

anti-insurgent
contra-acting
semi-independent
ultra-ambitious

but cooperate
deescalate
preexisting
reentry

With Suffixes

hull-less
shell-like

but nonnuclear
subbasement

Even for prefixes that normally form solid compounds, use a hyphen if its omission would lead to mispronunciation, cause confusion with a word spelled identically but without a hyphen, or create an illogical compound.

mid-ice
mini-state
under-ice
co-op (*but* cooperate)
multi-ply (several plies)
pre-position (position in advance)
pro-state (in favor of the state)
re-form (form again)

re-present (present again)
un-ionized
non-civil-service position
non-scientific and technical intelligence

Use a hyphen to join duplicated prefixes.

counter-countermeasures	counter-counternarcotics
sub-subcommittee	sub-subparagraph

Use a hyphen to join a prefix or suffix in a compound with a capitalized word.

anti-Castro	Africa-wide
neo-Nazi	Latin America-wide
non-U.S. NATO	Truman-like
pro-British	

exceptions: nonMIRVed, unMIRVed

A prefix (except *un*) normally forming a solid compound often is followed by a hyphen when joined with a two-word or hyphenated compound to form a unit modifier.

anti-guided-missile	*but*	antiballistic missile
non-missile-equipped		superhigh-frequency
non-nuclear-powered		ultrahigh-frequency
post-target-tracking		uncalled-for
semi-land-mobile		unself-conscious

However, do not insert a hyphen after a prefix joined to a solid compound.

antigunrunning	postreentry
nonlifelike	submachinegun
nonoceangoing	ultrarightwing

Numerical Compounds

Use a hyphen between the elements of compound numbers from 21 to 99 when they are spelled out. (In most contexts, the numbers in this range will be presented as numerals, not written out as words; see Chapter 4 for rules on writing numbers as words or numerals.)

twenty-one	ninety-nine
twenty-first	one hundred twenty-one

one thousand four hundred twenty-one

Use a hyphen in an adjective compound with a numerical element first.

two-sided question	8-kg box
the Six-Day War	18-year-old student
.22-caliber cartridge	10- to 20-year period

500-km-range missile

When an adjective numerical compound appears in a listing (such as a table) with the compound following but reading back to the word or words modified, use a hyphen in the compound and use the compound in its singular form.

motor, 3-phase, 60-cycle, 115-volt
belts: 2-inch, 1.25-inch, 0.25-inch

Use a hyphen between elements of a fraction, whether the fraction is a noun or an adjective.

two-thirds of the vote	a two-thirds majority

Other Compounds

Do not use hyphens in a compound title denoting a single civil or military office, but use a hyphen in a double title.

ambassador at large	manager-director
commander in chief	minister-counselor
vice president	secretary-treasurer
but under-secretaryship, vice-presidency	

Except for titles, hyphens appear in some—but not all—noun compounds containing a prepositional phrase.

government-in-exile	*but* next of kin
grant-in-aid	prisoner of war
man-of-war	state of the art
mother-in-law	state of war

Use hyphens in improvised compounds.

first-come, first-served basis	roll-on/roll-off ship
hard-and-fast rule	stick-in-the-mud
know-it-alls	technical know-how

Hyphenate the verb form of compound nouns that are written as two words.

to blue-pencil galley proofs (*but* proof with a blue pencil)
to cold-shoulder an idea (*but* turn a cold shoulder)
to cross-brace a structure (*but* a structure with a cross brace)
to flight-test a missile (*but* a missile in flight test)

Join a single capital letter to a noun or participle with a hyphen.

H-bomb	V-necked
I-beam	X-ray, X-raying
T-shaped	X-ed out
but I band, K band, P band, L band, etc.	

Using the Spelling and Compounding List

The following list contains both preferred spellings and preferred formations for compounds (multiple words, hyphenated words, or solid words).

The following abbreviations appear in the list:

adj (adjective)	masc (masculine)
adv (adverb)	n (noun)
cf (combining form)	pref (prefix)
etc (and so on)	um (unit modifier)
fem (feminine)	v (verb)

Frequently the abbreviations indicate that a compound appears in the form shown only for the specific function or functions shown. For example:

- *fire-resistant (um)* means that the compound is hyphenated as a unit modifier but not, for instance, as a predicate adjective:

  We chose a fire-resistant material.
  The material we chose was fire resistant.

- *low-key (adj)* means that the compound is hyphenated both as an adjective preceding the word modified (like a unit modifier) and as an adjective following the word modified:

  She gave a low-key speech.
  Her speech was low-key.

- *human rights (adj, n)* means the compound is written as separate words in both adjective and noun functions:

  It was a human rights issue.
  Human rights was the issue of the moment.

- *anti-American (etc)* means that the same compounding structure applies to similar compounds, such as *anti-British* or *anti-German* in this case.

- *counter (cf)* means that the compounding structure applies when forming a compound but not when the terms are simply juxtaposed in a sentence:

  The team focused on counterrebel operations.
  The team dug in to counter rebel advances.

Gender Neutrality

Be aware that modern publishing standards call for gender-neutral terms. Even though many terms containing *man* are part of the military lexicon, these terms are not always the best choice. For such terms shown in the following list, consider using them in reference to specific individuals but choosing gender-neutral terms for general reference.

APPENDIX: Metric and English Conversion Factors

Although an appendix is not an essential part of every book, the possibilities and uses of the device are many. Some kinds of material properly relegated to an appendix are explanations and elaborations that are not essential parts of the text but are helpful to a reader seeking further clarification; texts of documents, laws, and so forth, illustrating the text; and long lists, survey questionnaires, or sometimes even charts or tables. The appendix should not be a repository for raw data that the author was unable to work into the text.

—*The Chicago Manual of Style*

APPENDIX: Metric and English Conversion Factors

Conversion factors in boldface are exact. All others are approximate and are given to four significant figures.

Length/Distance

To Convert	*Multiply by*	*To Obtain*

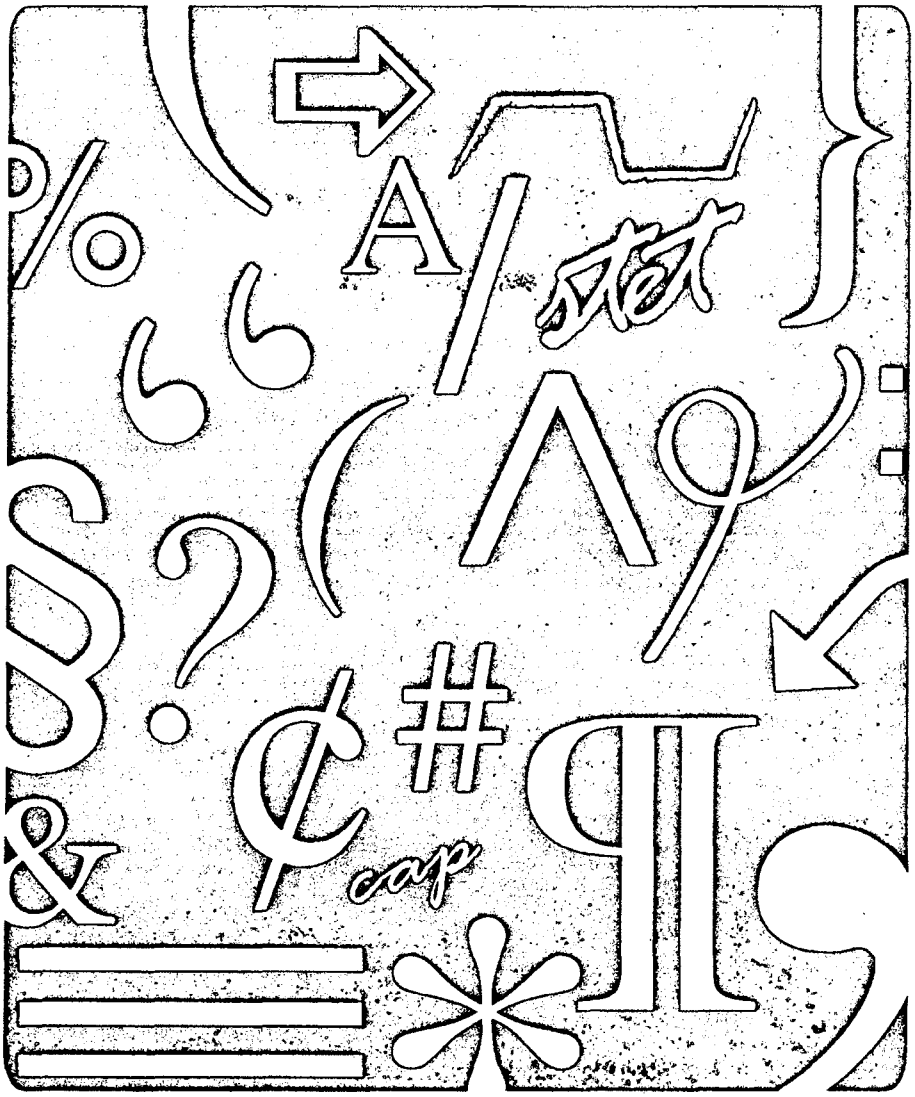
DIRECTORATE OF INTELLIGENCE

STYLE MANUAL & WRITERS GUIDE

FOR INTELLIGENCE PUBLICATIONS

Eighth Edition, 2011



This style guide was prepared by the DI

APPROVED FOR RELEASE DATE: 28-Feb-2012

C05757260

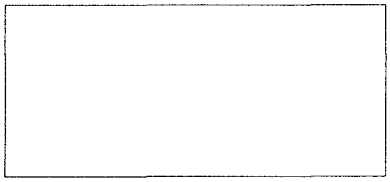
Foreword

Good intelligence depends in large measure on clear, concise writing. The information CIA gathers and the analysis it produces mean little if we cannot convey them effectively. The Directorate of Intelligence and the Agency as a whole have always understood that. Both have been home, from their earliest days, to people who enjoy writing and excel at it.

The *Style Manual and Writers Guide for Intelligence Publications* is an essential reference for the officers of our Directorate. Now in its eighth edition, it reflects an enduring commitment to the highest standards of care and precision.

This guide is designed to be helpful and convenient, sensible in organization, and logical in content. It contains, among other changes, a revised list of accepted acronyms and new tips on word usage. The world is not static. Nor is the language we employ to assess it.

In dealing with foreign policy and national security, our government has many sources of insight on which to draw. The depth of our knowledge, the strength of our thinking, and the power of our words will ensure that our customers, from policymakers to operations officers, continue to rely on the Directorate of Intelligence.



Fran Moore
Director for Intelligence

C05757260

Preface

The eighth edition of the *Style Manual and Writers Guide for Intelligence Publications* provides guidance for English usage and writing style in the Central Intelligence Agency. It incorporates most of the improvements that appeared in previous editions but returns to the organization by chapters of the earliest versions. The chapters on capitalization, numbers, abbreviations, italics, punctuation, spelling, and compound words have numerous headings and subheadings to enable users to find specific subjects quickly within the chapters themselves or through the table of contents. Further subject indexing is provided in chapter 9—the Word Watchers List—which incorporates many of the style rules in abbreviated form; it is similar to the Word Watchers Index in the fourth edition and to the overall organization of more recent editions. The manual also includes a comprehensive Spelling and Compound Words List, as have all previous editions, and an index to the entire manual.

The counsel in this guide is derived from many sources, including the works of Barzun, Bernstein, Copperud, Follett, Fowler, the Morrises, Strunk and White, Gregg, and other recognized arbiters of English usage. It also draws on the stylebooks of press services, newspapers, publishing houses, and past and present CIA offices.

A basic reference for spelling, compounding, and other instructions for all eight editions is the US Government Printing Office's *Style Manual*, the most recent edition of which was issued in 2008. The GPO's authority for spelling and compounding words is *Webster's Third New International Dictionary*, published by G. & C. Merriam Company. That dictionary or the more up-to-date abridgments of it (the latest being *Webster's 11th New Collegiate Dictionary*) are the authorities for the preferred spellings listed in this guide that were not found in the GPO manual.

This guide is for both the creators and the processors of intelligence analysis—for the writers and for the editors of their analyses. It also serves writers and processors of administrative papers. Moreover, it has been used and will continue to be used by teachers and students of writing and publications processing.

The manual is available online in both web browser (HTML) and printer-friendly (PDF) versions; limited quantities are available in hardcopy. The browser version contains active links that take users from one related issue to another; these are indicated with the standard hyperlink convention: underlined text. The browser version may be updated as needed.

CONTENTS

FOREWORD iii

PREFACE v

1. CAPITALIZATION 1

1.1. A Few Basic Rules 1
1.2. Proper Nouns 1
1.3. Derivatives of Proper Names 2
1.4. Articles in Place Names 2
1.5. Names of Persons 2
1.5a. Particles in Personal Names, 3
1.5b. Nicknames, 3
1.6. Government Bodies 3
1.7. Military Forces 4
1.8. International Organizations 4
1.9. Diplomatic and Consular Units 4
1.10. Religious Terms 5
1.11. Titles of Religious Leaders 5
1.12. Political Parties and Similar Groups 5
1.13. Political Philosophies 5
1.14. Geographic Terms 6
1.14a. Direction, 6
1.14b. Special Geographic Groupings, 6
1.15. Nationalities, Tribes, and Other Groups of People 7
1.16. Coined Names 8
1.17. Holidays, Religious Feasts, and Historic and Other Significant Events 8
1.18. Trade Names 8
1.19. Titles of Persons 9
1.19a. Before the Name, 9
1.19b. After or in Place of the Name, 9
1.19b1. Head or Assistant Head of State or Government; Royal Heir Apparent, 10
1.19b2. Top Officials, National Government Unit; Principal Members, Legislative and Judicial Branches, 10

C05757260

1.19b3. Officers of Party Organizations in Communist Countries, 10
1.19b4. Top Officials of First-Order Subnational Administrative Divisions, 11
1.19b5. Top Officers in a Military Service, 11
1.19b6. Principal Official of an International Organization, 11
1.19b7. Principal Members of the Diplomatic Corps, 11
1.20. Publications 12
1.20a. Titles in English, 12
1.20b. Shortened Titles, 12
1.20c. Laws and Treaties, 12
1.20d. Foreign Titles, 12
1.21. Graphics, Tables, and Chapters 13
1.22. Cross-References 13
1.23. Indented Bullet or Dash Paragraphs 13
1.24. Miscellany 13
1.24a. Seasons, 13
1.24b. Major Storms, 13

2. NUMBERS 15

2.1. Basic Guidance 15
2.2. Numbers of 10 or More 15
2.3. Numbers Under 10 15
2.4. Mixes of Numbers Above and Below 10 15
2.5. Ordinal Numbers 16
2.6. Indefinite Numbers 16
2.7. Figures of 1,000 or More 16
2.8. Millions and Billions 16
2.9. Numerical Unit Modifiers 17
2.10. Possessives 17
2.11. Ranges of Numbers 17
2.11a. Below the Millions, 17
2.11b. In the Millions, 18
2.12. Numbers in Tables and Graphics and for Pages, Paragraphs, and Footnotes 18
2.13. References to Numbers as Numbers 18
2.14. Numbers in Nonliteral Sense 18
2.15. Decimals 19

INDEX 177

1. CAPITALIZATION

1.1. A Few Basic Rules

When deciding whether or not to capitalize a word, follow the old maxim: "When in doubt, don't." Do not, for example, capitalize the first letters of the words explaining an uppercase abbreviation unless the term abbreviated is a proper name.

LAN (local area network) USPS (United States Postal Service)

The capitalization of abbreviations themselves is covered in chapter 3. One general rule is to avoid the all-uppercase formulations common in the military for weapon designators (use Scud, *not* SCUD) and for exercises. Lowercase is preferred for acronyms (such as comsat), but be aware of exceptions (notably NATO and SIGINT).

This chapter covers other areas in which uncertainty about capitalization may arise. We assume all users of this manual know that the first letter of a sentence should be capitalized, but a writer may be unsure about what to do if a number begins a sentence—spell it out, even if it is a number normally written as a figure (see sections 2.2 and 2.14), or rephrase the sentence (for example, change *1988 was a significant year for her* to *The year 1988 was significant for her*).

1.2. Proper Nouns

Generally, capitalize a common noun when it forms part of a proper name but not when it is used alone as a substitute for the name of the place or thing or when it becomes separated from the rest of the name by an intervening word or phrase. Certain well-known short forms of specific proper names, however, are exceptions to this rule.

Social Democratic Party, the party
Catholic Church, the church
Harvard University, the university
Quebec Province, Province of Quebec; the province; Quebec, Canada's separatist province
but
the British Commonwealth, the Commonwealth
the Panama (or Suez) Canal, the Canal
the Golan Heights, the Heights
the Persian Gulf, the Gulf
the Horn of Africa, the Horn
the Korean Peninsula, the Peninsula
the Olympic Games, the Games, the Olympics, the Winter (or Summer) Olympics
the Taiwan Strait, the Strait, cross-Strait

A noun common to two or more proper names is capitalized in the plural form when preceded by the proper adjectives in those names.

Montgomery and Prince George's Counties
Harvard and Yale Universities
Red and Black Seas

1.3. Derivatives of Proper Names

Do not capitalize derivatives of proper names used with acquired independent meanings.

anglicized words	italic type
bohemian lifestyle	molotov cocktail
byzantine organization	pasteurized milk
diesel engine	roman type
draconian measures	venetian blinds
but	
Castroite sympathies	Islamization
degrees Celsius	Marxist, Leninist
degrees Fahrenheit	Morse code
Francophone	pulsed Doppler effect
Gaullist policies	Sandinista

1.4. Articles in Place Names

Capitalize the definite article, or its foreign language equivalent, when it is part of an official name. When such a name is used adjectively, an uncapitalized *the* might be used and, despite the redundancy, would precede a capitalized non-English equivalent.

The Bahamas	the Bahamas Tourist Office
El Salvador	the El Salvador situation
The Gambia	the Gambia mapping project
The Hague	the Second Hague Conference

For some country names the definite article is used but is not capitalized because it is not part of the official name (for example, the United Kingdom, the United States, the Vatican) or because the convention has been to use a lowercase *t*, as in:

the Philippines (The proper adjective is Philippine; the people are Filipinos.)

the Netherlands (The proper adjective is Dutch or Netherlands; the people are called the Dutch or the Netherlanders.)[1]

Do not omit the article before a country name in a series if the article is used when the name stands alone.

the United States and *the* Netherlands (*not* the United States and Netherlands)

There is no *the* in *Congo, Seychelles, Sudan,* or *Western Sahara* (*the Sahara* refers to the desert).

1.5. Names of Persons

The spelling of personal names in CIA writing follows transliteration systems generally agreed upon by US Government agencies, unless officials have stated a preference for variant spellings of their names.

[1]Guidance on country names and the nouns and adjectives denoting nationality is given in *The World Factbook,* produced by the CIA and available online [redacted] or in hardcopy from the US Government Printing Office or the National Technical Information Service.

C05757260

1.5a. Particles in Personal Names

In certain personal names, particles such as *al, d', da, de, del, della, den, di, du, l', la, le, van,* and *von* are usually not capitalized unless they begin a sentence.

. . . achieved independence while de Gaulle was President. De Gaulle, however, did . . .

. . . was opposed by the den Uyl government. Den Uyl's policy differed from that of van Agt . . .

In some cases, particles are often dropped when the family name alone is used.

Iraqi Prime Minister Nuri al-Maliki; *but* Maliki stated . . .

Anglicized versions of foreign names vary in the matter of retaining or dropping particles and in the use of capital letters.

1.5b. Nicknames

When a nickname or a descriptive expression replaces a person's first name, capitalize it. If the nickname falls between a person's first and last names, capitalize it and enclose it in quotation marks.

the late revolutionary Che Guevara

Israeli Prime Minister Binyamin "Bibi" Netanyahu

1.6. Government Bodies

Capitalize both the full proper name of a national government body and its shortened form.

the British Parliament, the Parliament, Parliament

the Argentine Congress, the Congress; the Tunisian Chamber of Deputies, the Chamber; *but* the Argentine legislature, the Tunisian legislature, the legislature

the French Senate, the Senate, the upper house

the Cuban Council of Ministers, the Council of Ministers

the British Cabinet, the Cabinet, the Conservative Cabinet, Cabinet member; *but* the Labor shadow cabinet (This example does not apply across the board, especially if the term *cabinet* is used in reference to a body whose formal title does not resemble the English word. If in doubt, use lowercase.)

the Ministry of Economy, the Ministry; a proposed ministry of energy, the proposed ministry, various ministries, several ministries, the economic ministries, the foreign service, the civil service; *but* a Secret Service agent, the Intelligence Community

the Supreme Court

the Central Bank, the Bank

the US Government, the Federal Government (US only; also Federal employee, etc.), the French Government, the French and Italian Governments, the Government of France, the Governments of France and Italy; *but* the government (shortened form always lowercased), the Brown government, the Tory government, the European governments; the executive, legislative, and judicial branches of government; the Obama administration, the administration; the Calderon administration

For a subnational government body, capitalize only the full proper name and avoid shortened forms that might be confused with national equivalents.

the Maryland House of Delegates, the state legislature (*not* the House); the Quebec Parliament, the provincial parliament; the Jerusalem Municipal Council, the council, municipal councils all over Israel

C05757260

1.7. Military Forces

Capitalize the full proper name (or reasonable translations and approximations thereof) of a military force or service as well as the shortened form of that name.

the US Army, the Army
the Egyptian Army, the Army, an Army engineer
Chilean Army, division, or regiment level
the Russian Navy, the Navy, a Navy officer
the People's Liberation Army, the Army, the PLA
the Royal Air Force, the Air Force, the RAF, an Air Force pilot
The Israel Defense Forces, the IDF (*not* the Forces)

This rule does not apply to individual units in the matter of capitalizing the shortened form of the name.

the 3rd Army, the army	the 27th Division, the division
the 7th Fleet, the fleet	The 1028th Brigade, the brigade

Nor does it apply to a reference, other than a proper name, to military services as a group, to a general reference to one kind of service in the plural form, or to any general reference.

the Russian armed forces
the British military establishment
the infantry, the artillery, the submarine forces
US naval forces
the East European air forces
the navies of the Mediterranean NATO members
a navy (army, air force) to be proud of
Russian-supplied air force (naval, ground force) equipment
but
the German and French Air Forces, the Greek and Turkish Navies (specific services referred to by proper names in plural form)

1.8. International Organizations

Capitalize both the full proper name and the shortened form of an international organization and its subelements.

the UN General Assembly, the Assembly
the World Bank, the Bank

1.9. Diplomatic and Consular Units

Capitalize the full or shortened name of a specific embassy, mission, or consulate, but not those words when used generally.

the British Embassy, the Embassy
the British Embassies in Paris and Rome
the US Mission, a spokesman for the Mission
the French Consulate, the Consulate, during Consulate hours

C05757260

but
reports from African embassies
employees skilled in consulate operations
members of diplomatic missions
US embassy guards in the African states

1.10. Religious Terms

Capitalize the names of religions, religious bodies, and the terms for their adherents and writings.

the Bible	Islam	Methodist Church (*but* the church)
Biblical text	a Jew	a Muslim
Catholicism	Judaism	a Protestant
Christianity	the Koran	the Talmud
an Episcopalian	Koranic law	Talmudic scholar

Do not capitalize such terms when they are used in a nonreligious sense.

This style guide, which should be the bible for intelligence writers, attempts to be catholic in its approach to English usage.

1.11. Titles of Religious Leaders

The terms for and titles of religious leaders are capitalized preceding a name and occasionally following the name or when used alone.

Bishop Tutu, the Bishop; *but* appointment of a bishop. (In a political context simply use the name for subsequent reference: *meetings between Tutu and the authorities.*)

Pope Benedict XVI . . . the Pope; *but* election of a pope; future popes; papal, papacy

1.12. Political Parties and Similar Groups

Capitalize the full or shortened name of a political party but not the word *party* standing alone.

the Chinese Communist Party, the party, the CCP
the Italian Socialist Party, the Socialist Party, the PSI
the Christian Democratic Union, the party, the CDU
the British (or Australian or New Zealand) Labor[2] Party, the party, Labor's chances in the election

1.13. Political Philosophies

Capitalize words referring to members of organized parties but not words referring to political philosophies and their adherents.

a Socialist, a Liberal, a Laborite, a Conservative, a Tory, a Social Christian, a Christian Socialist, a Communist (all party members)

A British socialist is likely to be a member of the Labor Party.

The socialist parties of Western Europe include the British Labor Party and the German Social Democratic Party.

[2]Note that, even in proper names, we always use the American spelling for English words spelled differently in the British Commonwealth.

C05757260

Not all liberal European parties have the word *liberal* in their names.

a communist opposition party called the People's Party

The communist[3] countries today are China, Cuba, North Korea, Laos, and Vietnam.

Eurocommunism

but

Christian Democracy, Christian Democrat, Christian Democratic (both the *C* and the *D* are uppercased)

1.14. Geographic Terms

1.14a. Direction

A geographic term used to denote mere direction or position on the earth[4] is not a proper name and is not capitalized.

north, south, east, west, south-central, far north

northerly, eastward, western, far western

east coast, southern France, central Europe

the polar region, polar icecap; the Arctic Circle, the Arctic region (lowercase as descriptive adjective: arctic clothing, conditions, etc.)

Latitude (zero to 90 degrees) and longitude (zero to 180 degrees) continue to describe position on the earth, but context and space limitations allow for differences in format beyond the traditional symbols used to designate degrees, minutes, and seconds (when needed).

Either 55° 45' north latitude, 37° 35' east longitude or 55 45 north latitude, 37 35 east longitude may be used in the text of a paper, as long as use is consistent.

The format 55 45 N 37 35 E is preferred on a map or graphic.

Six digits set solid (554500N) is preferred in a table or matrix with latitude as a header and seven digits set solid (0373500E) with longitude as a header.

1.14b. Special Geographic Groupings

Geographic terms often become part of a proper name for a definite region, geographic feature, or political grouping and are capitalized.

the West, the East, Western countries, East-West dialogue

the Western Hemisphere, the North Pole, the Caribbean Basin, the San Andreas Fault, the Equator

the Continent (meaning continental Europe)

but

the coterminous, or contiguous, United States (meaning the first 48 states) and the continental United States (meaning the first 48 states plus Alaska)

Greater Moscow, Metropolitan Moscow (*but* Moscow metropolitan area)

North and South, capitalized, are often used as abbreviations of the two Koreas or to refer, respectively, to the developed and developing countries, as in "the North-South dialogue."

[3]Communist countries and parties often call themselves "Socialist" or "socialist." In paraphrasing communist statements, put such references in quotation marks. The same applies to *imperialism* and *imperialist* (and to *anti-imperialism* and *anti-imperialist*), which are terms communists use in describing their opponents.

[4]Capitalize *Earth*, *Moon*, and *Sun* only in extraterrestrial contexts. Earth orbit, Moon landing, orbit the Sun; *but* earth's topography, moonlight, sunshine.

C05757260

Some capitalized geographic terms are used to divide the world into groups of countries for purposes of intelligence reporting.

Middle East or Middle Eastern (preferred over Near East, Mideast)
North Africa (occasionally North-Central Africa)
Sub-Saharan Africa
West Africa, East Africa
but
black Africa, southern Africa (South Africa refers only to the republic)
South Asia (sometimes Southwest or Southeast Asia)
East Asia (preferred over Far East)
Oceania (note also North or South Pacific, the Pacific Rim, *but* eastern, western Pacific)
Western Europe, West European
Eastern Europe, East European
Latin America
Middle America
Central America

Some countries fall into more than one category, depending on the context. In some reports, countries logically belonging in a geographic category are grouped separately by some other criterion, such as membership in NATO. The Arab states are often treated as a group in papers on the Middle East. And the terms Middle America and Central America are not synonymous. Be careful, therefore, to explain any such groupings or any deviations from normal geographic categories in a prefatory note or a footnote.

1.15. Nationalities, Tribes, and Other Groups of People

Capitalize the names of racial, linguistic, tribal, ethnic, and religious groupings such as the following. Check *The World Factbook* for specific groupings in a country.

African-American	Colored[6]	Mongol
Amerindian	Creole	Mongoloid
Arab	Indian	Mormon
Aryan	Indo-Chinese	Negro, Negroid
Asian	Indo-European	Nordic
Bedouin (ethnic population)[5]	Jewish	Oriental
Berber	KwaZulu	Polynesian
Bushman	Magyar	Pygmy
Caucasian	Malay	Walloon
Caucasoid	Maori	Zulu

Do not capitalize the following terms based on racial origin, size, and local or other usage. (Some terms of this sort can have offensive connotations and, of course, should never be used.)

aborigine, aboriginal	bushman (general sense)	overseas (as in overseas Chinese)
animist	mestizo	pygmy (general sense)
bedouin (nomadic lifestyle)	mulatto	white
black		

[5]See *bedouin* in chapter 9.

[6]The capitalized term *Colored* is used in reporting on South Africa and (historically) other white-populated areas of Africa. Except in the way it is spelled here (Colored, *not* Coloured) the term conforms to local usage.

C05757260

1.16. Coined Names

A coined name or short form for a military, economic, political, or other grouping is capitalized.

the Alliance, Allied (adjective), and Allies in reference to NATO (uppercasing is needed for clarity; otherwise lowercase)
the Contras
the European Union, the Union, the EU member states
the Free World (use *noncommunist world* in all but historical contexts)
the Group of Eight (G-8)
the Intelligence Community
Nonaligned Movement
Six-Party Talks
but
Camp David accords, Geneva accords, Helsinki accords, Amman accords, Dayton accords, Paris accords
the establishment
fifth column
the occupied territories
Persian Gulf states, the Gulf states
stealth bomber, stealth technology, counterstealth

1.17. Holidays, Religious Feasts, and Historic and Other Significant Events

Many of the examples in this section need capitalization to give them the emphasis or prominence essential to understanding their meaning, especially when they are used out of context.

the Cold War
the Cultural Revolution
D-Day
the Depression
the Feast of the Passover
the Great Leap Forward
the Holocaust
Independence Day
New Year's Day
the October War[7]
the 23rd Party Congress
the Prague Spring
Ramadan
the Renaissance
the Six-Day War[7]
World War II

1.18. Trade Names

Trade names (such as *Velcro, Kleenex,* or *Teflon*) should be capitalized or replaced with a generic term.

air-cushion vehicle (ACV) or hover craft (unless it is a real Hovercraft)
fiberglass (unless it is Owens-Corning Fiberglas)
oxytetracycline (unless the physician specifically prescribed Terramycin)
a photocopy (unless it is known to be a Xerox copy or a Kodak copy)
tracked vehicles (unless they have genuine Caterpillar treads)
a canning jar (unless it is a real Ball or Mason jar)

[7]Capitalize the *W* in *October War* or *Six-Day War* because either term as a whole is a distinguishing coined name, but *1973 Middle East war* or *1967 Arab-Israeli war* is distinguishing enough without the capital *W*. Avoid *Yom Kippur war*, which is slangy. Do not uppercase the *w* in *Korean war*, which was "undeclared"; the same logic applies to *Vietnam war* and *Falklands war*, and a similar convention (if not logic) to *Iran-Iraq war*.

C05757260

Sometimes an acceptable replacement is hard to find. For example, "Ping-Pong diplomacy," the catchphrase once used to describe the exchange of sport and cultural delegations between the United States and China, was probably not entirely accurate even with the trade name uppercased but was certainly preferable to "table tennis diplomacy." Usage eventually pushes bestselling trademarks into the generic language—and in some cases, such as jeep, the generic preceded the trade name. For instance, the following once-capitalized names are now listed in the Merriam-Webster dictionary in lowercase: *celluloid, deep-freeze, dry ice, photostat,* and *zipper.*

1.19. Titles of Persons

1.19a. Before the Name

Capitalize any valid title (or short form of it) immediately preceding a person's name. The plural form of the title preceding more than one name is also capitalized. In front of a title, the prefix *ex* (followed by a hyphen or an en dash) and the adjectives *former* and *then* (neither followed by a hyphen) are not capitalized; neither are the suffixes *designate* and *elect.* Do not confuse a mere description with a title by capitalizing it.

President Sarkozy, Acting President Ghimpu, Defense Minister Barak, First Deputy Premier Shuvalov

Prime Ministers Cameron and Cowen

former Prime Minister Callaghan, then Defense Minister Sharon, ex-President Lopez, ex-Foreign Minister Gromyko, President-elect Salinas, Permanent Representative-designate to the UN Dauth

the late PLO Chairman Arafat (*but* former PLO leader Arafat)

Chief Justice Ramirez, Associate Justice Alberti, Justices Alberti and Ramirez

Bishop Jones, Chairman Smith, Prof. Mary Brown, Professor Brown

Mayor Black, Assistant Principal Jones

First Lady Margarita Zavala de Calderon

party Secretary Brown (uppercase any party top leader's formal title preceding the name), ruling-party Chairman Jones

vice-presidential candidate Gonzalez, pianist Ray Charles

Avoid preceding a name with more than one title. Use the more important one first, and then the other later in the text if necessary or if desired for variation.

onetime Minister of Defense Yazov . . . Marshal Yazov

the late President Pinochet . . . General Pinochet

1.19b. After or in Place of the Name

Generally, a title standing alone is lowercased unless it refers to an incumbent—present or past (but not future). To indicate preeminence or distinction in certain instances, capitalize a common-noun title or shortened title when it follows the name of a person or is used alone in reference to the person to whom the title belongs or belonged. The plural form of such a title is also capitalized as appropriate. So is the word *Acting* if it is a valid part of a capitalized title. Do not capitalize such a title when it refers to the office rather than the individual or when it is used generally.

1.19b1. Head or Assistant Head of State or Government[8]; Royal Heir Apparent

Nicolas Sarkozy, President of France
the President
the Prime Ministers of Italy and France
the Premier-designate, the Vice President–elect
the woman designated as Premier, the man elected Vice President
the former Vice President, an ex-President
the then Secretary General
the Queen of England, the Prince of Wales, the Crown Prince
the former King
but
aspire to be president
destined to be king
a younger head of state
the new chief of state
note also
the First Lady, the First Family (*but* the royal family)

1.19b2. Top Officials, National Government Unit; Principal Members, Legislative and Judicial Branches

David Wright Miliband, Secretary of State for Foreign and Commonwealth Affairs
the Acting Foreign Secretary
the Minister of Foreign Affairs, the Foreign Minister
the Deputy Minister of Foreign Affairs
Minister Without Portfolio
the Chief Justice
the President of the Senate, the President
the Speaker of the House, the Speaker
Bank of Canada Governor Carney
but
a deputy minister of foreign affairs, a first deputy premier
shadow minister, shadow chancellor of the Exchequer, shadow foreign secretary
conferred with cabinet ministers and secretaries of state
the senator, the representative, the congressman, the assemblyman
the member of Parliament (*never* parliamentarian—see chapter 9)
a deputy in the National Assembly
an associate justice
chairman of the Foreign Affairs Committee
the deputy chairman

1.19b3. Officers of Party Organizations in Communist Countries

Cuban Communist Party First Secretary Fidel Castro
Hu Jintao, General Secretary of the Communist Party of China
party General Secretary Hu
the General Secretary, the party General Secretary

[8]Capitalize *Presidential* in any reference to a present or past US President (Presidential vetoes, decisions, proclamations, etc.) but not a reference to a future one (the 2012 presidential election) or to the office generally (presidential powers under the US Constitution). Outside the US context, lowercase *presidential* and other adjectives referring generally to government offices unless they are part of an official name or title: Presidential (Ministerial, Vice-Presidential) Liaison Office(r); *but* presidential action, ambassadorial courtesies, prime-ministerial caliber.

but
Politburo member Ricardo Alarcon
party secretary Juan Almeida
the party secretary responsible for agriculture
a full member or candidate member of the party Politburo
the general secretary of the Italian Communist Party

1.19b4. Top Officials of First-Order Subnational Administrative Divisions

Jean Charest, Premier of Quebec
the Vice Premier of Quebec
the Governor of Connecticut
the Lieutenant Governor of Virginia
the Acting Governor of Maryland
the Armenian Republic First Secretary
but
a capable premier
several state governors
the mayor of Philadelphia

1.19b5. Top Officers in a Military Service

Commander in Chief of the Chilean Army; the Commander in Chief
Chief of Staff, Brazilian Air Force
Deputy Chief of Staff
but
the quartermaster
commander, IV Corps
chief, G-2 (Intelligence Branch), Army Headquarters
the general (military title standing alone not capitalized)

1.19b6. Principal Official of an International Organization

the Secretary General
the current Secretaries General of the UN and the OAS
but
periodic selection of NATO secretaries general

1.19b7. Principal Members of the Diplomatic Corps

the Ambassador, the British Ambassador[9]
the Deputy Chief of Mission
the Minister, the Charge, the Consul General, Minister Plenipotentiary
but
the counselor of embassy, the economic counselor, the first secretary, the US defense attache, the consul, the rank of ambassador, ambassadors at the conference (general use)

[9]There are four levels of ambassadorship. 1) Ambassador-nominee: a person who has been designated by a government as ambassador but for whose appointment the United States has not granted *agrement*. 2) Ambassador-designate: a person whose government has obtained *agrement* for appointment but who has not yet taken up the post. 3) Appointed Ambassador: a person who has presented credentials to the Secretary of State or designee but not to the President. 4) Ambassador: a person who has presented credentials to the President.

C05757260

1.20. Publications

1.20a. Titles in English

Capitalize the first letter of the initial word, that of the final word, and that of any principal word in titles of publications and the like (books, newspapers, magazines, articles, series, reports, speeches, plays, movies, musical compositions, works of art, and historical documents). Principal words include all nouns, pronouns, verbs (including the *to* in an infinitive), adjectives, and adverbs; the preposition *via*, as well as *per* when part of a unit modifier; any other word of more than three letters; the first word following a colon or em dash within a title; and parts of compounds that would be capitalized standing alone (Long-Term, President-Elect, Re-Creation, Follow-On, Trade-Off *but* Balance-of-Payments Problems, Nine-to-Five Schedule, Co-op Formation). If a normally lowercased short word is used in juxtaposition with a capitalized word of like significance, it should also be capitalized (*Buildings In and Near Minneapolis, Construction "On the Cheap"*).

1.20b. Shortened Titles

The above rule is sometimes modified to apply to accepted shortened titles of some publications and historic documents.

article in *The Washington Post*; quoted in the *Post* article
reported in *The Times*; from the London *Times*[10]
Quadripartite Agreement; the Agreement
Balfour Declaration; the Declaration (*but* a British white paper)
the Ruritanian Constitution; the Constitution
but
The 1962 Constitution was a vast improvement over earlier constitutions.
Writers of constitutions (general use) and compilers of style guides are kindred souls.

1.20c. Laws and Treaties

Capitalize the first word and all other important words in the formal titles or distinguishing shortened names of federal, state, or foreign documents. If a descriptive term is used, or if the document is still in draft form, use lowercase. The names of ratified treaties are capitalized when rendered in full. For treaties that have not been ratified, the *t* in treaty should always be lowercase.

Bill of Rights
START Treaty, the treaty, New START Treaty
Treaty of Paris, the treaty
Kyoto treaty

1.20d. Foreign Titles

Capitalization of titles that must be given in a language other than English should conform to the practice in that language.

[10]Always word references to the London *Times* so as to avoid confusion with *The New York Times* and vice versa.

C05757260

1.21. Graphics, Tables, and Chapters

The rule in section 1.20 concerning capitalization of titles of publications and the like also applies to titles of graphics, tables, chapter and part headings, headlines, and the equivalent, but not to annotations (such as arrowed captions or callouts) on a photograph, map, or other graphic—for which only the first letter of the initial word is capitalized. If a number given as a figure begins such a caption the word following it is *not* capitalized.

200-mile limit (*not* 200-Mile limit or 200-mile Limit)

1.22. Cross-References

The common nouns used in numeral or letter designations of chapters, parts, graphics, tables, etc. are not usually parts of titles and are not capitalized in cross-references.

covered in chapter III, volume I
refer to appendix B
(see figure 13)
(detailed in table A-4)
disagrees with section 27

1.23. Indented Bullet or Dash Paragraphs

Capitalize the first letter of each entry in a series of blocks of text indented for emphasis and introduced by a bullet or an em dash.

1.24. Miscellany

1.24a. Seasons[11]

Do not capitalize *spring*, *summer*, *fall* (*autumn*), or *winter*. As a general rule, use the definite article in referring to a season and use *of* before the year.

in the fall of 2009
but
her fall 2009 election triumph

1.24b. Major Storms

Capitalize *hurricane* and *typhoon* as part of a US National Weather Service name for such a storm, as in Hurricane Katrina or Typhoon Morakot. Both terms designate types of cyclones, as does *tornado*, but personalization has not been applied to cyclones, tornadoes, or waterspouts (tornadoes gone to sea). In view of the confusion of nomenclature, be sure of what you are talking about before you write about it.

[11]Avoid seasonal references in any writing about the Southern Hemisphere.

C05757260

§ 2. NUMBERS

2.1. Basic Guidance

Although the reader comprehends figures more readily than numbers spelled out, particularly in technical, scientific, or statistical matter, typographic appearance and other special reasons often call for spelling out numbers rather than using figures.

2.2. Numbers of 10 or More

Except in the first word of a sentence, write numbers of 10 or more in figures, not in spelled-out words.

Her tour covered 11 countries in 16 days.

Sixteen days on the road left him exhausted. (*Better*: He was exhausted after 16 days on the road.)

2.3. Numbers Under 10

Spell out most numbers under 10, but use figures if such numbers are decimals, ages of persons, percentages, specific amounts of money, or numbers used with units of measure other than time.

For five years the county has provided free preschool classes for 5-year-olds.

They visited six countries in Asia, three in Africa, and two in Europe, spending an average of 1.45 days in each country.

He walked 6 kilometers every 2.5 days (*but* every two days).

She spent 8 percent of her time in Europe.

He overspent his daily allowance by an average of $7.

The jet's top speed was Mach 2.2.

2.4. Mixes of Numbers Above and Below 10

Combinations of numbers on either side of 10 follow the basic rules governing numbers set forth above.

The estimate covers the period five to 10 years from now.

He packed two suits, 12 shirts, and three ties.

She had 14 children (three daughters and 11 sons).

The measure lacked three of the 34 votes needed for approval.

The attack involved about 200 troops, 12 tanks, and two aircraft.

C05757260

2.5. Ordinal Numbers

The rules governing cardinal numbers generally apply to ordinal numbers, except that military units are always designated by figures (again, unless the figure unavoidably comes at the beginning of a sentence), and fractions are usually written out.

First Congress	82nd Congress
ninth century	20th century
seventh region	17th region
fifth anniversary	50th anniversary
first grade	11th grade
3rd Army	2nd Infantry Division
323rd Fighter Wing	1028th Brigade
9th Naval District	7th Fleet
VI Corps (Army usage)	XII Corps

2.6. Indefinite Numbers

Except with words such as *about, nearly, more than,* and *approximately,* references to quantities in an indefinite sense usually are not written with figures.

The project will cost the government tens of millions.

He addressed several thousand people.

She answered hundreds of questions.

but

He spent about 30 hours on his trip report and had to wait more than 15 days to be reimbursed for expenses.

2.7. Figures of 1,000 or More

Numbers with more than three digits are written with commas, except for years, radiofrequencies, military unit designators, clock time, most serial numbers, and the fractional portions of decimal numbers.

She had traveled 6,187 kilometers as of 1400 hours.

A force of 20,000 (*never* 20 thousand) troops was needed.

According to some sources, there were 1,076,245 US casualties in World War II.

The station operated on a frequency of 1800 kHz.

He was assigned to the 1028th Brigade.

He picked up job number 518225 10-88.

The exact weight is 3,399.243046 grams.

The next step is to multiply by 3.1416.

2.8. Millions and Billions

Numbers over 999,999 are rounded unless an exact amount must be stated. Spell out *million* or *billion* preceded by a figure rounded usually to no more than two decimal places.

The world population today is more than 6.8 billion.

The US population is about 309 million.

C05757260

The number of Americans dead and wounded in World War II totaled 1,076,245.

More than 16.35 million Americans served in World War II—more than three times the 4.74 million in World War I.

Estimates range between $10 million and $20 million (*not* between $10 and $20 million).

but

The cost is estimated at $10-20 million.

2.9. Numerical Unit Modifiers

Numerical unit modifiers are written with hyphens.

third-level decision
20-kilometer (*or* 20-km) march
eleventh-hour decision
10-room house
20th-century progress
200-million-euro loan
(*but* $200 million sale)
3-million-man army
a 1-cent increase
one- and two-bath apartments
five-year plan[12]
105-millimeter (*preferred* 105-mm) guns
7-meter (*never* 7-m)[13] limit
.45-caliber pistol
50-billion-ruble budget (*but* $50 billion program)
2-million-barrel-per-day
(*or* 2-million-b/d) output
6-percent increase, 6- to 7-percent (*or* 6-to-7-percent) increase (*but* 6 percent short)

2.10. Possessives

Numerical expressions in the possessive case require an apostrophe but not a hyphen.

After five years' planning, the project got under way.

She put 16 days' work into the project.

The new regime bought several million dollars' worth of arms (*but* $20 million worth).

2.11. Ranges of Numbers

2.11a. Below the Millions

In order to prevent typographical error or misreading in ranges of numbers, use prepositions and conjunctions rather than hyphens, except for years, page or paragraph references, and values in the millions.

The march covered 10 to 15 kilometers (*not* 10-15 kilometers).

The league membership is between 15,000 and 20,000 (*not* 15,000-20,000).

Model numbers 847,312 through 873,214 were recalled (*not* 847,312-873,214).

but

This report covers the years 2005-09.

For further information, see pages 12-25.

[12]The hyphen is retained in capitalized forms of this term.

[13]Abbreviations of units of measure, including abbreviations formed by a single letter (such as *m* for *meter*), are acceptable in appropriate circumstances, such as in tables or in texts making frequent references to specific quantities. One exception, however, is a hyphenated modifier with a single-letter abbreviation, such as *7-m* or *20-L*. Such compounds are confusing and should be avoided. Instead, spell them out (7-meter, 20-liter) or change the unit of measure (700-cm, 20,000-mL). Potentially confusing also are the abbreviations m^2 and m^3, which, although proper metric forms, can sometimes be mistaken for footnote references. Spelling out *square meter(s)* or *cubic meter(s)* is preferred, or *sq m* and *cu m* may be used. So may m^2 and m^3 if there is no possibility of ambiguity.

C05757260

In tabular material, especially where space limitations apply, the use of hyphens in ranges of numbers is usually more appropriate.

Do not use combinations of prepositions and hyphens, such as *between 15,000-20,000* and *from 847,312-873,214*, to express a complete range of values. The final example in section 2.11b below shows the only circumstance in which such a combination would be appropriate.

2.11b. In the Millions

Hyphens may be used in ranges of numbers in the millions and multimillions.

> Natural gas reserves are estimated at 20-30 billion cubic feet.
>
> Production rose to 2.0-3.5 million tons annually during the period 1971-75.
>
> The range of estimated construction costs has increased from $500-600 million to $2-3 billion. (Do not repeat the dollar sign in ranges like these. Do not write $500 to $600 million or $2 to $3 billion. Although writing $500 million to $600 million or $2 billion to $3 billion is correct, such phrasing would be awkward in the sentence above.)

2.12. Numbers in Tables and Graphics and for Pages, Paragraphs, and Footnotes

Such numbers—and sometimes those that immediately follow each bullet or "tick" in a series that highlights quantities—are not subject to the general rules for numerals, nor are numeral designators for tables, graphics, volumes, chapters, and other parts of publications. However, the text portions of footnotes and, unless space constraints dictate otherwise, of tables and graphics are governed by the same rules for numerals that are applicable to the main text.

2.13. References to Numbers as Numbers

Any number referred to as a number is given as a figure unless beginning a sentence with such a reference is unavoidable.

> The estimate could be off by a factor of 2 or 3.
>
> The data are rounded to the nearest 5.
>
> Divide by 5 to determine your share.
>
> His lucky number is 7.
>
> *but*
>
> Seven is his lucky number.

2.14. Numbers in Nonliteral Sense

Numbers used in a metaphorical or figurative sense are spelled out without regard for the basic rules covering numbers above and below 10.

> The Minister is famous for eleventh-hour decisions.
>
> Moreover, he is often a hundred percent wrong.
>
> Because he is a shrewd politician he remains number two in the regime instead of number twenty.
>
> There must be a thousand others who could run the Ministry better than he.

C05757260

2.15. Decimals

Numbers with a decimal point are expressed in figures. Decimal numbers of less than 1 should have a zero before the decimal point except for designations of gun bore or ammunition. Zeros are omitted at the end of a decimal number unless exact measurement is indicated.

0.25 meter (note that the unit of measure is singular)
1.25 centimeters
silver 0.900 fine (exact measurement)
.22-caliber cartridge

2.16. Fractions

Fractions referring to reasonably specific quantities are written out, with a hyphen in both noun and adjective forms.

three-fourths (*or* three-quarters) of a kilometer[14]
a two-thirds majority; a majority of two-thirds
one-fifth of the electorate; one-tenth; one-twentieth (*or* a fifth, a tenth, a twentieth)
but
a quarter of a lifetime
the second quarter of 2009, the last three quarters of 2009, earnings for first quarter 2010, first-quarter earnings

2.17. Mixed Numbers

If possible, avoid a combination of a whole number and a fraction by converting the fraction to a decimal quantity.

5.5 percent (or *about 5.5 percent*, if you wish to avoid a suggestion of precision)

In nonstatistical contexts, written-out phrases are preferred.

two and a half (*not* one-half) years ago
two-and-a-half-year trial period (*better in some contexts*: 30-month trial period)

In statistical texts, however, precise reporting may require mixes of whole numbers and fractions (5½ , 4¼).

2.18. Expressions of Value

2.18a. US Money

Values expressed in US money are given in figures preceded by a dollar sign. Ordinarily, there is no need for the initials *US* to precede the dollar sign unless the context could allow the reader to assume that dollars other than US dollars are meant. If this is the case and the dollar amounts appear throughout the text, consider adding a footnote such as "Money values in this paper are in US dollars unless otherwise indicated." The word *dollars* is used in an indefinite expression with no figure given or if some definition of the word is needed—such as the year to which the dollar value applies. The word *cents* is used for amounts less than a dollar.

[14]Fractional quantities such as this one may sound plural but they take a singular verb (three-fourths of a kilometer is too far to walk). The same is true of any quantitative expression in which the emphasis is on its meaning as a single unit of measure—for example, money ($500 is too expensive) and time (two years is too long).

C05757260

Russia spent nearly $50 million to develop the system.

Motorists in Amsterdam pay about US $6.50 for a gallon of gasoline; those in Caracas, however, pay only 12 cents a gallon.

Each unit now costs several hundred dollars.

We estimate the system cost the equivalent of 50-60 billion 1987 dollars.

2.18b. Foreign Money

When values are expressed in foreign money, use figures except for indefinite amounts. Because they are unfamiliar to many readers, do not use symbols for foreign currency.

The Israeli-British talks set the unit price at 1,250 pounds sterling (3,065 Israeli pounds).

The construction costs averaged 5 rubles per capita.

The fare is 1 euro.

A bottle of Japanese beer costs 230 yen in Tokyo.

but

Meals in London will cost a few pounds more (*sterling* is understood).

2.19. Percentages and Times Phrases

Numbers showing the relationship of a smaller to a larger quantity are often expressed in percentages, which are always given in figures (75 percent, 6.2 percent, 1 percent, 0.5 percent).

Numbers showing the relationship of a larger quantity to a smaller one are often accompanied by the word *times* and, unless decimals are used, are governed by the basic rules for numbers on either side of 10 (five times as large, 10 times greater, 50 times more frequently, 2.5 times more powerful, two to three times greater).

2.19a. Percentage

The word *percent* is preferred in ordinary text. The percent sign (%) is acceptable in tables and graphics. Unless space is tight, the text portions of tables and graphics should use the word and not the sign to express percentage. Figures are always used for percentage except at the beginning of a sentence that cannot be reworded.

The current five-year plan projects a 20-percent increase by 2015.

Voter turnout dropped 5.7 percent in the second round.

African-Americans make up 5 percent of the student body.

Be careful to distinguish between percent and percentage point.

The inflation rate, which rose only half a percentage point last year, is expected to go up a full 2 or 3 points to 12 or 13 percent in 2010.

2.19b. Times Phrases

Various ways of expressing proportion with the word *times* are shown below. Note that careful wording is needed to avoid a wrong meaning. Sometimes the message is clearer if expressed in percentage. One can also use the suffix *-fold*, although this is somewhat archaic—and awkward when decimal factors are involved. Never use meaningless expressions such as "four times smaller," which sometimes is written by an author who means to say "one-fourth as large."

The number of tanks increased to five times the prewar level. (This is a 400-percent, or fourfold, increase.)

The number of tanks is five times greater than before the war. (This is a 500-percent, or fivefold, increase.)

The number of tanks increased five times. (The tank count went up on five separate occasions by unspecified amounts.)

There are five times as many tanks as there were before the war. (The present number is 400 percent, or four times, greater than the prewar number; is five times the prewar number; and has undergone a fourfold increase.)

If the suffix is attached to a whole number written solid and unhyphenated, spell the resulting word without a hyphen (fourfold, tenfold, twentyfold, hundredfold). Otherwise use a figure and a hyphen (21-fold, 5.75-fold).[15]

2.20. Expressions of Time

2.20a. Ages of Persons

These are expressed in figures except at the beginning of a sentence and in approximations by decades.

The general is almost 60 (*or* 60 years old, *but not* 60 years of age).

General Manley, 60 (*or* age 60, *but not* aged 60), is retiring at the end of the year.

The general must be in his sixties.

Five-year-olds who will reach their 6th birthday by 31 December are eligible.
(Change sentence to begin: All 5-year-olds.)

2.20b. Ages of Inanimate Things

These are given according to the basic rules for numbers above and below 10.

The program is two years old.

Those 30-year-old submarines are being scrapped.

2.20c. Dates[16]

Intelligence writing follows the military style of stating a date without internal punctuation and with day, month, and year in that order.

The United States declared its independence on 4 July 1776.

Switzerland's Independence Day is celebrated on 1 August.

She graduated in June 1951 (*not* June, 1951).

Both (word inserted to avoid starting the sentence with a figure) 11 and 26 November were holidays in 2009.

The March-April spring vacation period empties college campuses. (Use a hyphen to separate the months.)

It snowed heavily on the night of 20-21 February. (Use a hyphen to separate the days.)

The play had a three-week run (25 April–14 May). (Use an en dash—see section 5.9—to separate these dates.)

The base rights ended on 30 April 2008.

[15]The principal advantage of *fold* is that it sometimes permits a more precise translation of data reported in a foreign (particularly Slavic) language. A 5.75-fold increase, however, can just as easily be expressed as a 575-percent increase, an increase of 5.75 times the previous level, or an increase to 6.75 times the previous level.
[16]See dates as modifiers in chapter 9.

2.20d. Years

Figures designating a continuous period of two or more years are separated by a hyphen meaning "up to and including." For two years, *and* may be used.

The presidencies of John Adams (1797-1801), William McKinley (1897-1901), and Bill Clinton (1993-2001) were the only ones to span two centuries.

She worked here during the period 1961-96.[17]

She worked here in 1961 and 1962.

Do not combine *from* or *between* with a hyphen instead of *to* or *and*. Such combinations (from 1951-77, between 1941-45) are almost always incorrect.

A hyphen may be used to date events that straddle consecutive years representing a continuous period, but do not use one to date related but separate events occurring in two consecutive years.

Training of crewmembers took place during the period 2008-09.

during the winter of 2009-10

during the Argentine summer of 2008-09

Clinton was a US Senator (2001-09) before she became Secretary of State.

The first two submarines were launched in 1960 and 1961 (*not* 1960-61).

Use a slash, not a hyphen, in a combining form designating a 12-month period occurring in two calendar years, such as a fiscal year or an academic year, and state the type of year and, if necessary, the period covered.[18]

The farm made a profit in the 2007/08 crop year (1 July–30 June)[19] but not in 2008/09.

Registrations for the academic year 2010/11 are being accepted.

The report covered actual expenditures during fiscal year 2008/09 and made some projections of FY 2009/10 spending. (The abbreviation FY may be used after the first mention of fiscal year, but do not drop the 20. In this illustration it would be equally clear in the second reference to write simply 2009/10, without the FY or the term it stands for.)

2.20e. Decades

Decades are usually expressed with the figure for the initial year followed by an *s* but not an apostrophe.

All those submarines were constructed in the 1960s (*not* 60s, '60s, or sixties).

Our estimates were intended to cover the early and middle 1990s. Your figures dealt with the middle and late 1980s.

2.20f. Centuries

In certain special contexts, a century may be referred to in a manner similar to that used for decades (the 1800s, the eighteen hundreds), but, in most intelligence writing, ordinal numbers (in the 19th century, 20th-century progress) would be more appropriate.

[17]In an expression such as "during the period 1951-77," inclusion of the words "the period" is suggested. If the subject requires repeated reference to such ranges of years, as in economic reporting, the words might be omitted after the first such use. (He composed mainly for motion pictures during the period 1961-64 and twice returned to that medium in 1967-69 and 1974-75. His film music has been compared to that composed at Warners during 1935-50, the heyday of the Viennese-dominated Hollywood school.) In a text prepared for oral presentation write "from 1951 to (or through) 1977."

[18]In US Government practice the fiscal year is stated not in a combining form but with the calendar year representing the larger portion of the fiscal year. US fiscal year 2009 began on 1 October 2008 and ended on 30 September 2009. (Japan's fiscal year 2009, on the other hand, began on 1 April 2009 and ended on 31 March 2010.)

[19]Note the use of an en dash instead of a hyphen in a timespan joining compound elements; a hyphen would be used if the period were shown as July-June.

2.20g. Clock Time

The time of day is written in the 24-hour system, without internal punctuation.

The managers met at 0845 hours.
The satellite was launched at 1800 EDT (2400 GMT).
The midday break is 1300-1430.
also acceptable
The noon meal was the heaviest of the day.
Many high school students rarely get to bed before midnight.

2.20h. Other Time Expressions

Apart from the situations covered in sections 2.20a through 2.20g, references to time follow the basic rules for numbers above and below 10.

The protest lasted for eight days.
The aircraft were airborne in 11 minutes.
The pulses were seven seconds apart.
Figures are given for three fiscal years.
Some countries structure their economic activities according to five-year plans.
He resigned after his sixth year of service.
Payment is acceptable on the 29th day after the due date.
The Communist regime accounts for just six decades in China's history of more than 40 centuries.

2.21. Units of Measure

The Intelligence Community generally uses the International System of Units (metric system) to express size, specifications, or characteristics of things. Among the acceptable nonmetric units of measure are the kiloton, the nautical mile for sea distances, pounds per square inch (psi), and the knot. Other nonmetric units of measure still in use include barrels (and barrels per day) in reporting on the petroleum industry, the US bushel in reporting on grain production and trade, cubic feet in reporting on natural gas reserves or output, and short tons (*not* metric tons) in reporting on nuclear weapons.

2.22. Figures With Units of Measure

Figures are used with any unit of measure (excluding units of time) unless an indefinite quantity is stated, in which case the unit is never abbreviated. As a general rule, do not abbreviate units of measure unless they occur frequently in a report. *They advanced several hundred kilometers* (*never* several hundred km).

1 gallon	4 bushels	8 acres bushels
3 miles	6 meters	8½ by 11 inches
exceptions		
fourfold	six-story building	three-ply
one gross	tenpenny nail	two dozen

C05757260

2.23. Other Number Rules

2.23a. Numbers Close Together

When a cardinal number ordinarily given as a figure precedes a numerical unit modifier that normally would use a figure, try to reword the sentence. If this is not possible, spell out one figure, preferably the smaller one.

15 six-meter trees (*or* 15 trees 6 meters tall)
twelve 250-kilogram bombs (*or* 12 bombs, each weighing 250 kilograms)

2.23b. Ratios, Odds, Scores, Returns

Use numbers for each of these numerical situations.

Women were outnumbered 17 to 1.
The doctor-to-patient ratio was 1:17.
He had a 50-50 chance of winning.
The New Orleans Saints won Super Bowl XLIV, 31 to 17.
The first vote gave the Democrats 21 seats, the Socialists 9, and the Communists 5.
The measure was approved by a 90-to-3 vote.

2.23c. Indefinite Expressions Using Figures

Illustrated in the following examples are numerical expressions that may be required in certain contexts (such as a direct quotation) but are not recommended. Alternative wording is usually available.

100-odd (*better:* more than 100) species of insects
reserves of 50-plus (*better:* 50 or more) vehicles

2.23d. Scientific Notation

A scientific and technical paper may require exponential expression of quantities in the multimillions: 10^{17} watts/cm^2.

C05757260

Factors for Converting to Metric Units of Measure

To Convert From[a]	To (Abbreviation or Symbol)[b]	Multiply by
acres	hectares[c] (ha)	0.4047
acres	square kilometers (sq km, km^2)	0.004047
acres	square meters (sq m, m^2)	4,046.8564
bushels	cubic meters (cu m, m^3)	0.03524
degrees Fahrenheit	degrees Celsius (°C)	5/9 (after subtracting 32)
feet	centimeters (cm)	30.48
feet	meters (m)	0.3048
feet, cubic	cubic meters (cu m, m^3)	0.02832
feet, square	square meters (sq m, m^2)	0.09290
gallons, UK (imperial)	cubic meters (cu m, m^3)	0.004546
gallons, UK (imperial)	liters (L)	4.5461
gallons, US	cubic meters (cu m, m^3)	0.003785
gallons, US	liters (L)	3.7854
inches	centimeters (cm)	2.54
inches	meters (m)	0.0254
inches, cubic	cubic meters (cu m, m^3)	0.00001639
inches, square	square centimeters (sq cm, cm^2)	6.4516
inches, square	square meters (sq m, m^2)	0.0006452
miles, nautical	kilometers (km)	1.852
miles, nautical	meters (m)	1,852
miles, nautical, square	square kilometers (sq km, km^2)	3.4299
miles, statute	meters (m)	1,609.344
miles, statute	kilometers (km)	1.6093
miles, statute, square	hectares (ha)	258.9988
miles, statute, square	square kilometers (sq km, km^2)	2.5900
ounces, avoirdupois	grams (g)	28.3495
ounces, troy	grams (g)	31.1035
pints, liquid	liters (L)	0.4732
pounds, avoirdupois	kilograms (kg)	0.4536
pounds, troy	grams (g)	373.217
pounds per square inch	kilopascals (kPa)	6.8948
quarts, liquid	liters (L)	0.9464
tons, long	metric tons (t)[d]	1.0160
tons, short	metric tons (t)[d]	0.9072
yards	meter (m)	0.9144
yards, cubic	cubic meters (cu m, m^3)	0.7646
yards, square	square meters (sq m, m^2)	0.8361

[a]This table covers only a selection of the most frequently encountered nonmetric units. More comprehensive conversion tables are available elsewhere (in *The World Factbook*, for example).

[b]See footnote 13 and section 2.22 for words of caution about proper use of abbreviations of metric units. The National Bureau of Standards holds that shortened forms used to represent units of measure should be called symbols, rather than abbreviations, because no periods are used.

[c]It is best to avoid the word *acreage* in the metric age, but it has not really been replaced by *hectarage* in the American vernacular. Try *area* instead.

[d]Not *tonnes*. Avoid abbreviation, however, because the *t*, like other one-letter abbreviations, sometimes gets lost in the shuffle. The best approach for metric tons is to establish early in the text of a paper that tons thereafter means *metric tons* and then just use the four-letter word. Occasionally, *MMT* is used to abbreviate *million metric tons* if frequent repetition warrants.

C05757260

3. ABBREVIATIONS

3.1. General Guidance

Use abbreviations sparingly and only when their meaning is clear. When abbreviations are necessary, use standard forms such as those in the GPO *Style Manual* and *Merriam-Webster's Collegiate Dictionary*, or other forms that have gained acceptance. In CIA usage, periods are usually omitted in all but a few categories of abbreviations, such as academic degrees (B.A., Ph.D.), export/import terms (f.o.b., c.i.f.), and ranks or titles (Gen., Prof., Dr.). (Abbreviations for military ranks are in section 3.7.)

3.2. First Reference

An organization, group, international agreement, unit of measure, weapon system, or the like that is referred to throughout a report is abbreviated after it is spelled out at the first reference, often with its abbreviation following it in parentheses. (In long reports, as a convenience to the reader, repeat the full designation occasionally without respecifying the abbreviation, but continue thereafter to use the abbreviation as before.)

Non-Proliferation Treaty (NPT)

nautical mile (nm)

multiple reentry vehicles (MRVs)

airborne warning and control system (The carriers are AWACS aircraft, never AWACs, as in "one AWAC, two AWACs.")

Omit the parenthetical insertion if the first use of the abbreviation closely follows the spelled-out name or term and the connection between the two is clear. This approach is particularly applicable to long country names that, because of repeated mention, need to be abbreviated after the first reference.

The newer models, with a range of 500 nautical miles, are replacing the 400-nm versions now widely deployed.

The United Arab Emirates is . . . the UAE is . . . a UAE delegation arrived[20]

Sometimes it is appropriate to give an abbreviation first, with the full title or other identification in parentheses, or set off by commas, immediately afterward.

WHO (World Health Organization)

ITAR-TASS, the Russian news agency

Pemex (Petroleos Mexicanos)

[20]Note that some country names, like this one, are plural in construction but take singular verbs. Some country names are compounds, but that form is ignored for both syntactic and adjectival purposes—*Trinidad and Tobago is* (adjective: *Trinidadian*); *Sao Tome and Principe is* (adjective: *Sao Tomean*).

C05757260

3.3. Well-Known Abbreviations

Some abbreviations are widely recognized and need no explanation. Even these, however, should be spelled out if the context suggests a need to do so or if there is any doubt about clarity.

ABM (antiballistic missile)
ANC (African National Congress)
APEC (Asia Pacific Economic Cooperation)
ASEAN (Association of Southeast Asian Nations)
AU (African Union)
AWACS (airborne warning and control system)
BGN (Board on Geographic Names)
BW (biological warfare)
CIA (Central Intelligence Agency)
CPU (central processing unit)
CW (chemical warfare)
DHS (Department of Homeland Security)
DIA (Defense Intelligence Agency)
DNI (Director of National Intelligence)
DOD (Department of Defense)
DOE (Department of Energy)
DOJ (Department of Justice)
EU (European Union)
FBI (Federal Bureau of Investigation)
FY (fiscal year)
GDP (gross domestic product)
GNP (gross national product)
GPS (global positioning system)
IAEA (International Atomic Energy Agency)
IC (US Intelligence Community)
ICBM (intercontinental ballistic missile)
IMF (International Monetary Fund)
IRBM (intermediate-range ballistic missile)
KGB (former Soviet State Security Committee)
LDC (less developed country)
MIRV (multiple independently targetable reentry vehicle)
NAFTA (North American Free Trade Agreement)
NATO (North Atlantic Treaty Organization)
NGA (National Geospatial-Intelligence Agency)
NGO (nongovernmental organization)
NRO (National Reconnaissance Office)
NSA (National Security Agency)
OAS (Organization of American States)
OECD (Organization for Economic Cooperation and Development)
OPEC (Organization of Petroleum Exporting Countries)
PLO (Palestine Liberation Organization)
R&D (research and development)
S&T (science and technology)
SALT (strategic arms limitation talks)
SAM (surface-to-air missile)
SLBM (submarine-launched ballistic missile)
SRBM (short-range ballistic missile)
START (Strategic Arms Reduction Treaty)
UK (United Kingdom)
UN (United Nations)
US (United States)
USSR (Union of Soviet Socialist Republics)
WHO (World Health Organization)
WMD (weapons of mass destruction)
WTO (World Trade Organization)

3.4. Foreign Terms

The name of a foreign institution is spelled out in English, if possible, but the commonly used abbreviation may be used even if it is drawn from the foreign wording.

Struggle of Filipino Democrats (LDP)

3.5. Incomplete or Possessive References

Avoid wording that would put an abbreviation immediately after an incomplete or possessive form of the name abbreviated.

the ban under the Non-Proliferation Treaty (NPT), *not* the Non-Proliferation Treaty's (NPT) ban

the platform of the Liberal Democratic Party (LDP), or the Liberal Democratic Party (LDP) platform, *not* the Liberal Democratic (LDP) platform

C05757260

3.6. Plural Forms

If the logical place to spell out an abbreviation comes when the term is plural, the abbreviation must also be in the plural form, even though the singular is used thereafter.

multiple independently targetable reentry vehicles (MIRVs)

3.7. Military Ranks

These abbreviations for the most commonly used military ranks are used only when they precede proper names, preferably full names. In general usage, the ranks are spelled out in lowercase.

Adm.	admiral
Army Gen.	army general
Brig.	brigadier
Brig. Gen.	brigadier general
Capt.	captain
CWO	chief warrant officer
Col.	colonel
Cdr.	commander
Cpl.	corporal
Ens.	ensign
1st Lt.	first lieutenant
Flt. Adm.	fleet admiral
Gen.	general
Lt.	lieutenant
Lt. Col.	lieutenant colonel
Lt. Cdr.	lieutenant commander
Lt. Gen.	lieutenant general
Lt. (jg)	lieutenant junior grade
Maj.	major
Maj. Gen.	major general
Mar.	marshal
Pvt.	private
Rear Adm.	rear admiral
Ret.	retired
2nd Lt.	second lieutenant
Sgt.	sergeant
Vice Adm.	vice admiral
WO	warrant officer

3.8. Unusual Forms

3.8a. MIRVs

This acronymic abbreviation is almost always plural as a noun; note the lowercase *s*. The term also has a verb form, which in turn has participial and negative forms.

If the Soviets had decided to MIRV all their ICBMs . . .
Producing an unMIRVed version of the ICBM system . . .
Stop deploying non-MIRVed missiles after a certain date . . .

C05757260

3.8b. SALT, MBFR, INF[21]

Sometimes an abbreviation not ending in *s* stands for a plural term, as in *SALT* (strategic arms limitation talks). Note that uppercase is not used in spelling out these terms. The abbreviation *SAL* (strategic arms limitation) is also used and, in context, often is clear enough to preclude any need to spell out. The negotiating rounds at Geneva in the 1970s have generally been abbreviated *SALT I* and *SALT II*. Note that it is redundant to write "SALT talks." This is not the case with "MBFR talks," in which the abbreviation (less familiar than SALT and therefore probably requiring explanation) covers only the purpose of the talks—mutual and balanced force reduction. The same logic applies to "INF talks"—negotiations concerning intermediate-range nuclear forces. It is customary not to use an article with these abbreviations. Although the term that SALT stands for is plural, the abbreviation is construed as singular (SALT *was* a high-priority issue in Brezhnev's foreign policy).

3.9. Country Names

3.9a. US, UK

The preferred style is to use the abbreviation for our own country only in the adjective form (a US initiative, *but* favored by the United States). This is not a rigid rule; the abbreviation may be used in graphics or text where space constraints dictate its use. In general, neither the full name *United States of America* nor the abbreviation *USA* is used.

Our style with respect to references to the United Kingdom of Great Britain and Northern Ireland is flexible to the same degree that it is for the United States. *Britain* or *Great Britain* is often used as the shortened form of the country name, but *the United Kingdom* (note the lowercase *t* in *the*) is preferred. *UK* is acceptable as an adjective or, preceded by the definite article, as a noun, except in cases where "sparing use" obliges us to avoid it. *British* is also an acceptable adjective—according to some authorities, it is the preferred one.

3.9b. China

The full name of the People's Republic of China usually is shortened to *China*, although *PRC* may be used. *Chinese* is the preferred adjective and refers only to the mainland. For what we used to call Nationalist China or the Republic of China, use only *Taiwan*, both as a noun and as an adjective. For variation *Taipei* may be used in either noun or adjective form (for example, the officials in Taipei, or the Taipei authorities), but avoid *Taiwanese* as an adjective referring to the island's administration or its officials (and do not use the term *Taiwanese government*). The terms *Communist China* (and *Chinese Communist*) and *Nationalist China* (and *Chinese Nationalist*) or *Republic of China* should be used only in historical contexts. (See *China*, *Taiwan* in chapter 9.)

3.9c. Miscellaneous Rules

Do not abbreviate when a country is mentioned only once or twice, or when it is included in a series in which other country names are spelled out. Most countries have long official names that have been shortened to forms now preferred by the US Board on Geographic Names. Some examples are Australia (Commonwealth of Australia), Mexico (United Mexican States), and South Africa (Republic of South Africa; this full name would be preferred in some contexts to avoid confusion—for instance, a text on the situation in southern Africa as a whole).

[21]All three of these terms refer to past events and should be used only in a historical context.

C05757260

3.10. Titles of Persons

3.10a. Civil or Military

Most civil or military titles preceding a name are abbreviated if followed by both a given name or initial and a surname. *Senator, Representative, Commodore,* and *Commandant* are never abbreviated. *Doctor* is always abbreviated as a title.

> Prof. Mary Jones, Professor Jones; Gen. J. F. Smith (note space between initials), General Smith
> Representative Henry Brown, Representative Brown
> Dr. Robert Young, Dr. Young

3.10b. Complimentary

Complimentary titles (Mr., Mrs., Ms., M., MM., Messrs., Mlle., Mme.) are also abbreviated at all times but are rarely necessary in intelligence writing. Except in biographic reports, the only title we should use is an official one at the first mention of a person's name. After that, refer to the person by last name or by title, treating males and females alike.

> Foreign Minister Spiknayskaya is expected to take part in the conference only long enough to deliver her government's opening position statement. After her departure the principal negotiator will be Ambassador Faytfirskiy, a protege of the Foreign Minister. He is, in fact, a strong candidate to succeed Spiknayskaya when she retires.

In a biographic report mentioning the spouse or other relatives of a person who is the subject of the report, a complimentary title might be needed to ensure clarity.

> President Amigo's family will accompany her on the visit. Her husband, Luis, is a concert pianist. Mr. Amigo, while politically active, has never run for office.

3.11. Latin Abbreviations

Avoid Latin abbreviations (such as *op. cit., et al.,* and *ibid.*) except in footnotes and bibliographies. For the most part, the abbreviations *e.g.* and *i.e.* can be replaced by *for example* or *for instance* (instead of *e.g.*) and *that is* (instead of *i.e.*)—all three phrases followed by a comma. Likewise, use *namely* or *that is* (followed by a comma) instead of *viz.* Another Latin abbreviation to be avoided is *etc.*, because it is, in general, not appropriate in formal writing. [No doubt, some reader will point out that *etc.* is used many times in this publication. The compiler apologizes for confusing anyone but notes that style guides have a somewhat different set of rules from intelligence reports.] If these abbreviations must be used, they retain the periods and are not italicized. Nor is *versus* italicized, either spelled out (preferred in a title or heading) or abbreviated *(vs.)*.

3.12. Political Subdivisions

As a general rule, do not abbreviate the names of political subdivisions such as provinces, departments, or states (US or foreign). Abbreviation of states of the United States or provinces of Canada is acceptable to distinguish cities of the same names in different jurisdictions if the names are used repeatedly. Most of the time there is no need to use political subdivisions for well-known cities such as Toronto, Montreal, New York, and Washington (the DC is almost never necessary in intelligence contexts). Do distinguish Saint John, New Brunswick, from Saint John's, Newfoundland, if the text does not make clear which one is in question; London, Ontario, from London, England; and Vancouver, Washington, from Vancouver, British Columbia.

C05757260

It is not necessary to put the name of the country after that of any well-known city (Bern, Islamabad, Canberra, Brasilia), even if it is not the capital (Geneva, Karachi, Sydney, Rio de Janeiro). Use country names with cities not well known.

3.13. Months and Days

Do not abbreviate the names of months or days except to save space in tables or graphics.

3.14. Percent

Do not abbreviate *percent* except to save space in tables or graphics, where the symbol (%) may be used.

3.15. Units of Measure

Do not abbreviate a unit of measure used in á general or approximate (dataless) sense. Do not abbreviate or use symbols for one or just a few isolated units of measure[22] within text even when precise quantities are given. But do abbreviate units of measure used throughout the text of a report.

This report includes for each city the temperatures (in degrees Celsius) during the trip; the hottest was Washington's (35 °C).

Ranges are given in kilometers.

The opening was several meters wide.

The system has a capacity of 3,000 Btu.

Standard Symbols for Units of Measure:

A	ampere, angstrom	**kn**	knot (speed)
ac	alternating current	**kt**	kiloton
AF	audiofrequency	**kV**	kilovolt
Ah	ampere-hour	**kVA**	kilovoltampere
A/m	ampere per meter	**kW**	kilowatt
AM	amplitude modulation	**kWh**	kilowatthour
avdp	avoirdupois	**L**	liter
b	bit	**lb**	pound
b/d	barrels per day	**LF**	low frequency
Btu	British thermal unit	**L/s**	liters per second
bu	bushel	**M**	million (3M = 3 million)
C	Celsius (degrees)	**m**	meter
c	cycle (radio)	**m^3**	cubic meters
cL	centileter	**μ**	micro (prefix, one-millionth)
cm	centimeter	**μF**	microfarad
c/m'	cycles per minute	**mA**	milliampere
cu	cubic	**mbar**	millibar
cwt	hundredweight	**mb/d**	million barrels per day
da	deka	**Mc**	megacycle

[22]Note that these abbreviations (symbols) do not have plural forms. Be particularly alert to the fact that the lowercase and uppercase forms of the same letter have different meanings in metric abbreviations (*K, Kelvin*; *k, kilo*; *M, mega*; *m, meter*). Be aware also that a capital *L* now is specified as the abbreviation for *liter*.

C05757260

dag	dekagram
daL	dekaliter
dam	dekameter
dB	decibel
dBu	decibel unit
dBsm	decibels relative to 1 square meter
dc	direct current
dg	decigram
dL	deciliter
dm	decimeter
dwt	deadweight ton
EHF	extremely high frequency
emu	electromagnetic unit
F	Fahrenheit (degree), farad
FM	frequency modulation
ft	foot
G	giga (prefix, 1 billion)
g	gram, acceleration of gravity
gal/min	gallons per minute
gal/s	gallons per second
GHz	gigahertz (gigacycles per second)
h	hour
ha	hectare
HF	high frequency
hg	hectogram
hL	hectoliter
hm	hectometer
hp	horsepower
hph	horsepower-hour
Hz	hertz (cycles per second)
in	inch
J	joule
J/K	joule per kelvin
K	kelvin (degree not used)
k	kilo, thousand (7k = 7,000)
KB	kilobyte
kc	kilocycle
kg	kilogram
kHz	kilohertz (kilocycles per second)
kL	kiloliter
km	kilometer
km²	square kilometers
km/h	kilometer per hour
mc	millicycle
mg	milligram
MHz	megahertz
mHz	millihertz
min	minute
MJ	megajoule
mL	milliliter
mm	millimeter
MMt	million metric tons
mph	miles per hour
Mt	megaton
mV	millivolt
MW	megawatt
mW	milliwatt
n	nano (prefix, one-billionth)
nA	nanoampere
nm	nautical mile
ns	nanosecond
oz	ounce (avoirdupois)
p	pico (prefix, one-trillionth)
pA	picoampere
pH	hydrogen-ion concentration
ps	picoseconds
psi	pounds per square inch
pt	pint
pW	picowatt
qt	quart
quad	quadrillion
rad	radian
rms	root mean square
rpm	revolutions per minute
rps	revolutions per second
s	second
T	tera (prefix, 1 trillion)
ton	US ton (not abbreviated)
UHF	ultrahigh frequency
V	volt
VA	voltampere
VHF	very high frequency
V/m	volt per meter
W	watt
Wh	watthour

C05757260

3.16. Ambiguous Abbreviations

Do not use without explanation (if possible, avoid altogether) an abbreviation that can be construed in different ways. *NA*, for example, has been used in tables to mean *not available* as well as *not applicable*. Current practice is to use *NA* only to mean not available. The absence of an entry is assumed to mean not applicable.

Another ambiguous abbreviation is *MT*, which for some writers stands for *metric tons* (the proper abbreviation for which is *t*), but which others have used to mean *megatons* (correctly abbreviated *Mt*).

Still another source of confusion is the improper *kts* for *knots* (which, if abbreviated at all, should be shortened to *kn*). The *kts* is easily mistaken for *kilotons* (correctly abbreviated *kt*).

Finally, the abbreviation C^3, C_3, $C3$, or any of its confusing forms is discouraged—it is supposed to mean *command, control, and communications* but, in careless use, often does not. The preferred form requires a larger-than-normal superior number—C^3—to distinguish it from the smaller variety used for, say, footnote references.

4. ITALICS

4.1. Prominence or Emphasis

The primary purpose of italic type is to give prominence or emphasis to particular words and phrases; italics should be used sparingly so as not to defeat this purpose.

> All members of the working group except the representative of the Central Intelligence Agency believed that the Ruritanians would choose a *phased* development over the next five years. *CIA held to its position that they would try to complete the project by the end of 2012.*

4.2. Titles

Use italic type for titles of books, periodicals, or works of art (including the performing arts—plays, compositions, broadcasts, films, etc.).

> Philip Caputo's *A Rumor of War*
> Michael Jackson's *Thriller*
> concert opening with *An American in Paris*
> the television medical drama *House*
>
> a subscription to *The New Yorker*
> a showing of da Vinci's *Mona Lisa*
> appearing on *American Idol*
> *Slumdog Millionaire* won the Best Picture Oscar in 2009.

Use quotation marks for titles of articles or other parts within longer works (see section 5.15a2).

> "The Style Invitational" in *The Washington Post*

4.3. Foreign Words

The need for italicizing or translating foreign words in intelligence reports depends on whether the word or phrase has been naturalized into English, has not been anglicized but is reasonably familiar to American readers, is the title of a publication or work of art, is the name of an organization, or is otherwise governed by some special consideration.

4.3a. Familiar or Anglicized Foreign Words

Do not italicize foreign words and phrases that have been naturalized into English. Italicize but do not translate foreign words and expressions that have not been anglicized but are familiar to American readers or are easily understood by virtue of their similarity to English (an English equivalent is preferred unless the foreign expression has a special meaning).[23]

> He served as aide-de-camp to the general.
> His experience as chef de cabinet was a factor in his nomination.
> The speaker was shouted down by crowds chanting, *"Democracia, democracia!"*

[23]See section 6.13 for guidance on the use of diacritical marks in foreign words and phrases.

C05757260

4.3b. Other Foreign Words

When a non-English word not covered by section 4.3a is used in ordinary text, italicize it and follow it with a translation in parentheses. This need not be a literal translation if a freer interpretation or explanation, even an extensive one, would be more helpful to the reader. The translation is not italicized unless it constitutes a title of a publication or work of art.

> The achievement of *enosis* (union)[24] with Greece is the all-consuming goal of one segment of the Cypriot population.
>
> Brandt's *Ostpolitik* (his policy of seeking harmony with the communist world)[24] was a hallmark of his chancellorship.
>
> Austria's memories of the *Anschluss* (annexation by Nazi Germany) in 1938 remain a factor in contemporary politics.
>
> He earned the coveted *agregation* (secondary-level teaching credential) the following year.
>
> Marcel Proust's *A la recherche du temps perdu (In Search of Lost Time)* is required reading for Dr. Reboussin's course in French literature.

4.3c. Titles of Publications

As stated in section 4.2, any book or periodical title is italicized. A title in a foreign language may or may not be translated, depending on the title and the context. If a translation is given, it should be in parentheses and in italics (see the final example in section 4.3b above and note that the capitalization style of the original title follows that of the French-language press, whereas the translation follows English-language style).

No translation is needed for such familiar titles as *Pravda, Trud, Der Spiegel, Le Monde, Izvestiya, L'Osservatore Romano, Paris Match,* and *Kommunist.* Some titles—*People's Daily,* for example—have conventionally been cited only in translated form. For this title sometimes and for other titles almost always, an explanation is more relevant and useful than a translation.

> *People's Daily,* official organ of the Chinese Communist Party

Other titles can go either way. For example, *Krasnaya zvezda (Red Star)* [note that *zvezda* is not capitalized], the newspaper of the Russian armed forces, is sometimes cited in Russian followed by a translation, but just as often the title is given only in translated form. Either way is acceptable as long as that way is used consistently in the issuance in which the publication is cited.

4.3d. Names of Organizations

Whenever possible, use the English translation, rather than the original language, in referring to the name of a foreign organization, government body, political party, educational institution, corporation, or the like. Often, however, there are compelling reasons—including convention, wide recognition, and untranslatability—for giving such a name in the original language. In such cases, do not italicize the name. If a translation is possible, relevant, or unobvious, supply one in parentheses following the foreign-language name. If appropriate, give instead or in addition an explanation of the name or description of the organization.

> the joint Bulgarian-Hungarian building enterprise, Intransmech
>
> the Cuban news agency, Prensa Latina
>

[24] A translation of *enosis* or explanation of *Ostpolitik* would not be necessary in every instance.

C05757260

the Wissenschaftsrat (Science Council)
debated in the Bundestag (or the Bundesrat)
the defunct an-Nahda (Renaissance) Party
the Parti Quebecois
graduate of the Sorbonne
veteran of the Surete
visited the al-Aqsa Mosque in Jerusalem
vote of confidence in the Knesset (parliament)

4.4. Names of Craft

Do not italicize (or enclose in quotation marks) names of ships,[25] aircraft, or spacecraft.

seizure of the Pueblo
launched Soyuz-3
a Yankee-class submarine
the Concorde's noise level

4.5. Cited Letters, Words, and Phrases

This style guide provides numerous illustrations of another use of italic type: the citing of a letter, word, or phrase.

words ending in s
nonabbreviation of *percent*

[25]Do not use feminine pronouns to refer to ships or other craft.

5. PUNCTUATION

5.1. General Principles

Most readers of this style guide already know that punctuation is based on meaning, grammar, syntax, and custom and is used to make writing clear. Even so, there are likely to be selected instances when a writer needs guidance. Such guidance is provided in this chapter. The trend should always be toward reducing the amount of punctuation, but be careful to use phrasing that avoids ambiguity and ensures exact interpretation. The sole aim of the choice and placing of punctuation marks should be to bring out the author's thought more clearly. Omit punctuation marks if they do not aid in reading and prevent misreading.

If you would like more information than is given below, consult the GPO *Style Manual*, the *Gregg Reference Manual*, or *Merriam-Webster's Collegiate Dictionary* for explanation and illustration of punctuation rules that are applicable to intelligence reports..

5.2. Apostrophe

The primary functions of the apostrophe are to show possessive case and, in some cases, to create plural forms. (It is also used to indicate contractions in words such as *can't* and *it's*, but these are not appropriate in written English.)

5.2a. Possessives

The possessive case of most nouns and indefinite pronouns is indicated by some combination of the apostrophe and the letter *s*.

5.2a1. Words That End in an s Sound

If the singular of a word (or acronym or abbreviation) ends in an *s* sound, add an apostrophe and an *s* unless the added sibilant is not present in the word's normal pronunciation; in such cases, add only the apostrophe.

the corps' units	Paris's history[26]
Dickens's novels	PBS's programs
Juarez's troops	the Philippines' outer islands
Nantes' port	the United Arab Emirates' oil
the Netherlands' canals	

[26]To avoid a triple sibilant, exceptions are sometimes made for significant names that already end in a double sibilant; for example, convention favors *Jesus'* and *Moses'*. Another exception is *Achilles' heel*.

If the plural of a word ends in *s*, add only the apostrophe.

the boys' team	the two leaders' rift
The Joneses' address	the Russians' policy[27]

5.2a2. Words That Do Not End in an s *Sound*

If a word (either singular or plural) does not end in an *s* sound, add an apostrophe and an *s*.

the child's shoes	the children's shoes
each other's home	the officer's report
that Thai's[28] passport	those Thai's[28] passports
the woman's book	the women's books

5.2a3. Compounds

In compounds, make only the last word possessive.[29]

commander in chief's decision	secretary general's speech
someone else's hat	Shah of Iran's overthrow

5.2a4. Combinations Indicating Joint Possession

In a combination of two or more nouns for which joint possession is to be indicated, make only the last noun possessive; if individual possession, make both or all nouns possessive.

President Obama and Chancellor Merkel's meeting to discuss Afghanistan and international climate change occurred on 3 November 2009.

Rodgers and Hammerstein's only collaboration specifically for a film was on *State Fair*.

Clint Eastwood's, Hilary Swank's, and Morgan Freeman's Oscars were all for *Million Dollar Baby*.

5.2a5. Geographic, Firm, or Organization Names or Publication Titles

In geographic names, firm names, the names of organizations and institutions, and the titles of publications, follow the generally accepted form.

Consumers Digest	Johns Hopkins University	People's Republic
Court of St. James's	Lloyds (bank)	*Reader's Digest*
Harpers Ferry	Lloyd's (insurance)	Reuters (news agency)

5.2a6. Organized Bodies That End in s

Do not use an apostrophe after names of states or countries and other organized bodies ending in *s*, or after words more descriptive than possessive, except when the plural does not end in *s*.

Kansas law	Weight Watchers meeting	National Organization of
League of Nations mandate	officers club	Women's headquarters
master's degree	teachers college	writers guide

[27]Use of the possessive in a phrase like this is an easy fix for one of the most frequent writing errors, the antecedentless pronoun, as in "the *Russian* policy toward *their* minorities." Change the adjective *Russian* to the possessive noun *Russians'* to give *their* an antecedent. The reference word (usually an antecedent) for a pronoun must be a noun or another pronoun, never an adjective, like *Russian* in the sample phrase. An early CIA style guide writer called the antecedentless pronoun a *moose track*, as in *"There were moose tracks in the snow but none of them could be seen"*—the pronoun *them* does not have a proper antecedent in the noun-turned-adjective *moose*.

[28]Note that *Thai* is both singular and plural.

[29]If the compound is plural (see section 6.5b), use the *of* possessive (section 5.2b) unless the plural is formed in the final word of the compound: decisions of the attorneys general, *but* the general counsels' decisions.

5.2a7. Personal Pronouns

Do not use the apostrophe with the possessive form of personal pronouns.

his	ours	yours
hers	theirs	its (Do not confuse with the contraction *it's* [it is].)

5.2b. Possessives With Persons or Inanimate Bodies

As a general rule, the possessive form made up of an apostrophe and an *s* (the Minister's) is used for nouns denoting persons, and the form combining the preposition *of* and a noun object is applied to organizations or inanimate things (a decision of the Ministry). However, the *s* possessive is commonly used for the inanimate in expressions that indicate time (moment's notice, year's labor, two hours' work, a day's pay) and in other familiar phrases (heaven's sake, heart's content, for pity's sake, for old times' sake).

Which possessive form to use often depends on sound or rhythm: the *s* possessive is more terse than the longer, more sonorous *of* phrase (morning's beauty, beauty of the morning). In some *of* phrases, idiom calls for a sort of possessive redundancy—always for a pronoun (friend of his), usually but not necessarily for a proper noun (friend of John's; friend of John Jones), and optionally for a common noun (friend of the author, friend of the author's).

5.2c. Noun or Pronoun Preceding a Gerund

The possessive case is used for a noun or pronoun preceding a gerund if this syntax is unavoidable (try to rephrase).

> London announced it had no objection to Rome's taking part. (*Better:* London announced it would not object if Rome took part.)
>
> Economy was one reason for George's buying a small car. (*Better:* Economy was one reason George bought a small car.)

5.2d. Plurals

The apostrophe is inserted before a lowercase *s* to form the plurals of single letters and digits and of abbreviations ending with a period. (*Note:* an abbreviation of a unit of measure has neither a period nor a plural form [1 km, 2 km].) It is not inserted before the *s* in the plurals of groups of letters or hyphenated letter-number combinations unless needed to enhance comprehension—for example, if the combination ends with a lowercase letter (SS-N-3a's). It is omitted in the plurals of groups of digits designating decades or centuries.

Boeing 747s	dotted i's
Pershing Ia's (*but* Pershing IIs)	11s and 13s
H-Is and H-IIs (*but* type I's)	Kresta-IIs (*but* Flogger B's)
MiGs	RVs
Ph.D.'s, B.A.'s, M.A.'s[30]	7's and 8's (*but* SS-7s and SS-8s)
the 1980s	SS-N-4s (*but* Mod 2's; all Mods of the SS-11)

[30]Academic degrees are in lowercase when spelled out: doctor of philosophy, doctorate, master of arts, bachelor's degree.

C05757260

To form the plurals of spelled-out numbers, of most words referred to as words, and of words already containing an apostrophe, add just *s* or *es*. But, add *'s* to indicate the plural of words referred to as words if the omission of an apostrophe would cause difficulty in reading.

> One of Theodore M. Bernstein's best style books is *Dos, Don'ts & Maybes of English Usage*, but it fails to point out that most incorrect *due to*'s can be remedied by changing them to *because of*'s. (Note that the 's is not italicized when attached to form the plural forms of the italicized *due to* and *because of* in this example.)

5.3. Brackets

5.3a. Inside Parentheses

Brackets are used to enclose a parenthetical word or expression within a set of parentheses.

> He was well educated (by tutors in Portland [Maine]).

5.3b. Editorial Remarks

Brackets are used to set off such remarks within quoted material.

> The Minister said, "The election [of 3 March] will be reexamined."

5.4. Bullets (Ticks)

Bullets—usually solid circular symbols—are used to introduce a list of two or more items set off within a column of text. They may be used instead of or in combination with *em dashes* (sometimes called *ticks*), as in a series of indented, itemized blocks of text in which some blocks are subsets of more important ones. Never use a single bullet or tick simply for emphasis; rather, use boldface or italic type.

Capitalize the first letter of all material introduced by a bullet or an em dash and end each phrase with a period (or a question mark, if appropriate). Introduce the material with a colon at the end of the introductory sentence or phrase.

The following are examples of bullets used with em dashes:

- This would be a primary bullet phrase (or clause).
- This would be another primary bullet phrase.
  —This would be a secondary phrase subordinate to the bullet phrase above.
  —This would be another secondary phrase.
- This would be the next primary phrase.
  —Phrases pertinent to this phrase would be listed under it like this.
  —And this.
- This would be the last primary bullet phrase.

5.5. Colon

5.5a. Summaries or Expansions

Use a colon before a final clause or phrase that summarizes or expands preceding matter. A single space is used after a colon.

C05757260

Food, clothing, fuel, and building materials: these are the critical items.

The delegation visited four European cities: London, Paris, Dublin, and Rome.

Jones served in three Ministries: Economy; Communications, Power, and Industry; and Agriculture.

5.5b. Separation of Clauses

A colon is used to separate two main clauses if the second amplifies or explains the first. Otherwise, use a semicolon (see section 5.16b).

Railroading is not a variety of outdoor sport: it is a service.

He is well qualified to serve as Foreign Minister: he has held posts in the Ministry since 1995 and has served abroad many times.

5.5c. Titles and Subtitles

Use a colon to separate subtitles from titles.

The Tragic Dynasty: A History of the Romanovs

Editorial Consistency: An Agency Goal

5.5d. Ratios

Figures (not spelled-out words) are always used for ratios, but use hyphens if the ratio is used adjectively.

20:1, *but* a 20-to-1 chance

5.5e. Indented Material

Use a colon to introduce lengthy material set off from the rest of the text by indentation. If the material is a quotation, do not use quotation marks.

5.6. Comma

The comma is the punctuation mark that is both most often used and most often misused. There is a general tendency to use too many commas, but the sin of omission is almost as common as the sin of commission.[31]

5.6a. For Comprehension

Use a comma to separate two words or figures that might otherwise be misunderstood.

Of the total, production was the greatest single item.

To his younger brother, Murray was a paragon whose every action was to be imitated.

Instead of thousands, hundreds were built.

In 2009, 523 units were completed. (*but* In 2009 about 500 units . . .)

[31]One "sin of commission" is the so-called comma splice, in which a comma is used instead of a semicolon or period to denote cessation rather than pause, as in "Rain is forecast, however, we intend to hold the event anyway." The first comma should be a semicolon (or a period, followed by a new sentence), or the two elements of the compound sentence can be "spliced" properly with *but:* "Rain is forecast, but we intend to hold the event anyway."

C05757260

5.6b. Separation of Coordinate Modifiers

Use a comma to separate from each other the parts of a series of coordinate modifying words (the words are coordinate if you can substitute *and* for the comma).

short, swift streams long, slender, brittle stems

Do not use a comma if the modifying words are cumulative (cannot be separated by *and*), rather than coordinate—that is, if one modifies another or a unit of which another is a part.

illegal drug traffic short tributary streams

If the modifying words are neither coordinate nor cumulative, they probably constitute a unit modifier (see section 7.3).

5.6c. With Nonrestrictive Words

Use a comma to set off nonrestrictive (nonessential) words, phrases, or clauses.

The chairman, George Smith, spoke last.

The work was, in fact, completed.

The manager, who was dismissed in 2008, was reappointed in 2009.

His brother, Joseph, was appointed. (He had only one brother.)

Mitchell's novel, *Gone With the Wind*, was a bestseller. (She wrote only one novel.)

Actual production, however, was lower.

Whether the element is nonrestrictive is determined by the intent of the sentence. Note that in the following sentences each of the elements that are nonrestrictive in the sentences above is necessary to the meaning of the sentence in which it appears, is therefore restrictive, and is not set off by commas. Compare these examples with the ones above.

Cochairman Smith spoke last (not Cochairman Jones).

The idea must work in fact as well as in theory.

The manager who was dismissed in 2008 was rehired in 2009. (The *who* clause identifies the particular manager being discussed.)

His brother Joseph was appointed. (He had more than one brother.)

James Michener's novel *Tales of the South Pacific* won the Pulitzer Prize for fiction. (He wrote many other novels, but none of them won Pulitzers.)

However hard they tried, production stayed low for several years.

5.6d. With Contrasting Statements

Use a comma to set off contrasting statements in a sentence.

Obama, not Bush, made the decision.

5.6e. Serial Comma

Use a comma after each element except the last in a series of three or more words, phrases, clauses, letters, or figures used with *and* or *or* (as long as none of the elements in the series is a phrase or clause with internal commas). Opinion is divided about whether to use the serial comma, as the comma after the next to last element in a series is called: many publications, especially newspapers, generally omit it so as to save space but sometimes insert it to avoid ambiguity. The question does not arise if the serial comma is always used. Most authorities on English usage recommend that policy, and it is the rule for CIA publications.

C05757260

Copper, lead, zinc, and tin were mined.

The contestants may dance, play an instrument, or sing.

The data were collected, estimates were made, and conclusions were drawn.

Complete forms A, B, and C by writing 1, 2, or 3.

If one or more of the elements in the series is a phrase or clause with internal commas, use semicolons instead of commas between the elements, rearranging the sentence if necessary to put the series at the end. No matter how short the elements, use the serial semicolon before the *and* or *or*.

The chief exports were brass, which is an alloy; platinum, which is a precious metal; and tin. (*never* Brass, which is an alloy; platinum, which is a precious metal; and tin were the chief exports.) (See also section 5.16a.)

5.6f. Compound Sentences

Use a comma before the coordinating conjunction in a compound sentence (a sentence that contains at least two independent clauses).

He served in the Army until 1996, and then he went to work for the telephone company.

The country imports copper, iron, and lead, but domestic tin is available.

In a simple sentence with a compound predicate do not use a comma before the coordinating conjunction unless it is needed for clarity.

He served in the Army until 1996 and then went to work in a bank.

He went to Russia to study but decided not to stay.

but

He goes to sleep the minute he hits the mattress, and springs out of bed in the morning always eager to begin a new day.

5.6g. Numbers in the Thousands and Higher

Use a comma to separate digits of most numbers in the thousands and unrounded millions.

1,000

3,399.243046

6,201

250,000

5,752,194 (if rounded, 5.75 million, 5.8 million, or 6 million)

5.6h. Introductory Phrases

Use a comma to separate from a main clause an introductory clause or phrase that is long or that might cause confusion without a comma.

Because the corporation derived much of its 2008 income from suburban outlets, it established several new ones in 2009. (*but* After his defeat he retired from public life.)

Use a comma to set off a beginning participial phrase modifying the subject or an absolute phrase before the subject; and, if it contributes to easier reading, an opening adverbial phrase stating a year.

To begin with, Smith worked as an engineer.

In 1986 the tragedy at Chernobyl occurred.

In 1987, Gorbachev formulated his policies of glasnost and perestroika.

Note that, whereas no comma is needed after 1986 in the second example, in the next one, when the year is followed by an *uppercased* word, insertion of a comma aids quick comprehension; such a comma is nevertheless optional.

C05757260

5.6i. Title of Person and Name of Organization

In the absence of the words *of* or *of the*, use a comma to separate a person's title and the name of an organization.

director, Coal Division, Ministry of Mines

5.6j. Omission of a Word or Words

Use a comma to indicate omission of a word or words, unless the construction is clear enough without commas.

In spring and fall there is hiking in the area; in summer, sailing; in winter, skiing. (*but* The data were collected, estimates made, and conclusions drawn.)

5.6k. Before Direct Quotations

Use a comma to separate an introductory phrase from a short direct quotation (for long quotations, use a colon instead).

He said, "Now or never."

5.6l. With Geographic, Personal, or Corporate Names

Use a comma to set off a province, state, or country name from a city name; *Jr.* (but not, say, *III* or *IV*) following a personal name; and sometimes (follow the subject's preference) *Inc.*, *Ltd.*, or *S.A.* after a corporate name. If the setting off occurs in midsentence, a comma must be used after as well as before.[32]

He lives in Vancouver, Washington, but visited Vancouver, British Columbia, for the Winter Olympics in 2010.

John Jones, Jr., heads Dictionaries, Inc., and his son John Jones III runs the Georgetown branch (not his only son, or the name would be set off by commas—see 5.6c).

5.7. Dash (or Em Dash)

The dash (or *em dash*, not to be confused with the *en dash*—see section 5.9) should be used only when it is needed, and not when such punctuation as a comma, a colon, or parentheses would suffice. Excessive use presents a visual barrier to the reader and interrupts the flow of thought. The dash should never be used immediately after a comma, a semicolon, or, except as described in section 5.4, a colon.

5.7a. Parenthetical Matter

The dash is sometimes used to set off parenthetical matter, although a pair of dashes can often be replaced by parentheses and should be if there would otherwise be two pairs of dashes within a sentence. If the dash is used to set off material *at the end of a sentence*, only one dash, at the beginning, is needed. If the material is set off *within the sentence*, only another dash (not a comma or a semicolon) can be used to end the setoff phrase or clause.

He was a key figure in the successes—as well as the problems, both domestic and international—of Japan's trade policies.

He has three sons—Thomas, 29; Richard, 19; and Henry, 16.

[32]Failure to do this results in what usage and style authority Roy Copperud dubs a "one-legged comma." Such an omission can also occur before a setoff clause or phrase.

C05757260

He goes home twice a year—at Christmastime and on his birthday—and he never stays for more than two days. (In this example, the necessary second dash supersedes the comma that would ordinarily divide the two clauses of this compound sentence.)

The report for 2009 (the calendar, not the fiscal, year) led to an angry exchange—unusual for January—in the legislature.

5.7b. Before a Final Summarizing Clause

The dash is often used interchangeably with the colon to introduce a final summarizing clause.

Freedom of speech, freedom of worship, freedom from want, freedom from fear—these are the fundamentals of moral world order.

5.7c. In Place of a Bullet

The dash is sometimes used instead of a bullet to mark the beginning of each part of a block of material (other than quotations) set off by indentation from the rest of the text. If used in this way, it may be called a *tick*. (See section 5.4.)

5.8. Ellipsis

An ellipsis (the omission of words within quoted material) is represented by three spaced periods. When in the middle of a quotation an ellipsis occurs at the end of a sentence, a fourth period (or other punctuation, if appropriate) precedes the spaced periods. When only part of a sentence is quoted, periods to show omission are required only within the quotation, not at the beginning or the end.

The President began his address with the observation that in 1776 "our fathers brought forth a new nation, conceived in liberty and . . . dedicated to the proposition" of equality for everyone.

In his words, "we [cannot] consecrate . . . this ground. The brave men . . . who struggled here . . . have consecrated it. . . . The world . . . can never forget what they did here."

5.9. En Dash

The en dash (not to be confused with the *dash*, or *em dash*) is, in effect, a superhyphen, used to "hyphenate" a compound modifier that includes one or more compound elements. It is effective with capitalized compounds but is less so with lowercase compounds, for which use of multiple hyphens is better, even though the lowercase compound is one not normally hyphenated. (The en dash can usually be avoided by rewording.)

Winston-Salem–Pointe Claire telephone call (*or* call between Winston-Salem and Pointe Claire)

Saudi Arabia–United Arab Emirates border (*or* border between Saudi Arabia and the United Arab Emirates)

Health Department–sponsored program (*or* program sponsored by the Health Department)

post–World War II policies (*or* policies after World War II)

SS-19–type silos (*or* silos of the SS-19 type)

but

Echo-II-class submarine (Use two hyphens, *not* a hyphen and an en dash, because this is a special category. See section 7.6e.)

defense-industry-based engineers (*not* defense industry–based engineers, which is confusing)

also

a vice-president-elect, *but* the Vice President–elect

a prime-minister-designate, *but* the Prime Minister–designate

C05757260

5.10. Exclamation Point

Because intelligence reports are expected to be dispassionate, this punctuation mark should rarely, if ever, be used.

5.11. Hyphen

Use of the hyphen is well illustrated in the chapters on numbers, spelling, and compound words.

5.12. Parentheses

Parentheses are used as shown in 5.12a through 5.12d. (See also section 5.3 on the use of brackets in functions similar to but distinct from those served by parentheses.)

5.12a. With Comments

Use parentheses to set off a word, phrase, clause, or sentence that is inserted by way of comment or explanation within or after a sentence but that is structurally independent of it.

This style guide (unclassified) will be widely disseminated.

He graduated from Stony Brook University (part of the State University of New York system).

Three old destroyers will be scrapped. (All three have been out of commission for some time.)

Note that the placement of the period above depends on whether the parenthetical insertion is part of the sentence that occasioned it or is an independent, complete sentence (see the last two examples above). In the following example, note that the comma follows the parentheses enclosing an insertion made in the middle of a series separated by commas.

He visited Portland (Maine), Philadelphia, and Baltimore.

5.12b. With Cross-References

Use parentheses to enclose cross-references.

Japan's exports have risen steadily for the past 10 years (see figure 3).

. . . *or* (annex A).

. . . *or* (see the table).

. . . *or* (See figure 3.) *as a separate sentence.*

5.12c. With Numbers or Letters in a Series

Use parentheses to enclose numbers or letters that set off parts of a series.

We must set forth (1) our long-term goals, (2) our immediate objectives, and (3) the means at our disposal. (Be sure to use a set of parentheses with each number, not just a single one after it.)

5.12d. With Foreign Words

Use parentheses to enclose translations or explanations—if necessary—of foreign words or to enclose the original language following the English version (see section 4.3).

He referred to the document as an estimate (*otsenka*).

Sagan's best known novel is *Aimez-vous Brahms?* (*Do You Like Brahms?*). [Italicize the translation because it is still a title.]

C05757260

Pointing to the skyline as we neared the capital, he trumpeted the nation's new *grandeza*—even as we passed one of the *favelas* (shantytowns) outside the city.

5.13. Period

The use of the period is so elementary that it hardly needs to be discussed in this guide except to point out that it is not generally used in CIA for abbreviations and that a single space is used between sentences. The placement of the period in its principal function, to terminate a nonexclamatory or noninterrogative sentence, is discussed and illustrated in other parts of this chapter on punctuation—under "Parentheses" and "Quotation Marks," for example. (See section 5.8, which discusses one of the period's sidelines.)

5.14. Question Mark

As with the period, a discussion of the function of the question mark borders on stating the obvious. Note, however, that, apart from its principal function of terminating interrogative sentences, the question mark is used:

5.14a. To Show Uncertainty

A question mark may be used to show uncertainty (or ignorance), as when it is placed next to (or instead of) a figure in a tabulation. Similar application can be made within the text, but this should be kept to a minimum.

The paper was a hodgepodge, trying to deal with poets as diverse as Omar Khayyam (?-1132?) and Geoffrey Chaucer (1340?-1400).

5.14b. In a Title

A question mark may be used as part of an appropriate title.

Moscow and the Eurocommunists: Where Next?
A Credible Nuclear Deterrent?

5.15. Quotation Marks

Quotation marks may be double or single and must always be used in a pair. Single quotation marks never appear in American usage unless double marks are present.

5.15a. Double Quotation Marks

5.15a1. Direct Quotations

Use a set of double quotation marks around a short direct quotation. (If the quotation is long—say, half a dozen lines or more—set it off by indentation within the text column and omit the quotation marks.)

"The President," he said, "will veto the bill."
Who asked, "Why?"
Why label it a "gentlemen's agreement"?
The citation read: "For meritorious service beyond the call of duty."

5.15a2. Titles That Do Not Merit Italicization

Use quotation marks to set off titles of poems, songs, short stories, and other parts of a longer work (see section 4.2).

> Many people consider "Billie Jean" to be the most influential song in Michael Jackson's album *Thriller*.
>
> Who wrote the article "Thermonuclear Processes" in that issue of *Survey*?
>
> Have you read Robert Frost's poem "Fire and Ice"?
>
> "Punctuation" is one of the chapters in the GPO *Style Manual*.

5.15a3. Selected Words or Phrases

Use quotation marks to set off words or phrases—but usually not letters, for which italic type is better—used or cited in a special sense. (For this function, quotation marks are sometimes used interchangeably with italic type.)

> Do not capitalize the s in *socialist* in the phrase "most British socialists join the Labor Party."
>
> The North Korean press put the blame on "US imperialism."
>
> If this is a "working" vacation, why are you lying there doing nothing?
>
> Do not italicize, or use quotation marks for, the *T* in "the inverted-T-shaped building."

Be careful not to overuse or misuse quotation marks. Use them to enclose words used in a special sense (such as communist jargon), but do not use them to apologize for acceptable English words or in an attempt to redeem slang. Never allow the reader to wonder why they were used. For example, the wording "the Russians took a 'pragmatic' approach" is obscure; it probably means "the Russians took what they called a pragmatic approach," but the reader may assume that the quotation marks around pragmatic connote some "special" meaning and may waste time looking for an explanation.

5.15b. Single Quotation Marks

A pair of single quotation marks is used to enclose a quotation within a quotation. But, if a quotation is set off by indentation, rather than by quotation marks, a quotation within it would use double, not single, quotation marks.

> He said, "I used the term 'gentlemen's agreement.'"
>
> He asked, "Why label it a 'gentlemen's agreement'?"
>
> "Remember," she said, "what Grandfather used to advise: 'When other people run, you walk.'"
>
> "Do you remember," she asked, "that Grandfather used to advise: 'When other people run, you walk'?"

5.15c. Punctuation With Quotation Marks

Also illustrated in the examples already given are the positions of various punctuation marks with relation to quotation marks:[33]

- Commas and periods always go inside quotation marks (single or double).
- Semicolons and colons always go outside the final quotation mark.
- Other punctuation marks are placed inside quotation marks at the end of a sentence only if they are part of the matter quoted.

[33]An asterisk or a superior reference number or letter normally follows all punctuation marks except a dash but falls inside a closing parenthesis or bracket if it applies only to the matter within the parentheses or brackets.

C05757260

5.15d. Terms Precluding Need for Quotation Marks

Quotation marks are usually not necessary to enclose expressions following terms such as *known as, called,* or *so-called.*

Aluminum is known as aluminium in Canada.

Your so-called investigating body has not done much investigating.

If this is called profit and loss, when do we start profiting?

They may be used even here, however, to give special emphasis to the quoted or verbatim nature of the expression given, especially if sarcasm or bad grammar is involved:

He criticized what he called the "looks funny" school of editing.

They are following the so-called "where it's at" lifestyle.

Other such terms—*entitled, named, endorsed,* and *signed* or their equivalent—clearly call for either italicizing or enclosing in quotation marks the word or words that follow them.

The card was signed "You know who."

His housemates named him "chief cook and bottle washer."

The word *radar* is an acronym derived from the term "radio detecting and ranging."

5.16. Semicolon

The semicolon can be regarded to some extent as a supercomma because it supersedes the comma in cases where a comma is not clear enough for the function intended.

5.16a. Series

Use a semicolon to separate the elements in a series that falls at the end of a sentence and cannot be separated by commas without risk of making the sentence difficult to understand. If such a series is in midsentence, reword the sentence to put the series at the end. (See section 5.6e.)

The major inputs are iron ore, which comes from Poland; nitric acid, which is imported from the Czech Republic; and nickel, which is furnished in adequate quantities by domestic producers.

The principal legatees were a niece, Jane Wilson; a longtime friend, Samuel Jones; and the city library.

5.16b. Compound Sentence

Use a semicolon to separate the clauses of a compound sentence when a coordinating conjunction is not used.

He received a degree from the University of Vermont in 1976; later he attended Dartmouth College.

A fool babbles continuously; a wise man holds his tongue.

5.16c. With Conjunctive Adverbs

Use a semicolon before an independent second clause introduced by a conjunctive adverb (accordingly, also, consequently, furthermore, hence, however, indeed, moreover, nevertheless, otherwise, so, still, then, therefore, thus, yet).

Some Americans spend millions of dollars for junk food; consequently, the national obesity rate is growing rapidly.

Smith speaks English, French, German, and Russian well; moreover, he understands Persian, Urdu, and Vietnamese.

In monsoon season you should take your umbrella with you; otherwise, you may get soaked.

C05757260

5.17. Slash

The slash (also called diagonal, oblique, shill, slant, solidus, and virgule) should be used sparingly and never in place of a hyphen or dash.

5.17a. To Show a 12-Month Period Occurring in Two Calendar Years

fiscal year 1965/66
marketing year 1973/74
crop year 2005/06
academic year 2009/10

5.17b. To Represent Per *in Abbreviations*

km/h (kilometers per hour)
b/d (barrels per day)

5.17c. To Separate Alternatives

These designs are intended for high-heat and/or high-speed applications. (Usage guides generally discourage *and/or* and encourage one or the other of the two words instead. In this example *and* alone would suffice.)

She sat at her computer for hours in a catatonic/frenzied trance trying to cover every possible contingency of style usage in the Agency. (And in this one, *or* could replace the slash with no confusion of meaning.)

5.17d. To Show Combination in Certain Instances

Russian support was pivotal for this Japanese/US-backed proposal. (Use of an en dash or another hyphen would be awkward.)

Insurgent forces were armed with Cuban/Russian-supplied weapons. (Use of a slash here could indicate either a combination or alternatives, the latter reflecting Moscow's practice of sometimes using surrogates to supply its clients.)

The goal of one-man/one-vote was never forgotten. They campaigned on a one-man/one-vote platform. (Keep the hyphen and slash whether a noun form or an adjective form.)

The group endorsed the Christian Democratic Union/Christian Social Union platform.

C05757260

6. SPELLING

6.1. General Principles

The majority of the words given as examples in this chapter are also found in chapter 8 (Spelling and Compound Words List), where all entries are listed in alphabetical order. A writer seeking the correct spelling or hyphenation of a word or words may find it easiest to look there first.

The GPO *Style Manual* and *Webster's Third New International Dictionary*, published by the G. & C. Merriam Company—or the abridged version, *Merriam-Webster's Collegiate Dictionary*—are the authorities for the guidance provided in this chapter and in chapters 7 (Compound Words) and 8. Where there is a difference, the GPO version usually prevails over Merriam. For a word not given in this style guide, consult first the GPO manual and then the Merriam dictionary. For guidance on the spelling of proper names—geographic, personal, and organizational—see sections 6.11 and 6.12.

6.2. Preferred and Difficult Spellings

Words frequently misspelled and the preferred forms of words with variant spellings are included in the list in chapter 8. Many other such words are dealt with in special categories in this chapter.

6.3. British Terms

When the American and British spellings of common English words differ, the American spelling is always used, even when these common words form part of a proper name usually spelled with British English.

Industrialization (*not* Industrialisation) Board
Labor (*not* Labour) Party
Minister for Defense (*not* Defence)
Programs (*not* Programmes) Chairman

6.4. Anglicized Foreign Words

Many foreign words and phrases have been thoroughly anglicized. Others are not as easily comprehended by American readers and should not be used unless there is no equivalent English expression (for example: *ad hominem*, *passim*). Still other foreign expressions should be avoided because they sound hackneyed (apropos, confrere, faux pas, inter alia, piece de resistance, tete-a-tete). Foreign-derived words sufficiently common or functional to be used (without italic type) can be found in chapter 8.

C05757260

6.5. Plural Forms

6.5a. O Endings

Nouns ending in *o* preceded by a vowel add *s* to form the plural; most nouns ending in *o* preceded by a consonant add *es* to form the plural. Following are selected exceptions.

commandos	magnetos	solos
dynamos	mementos	tobaccos
egos	mestizos	Tornados (aircraft name), *but* tornadoes (common noun)
escudos	octavos	twos
ghettos	provisos	virtuosos
kimonos	salvos	zeros

6.5b. Compound Terms

For the plurals of compound terms, whether hyphenated or not, use the plural form of the significant word or words. If there is no significant word, the plural is formed on the last word.

adjutants general	courts-martial	inspectors general
aides-de-camp	deputy chiefs of staff	major generals
also-rans	directors general	ministers-designate
ambassadors at large	general counsels	passers-by
assistant comptrollers general	gentlemen farmers	pick-me-ups
attorneys general	go-betweens	presidents-elect
brothers-in-law	goings-on	rights-of-way
charges d'affaires	governors general	secretaries general
chiefs of staff	grants-in-aid	trade unions
commanders in chief	hangers-on	under secretaries
consuls general	higher-ups	vice chairmen

6.5c. Other Difficult Plurals

Other words with plural forms that might cause difficulty are listed in chapter 8. If you are unsure of a word's plural, look there.

6.6. Endings *-yze*, *-ize*, and *-lse*

A verb whose last three letters are pronounced like *eyes* is usually spelled in one of three ways. The letter *l* is followed by *-yze* if the verb expresses an idea of loosening or separating. The related noun ends in *-lysis*.

analyze (analysis) paralyze (paralysis)

Most other words in this class end in *-ize*. Common exceptions are the following.

advertise	disguise	incise
advise	enfranchise	merchandise
arise	enterprise	revise
chastise	excise	rise
comprise	exercise	supervise
compromise	exorcise	surmise
despise	franchise	surprise
devise	improvise	televise

C05757260

6.7. Endings *-sede, -ceed,* and *-cede*

A verb with a final syllable that sounds like *seed* is usually spelled in one of three ways. As shown below, only one such word ends in *-sede,* only three end in *-ceed,* and the others end in *-cede.*

supersede	exceed	accede
	proceed	concede
	succeed	intercede
		precede

6.8. Endings *-ible* and *-able*

If you are not sure whether a word ends in *-ible* or *-able,* look it up in chapter 8.

6.9. Doubled Consonants

There is no firm rule about whether to double a single consonant following a single vowel at the end of a word before adding a suffix beginning with a vowel. For one-syllable words the consonant is almost always doubled (rob, robbed, robber, robbing; kiss, kissed, kisses, kissing). For words of more than one syllable the consonant is usually not doubled unless the accent in the derivative falls on a syllable containing the troublesome consonant or its double (*can*cel, *can*celed, *can*celing, *but* cancel*la*tion; re*fer*, re*ferred*, re*fer*ring, *but re*ference).

Inevitably, however, there are exceptions to both the rules stated above. The derivatives of *bus,* for example, break the rule for one-syllable words (bus, bused, buses, busing). The derivatives of *handicap* run counter to the formulation for words of more than one syllable (handicap, handicapped, handicapping). The Merriam dictionary sometimes gives first spelling preference to a doubled-consonant derivative (programmed) but also approves a single-consonant variation (programed).

Spelling preferences in this guide usually accord with the tendency in American (as opposed to British) usage to use a single consonant in most cases where there is a choice. The first order of preference is the GPO choice if there is one; otherwise, our spelling is taken from Merriam. If Merriam gives a choice, the single-consonant version is generally preferred.

6.10. Indefinite Articles

6.10a. With Consonants and Vowels

The indefinite article *a* is used before a consonant and an aspirated *h;* the article *an* is used before a silent *h* and all vowels except *u* pronounced as in *usual* and *o* pronounced as in *one.*

a historical review	a once-over	an honor
a hotel	a union	an hour
a humble man	an herb, *but* a herbicide	an onion

C05757260

6.10b. With Initials That Begin With a Consonant Sound

When a group of initials pronounced as letters begins with *b, c, d, g, j, k, p, q, t, u, v, w, y,* or *z,* each having a consonant sound, use *a.*

a BGN compilation	a DVD player	a TV program
a CIA position	a GPO *Style Manual* chapter	a UPI dispatch
a DC tax form	a PBS special	a VCR tape

6.10c. With Initials That Begin With a Vowel Sound

When a group of initials pronounced as letters begins with *a, e, f, h, i, l, m, n, o, r, s,* or *x,* each having a vowel sound, use *an.*

an FDA recall	an ICBM silo	an NBC program
an HHS report	an MRV system	an SLBM system

6.10d. With Acronyms

When initials form an acronym that is pronounced as a word, the use of *a* or *an* is determined by the sound, according to the guidance given in section 6.10a.

a HAWK missile	a NASA launch	a UN mission
a MIRV system	an NREM sleep	an UNCTAD report

6.10e. With Abbreviations That Have Variable Pronunciations

If pronunciation of an abbreviation is variable or borders on slang, use the article appropriate to sounding the group of initials as letters.

an AAA battalion, *not* a AAA (pronounced "triple A") battalion
an SLBM system, *not* a SLBM (pronounced "slubbum") system
but
because of entrenched Pentagon and State Department usage: a SLCM (pronounced "slikkum") system

6.10f. With Numerical Expressions

The rule on use of *a* or *an* also applies to numerical expressions and letter-number designators.

an 11-year-old	a onetime winner	an VIII classification
a IV-F category	an Su-20 Fitter aircraft	a MiG-21 Fishbed

6.11. Geographic Names

CIA's authority for the spelling of geographic names is the US Board on Geographic Names (BGN). The official repository of standard spellings of all BGN-sanctioned foreign place names is the GEOnet Names Server of the National Geospatial Intelligence Agency (NGA), which can be found online [redacted]

Refer also to maps or other references issued by [redacted] [redacted] or consult a regional specialist [redacted] Such consultation is automatic when a cartographer is preparing a map to accompany the paper in which the place names appear. Be sure that the spellings of place names in the text of the paper agree with those on the map. If the approved spelling is markedly different from a more familiar and recognizable spelling, the

more familiar spelling should be inserted in parentheses after the place name on the map. In the text, however, use the more familiar spelling, with the other version following it in parentheses at the first reference. In a paper on Tunisia, for example: Gulf of Gabes (Khalij Qabis); Menzel Bourguiba (Manzil Bu Ruqaybah) Shipyard.

Follow [redacted] advice in the use of hyphens and apostrophes in transliterations (Anse-d'Hainault, Komsomol'sk, N'Djamena). Diacritical marks used in place names on the map, however, are usually omitted in the text. (See section 6.13.)

6.12. Names and Titles of Persons and Organizations

The DI regional leadership analysts and [redacted] in the Office of Policy Support are the points of contact at CIA for the spelling of foreign personal names. CIA normally follows the Intelligence Community transliteration standards developed under the DNI Foreign Language Program Office. Current standards for personal names exist for Arabic, Hindi/Urdu, Iranian Farsi and Afghan Dari, Korean, and Russian, with an additional set available for Cyrillic Slavic languages (Belarusian, Bulgarian, Macedonian, Serbian Cyrillic, and Ukrainian). Other standards are currently in development.

At times, a prominent foreigner expressly indicates a preference for, or the media or official documents regularly use, a spelling of his or her name that differs from the IC transliteration standard. In such cases, CIA uses the alternative spelling—for example, former President Mohammed Hosni Mubarak of Egypt. For assistance in the spelling of names and titles of foreigners, consult either [redacted] in the Office of Policy Support or the appropriate regional leadership analyst, or, if the person in question is a government leader, refer to *Chiefs of State and Cabinet Members of Foreign Governments*, available online at [redacted]

6.13. Diacritical Marks

Diacritics are used on maps and in *The World Factbook* but not in other intelligence writing.

6.14. Transliteration Guidance

Under the guidance of the DNI Foreign Language Program Office, the Intelligence Community has approved standards for the transliteration into the Latin alphabet of personal names originally rendered in a language that uses another alphabet. The transliteration standards are an agreed-upon set of symbols to represent non-Latin alphabets. They are not meant to be a pronunciation guide, and they assume that the audience does not know the foreign language. They are designed to be easy to apply, readable, and recognizable to the educated English reader. As a result, transliterated names may contain ambiguities (for example, "Samir" may refer to two distinct Arabic names). IC guidelines require that variant transliterations for an individual already encountered be noted in parentheses or footnotes in order to ensure that vital forensic information is not lost.

For transliteration of place and personal names, consult first the authorities named in sections 6.11 and 6.12.

It is mandated that these standards be used in official intelligence reports and finished intelligence products. Other standards may be employed in other cases (for example, technical standards for transcription), although widespread use of the IC standards may help facilitate name retrieval and linkage.

When names of individuals from cultures outside the language in question are encountered (for example, "Hillary Clinton" appearing in Russian Cyrillic), use the established spelling for that person's culture rather than transliteration.

For organizational names, transliterate proper nouns according to the IC standards. Translate common nouns and other words: for example, Al-Nakhl Sugar Company, *not* Sharikat al-Nakhl lil-Sukkar or Palms Sugar Company. For well-known entities, use the established English name and spelling: for example, Arab League.

For terms that are not personal or place names, adhere to the following guidance: use the IC standard for terms not translated into English, as in intifada. Use the dictionary spelling for words in general use in English, as in minaret. If there is a good English translation of a word, use it: pilgrimage, *not* hajj, for example.

C05757260

§ 7. COMPOUND WORDS

7.1. General Rules

When an idea cannot be expressed in a single word, we use a compound—the combination of two or more words—to express the thought. A compound can be created by writing the words in unconnected sequence, by hyphenating them, or by connecting them to form a solid, single word. This chapter summarizes various rules governing the formation of compounds. Chapter 8 lists thousands of compounds, so look there if you need to find the preferred spelling of a particular one.

7.1a. Separate Words

One may write two words in sequence, without connecting them with a hyphen or merging them into a single word, if this formulation causes no ambiguity in sense or difficulty of comprehension.

blood pressure	living costs	real estate
eye opener	music teacher	word combination

7.1b. Joined or Hyphenated

Often, words have to be joined into a solid form or connected with a hyphen to express an idea that would not be as clear if they were not so compounded.

18-year-olds	bookkeeping	need-to-know	right-of-way
afterglow	cross-reference	newsprint	whitewash

Derivatives of a compound usually retain the hyphenated or solid form of the original.

coldbloodedness	footnoting	praiseworthiness	stick-to-it-iveness
cost-effectiveness	ill-advisedly	railroader	X-rayed

7.2. Solid Compounds

7.2a. Combinations of Nouns

When two nouns form a compound that then has a primary accent, it is written solid (joined without a hyphen), especially when the prefixed noun consists of only one syllable or when one of the elements loses its original accent.

bathroom	bookseller	pipeline

C05757260

7.2b. Combinations of Verbs and Adverbs

A noun formed by combining a short verb and an adverb is usually written solid, but it is hyphenated when the solid form risks misinterpretation. The verb (v) forms of such combinations usually remain two words.

buildup (v build up)	giveaway (v give away)	setup (v set up)
cut-in (v cut in)	run-in (v run in)	tie-in (v tie in)

7.2c. Compounds Beginning With Certain Nouns

Compounds beginning with the following nouns are usually solid.

book (bookstore)	house (housekeeping)	shop (shopworn)
eye (eyeglasses)	school (schoolteacher)	work (workday)

7.2d. Compounds Ending With Certain Words

Compounds ending in the following words are usually solid when the prefixed word consists of one syllable, but are less often so written when the prefixed word has several syllables (spaceborne, *but* satellite-borne, helicopter-borne).

boat (rowboat)	man (lobsterman)	time (halftime)
book (textbook)	master (harbormaster)	ward (homeward)
borne (spaceborne)	mistress (choirmistress)	way (seaway)
bound (landbound)	owner (homeowner)	wide (worldwide)
hearted (halfhearted)	person (salesperson)	wise (edgewise)
holder (shareholder)	piece (mouthpiece)	woman (chairwoman)
house (boathouse)	power (airpower)	work (artwork)
keeper (beekeeper)	proof (blastproof)	worker (pieceworker)
light (moonlight)	room (chartroom)	working (woodworking)
like (boxlike)	shop (toolshop)	writer (speechwriter)
maker (steelmaker)	tight (airtight)	yard (shipyard)

7.2e. Any, Every, No, *or* Some *Combined With* Body, Thing, Where, *or* One

Write solid a combination of *any*, *every*, *no*, or *some* and *body*, *thing*, or *where*. When *one* is the second element, write as two words if the meaning is a particular person or thing; to avoid mispronunciation, write *no one* as two words at all times.

anybody everything nowhere someone

but

Some one choice must be made, and any one of you can make it. Will no one volunteer?

7.2f. Self or Selves

Pronouns ending in *self* and *selves* are always solid compounds.

herself	oneself	themselves
itself	ourselves	yourself

C05757260

7.2g. Compass Directions

Write as one word a compass direction consisting of two points, but use a hyphen after the first point when three points are combined.

northeast north-northeast

7.3. Unit Modifiers

A unit modifier functions as an adjective. It contains more than one word but acts on the noun it modifies as a unit. Examples are civil defense plan, wholly owned subsidiary, policymaking level, and most-favored-nation clause. Unit modifiers always precede the word they modify; if a modifier is located elsewhere in the sentence, it cannot be a unit modifier.

Unit modifier: The Secretary of State occupies a policymaking position.
Not a unit modifier: A decision is policy making only if effective.

If the modifiers are coordinate (see section 5.6b) or cumulative—that is, if either word could serve as a single modifier—they do not constitute a unit modifier. In "migrant construction workers," for example, the modifiers are cumulative because *migrant* or *construction* alone could modify *workers*. In "40-horsepower engine," however, neither *40* nor *horsepower* could logically serve as a single modifier. In "carefully prepared report" only the second word could modify *report*. Both of these phrases are unit modifiers.

7.3a. Hyphenated

Unit modifiers immediately preceding the word or words modified are usually hyphenated but sometimes are written as one word.

1-meter-diameter pipe	low-priced model	Six-Day War
4-percent increase	most-favored-nation clause	Third Five-Year Plan
drought-stricken area	number-one priority	UN-initiated talks
English-speaking nation	part-time job	US-owned property
high-level post	policymaking level	value-added tax
longtime friend	rightwing group	well-known name

7.3b. Unhyphenated

When the meaning is clear and readability is not aided, hyphens may be omitted from a compound that precedes the word modified, especially if the compound is an established or familiar phrase. But refrain from an accumulation of modifiers that defies comprehension and impedes readability.

atomic energy program	flight test program	human rights position
ballistic missile submarine	free enterprise system	life insurance company
civil defense plan	ground attack aircraft	natural gas exports
current account deficit	hard currency loan	surface ship deployment

but

no-hyphen rule (readability aided; *no hyphen rule* would be ambiguous)

areas in which ballistic missile submarines normally operate (readable); *not* normal ballistic missile submarine operating areas (difficult to comprehend)

ballistic missile early warning radar (established use)

C05757260

7.3c. With Ordinal Numbers

In general, the omission of hyphens is not recommended in a compound containing an ordinal number used in its literal sense, no matter how familiar and frequent the expression.

first-quarter report	second-half performance
fourth-grade class	third-country involvement
but	
first aid station	Third World delegates

Similarly, in a unit modifier containing a prepositional phrase, comprehension is enhanced if hyphens are used for even the best known expressions.

balance-of-payments problem	right-to-work law
cost-of-living study	under-the-counter sales

No hyphen is required if the compound preceding the word or words modified is already tied together with a conjunction.

cold but sunny day	medium and high altitude
command and control echelons	middle or late 1970s

An improvised compound (euphemism for cliche) such as that in "hard-and-fast rule" or "bread-and-butter issue" is an exception (see section 7.6c).

7.3d. Predicates

A unit modifier must be distinguished from a compound predicate adjective, in which the hyphen is usually omitted.[34]

His future was *still undetermined* while he was a student.
Most of the transactions in that deal were *foreign financed*, and the exchanges were *under the counter*.
The talks were *US initiated*, and the agenda *well prepared*.
The increase was *4 percent* in 2008 and *5 percent* in 2009.
The majority of the population was *English speaking*.
The government has been *socialist leaning* in recent years.

7.3e. Comparatives and Superlatives

The hyphen is usually—although not always—omitted in a two-word unit modifier in which the first word is a comparative or superlative. For clarity's sake, however, it should be retained in certain three-word modifiers.

best liked books	less developed countries	lowest priced model
highest level meeting	lower income group	worst case scenario
but		
bestselling novel (derived from *bestseller*)	lighter-than-air craft	
higher-than-market price	most-favored-nation clause	
lighter-colored paper	most-sought-after tickets	

[34]In this sense, do not confuse a unit modifier with a hyphenated compound formed by adding a prefix or suffix (see sections 7.4b to 7.4g). Such a compound (for example, *self-educated* or *rent-free*) would retain its hyphen in the predicate form. Also, note that entries in chapter 8 labeled *um* (unit modifier) generally conform to section 7.3d, but entries labeled *adj* (adjective) do not. *Was the call local or long-distance? This approach was low-key.*

C05757260

7.3f. Adverbs Ending in -ly

Do not use a hyphen in a two-word unit modifier in which the first word is an adverb ending in *-ly*.

recently designed logo	wholly owned subsidiary
but	
lonely-hearts club	only-child complex

7.3g. Three-Word Modifiers

Do not use hyphens in a three-word unit modifier in which the first word is an adverb modifying the second word.

unusually well preserved specimen	very well defined line	
exceptions		
extremely-low-frequency communications	very-high-frequency broadcasts	very-low-frequency transmissions

If the first word of a three-word unit modifier modifies the other two, the hyphen is used between those two.

a formerly well-known person	a nearly right-angle bend	a virtually self-educated man

7.3h. Foreign Phrases

Do not use a hyphen in a unit modifier consisting of a phrase of foreign origin.

bona fide transaction	ex officio member	per capita tax
carte blanche policy	per diem allowance	prima donna behavior

7.3i. Proper Nouns

Do not use a hyphen in a compound proper noun or in a capitalized coined name used as a unit modifier, in either its basic or derived form.

Cold War tensions	Latin American states
French Revolutionary period	World War II period

Do, however, use one if the proper noun is normally a combined form.

Afro-American program	French-English descent
Franco-Prussian War	Indo-Pakistani relations

This rule does not apply to numerical compounds in an expression such as *Fifth Five-Year Plan*, nor would it apply entirely in an expression incorporating an already-hyphenated coined name (*Six-Day War euphoria*).

7.3j. En Dash in Proper Noun Compounds

In a unit modifier made up of proper adjectives or proper nouns of which one or more is a compound, the en dash is used between the parts.

North American–South American sphere
Dominican Republic–Haiti border
Ulan-Ude–Chita–Ulaanbaatar triangle

C05757260

7.3k. Quotation Marks

Do not use a hyphen in a unit modifier enclosed in quotation marks unless it is normally a hyphenated form, and do not use quotation marks in lieu of hyphens.

a "spare the rod" approach to parenthood
the "one-man woman" plots of many operas
a "damn it all" attitude toward writing style

7.3l. Chemical Terms

The hyphen is not used in a unit modifier composed of chemical terms.

carbon monoxide poisoning

7.3m. Letter or Number Elements

Do not use a hyphen in a unit modifier containing a letter or numeral as its second element (*but* see section 7.6e).

annex B maps	level 4 alert	Proposition 13 backlash
Article III provisions	Mod 3 missile	Type 59 tank
grade A milk	number 2 fuel oil	

This rule does not, however, apply to certain terms established by long usage for military aircraft and naval ships.

An-22	MiG-19	Su-7
Kresta-I	Osa-II	Yak-40

7.3n. Common Basic Elements

When two or more hyphenated compounds have a common basic element and this element is omitted in all but the last or first term, the hyphens are retained.

the British- and French-produced Concorde	two- or three-year period
first-, second-, and third-grade students	US-owned and -operated companies
ground- and air-launched missiles	

but

firsthand and secondhand (*not* first- and secondhand)
twofold or threefold (*not* two or threefold)
oil and gas fields, or oilfields and gasfields (*not* oil and gasfields)
mid- and late 1990s (*but* mid-to-late 1990s)[35]
early or mid-1990s (*but* early-to-mid-1990s,[35] *better:* early-to-middle 1990s)

[35]Use of the hyphenated prefix *mid-* in the examples shown is not incorrect, but the hyphen makes it awkward to combine *mid-* with the other, unhyphenated elements, *early* and *late*. For this reason it is recommended that *middle* rather than *mid-* be used when a combination is involved: middle and late 1990s, early and middle 1990s, early or middle 1990s, early-to-middle 1990s.

C05757260

7.4. Prefixes and Suffixes

7.4a. Unhyphenated

Prefixes other than *ex, self, quasi,* and *vice* and suffixes other than *free, designate,* and *elect* usually form a solid compound with a noncapitalized word.

afterhours	clockwise	multicolor	semiofficial
antedate	counterintelligence	neofascist	subcommittee
antiaircraft	fourfold	nonferrous	transship
biweekly	hydroelectric	northward	ultramodern
byproduct	lifelike	partnership	unofficial

7.4b. Hyphenated[36]

A hyphen is used in compounds formed with the prefixes and suffixes noted as exceptions in the preceding section.

ex-serviceman	rent-free
minister-designate	self-control
President-elect Jones	vice-chairmanship (*but* vice chairman)
quasi-academic	

7.4c. Doubled Vowels or Tripled Consonants

Except after the short prefixes *co, de, pre,* and *re,* which are generally written solid, a hyphen is used to avoid doubling a vowel when adding a prefix or tripling a consonant when adding a suffix.

anti-inflation	hull-less	shell-like	
brass-smith	semi-independent	ultra-atomic	
but			
cooperation	nonnuclear	posttreatment	reestablishment
deemphasize	overreact	preelection	subbasement

7.4d. To Avoid Confusion

A hyphen is used with a prefix that normally forms solid compounds if omission of the hyphen would lead to mispronunciation or cause confusion with a word spelled identically but without a hyphen.

co-op (*but* cooperative)	re-cover (cover again)	re-treat (treat again)
multi-ply (several plies)	re-create (create again)	under-ice
pre-position (position in advance)	re-form (form again)	un-ionized
pro-state	re-present (present again)	

[36]The hyphenated compounds discussed in sections 7.4b through 7.4g are not subject to the rule in section 7.3d and would retain their hyphens in the predicate form.

C05757260

7.4e. Duplicated Prefixes

A hyphen is used to join duplicated prefixes.

counter-countermeasures sub-subcommittee

7.4f. Prefixes or Suffixes in Compounds With Capitalized Words

A hyphen (unless an en dash is called for) is used to join a prefix or a suffix in a compound with a capitalized word.[37]

Africa-wide	neo-Nazi	pro-British
anti-Castro	pre-Renaissance	un-American
exceptions		
nonMIRVed	unMIRVed	
en dash called for		
Latin America–wide	pre–World War II	

7.4g. Unit Modifier Containing a Multiword Compound

A prefix (except *un*) normally forming a solid compound is often followed by a hyphen when joined with a two-word or hyphenated compound to form a unit modifier.

anti-guided-missile	non-nuclear-powered	pre-martial-law
non-missile-equipped	post-target-tracking	semi-land-mobile
but		
antiballistic missile	uncalled-for	unself-conscious

For many of the terms used above to illustrate the rule in this section, rephrasing of the sentence might be preferable to insertion of the extra hyphen.

defense against guided missiles (instead of anti-guided-missile defense)
aircraft not equipped with missiles (instead of non-missile-equipped aircraft)
a system that is partially land mobile (instead of a semi-land-mobile system)

Do not insert a hyphen after a prefix joined to a solid (unhyphenated, one-word) compound.

antigunrunning	nonoceangoing	submachinegun
nonlifelike	postreentry	ultrarightwing

7.5. Numerical Compounds[38]

7.5a. Spelled Out

Use a hyphen between the elements of compound numbers from 21 to 99 when they must be spelled out (bear in mind that figures, rather than spelled-out words, are generally used for numbers of two or more digits).

twenty-one	ninety-nine	one thousand one hundred forty-one
twenty-first	one hundred forty-one	

[37]For similar reasons, retain the hyphen if it is part of an established formal name such as Non-Proliferation Treaty (abbreviated NPT) and Multi-Fiber Arrangement (MFA), even though the spelling differs from our normal style (nonproliferation, multifiber).
[38]See chapter 2.

C05757260

7.5b. Adjective Compounds With Numerical First Element

10- to 20-year period (*or* 10-to-20-year period)
18-year-old student
20th-century progress
3-meter (*never* 3-m) railing
5-to-4 vote
8-kilogram (*or* 8-kg) turkey
but
$20 million loan
eight-time Olympic medalist
medium-to-high altitude
medium-to-high-altitude interceptors
multimillion-dollar loan
the Six-Day War
Third Five-Year Plan

7.5c. Fractions

Use a hyphen between the elements of a fraction whether it is a noun or an adjective.

a two-thirds majority
two-thirds of the legislature

7.6. Other Compound Words

7.6a. Titles

Do not use a hyphen in a compound title denoting a single civil or military office, but do use one in a double title.

ambassador at large
commander in chief
editor in chief
but
under-secretaryship
manager-director
minister-counselor
secretary general
vice-presidency
secretary-treasurer
under secretary
vice president

7.6b. Noun Compounds Containing a Prepositional Phrase

Apart from titles, hyphens are used in some noun compounds containing a prepositional phrase.

government-in-exile
grant-in-aid
but
next of kin
prisoner of war
man-of-war
mother-in-law
state of the art
state of war

7.6c. Improvised Compounds

bread-and-butter issue
classroom full of know-it-alls
first-come-first-served basis
hard-and-fast rule
need-to-know
technical know-how

7.6d. Verb Forms of Noun Forms Written as Two Words

turn a cold shoulder (to cold-shoulder an idea)
proof with blue pencils (to blue-pencil galleys)
missile in flight test (to flight-test a missile)

C05757260

7.6e. Single Capital Letter Plus a Noun or Participle

H-bomb	L-shaped room	T-shaped
I-beam	T-jetty	X-ray

Use hyphens (*not* en dashes) in the compounds designating Russian submarine classes when the compounds are used adjectively.[39] If the meaning is clear, refer to these submarines by the class designator alone.

Yankee-class, Delta-class, Victor-class, etc.
Echo-II-class, Charlie-I-class (two hyphens, *not* hyphen and en dash)
submarines of the Yankee class (no hyphen)
a Delta-class unit, a Delta-II-class unit
Delta and Yankee units (acceptable to omit word *class*)
a Victor tracking a Yankee
Four Yankees, two Delta-IIs, and a Victor have been observed in the submarine yard.
The characteristics of the Delta-I and -II were compared.

The same rules apply essentially to surface ship classes (Komar, Osa) and non-Russian submarine classes (Han, Xia).

[39]In CIA publications the full designator, not just its first letter, is preferred: Delta-class (*not* D-class), Yankee-class (*not* Y-class). Note, however, that the designator is spelled with only the first letter capitalized, not in all capital letters, as seen in military usage. Designators for Russian submarines, according to DIA, are as follows: Akula, Alfa, Bravo, Charlie, Delta, Echo, Foxtrot, Golf, Hotel, India, Juliet, Kilo, Lima, Mike, November, Oscar, Papa, Romeo, Sierra, Tango, Typhoon, Uniform, Victor, Whiskey, Yankee, and Zulu. (All are phonetics except Akula and Typhoon.)

C05757260

§

8. SPELLING AND COMPOUND WORDS LIST

Including inflections, plurals, and other word forms, there are more than 13,000 words listed in this chapter. Many are familiar and are not likely to cause a problem for any writer. Others may be unfamiliar or confusing.[40] Rules for spelling and compounding may be found in chapters 6 and 7, but if you want only to determine the correct spelling or compound form of a word or phrase, you are likely to find your answer below. Note that a word followed by (*s*) (antibiotic[s]) and marked as both *n* and *adj* or *um*, takes the *s* only in the noun form. Similarly, if a word is shown with several inflections (airmail[s], airmailed, airmailing) and is marked as both *n* and *v*, usually only the first form (airmail[s]) is the noun, although sometimes the present participle is also a noun (back[s], backed, backing) or an adjective (wind[s], wound, winding).

adj (adjective)	**masc** (masculine)	**prep** (preposition)
adv (adverb)	**n** (noun or modified noun)	**sing** (singular)
cf (combining form)	**pl** (plural)	**syn** (synonym)
comp (computer term)	**pred** (predicate)	**um** (unit modifier)
fem (feminine)	**pref** (prefix)	**v** (verb)

A

aberration(s)

able-bodied (um)

ABM (antiballistic missile) **system**

about-face

above-average (um)

aboveboard

abovedeck

aboveground (um)

above water (pred)

abridgment(s)

absentminded

accede(s), acceded, acceding

access code(s)

accessible

access time(s)

accommodate(s), accommodated, accommodating

accommodation(s)

accords (Amman, Camp David, Dayton, Geneva, Helsinki, Paris)

accoutrement(s)

Achilles' heel(s)

acknowledgment(s)

acoustic (adj)

acoustic(s) (n)

acquiesce(s), acquiesced, acquiescing (takes preposition *in*, not *to*)

across-the-board (um)

active-duty (um)

A.D. (*anno domini*, refers to years since the birth of Christ; see *B.C.*)

adapter(s)

addendum, addenda (pl)

additionally (adv, of addition; do not use for *in addition*)

add-on(s) (n)

ad hoc

adjutants general

ad lib (adv)

ad-lib(s) (n, adj, v), **ad-libbed, ad-libbing**

admissible

advertise(s), advertised, advertising

advertisement(s)

advice (n)

advise(s), advised, advising

adviser(s); advisor (used in the legal field and by others by preference)

advisory

aegis

aesthetic(s) (n, adj)

affect(s), affected, affecting (v, influence; see *effect*)

affection(s) (n, fondness)

affectation(s) (n, insincere attitude)

A-frame(s)

Africa-wide

Afrikaans

after (cf, all one word)
- aftereffect
- afterglow
- afterward

agenda(s)

agents-of-influence

age-old

aging

agitprop

agree(s), agreed, agreeing (*with* a person, *to* a proposal, *on* a plan)

agreed-to (um)

agreed-upon (um)

agribusiness

agro (cf, all one word)
- agroindustrial

aid(s) (n, assistance)

aid(s), aided, aiding (v, assist)

aide(s) (n, assistant)

aide(s)-de-camp

aide-memoire, aides-memoires (pl) (memory jog)

AIDS (acquired immunodeficiency syndrome)

aim point(s)

air and sea ports

armor-heavy (um)
arms control(s) (n)
arms-control (um)
arms-exporting (um)
arm's-length (um)
armsmaker(s)
arms-producing (um)
arms-supplying (um)
arm-twisting (n)
army-group-level (um)
armywide
Army-wide
around-the-clock (um)
artificial intelligence
artificial language(s)
artilleryman, artillerymen (pl)
artwork(s)
ascend(s), ascended, ascending
ascendancy, ascendancies (pl)
ascendant
ascent(s) (rise, climb; see *assent*)
ASCII (American Standard Code for Information Interchange)
Asia Pacific Economic Cooperation
but
Asia-Pacific region
assassinate(s), assassinated, assassinating
assassination(s)
assembly line(s)
assemblyman, assemblymen (pl)
assemblywoman, assemblywomen (pl)
assent(s), assented, assenting (consent; see *ascent*)
assistant comptroller(s) general
assure(s), assured, assuring (affirm; see *ensure, insure*)
asylee(s) (person seeking asylum or one given asylum)
ATBM(s) (anti-tactical-ballistic missile)
at-large (um)
atomic energy, atomic energies (pl) (n, um)
at-sea (um)
attache(s)
attorney(s) general
audible
audiocassette(s)
audiosurveillance(s)
audiotape(s)
audiovisual(s) (n, adj)
auger(s) (n, hole-boring tool)
augur(s), augured, auguring (v, predict from signs or omens)
automaker(s)
autoworker(s)
auxiliary, auxiliaries (pl)
AWACS (airborne warning and control system)
avant-garde
a while (n, a period of time)
awhile (adv, for a time)
ayatollah(s)
ax, axes (pl)
axis, axes (pl)

B

B.A. (bachelor of arts)
baby boomer(s)
bachelor's degree(s) (B.A.[s])
back(s), backed, backing (n, v)
backbench(es)
backbencher(s)
backbite(s), backbit, backbiting
backbiter(s)
backbone(s)
back burner(s)

C05757260

back-channel (um)
backdoor (um)
back(s) down, backed down, backing down
backfit(s), backfitted, backfitting (n, v)
background processing
backlash(es)
back pay
backpedal(s), backpedaled, backpedaling
backroad (um)
backroom (um)
backseat(s) (n, um)
backslide(s), backslid, backsliding
backstage
backstop(s), backstopped, backstopping (n, v)
backtrack(s), backtracked, backtracking
back(s) up, backed up, backing up
backup(s) (n, um)
backup system(s)
backward (no s)
backwater(s)
backyard (um)
bagful(s)
Bahamas, The
Bahamian (n, adj)
bail(s) out, bailed out, bailing out
bailout(s) (n, um)
balance-of-payments (adj)
Balkanize(s), Balkanized, Balkanization
ball bearing(s)
ballistic missile (um, of submarines, defense, radar)
ballistic missile early warning (BMEW) radar(s)
ballistic-missile-related (um)
ballistic missile submarine(s) (SSB)
ballpark(s) (n, adj)
Baltic republics/states (not *the Baltics;* citizens are referred to as *Estonians, Latvians,* or *Lithuanians,* not *Balts*)
bandwagon(s)
bandwidth(s)
banknote(s)
bankrupt(s), bankrupted, bankrupting
bar code(s)
barebones (um, nonliteral)
base camp(s)
baseline(s)
basis, bases (pl)
battalion(s)
battlefront(s)
battleground(s)
battle group(s)
battleline(s)
battle management (n, um)
battle readiness
battle-ready (um)
B.C. (before Christ, comes after the number; see *A.D.*)
beam width(s)
Bear G('s) (Russian aircraft)
bedouin (sing, pl)
bed rest
bedrock (n, adj)
behind-the-scenes (adj)
belowground
below-market (um)
belt-tightening (um)
beltway bandit(s)
benchmark(s) (nonliteral)
beneficent
benefit(s), benefited, benefiting (n, v)
Benelux
Berlin Wall (the Wall)
beside (alongside)
besides (except, other than)
best seller(s)
bete noire, betes noires (pl)
better-than-even (um)
biannually (prefer *semiannually*, but *consider* replacing with *twice a year*; see *biennially*)
bias(es), biased, biasing (n, v)
biennially (consider replacing with *once every two years*; see *biannually, semiannually*)
big-power (adj)
big shot(s)
big-ticket (adj)

C05757260

binary system(s)
binational
bipolar
birder
bird's-eye (adj)
birdshot
birdwatch(es), birdwatched, birdwatching
birthdate
birthplace(s)
birthrate(s)
bistatic
bitmap(s), bitmapped, bitmapping (n, v)
bitmapped (um)
biweekly (once every two weeks; see *semiweekly*)
blacklist(s), blacklisted, blacklisting (n, v)
blackmail(s), blackmailed, blackmailing (n, v)
black market(s) (n)
black-market(s), black-marketed, black-marketing (um, v)
black-marketeering (n)
black-marketer(s)
blastmark(s)
blastproof
blind eye(s)
blitzkrieg(s)
bloc(s) (group)
block(s) (form)
blog(s) (n, short for weblog)
blog(s), blogged, blogging
blogger(s)
blond(s) (masc, fem)
bloodbath(s)
bloodletting(s)
bloodlust
blood pressure(s)
bloodshed
bloodthirsty
blowdown(s)
blow(s) out, blew out, blowing out (v)
blowout(s) (n, adj)
blue chip(s) (n)
blue-chip (um)
blue-collar (nonliteral, um)
blue-pencil(s), blue-penciled, blue-penciling (v, um)
blueprint(s)
blue-ribbon (nonliteral, um)
blue-water navy, blue-water navies (pl)
boardroom(s)
boatbuilding
boathouse(s)
boatload(s)
boat people
boatyard(s)
body bag(s)
bodyguard(s)
body politic
Boeing 747(s)
boilerplate
boldface

born-again (n, adj)
borne (carried)
bottleneck(s)
bottom line(s) (n)
bottom-line (adj)
bourgeois (adj)
bourgeoisie(s) (n)
boxcar(s)
boxlike
brain child, brain children (pl)
brain trust(s)
brainwash(es), brainwashed, brainwashing
brand name(s) (n, um)
breach(es) (gap; see *breech*)
bread-and-butter (adj)
breadbasket(s)
break(s) down, broke down, breaking down
breakdown(s) (n, um)
break(s) even, broke even, breaking even
break-even (um)
break(s) in, broke in, breaking in
break-in (n)
break(s) out, broke out, breaking out
breakout (n, um)
breakpoint(s)
breakthrough(s)
break(s) up, broke up, breaking up
breakup(s) (n, um)
breathtaking
breech(es) (lower part, part of a gun barrel; see *breach*)
breeding ground(s)
bridgebuilder(s)
bridgehead(s)
bridgeway(s)
bridgework(s)
briefcase(s)
brinkmanship
broadband (n, adj)
broad-based
broadcast(s), broadcast, broadcasting (n, adj, v)
broadcloth(s)
broad gauge(s) (n)
broad-gauge (adj)
broadleg(s) (n, adj)
broadminded
broken-down (um)
brother(s)-in-law
brunet(s) (masc, fem)
brushpass(es)
budget-busting (um)
building block(s) (n)
building-block (adj)
build(s) up, built up, building up
buildup(s) (n)
built-in(s) (n, adj)
built-up (um)
bulletin board(s)
bulletproof
bullheaded
burdensharing
bureau(s)
burgeoning
burka(s)
burn bag(s)
burnout(s) (n)
burnup(s)
bus(es), bused, busing (n, v)
busdriver(s)
busfare(s)
businesslike
busline(s)
busload(s)
busting (used in terms like budget busting and trust busting; hyphenate as a um)
buy-back (um)
buy(s) in, bought in, buying in
buy-in (n, adj)
buy(s) out, bought out, buying out

C05757260

buyout(s) (n, um)

buzzword(s)

BW-agent (um)

by (cf, usually one word)
byelection(s)
bylaw(s)
bypass(es)
byproduct(s)

C

cache(s)

caldron(s)

caliber(s)

caliph(s)

caliphate(s)

call(s) back, called back, calling back

callback(s) (n, um)

call-in (n, um)

call sign(s)

call(s) up, called up, calling up (n, v)

callous (adj, unfeeling; see *callus*)

callup(s) (n, um)

callus(es) (n, thickening of the skin; see *callous*)

camouflage(s)

cancel(s), canceled, canceling

cancelable

cancellation(s)

candor(s)

canister(s)

cannon (pl **cannon** or **cannons**, depending on usage)[41]

cannot

canoe(s), canoed, canoeing (n, v)

canvas(es) (cloth)

canvas-covered (um)

canvass(es), canvassed, canvassing (solicit)

capital(s) (city, money)

capital-intensive (um)

[41]Use *cannon* if such weapons are referred to collectively (*Cannon were deployed on the surrounding hillsides*) but *cannons* when the weapons are discussed individually. (*Wing-mounted cannons, two on each side, augment the aircraft's firepower.*)

capitol(s) (building)

caplet(s)

carat(s) (unit of weight; see *caret*)

carbarn(s)

car-bomb(s), car-bombed, car-bombing (n, adj, v)

carbon footprint(s)

carbon monoxide

carcinogen(s)

carcinogenic

card-carrying (um)

carefree

caret (insertion mark; see *carat*)

car ferry, car ferries (pl)

cargo(es)

Caribbean

carline(s)

carload(s)

car-mile(s)

carpal tunnel syndrome

carrier-based (um)

carrierborne

carry over, carries over, carried over, carrying over

carryover(s) (n, um)

carte blanche, cartes blanches (pl)

cartel(s) (even with specific name)

cartilage(s)

car wash(es)

case-by-case (adj)

caseload(s)

case officer(s)

caseworker(s)

cash-and-carry (adj)

cash-flow(s) (n, adj)

cashier's check(s)

cash-strapped (um)

cast(s) off, cast off, casting off

castoff(s) (n, um)

casual (informal; see *causal*)

casualties (include persons injured, captured, or missing in action, not just those killed)

C05757260

casus belli (sing, pl)
catalog(s), cataloged, cataloging (n, v)
cataloger(s)
cat-and-mouse (um)
catchall(s) (n, um)
catchphrase(s)
catch(es) up, caught up, catching up
catch-up(s) (n, um)
catchword(s)
cat's-paw(s)
cattle breeder(s)
cattleman, cattlemen (pl)
cattle raiser(s)
cattle-raising (um)
cattle ranch(es)
caudillo(s)
causal (of cause; see *casual*)
cause celebre, causes celebres (pl)
causeway(s)
cave(s) in, caved in, caving in
cave-in(s) (n, um)
CD-ROM(s) (compact disk read-only memory)
cease(s) fire, ceased fire, ceasing fire
cease-fire(s) (n, um)
cell phone
Celsius
cementmaking
census taker(s)
census-taking (um)
center(s), centered, centering (as a verb, is used with *on*, *upon*, *in*, or *at*, but not *around*)
center-left
centerline(s)
centerpiece(s)
centerpole(s)
center-right
centi (cf, all one word)
centri (cf, all one word)
chain(s) of command
chainsmoke(s), chainsmoked, chainsmoking
chainsmoker(s)
chairman, chairmen (pl)
chairperson(s)
chairwoman, chairwomen (pl)

9. WORD WATCHERS LIST

9.1. What's in This Chapter?

The Word Watchers List contains an alphabetized compilation of entries dealing with possibly troublesome words, word types, and word problems. It is intended to help writers and processors of the written word find quickly the answers to questions likely to arise most often in their work. Most of the entries provide answers on the spot. Others direct the user to other entries in this chapter (such references are highlighted in red) or to parts of earlier chapters referred to by section or footnote number.[42]

9.2. Who Are the Word Watchers?

This compilation is meant to provide guidance for writers of intelligence publications as well as writers of intelligence-related administrative papers. All are assumed already to possess the three essentials of intelligence analysis: knowledge, clarity of thought, and good judgment. No writing, however skilled, can conceal deficiencies in these requisites.

9.3. Some Helpful Precepts

Written English is the analysts' and administrators' main vehicle for conveying their studied evaluations to consumers. Mastery of the language adds force, precision, and grace to these presentations. Writers who want to compose English prose devoid of jargon and easy to comprehend should bear in mind these concepts:

- Keep the language crisp and pungent; prefer the forthright to the pompous and ornate.
- Do not stray from the subject; omit the extraneous, no matter how brilliant it may seem or even be.
- Favor the active voice and shun streams of polysyllables and prepositional phrases.
- Keep sentences and paragraphs short, and vary the structure of both.
- Be frugal in the use of adjectives and adverbs; let nouns and verbs show their own power.
- Make sure that subject and verb agree in number; do not be tricked by intervening words.
- Be just as sure that every pronoun has a clearly identifiable antecedent and that the two agree in number and gender.
- Be aware of your reading audience; reserve technical language for technical readers.
- Be objective; write as a reporter or analyst or administrator unless you are entitled to write as a policymaker.

[42]Note that a section number always begins with the number of the chapter in which the section appears—section 7.3, for example, is the 3rd section of chapter 7. Footnotes, however, are numbered in one sequence throughout—from footnote 1 in chapter 1 to footnote 42 in chapter 9.

C05757260

a, an before h	Use *an* when the next word begins with a silent *h* (*an herb*); use *a* when the *h* is pronounced (*a historic occasion*).
aboard, on board	*Aboard* can be an adjective (*the crew is aboard*), an adverb (*they went aboard*), or a preposition (*they are aboard the ship*). The prepositional phrase *on board* can be used adjectively (*they are on board*) or adverbially (*they went on board*) but preferably not prepositionally—avoid *they went on board the ship*.
about, approximately, around	*Around* is acceptable in approximations of time: *around three o'clock*. In other contexts it is a questionable synonym for *about* or *approximately*. Given a choice between those two words, choose *about* most of the time; it saves space and sounds less stuffy. Do not use *about* (or *approximately, around,* or *estimated)* when a figure is stated precisely. Do not say *during the attack,* ***about*** *3,041 troops were killed* if you are sure of the number. If you are not sure, replace the 3,041 figure with *about* (or *an estimated*) *3,000*.
absolutes	Some adjectives convey an absolute: it is the whole thing or nothing. They do accept modifiers that take away their absoluteness—*almost*, for example—but they do not accept limiting modifiers such as *somewhat, totally, more*, and *less*. The Preamble to the US Constitution is out of bounds grammatically when it speaks of *a more perfect Union*, and, as the common saying puts it, a woman cannot be *somewhat pregnant*. Other words in this category are *eternal, fatal, incessant, maximum, minimum, ultimate, unique*, and *universal*. *Absolute maximum* is overkill: *maximum* says it all.
accelerate	See escalate, accelerate, intensify.
acquiesce, agree	*Acquiesce* takes the preposition *in*, not *to* (*acquiesce* ***in*** *the decision*); *to* is used with *agree* (agree ***to*** the plan).
acronyms	Explain them as you would any other abbreviation. But be aware that acronyms do not always seem to follow conventions about capitalization or other matters (*Aramco, NATO, agitprop*). Usually, when an acronym is made up solely from the first letter of the major words in the expanded form, render the acronym in all capitals (*North Atlantic Treaty Organization*, or *NATO*). We write *comsat* when speaking generally of a communications satellite but *Comsat* in reference to the corporation. The term *Landsat* should refer only to the US Earth resources satellite, but *landsat* might be used in a less specific reference.
active voice	In formal writing, prefer the active voice. *Lifeguards clear beaches when forecasters predict storms.* Only if your focus is beach clearing rather than lifeguards would the passive be preferred. *The beaches are cleared when storms are forecast.*
activity	See condition, situation, activity.
additionally	Prefer *in addition* if you must use something.
adverbs	When modifying a verb, adverbs usually go between the auxiliary (or auxiliaries) and the main verb. (*The Prime Minister has finally announced her decision.*)

C05757260

adverse, averse	sound alike, and both express opposition, but *adverse* applies to something working against a person or program (*adverse weather conditions*), and *averse* applies to a person who is against something. (*He is averse to traveling by plane.*)
affect, effect	*Affect* as a verb means to influence, to produce an effect upon. (*The blow on the head affected John's vision.*) *Effect*, as a verb, means to bring about. (*The assailant effected a change in John's vision by striking him on the head.*) *Effect*, as a noun, means result. (*The effect of the blow on John's head was blurred vision.*)
agree	*with* a person, *to* a proposal, *on* a plan. (See acquiesce, agree.)
AIDS	See HIV/AIDS.
all ready, already	are not interchangeable. The first means everybody is set to do something; the second means by or before a specified or implied time. (*Fortunately, the employees are all ready for the 3:00 meeting because it is already 2:45.*)
all right	never *alright*.
all together	See altogether, all together.
already	See all ready, already.
almost	See most, mostly, almost.
along with	See together with.
also	When used as a direct modifier of a negative verb—*he also does not favor import quotas*—*also* sounds awkward and unidiomatic. Do one of three things: move the word to modify the whole sentence or clause (*also, he does not favor import quotas*), replace it (*he does not favor import quotas either* or *moreover, he does not favor import quotas*), or make the verb positive (*he also opposes import quotas*). Be sure, moreover, that *also* is intended to modify the verb directly and not some other word in the sentence; *also*, like *even* and *only*, is a notorious "floating modifier." (See fill-ins.)
alternate, alternative	*Alternate* means rotating, following by turns; *alternative* pertains to a choice between possibilities. *Alternate*, as an adjective, does overlap *alternative* by conveying the idea of a second choice.
altogether, all together	*Altogether* means all told or completely. *All together* means in unison.
always	means on every occasion or forever. Be sure that you do not use *always* when you mean habitually or usually. *The President always leaves his office at noon on Saturday.* Are there no exceptions? (See absolutes.)
ambiguous, ambivalent	Use *ambiguous* if you wish to point out inconclusiveness or lack of clarity in a situation. *Ambivalent* applies to mixed feelings, the simultaneous operation in the mind of two different and usually conflicting desires.
American	is certainly acceptable as a noun meaning a US citizen, but for the adjective describing our country the preferred term is US.
among	See between, among.
amused	See bemused.

C05757260

anathema	means both a curse or denunciation and the thing or person cursed or denounced. In the former case the article and plural are used. *The anathemas of the losers, to pronounce an anathema.* In the latter they usually are not. *He was anathema to his enemies, they were anathema to their enemies.*
and, but, however	may be used at the beginning of a sentence when emphasis is desired, but use this construction sparingly; overuse blunts its effect and leans toward the informal.
and/or	Do not use in DI writing. See section 5.17c.
and so forth	See etc., and so forth.
anticipate, expect	When you *anticipate* an event, you generally make some preparation for it; when you *expect* an event, you simply await developments before acting. *They anticipated a hostile crowd, so they mobilized the National Guard.* Had they *expected* a hostile crowd, they would not have been surprised, but the National Guard would not have been there.
anxious, eager	Both connote a strong interest or desire; use *eager* unless you want to add a dimension of worry or fear.
any	as a pronoun, can take either a singular or a plural verb. *Any* [any one] *of her options is suitable. Are any* [some] *of them practicable?*
apparently	See qualifiers.
appraise, apprise	*Appraise* means to set a value on; *apprise*, to inform. *Apprise*, however, is considered a pretentious word and should be avoided.
approximately	See about, approximately, around.
apt	See likely.
around	See about, approximately, around.
as	in positive comparisons, is followed by another *as*. *She is as clever as her adversary.* Watch out for mismatches. *As good as or better than*, not *as good or better than*. In negative comparisons, *so* may be substituted for the first *as*. *She is not so clever as her adversary.* (See like, as and compare, contrast.)
as far as	Confusion arises with the construction *as far as . . . is concerned.* This is an indissoluble unit; *as far as* by itself is incorrect. *As far as football teams are concerned, I like the Redskins* is correct. *As far as football teams, I like the Redskins* is not.
as noted	See fill-ins.
assure, ensure, insure	*Assure* applies to persons (*to assure a leader of one's loyalty*). It alone has the sense of setting a person's mind at rest. Use *ensure* to mean make certain (*to ensure a nation's security*). *Insure* means to cover with insurance.
as well as	See together with.
as yet	Most of the time *as* can be dropped.
asylee	a permissible word, even though not in many dictionaries, meaning a person seeking asylum or one given asylum.
at the same time	See fill-ins.
augur, auger	*Augur* is a verb meaning to predict from signs or omens. An *auger* is a tool for boring holes.

C05757260

averse	See adverse, averse.
awhile	is not preceded by *for*. *He stayed awhile*; but *he stayed for a while.*
based on, due to, owing to	These word sets are almost always awkward and often introduce dangling phrases: *Due to (or owing to) illness, the meeting was postponed.* You can usually produce something smoother by reworking the sentence: *We had to postpone the meeting because almost everyone was sick.*
basically	See fill-ins.
because	See reason, because.
bedouin	Capitalize *Bedouin* when referring to an ethnic population, as in Jordan (see *The World Factbook*). When referring to a nomadic lifestyle, lowercase is suitable (*the bedouin belief in afreets [powerful evil demons]*).
beef up	Avoid this overused term. (See metaphors.)
before	See prior to, before.
bemused	means confused or bewildered and is not synonymous with *amused.*
between, among	*Between* expresses the relationship of two persons or things (*between the devil and the deep blue sea*); *among*, the relationship of three or more (*The spoils of victory were divided among the four winning parties*). Use *between*, however, if you are considering more than two things in pairs as well as in a group. (*We see major differences between the policies of Country A, Country B, and Country C.*)
biannual, biennial, semiannual	Both *biannual* and *semiannual* mean twice a year; *biennial* means every two years. To avoid confusion between *biannual* and *biennial*, avoid the former and use *semiannual*. Even better, say *twice a year* and *every two years.*
bits, bytes	are considered units of measure and are quantified in figures, not spelled-out words (*a 7-bit byte, 5 bytes of 7 bits each*; but *five 7-bit bytes*—see section 2.23a).
blatant, flagrant	Both words describe glaringly antisocial behavior. *Blatant* denotes the obvious, the offensive, the obtrusive: *a blatant lie*. *Flagrant* carries a stronger overtone of malice; it denotes deliberate, obtrusive wrongdoing. One who willfully violates a pledge commits a *flagrant* act. Both words convey subjectivism in many contexts. (See subjective words.)
bloc	is usually not capitalized, except for references to the former Soviet Bloc.
blog	A *blog* is a type of website, usually maintained in an online journal format, containing commentary, descriptions of events, or other material such as graphics or video. As a verb, *blog* means to maintain or add content to a blog. *Blog* is short for *weblog*, but the longer term is rarely used.
boat, ship	*Boats*, nautically speaking, are usually small craft that can be carried on a *ship*, a larger vessel suitable for crossing the high seas. The exception is a *submarine*, which is most often referred to as a boat. All take the pronoun *it*, not *she*.
both	is redundant in expressions such as *they both agree* or *they both share.* With three, however, *both* might be used: *Both London and Paris agree with Washington that the arrangement is sound.*
both . . . and	Be sure that the material that follows is in balance. *He was deaf to both argument and entreaty*, not *he was both deaf to argument and entreaty.* (See parallelism.)

C05757260

boycott, embargo	A *boycott* is a refusal, usually by an organized group, to buy or use a particular product or service. It is not synonymous with *embargo*, which is a legal restriction on trade.
breach, breech	As a noun, *breach* is a violation, a gap, or a rift in a solid structure. Do not confuse it with *breech*, which is acceptable only in reference to ordnance and to human anatomy.
burgeoning	Originally descriptive of something newly emerging, *burgeoning* has become accepted for something growing and expanding rapidly.
burnish	means to make shiny or lustrous; it is not correct to say someone *burnished his credentials.*
but	See and, but, however.
bytes	See bits, bytes.
cadre	*Cadre* was originally a military term for a group around which a larger unit is formed but now, under the influence of communist terminology, may denote any core group, as well as a member of such a group. Use in a nonmilitary context seems to be dying out as the Cold War era fades further into history. Use an English term if possible. Always add an *s* when the word is plural. (See cohort.)
calculate	See feel.
capital cities	in intelligence writing are generally legitimate stand-ins for the names of national governments. *Moscow's position is clear* is fine, but be sure not to use capital cities when you are referring to the country as a whole. Do not write, for instance, *Moscow is reinforcing its borders.*
casualties	include persons injured, captured, or missing in action as well as those killed in battle. In formulating casualty statistics, be sure to write "killed *or* wounded," not "killed *and* wounded." (See injuries, casualties.)
celebrity copycatting	can lead one up the garden path because those emulated are not always pure of speech. A venerable newscaster persists in mispronouncing *February* (without the first *r* sound) and has misled a whole generation. Another Pied Piper of TV is given to saying "one of those who *is*"—joining many others who are deceived by the *one* and forget that the plural *who* is the subject of the verb (see one). The classic copycat phrase, *at this point in time*, grew out of the Watergate hearings and now is so firmly entrenched that we may never again get people to say *at this time, at present*, or simply *now* (see presently).
center	as a verb is used with *on, upon, in*, or *at*, but not *around. The dispute* ***centers on*** *the fairness of the election.* The dispute can, however, ***revolve around*** *the fairness of the election.*
charisma	is a Greek word denoting divine grace or endowment. Its use should be limited to those rare and gifted persons who attract exceptional devotion from great numbers of followers.

C05757260

China, Taiwan	The full name of the People's Republic of China is usually shortened to *China*. *PRC* may be used. Hong Kong has been a Special Administrative Region of China since July 1997. *Chinese* is the preferred adjective and refers only to the mainland. For what was once called Nationalist China or the Republic of China, use only *Taiwan*, both as noun and as adjective. For variation, *Taipei* may be used in either noun or adjective form (for example, *the officials in Taipei*, or *the Taipei authorities*), but avoid *Taiwanese* as an adjective referring to the island's administration or its officials (and do not use the term *Taiwanese government*). The terms *Communist China* (and *Chinese Communist*) and *Nationalist China* (and *Chinese Nationalist*) or *Republic of China* should be used only in historical contexts.
citizenry	See pretentious words.
clearly	See qualifiers.
climactic, climatic	*Climactic* refers to climax or high point, *climatic* to weather. *The **climactic** moment of the President's trip came at Bonn. The **climatic** changes in the area are being studied.*
clout	is best confined to fights and baseball or golf. It can be used occasionally in the metaphorical sense of influence or power, but it always sounds colloquial. (See colloquialisms.)
cohort	always refers to a group of people. Emphasis is on the trait or traits common to all members. *Cohort* should not be used as a synonym for *comrade* or *comrades*. Mr. X may belong to a cohort, but neither he nor his buddies are cohorts. (Compare cadre.)
colloquialisms	are words or phrases suitable for conversation or other informal situations but not for intelligence writing.
colored	See footnote 6.
combined, joint	When referring to military exercises or operations, a *combined* exercise involves the forces of more than one country, a *joint* exercise two or more services of the same country.
communication(s)	In military/security terminology *communication* usually adds s as an adjective: *communications equipment, communications intelligence*. As a noun it sometimes drops the s: *sea lines of communication* (sometimes abbreviated *SLOCs* and pronounced as an acronym).
communism	See section 1.13 and footnote 3.
comparatively	See relatively, comparatively.
compare, contrast	*Compare to* points out likenesses; *compare with* points out both likenesses and differences; *contrast with* points out only differences. *He **compared** his cabinet **with** Kennedy's.* (He pointed out similarities and differences.) *He **compared** his cabinet **to** Kennedy's.* (He showed how much alike they were—and by implication, how praiseworthy his cabinet was.) *He **contrasted** his cabinet **with** Kennedy's.* (He emphasized the differences.) When using *compared* as a participle, preceding it with *as* will ensure better comprehension and in some cases avoid the appearance of a dangling participle. *This year's output, **as compared with** last year's, is more export oriented.*

C05757260

compel, impel, propel	*Compel* means to force, drive, or constrain; *impel* to urge to action through moral pressure; *propel* to impart motion to.
comprise, compose, include	*Comprise* views a collection as a whole; it means to contain or to consist of. Use *comprise* when referring to all components; use *include* when mentioning only some of them. *The statement comprises all he has to say on the topic. The statement includes a cogent summary of his thoughts.* *Compose* emphasizes the elements of a collection; it means to constitute or to make up. Unless accompanied by a modifier, it, too, refers to all components. *The parts compose the whole. The committee is composed of Sue, Jim, and Andy, among others.* The real problem with *compose/comprise* comes with the passive form. *Compose* in the sense of contain generally requires a passive construction: *is composed of. Comprise* lacks a meaningful passive form, but (partly because *comprise* sounds fancier than *compose*) we try to fill the gap with a parallelism: *is comprised of.* Never use this phrase. Something can be *composed of* a, b, and c. It can *include* a, b, and c. It can *comprise* (be made up of, be composed of) a, b, and c. It can never be *comprised of* a, b, and c.
concern	takes different prepositions for different senses. *He is concerned **with** computers* (he is so occupied or employed). *He is concerned **about** computers* (he is worried about them). When used in the sense of worry, concern sounds limp: *The government of Country A is concerned about US policy.* Focus whenever possible on what the government *calculates*, on what it might do.
concerted	meaning combined, requires a plural subject or object to make sense. Only *we* or *they* (never *I, he, she,* or *it*) can make a "concerted effort."
conclave	is a secret meeting, not just any gathering.
concrete steps	In nonliteral use this phrase raises awkward connotations of literalness. Say *concrete measures* or *specific steps.*
condition, situation, activity	often intrude into sentences for no reason. Good writers will say *the famine is worsening*, not *the famine conditions are worsening. The deteriorating economy* reads better than *the deteriorating economic situation.* Likewise, *the Russian Navy continued its exercises*, not *its exercise activities.*
consensus	is an opinion held collectively, not simply by a majority. Note the spelling: one *c*, three *s*'s.
consider, regard	*Regard*, in the sense of coming to a belief after careful deliberation, is usually followed by *as*; *consider*, in the same sense, is not. *He considered the vote a defeat. He regarded the vote as a defeat.*
consul	See council, counsel, consul.
continual, continuous, continuing, continued	*Continual* applies to something that occurs intermittently or is repeated at intervals, *continuous* to something that is uninterrupted in time or space. *Continuing* can be used in either sense. *Continuing* and *continued* are most often seen in government prose as pallid filler words. When tempted to use either, ask yourself whether there is a more effective word or whether you can do without the adjective. *His continuing efforts . . .* (*persistent efforts? fruitless efforts?* Do you need any adjective at all?)
contractions	are not acceptable in formal writing.
contradistinction	See pretentious words.
contrast	See compare, contrast.

C05757260

convince, persuade	are not interchangeable. A person is *convinced of* a need after he has been *persuaded to* recognize the need. *They convinced him of the importance of his participation and persuaded him to join.* If *convince* is followed by *to*, it usually is incorrect.
could, may, might	In the DI these words are used more or less interchangeably in a predictive mode: *Country A could (may, might) invade Country B.* Strictly speaking, however, they are not predictive at all. They are conditionals, and conditionals carry little analytic weight without the anchor of a limiting condition: *Country A **may** invade country B **if** Country B's leader leaves the scene.* Moreover, the three words are not synonymous. *Could* means *would be able to* and should be confined to statements dealing with capability. *Country A **could** invade Country B **if** it achieved air superiority.* Without a limiting condition, *could* carries the connotation that the capability exists but will not be used. *Country A could invade Country B (but we do not think it will).* Both *may* and *might* deal with possibility. For many, *might* carries an implication of greater uncertainty on the part of the writer. Again, the construction provides little enlightenment unless it offers further analysis. *Country A **may** invade Country B **if** President X gets the support of Country C. Country A **might** invade Country B **if** President X can persuade the legislature to back him.* Note the logical constraints imposed by *may* and *might* when they are properly yoked to a limiting condition. The last two examples not only warn about a possible invasion if certain conditions are satisfied; they also tell the reader by implication that the invasion *will not* occur *unless* the conditions are satisfied. If that is not what we want to say, the sentence needs reworking.
council, counsel, consul	*Council* is a noun that refers to a deliberative assembly, its work, or its membership. *Counsel* may be either a noun or a verb; it applies to advice and the person proffering that advice. *Consul* is the title of an officer in the foreign service.
countries, nations	Even La Belle France and Mother Russia are neuter and, like boats, take neuter pronouns (*it, they*). For information on country names and nationality designators, consult *The World Factbook.* (See footnote 1.)
credence, credibility, credulity	*Credence* means belief or mental acceptance. *Credibility* is the quality of being believable; something is *credible* when it is worthy of belief and judged plausible. One receives information that lends *credibility* to a rumor; one gives *credence* to the rumor upon being convinced that the information is valid. One who gives credence too easily is likely to stray over into *credulity*, which is next to gullibility.
crisis	In international affairs, a *crisis* is a situation involving significant actual or potential conflict. Similarly, in a country's domestic politics, reserve the word for major turning points. *Crisis* should not be used to describe lesser disruptions.
criteria	See data, media, criteria, phenomena.
culminate	takes the preposition *in* and is used intransitively. *The concert **culminated in** a sing-along,* not *a sing-along culminated the concert.*
cyberspace	the electronic medium of computer networks in which online communication occurs.

C05757260

dangling participles	See participles.
data, media, criteria, phenomena	are plural and therefore require plural verbs. The singulars are *datum*, *medium*, and (because they come from Greek rather than Latin) *criterion* and *phenomenon*. *Datum* and *medium* rarely have a place in DI writing, but we do use *criterion* and *phenomenon*. One never satisfies a criteria or observes a phenomena. (Note: *Gregg* points to a few instances when *data* and *media* might appropriately take a singular verb in formal writing; see section 1018. In the DI, you still are safer sticking with a plural verb.) The majority of *-um* nouns, of course, appear most often in the singular form. When pluralizing them, the DI generally uses English rather than Latin endings—for example, *forum(s)*, *curriculum(s)*. See also *Gregg*, section 614, for lists of the preferred pluralizations of foreign words.
dates as modifiers	A date should be used adjectivally only if you are distinguishing one event from another. Thus, the *1973 Middle East war* differentiates that conflict from others in other years. In contrast, *the 1901 assassination of President McKinley* and *the 1991 Iraqi invasion of Kuwait* need to be recast because they refer to unique events. Ending the phrases with *in 1901* and *in 1991*, respectively, would be a quick solution, but more creative choices may be available.
decimate	originally meant to select by lot, and then to kill, one out of every 10 in a group of enemies. Now it is used (and overused) to encompass heavy losses of many kinds. Use it only when referring to people, most often military people, and only when actual deaths are involved. Troops and units can be decimated. By extension, a disease can decimate a population. But buildings, tanks, and crops are damaged or destroyed, not decimated; and government economizing does not, one hopes, decimate the relief rolls.
definitely	See very, definitely.
defuse, diffuse	*Defuse* means to remove a fuse (or *fuze*—see the spelling and compounding list in chapter 8) from a weapon or, nonliterally, to deintensify, as in to *defuse a crisis*. *Diffuse* means to spread around, to scatter.
depart, leave	*Depart* requires a preposition; *leave* does not. *She will **depart from** Dulles today and will **leave** London on Tuesday.*
deploy	applies to military movement—in its narrowest definition, to military movement in preparation for battle. Avoid using it in the service of nonmilitary activity.
deprecate, depreciate	*Deprecate* means to express disapproval of something. Besides its application to prices and values, *depreciate* means to belittle something. If you *depreciate* someone's public-speaking skills, you are saying they do not amount to much; if you *deprecate* a speech, you are criticizing it.
developing countries	See less developed countries.
die	is something we all do, even writers who relegate world leaders to a sort of Immortality Club with phrasing like *the President has taken steps to ensure a peaceful transition if he should die.* Reality can be recognized by inserting *in office* or *before the end of his term*, or even by saying simply *when he dies.*
Dietmen	Avoid this term for members of the Japanese legislature; rather, use *Diet members* or *members of the Diet*.

C05757260

different from	is correct; *different than* is not. *Her opinion is different from his.* Better yet, *differs from.*
diffuse	See defuse, diffuse.
dilemma	involves a choice between two equally unsatisfactory courses of action. It is not the proper word to use when you mean simply a predicament or a troublesome decision. *The general had a dilemma: he had to decide whether to surrender or to face almost certain defeat on the battlefield.*
diplomatic corps	comprises all foreign diplomats assigned to a particular city; it is not synonymous with a country's diplomatic (or foreign) service. *Jones, a member of the British Foreign Service since 1983, is currently dean of the diplomatic corps in Ouagadougou.*
disburse, disperse	*Disburse* refers to the release of funds. *The payroll office disbursed the funds on Friday. Disperse* means to scatter. *The air force dispersed all its aircraft on Friday.*
disclose	See reveal, expose, disclose, divulge.
discreet, discrete	*Discreet* means cautious, prudent. *Discrete* means separate, distinct.
disinformation, misinformation	*Disinformation* refers to the deliberate planting of false reports. *Misinformation* equates in meaning but does not carry the same devious connotation.
disinterested, uninterested	*Disinterested* means impartial, not swayed by self-interest. *He attended the conference as a disinterested observer. Uninterested* connotes indifference. *She was uninterested in the film on management techniques.*
disperse	See disburse, disperse.
divulge	See reveal, expose, disclose, divulge.
domestic, indigenous	These words are synonymous in some senses but not all. Modifying *production*, for example, both define it as homegrown, or related to the country concerned. Modifying *animal*, on the other hand, the words diverge in meaning, *domestic* meaning domesticated or tamed, *indigenous* connoting native to or naturally occurring in the country or region concerned. In a phrase like *domestic political opponents* domestic is unnecessary because political opponents are always domestic unless otherwise stipulated; you may not need *political* either.
downbeat	See upbeat, downbeat.
due to	See based on, due to, owing to.
during	See more than, fewer than, over, under, during, while.
each	As a subject, *each* takes a singular verb and singular related pronouns. *Each has his own duties.* If, however, *each* follows a plural subject, the verb is plural. *The President and the Vice President each have an interest in the outcome.*
eager	See anxious, eager.
East Asia	Prefer to Far East.
East-West	*East-West* relations refers to those between the United States and its allies on one side (the West) and the Soviet Union and its allies on the other (the East) between World War II and the breakup of the Soviet Union in 1991.
economic growth	DI publications do not use the term *negative rate of economic growth.* Say instead that gross domestic product (or gross national product) is declining.

C05757260

effect	See affect, effect.
effectuate	See pretentious words.
either	as a subject, takes a singular verb and pronoun. For *either . . . or* constructions, see neither . . . nor.
election	Singular in most cases: usually there is only one election at a time (*national election, general election, presidential election*). But *presidential and legislative elections, municipal elections in several parts of the country.*
e-mail	a way to transmit messages electronically, or a message or messages so transmitted.
e-ticket	a paperless electronic document used for ticketing passengers, usually on an airline.
e-trade	electronic stock trading.
embargo	See boycott, embargo.
emigrate, immigrate, migrate	*Emigrate* is to leave a place permanently and is usually followed by *from*. *Immigrate* is to come to a place permanently and is usually followed by *to*. *Migrate* embraces both. *The doctor **migrated** in the 1950s. He **emigrated from** Sweden. He **immigrated** to Italy.* When a sentence includes both the place of departure and the place of arrival, *immigrate* is usually omitted. *He **emigrated from** Sweden **to** Italy.*
enormity, enormousness	*Enormity* means great wickedness. *The enormity of his attempts to conceal the facts led to his ouster. Enormousness*, the noun form of *enormous*, means great size.
ensure	See assure, ensure, insure.
enthuse	should not be used. (See colloquialisms.)
enunciate	See pretentious words.
equal, equivalent	*Equal* emphasizes precise quantitative likeness. *The three countries have equal numbers of submarines. Equivalent* applies to two or more things that have a qualitative similarity. *The military capabilities of the three countries are roughly equivalent.*
equally, as	Do not use these two words together in the same sentence (*equally as*) when you are making comparisons. Drop *equally* when you are comparing two persons or groups or two things. *He is as ineffective as his predecessor* (not *equally as ineffective*). Drop *as* when you name only one person or group or one thing in the sentence. *They are equally ineffective.*
equivalent	See equal, equivalent.
escalate, accelerate, intensify	*Escalate* means to increase by successive stages. A confrontation can *escalate* from border skirmishes to raids to invasion to all-out war; pensions can *escalate* with annual cost-of-living increases. Do not use *escalate* when you mean simply accelerate or intensify. *His political problems are escalating* is poor usage.
essentially	See fill-ins.
estimated	See about, approximately, around.
etc., and so forth	Rarely appropriate in DI writing. Enumerating the additional instances is usually more helpful.
eternal	See absolutes.

C05757260

even	a notorious floating modifier when used as an adverb. If it ends up in the wrong place it can distort meaning, and proper placement in a sentence requires care. *Even the Secretary was not disturbed by the threats* (and, if anybody would be, it would be he). *The Secretary was not even disturbed by the threats* (in fact, he was more or less unaffected). *The Secretary was not disturbed even by the threats* (much less by other things).
eventuate	See pretentious words.
evidence	is not a synonym for information or reporting. For the most part, avoid the word and get on with the analysis. Such phrases as *available evidence indicates* are essentially meaningless.
evidently	See qualifiers.
evince	See pretentious words.
exacerbate	Avoid this word; try *weaken*, *worsen*, *heighten*, *intensify*, *widen*, or *deepen* instead. (See pretentious words.)
exile	Except for diplomatic exile, a person is exiled *from* a country, not *to* a country. (See asylee.)
expect	See anticipate, expect.
expose	See reveal, expose, disclose, divulge.
extra words	See verbal overkill.
fake analysis	Phrases like the following betray sloppy thinking and detract from any serious presentation: anything can happen it is not possible to predict further developments are to be expected it is too early to tell it remains to be seen only the future will tell
Far East	See East Asia.
farther, further	*Farther* refers to physical or literal distance; *further* conveys the notion of additional degree, time, or quantity. A person hits a ball *farther*; he pursues a subject *further*.
fatal	See absolutes.
fear	Use only to describe a strong emotion, not a vague concern, an uneasy feeling, or an ill-defined skepticism.
feel	carries tricky emotional overtones. If a piece of analysis says the leaders of another country *feel* a certain way, the policymaking reader may conclude that the writer is identifying with those leaders—and perhaps criticizing the policymaker. You are on safer ground with *calculate* or *estimate*, whose relationship to the policymaker's operational world is unambiguous.
fewer, less	*Fewer* applies to numbers or units considered individually, *less* to quantities taken collectively. *Fewer dollars, less money; fewer months, less time; fewer miles, less distance.*
fewer than	See more than, fewer than, over, under, during, while.

C05757260

fill-ins	Reserve words and phrases like the following for those few occasions when they are really needed: *also, as noted, at the same time, basically, in connection with, indeed, in this context, of course, on the other hand, essentially, significantly, with reference to.* (See verbal overkill and fake analysis.)
finalize	See *-ize* words.
fiscal, monetary	*Fiscal* applies to a budget, *monetary* to currency.
fiscal year	See section 2.20d and footnote 18.
flagrant	See blatant, flagrant.
flammable, inflammable	*Flammable* is the preferred word when you are describing a combustible substance. However, a situation or a temperament is *inflammable*, not *flammable*.
flaunt, flout	*Flaunt* means to display ostentatiously; *flout* means to disobey openly, to treat the rules with contempt. *The starlet flaunted her physical assets in hopes of getting a good role. George flouted community association rules when he built a glass house.*
flounder, founder	As a verb, *flounder* means to stumble about clumsily; *founder* means to go lame (as with horses), to sink (as with boats), to collapse, or to fail utterly.
flout	See flaunt, flout.
forceful, forcible	*Forceful* means vigorous, strong, effective. If you want to connote the exertion of force, use *forcible*.
forego, forgo	*Forego* is to go before in time or place. Instead of using it we would usually write *go before* or *precede*. If you are doing without something, *forgo* the *e*.
foreword, forward	*Foreword* is the name for something written, usually by someone other than the author, to appear at the beginning of an article or book—whose author ordinarily writes the *preface*. Do not confuse with *forward*, which means near, at, or moving toward the front.
forgo	See forego, forgo.
former	See latter, former.
forthcoming	See upcoming, forthcoming, coming.
fortuitous, fortunate	*Fortuitous* describes something that happens by chance or accident. Do not confuse with *fortunate*. A *fortuitous* event can be either fortunate or unfortunate.
fortunately	See subjective words.
forward	See foreword, forward.
founder	See flounder, founder.
fractions	*One-half, one-third*, and the like are used when the fractions are precise. When precision is lacking, use *a half, a third*, and so forth.
Free World	is at best an imprecise designation. Use only in quoted matter.
fulsome	means offensive or loathsome, not complete or full.
further	See farther, further.

C05757260

gender	The English language is steadily acquiring new terms to counter the predominance of masculine forms: *anchor, newscaster, flight attendant, business person, layperson, chairperson, chair, mail carrier, Diet member, member of Congress, firefighter, police officer.* No completely satisfactory substitute yet exists for the pronouns *he, she, his, her,* and *him.* The best solution is to use the plural: *All representatives* (instead of *each representative*) *must cast their ballots* (rather than *his or her ballot*). If this is impractical, stick with *one* or *he or she* until someone comes up with a better idea.
gibe, jibe	A *gibe* is a taunt or sneer. *Jibe* is the act of shifting sails. Informally, to *jibe with* means to agree.
hackneyed phrases	Phrases like the following have been overused to the point of becoming meaningless cliches. Note the number of tired metaphors, and of equally tired adjectives and adverbs, in this list. a likely scenario assume the mantle of office bottom line broad outlines of the case considered judgment dire straits far-reaching implications geared up for action generates further disagreement hammer out a compromise heightened tensions hit the campaign trail keep their options open net effect of the decision nonstarters potential chokepoint refurbish his tarnished image triggered new developments viable alternatives widely held perception
hanged, hung	*Hanged* is the past tense of *hang* when referring to an execution; *hung* is the proper past tense in all other meanings.
hardly	has the force of a negative (*They had hardly any* [not no] *response.*); be careful to avoid an inadvertent double negative (*does not hardly*).
he/him/his	See gender.
historic, historical	*Historic* means famous in history. (*Gettysburg was the scene of a historic battle.*) *Historical* refers to general events of the past. (*She presented a historical review of the Middle East.*)
HIV/AIDS	Use *HIV/AIDS* when discussing the disease in terms of its social, economic, and political impacts. Use *HIV* by itself when discussing the human immunodeficiency virus or HIV prevalence rates. Use *AIDS* by itself when discussing mortality rates or the prevalence of AIDS-related illnesses, which follow HIV infection.
Hong Kong	See China, Taiwan.
hopefully	means with hope. Avoid using the word in the sense of *it is to be hoped, in the hope of,* or *let us hope.* (See subjective words.)
however	See and, but, however.
HTML	abbreviation for hypertext markup language.
hung	See hanged, hung.
hyperlink	a word, phrase, or image in a document that, when clicked on with a computer mouse, will take the user to a point in another document or another place in the same one. Hyperlinks are most common in webpages but can also be found in other hypertext documents.

C05757260

hypertext	a computer-based text retrieval system that enables a user to access particular locations in webpages or other electronic documents by clicking on hyperlinks.
hypertext markup language	a special language used to write pages and sites for the Internet.
immigrate	See emigrate, immigrate, migrate.
impact	Verbs such as *affect* or *hit* are preferable to *impact*. If you do use it as a verb, you should always use it intransitively. A missile does not impact a target; it *impacts* ***on*** a target or ***in*** a target area.
impel	See compel, impel, propel.
impending	See pending, impending.
imply, infer	*Implying* occurs when the writer or the speaker states something indirectly. *Inferring* occurs when the reader or the hearer draws a conclusion on the basis of indirect evidence.
important	When you want to introduce a second and more worthy consideration, use *more important* rather than *more importantly. Retail sales were up last month; more important, interest rates fell for the first time this year.* Similarly, use *most important*, rather than *most importantly*, in a context requiring the superlative. (See relevant, important.)
in addition to	See together with.
incessant	See absolutes.
incident, incidence	*Incident* applies to a minor occurrence or an event of only momentary importance. *A border incident took place yesterday when a small patrol entered the neutral zone. Incident* is not the proper word to use in cases of major conflict or catastrophe. An invasion is not an incident; neither is an earthquake. Be careful also to distinguish between *incidents* (occurrences) of civil unrest and the *incidence* (frequency) of civil unrest.
include	See comprise, compose, include.
in connection with	See fill-ins.
incredible, incredulous	*Incredible* means not believable; *incredulous* means skeptical. *His explanation was incredible; she gave him an incredulous stare.* (See credence, credibility, credulity.)
indeed	See fill-ins.
indicate	denotes a conclusion based on specific information. (*The massing of troops indicates that a battle is imminent.*) Do not use when you mean announce, reveal, say, or the like.
indigenous	See domestic, indigenous.
individual	is not a desirable synonym for person. Use it when you need to make a distinction between one person and a group: *The police are searching for the group or individual responsible.*
infer	See imply, infer.
infinitives	No one insists any more that all split infinitives must be shunned. Do, however, make sure that clarity or the flow of the sentence demands the split. If you are not sure, do not split.
inflammable	See flammable, inflammable.
infrastructure	is a legitimate word, but use it selectively.

C05757260

injuries, casualties	are suffered or sustained, not received or taken. (See casualties.)
in order to	often begins an adverbial phrase in the middle of a sentence, but at the beginning of the sentence you can usually do without the first two words. *He brought his lunch in a bag in order to save money.* But: *To save money, he brought his lunch in a bag.* Be careful of negative verbs followed by phrases beginning with *in order to* or *because of*. *He did not go out to lunch in order to save money* and *He did not go out to lunch because he wanted to save money* are both ambiguous, leading the reader to ask *then why did he go out to lunch?* The problem is usually solved by putting the *in order to* or *because of* phrase at the beginning of the sentence. A better plan is to rephrase and change the negative verb to a positive one with negative connotations. *He avoided restaurant lunches in order to (because he wanted to) save money.*
insure	See assure, ensure, insure.
intensify	See escalate, accelerate, intensify.
inter, intra	*Inter* indicates something that is between or among or together; *intra*, a prefix, means within. *International competition* (competition among nations), *intramural competition* (competition within an institution).
Internet	a communications network that connects computer networks and organizational computer facilities around the world.
interestingly	See hopefully and subjective words.
in terms of	a pretentious and often unnecessary phrase that can usually be deleted along with what it introduces—or at least replaced by *at*, *in*, *for*, or *by*.
in this context	See fill-ins.
intra	See inter, intra.
ironically	involves a sharp contrast between the apparent and the expected. Do not use *ironically* when referring to a trivial oddity. *Ironically, the senator, a professed atheist, goes to church every Sunday* is fine. *Ironically, the senator wears tennis shoes to church* is not.
Islam	the religious faith of Muslims. (See Muslims.)
issues	are resolved, not solved.
its, it's	*Its* is the possessive of the personal pronoun *it*. *It's* is the contraction of *it is*.
-*ize* words	appeal to many misguided writers. Seek synonyms for *conceptualize*, *finalize*, *optimize*, *prioritize*, and their ilk—a recent, particularly egregious example is *rumorize*.
jibe	See gibe, jibe.
joint	See combined, joint.
kind	See type.
kudos	is a Greek word meaning glory. In English it means praise or credit for an outstanding achievement. In both Greek and English it is singular and has no plural. Kudos goes to someone, kudos never go to anyone.
lack	as a transitive verb, is not followed by *for*. *The French do not lack* (omit *for*) *a sense of their grandeur.*
laid, lain	See lay, lie.

C05757260

late	When referring to someone who is deceased use *the* before the word *late. He succeeded the late President Smith*, not *He succeeded late President Smith.*
Latin abbreviations	See section 3.11.
latter, former	Both words refer to one of only two persons or things or collections. In a series of three or more, repeat the subject referred to or, if repetition is a problem, use *last-named* (or *first-named*).
lay, lie	*Lay* means to put, place, or prepare. It always takes a direct object. Both the past tense and the past participle are *laid*. (*The President ordered his aide to lay a wreath at the unknown soldier's tomb. The aide laid the wreath two hours later. Yesterday a wreath was laid by the defense minister.*) *Lie* means to recline or be situated; it never takes a direct object. Confusion arises because the past tense of *lie* is *lay* (the past participle is *lain*). *He lies* (or *lay*, or *has lain*) *down.*
lead, led	*Lead* (rhymes with *reed*) means to go ahead of; *led* is its past tense and participle. *Lead* (rhymes with *red*) is the metal.
leave	See depart, leave.
led	See lead, led.
LDCs	See less developed countries.
lend, loan	Use *lend* when you need a verb; *loan* as a verb is colloquial.
less	See fewer, less.
less developed countries (LDCs)	Developing countries is preferred. (Do not say "lesser developed countries." (See Third World.)
liable	See likely.
lie	See lay, lie.
like, as	Both *like* and *as* can properly be used in making comparisons, but *like*, a preposition, governs nouns, pronouns, and incomplete clauses, while *as*, a conjunction, governs full clauses. *He behaves **like** a child. He behaves as a child **would behave**.* Sometimes you can omit the verb in the clause after *as*. In this case the verb is understood: *When I was a child, I thought as a child [would think].* Leaving out the verb will often produce smoother prose, but you need to ensure that the omission does not sound stilted or foster ambiguity.
likely	As an adverb, *likely* must be preceded by a qualifier like *quite, more, most,* or *very*. (*She will very likely win the election.*) As an adjective, it needs no qualifier. *He is likely to blow the operation* (not *He will likely blow the operation*). *She is a likely candidate.* *Apt* and *liable* sometimes crop up as synonyms for *likely*. Neither, however, has the same predictive connotation. *Apt* suggests a tendency, usually unfortunate: *He is apt to lie at the drop of a hat. Liable* connotes vulnerability rather than probability: *He is liable to arrest.*
likewise	is an adverb, not a conjunction, and cannot properly be used as a substitute for *and*.
links	See relations, ties, links.
loan	See lend, loan.

C05757260

loath, loathe, loathsome	*Loath*, an adjective, means reluctant. *He is loath to break the agreement. Loathe*, a verb, means to dislike intensely. *He loathed the long train ride. Loathsome* means abhorrent or repulsive. *The bloody murder was loathsome.*
logistic	in the sense of moving, quartering, and supplying troops, is the adjective; *logistics* is the noun. *Logistical* is discouraged.
lower	is both the comparative degree of the positive adjective *low* (superlative *lowest*) and the antonym of the positive adjective *upper*, which, like the antonymous *lower*, has no comparative or superlative. This consideration is significant only when deciding whether to put a hyphen after *lower* (as always after upper) in a unit modifier. (See footnote 34.)
majority	means more than 50 percent. *Majority* takes a singular verb when the sense is oneness. *The majority of the Senate supports the measure.* When the individuality of the members is stressed, the verb is plural. *The majority of the Senators are from rural districts.* When no one has achieved a majority, someone still will have a plurality (the group that, while falling short of a majority, is larger than any other). Neither *majority* nor *plurality* can be modified by terms like "one-vote" or "one-seat." (See plurality, consensus, and margin.)
margin	*Margin*, not *majority*, is what you call the number of legislative seats by which the majority exceeds the minority. *The Prime Minister's party, with 220 seats, has a 20-seat margin over the opposition's 200 seats.* (See majority and plurality.)
masterful, masterly	Careful writers distinguish between these adjectives. A *masterful* person is overpowering, overbearing, or imperious; he or she is capable of mastering others. A virtuoso performance is *masterly*, the work of a master artist.
material, materiel	*Material* is any substance from which something is made. *Materiel* refers to equipment, especially military supplies.
may	See could, may, might.
maximum	See absolutes.
meaningful	is a vacuous word that is too often used by analysts to mean significant. *The results of the meeting were meaningful* is meaningless.
meantime, meanwhile	The former serves mainly as a noun. *In the meantime, he waited.* You can express the same idea in fewer words by using *meanwhile. Meanwhile, he waited.*
measures, units of	See sections 2.21, 2.22, and 3.15 as well as the conversion chart on page 25.
media	See data, media, criteria, phenomena.
mercifully	See hopefully and subjective words.
metaphors	are figures of speech used to describe something in terms of something else. Approach them with caution. Even experienced writers, seeking to add a flourish to their prose, sometimes make the mistake of mixing unrelated metaphors in a single sentence. One example will serve as a warning: *This slap on the wrist came on the heels of the President's trip.*
Middle East	is preferred over *Near East* and *Mideast* and, as an adjective form, is as acceptable as *Middle Eastern.*
might	See could, may, might.
migrate	See emigrate, immigrate, migrate.

C05757260

military	as a noun can be singular or plural—be consistent within a paper. If in doubt, consider it plural.
militate	See mitigate, militate.
minimum	See absolutes.
misinformation	See disinformation, misinformation.
mitigate, militate	*Mitigate* means to moderate or alleviate. *He did what he could to mitigate his minister's wrath. Militate* means to have weight or effect, either for or against but more frequently the latter. *The facts militate against his interpretation.*
Mod	is an abbreviation-derived jargon word (capitalized) that is acceptable in formal writing about weapons to designate different versions (models) of a weapon system: *the SS-II Mod 2, all Mods of the SS-11.*
modifiers, floating	See also, even, and only.
momentarily	applies to a fleeting instant; it does not mean *at any moment.*
monetary	See fiscal, monetary.
more than, fewer than, over, under, during, while	*Over* and *under* describe location; use *more than* and *fewer than* with numbers. For time, use *during, from,* or *while* except when the time reference is indefinite or vague. *The system has improved during the past year. Inflation is up 10 percent from a year ago.* But: *Relations between the two nations have improved over time. Living conditions have changed over the centuries.*
most, mostly, almost	*Most* is not a proper substitute for *almost* in formal writing. *Almost every one,* not *most everyone. Most,* not *mostly,* is the correct word when you mean to the greatest degree. *Those most affected,* not *those mostly affected.*
Muhammad, Mohammed	See Muslims.
Muslims	are adherents of Islam. They are followers of the prophet *Muhammad,* not *Mohammed.*
nations	See countries, nations.
naturally	See subjective words.
neither . . . nor	When the elements in a *neither . . . nor* construction are singular, the verb is singular; when they are plural, the verb is plural. When the elements differ in number, the verb is determined by the number of the nearer (or nearest) element. *Neither Bob nor Joe is going to the conference. Neither the French nor the Italians are attending this year. Neither Bob nor his neighbors are planting gardens.*
never	Think before writing that something has *never* happened: are you sure that there has not been even one occurrence in all of history? (See absolutes.)
newly industrializing countries or economies	See Third World.
noisome	means either offensive and disgusting, like a *noisome odor,* or harmful; it has nothing to do with noise.
nonaligned countries	do not belong to alliances of West or East, but they often are not practitioners of neutrality, like Switzerland. Instead, they are advocates or opponents of selective policies of both sides. Most of them are grouped in the Nonaligned Movement.

C05757260

nonconventional, unconventional	*Nonconventional* refers to high-tech weaponry short of nuclear explosives. *Fuel-air bombs are effective nonconventional weapons. Unconventional* means not bound by convention. *Shirley Chisholm was an unconventional woman.*
none	is singular when used in the sense of no one or not one. *None of those delegates was elected party chair.* If *none* applies to more than one person or thing, use a plural verb. *None of those delegates were expected to be nominated.* The object of the *of* phrase following *none* is usually the best indicator of whether *none* is singular or plural. *None of the cake was eaten. None of the cookies were eaten.*
North-South	refers in international politics to relations between industrialized and developing nations. *North* and *South* also can mean the two Koreas.
not only . . . but also	In *not only . . . but also* constructions, be sure that the parts of the sentence are parallel. *He is aware not only of the political consequences but also of the military dangers. He not only is aware of the political consequences but also recognizes the military dangers.* (See parallelism.)
number of	a phrase that is too imprecise in some contexts. *A number of troops were killed.* (If you do not know how many, say *an unknown number.*) *Number of*, when preceded by *the*, usually takes a singular verb. *The number of mistakes is small.* When preceded by *a*, *number of* generally takes a plural verb and means several. *A number of the mistakes were due to carelessness.*
numerical order designators	*First, second, third*, and other designators of numerical order are preferred to *firstly, secondly, thirdly*, and the rest.
obviously	See qualifiers.
of	turns up as an unnecessary hanger-on in conjunction with words like *outside* and *off*. The latter are prepositions in their own right and need no reinforcement. One gets *off* one's high horse or *off* the fence, not *off of* them. *Out of*, on the other hand, cannot do without *of*.
of course	See fill-ins.
offload	Use the less pretentious word *unload*.
offput	is not a word. If you are offended, you are put off.
older, younger	refer to only two persons or things or collections of either; *oldest* and *youngest* are the proper adjectives when more than two are involved.
on	See upon, on.
on board	See aboard, on board.
one	has a way of intruding into a sentence. *The congress was an obstreperous one* reads better as *The congress was obstreperous.* In constructions where *one* is the subject, use a singular verb. *One in every 10 senators is uncommitted.* But beware: *He is one of those who were* (not *was*) *uncommitted*; in this construction, *those who*, not *one*, controls the verb.
only	is a floating modifier that can be attached to almost any word in a sentence. Anchor it carefully to ensure that you are conveying the meaning you want to convey. *Even, primarily*, and *mainly* pose similar challenges. *Only he attended the meeting.* (The others did not show up.) *He only attended the meeting.* (He did not make a speech.) *He attended only the meeting.* (He skipped the dinner.)
on the other hand	See fill-ins.

C05757260

opine	See pretentious words.
opposition, opposed, opponent	*Opposition* takes the preposition *to*, as does *opposed*; *opponent* is followed by *of*.
optimize	See *-ize* words.
oral	See verbal, oral.
organ, organism, organization	An *organ* is a musical instrument, a part of the body, or a medium of communication. An *organism* is a living plant or animal. An *organization* is a society or association or business consisting of people united in some way for a specific purpose. Do not use these three words interchangeably.
over	See more than, fewer than, over, under, during, while.
owing to	See based on, due to, owing to.
parallelism	To make a parallel clear, repeat a preposition, an article, the *to* of the infinitive, or the introductory word of a phrase or clause. *Technology **to boost** production and **to exploit** natural resources.*
parameter, perimeter	*Parameter* is a legitimate word for mathematicians and scientists, but it is easily misused, for example when *dimension* or *characteristic* would be better. Save *parameter* for the times you really mean a limiting factor, especially when the thing limited is abstract rather than concrete. Do not confuse with *perimeter*, which is the outer edge of a physical area; the emphasis is on shape and extent rather than on the limits being set.
parliament	Use only if it is the actual name of the body. Otherwise, use *legislature* or the precise name: *National Assembly, Diet, Congress*.
parliamentarian	A *parliamentarian* is an expert on parliamentary rules and procedures, not a member of parliament. People who pass laws are *legislators*. Or use the specific title of the legislators in question (*senator, delegate*). Refer to a Japanese legislator as a *Diet member*, not a *Dietman*.
participles	must not be left dangling, where they often lead to ambiguity and illogicality. *Turning the corner, the view was much changed* is clearly wrong. The sentence should read: *Turning the corner, he found the view much changed.* General guide: participles are adjectives, so watch what they modify and keep them close by. (A memorable dangler from a travel brochure: *You can see the Statue of Liberty sailing into New York harbor.*)
party	should be applied to a person only in telephone and legal contexts. For guidance on when to capitalize party, see section 1.12.
passive voice	See active voice.
PC	means personal computer.
pending, impending	*Pending* means yet to come or not yet settled; *impending* adds a hint of threat or menace.
people, persons, personnel	The word *people* usually applies to sizable groups imprecisely enumerated (*several thousand people showed up for the demonstration*), *persons* to smaller, usually explicit numbers (*217 persons were interviewed, nine persons were hired*). *Personnel* is a collective noun (usually plural) referring to employees of an organization or to members of the armed services as a group. Do not use it as a substitute for *people* or *persons*. *Many people applied. Three persons remain in the running. All company personnel have to be trained.*
perimeter	See parameter, perimeter.

C05757260

personnel	See people, persons, personnel.
persons	See people, persons, personnel.
persuade	See convince, persuade.
phenomena	See data, media, criteria, phenomena.
plurality	The largest single group (of votes, opinions, and the like) when no one has a majority. (See majority and consensus.)
plurals of *-um* nouns	To pluralize nouns that began life as neuter Latin words (ending in *-um*), the DI generally adds s rather than following the Latin rules: *forums* rather than *fora*, for instance. See *Gregg*, section 614 for lists of the preferred pluralizations of foreign words. For Latin (and Greek) words that appear most commonly in the plural, see data, media, criteria, phenomena.
possible	See probable, possible.
possibly	See could, may, might.
practicable, practical	*Practicable* means capable of being carried out in action; *practical* connotes useful. *It was practicable to build a highway* (it could be done), *but it was not practical* (because it would receive little use).
precipitate, precipitant, precipitous	*Precipitate* applies to rash or hasty human actions. *Precipitant* is used in the same general sense, but with stress on rushing or falling headlong. *Precipitous* refers to physical steepness.
preclude, prevent	Generally, *preclude* applies to events as its object, *prevent* to persons. *The bad weather precludes a departure today. The bad weather prevents me from leaving today.*
predominant, predominate	*Predominant* is the adjective; *predominate* is the verb. *His predominant influence is evident in party pronouncements. His views predominated in party pronouncements.*
preface	See foreword, forward.
presently	means in a short time, not at present, currently, or now.
pressure	As a verb, *press* is preferred.
pretentious words	Avoid words like *apprise*, *citizenry*, *contradistinction*, *effectuate*, *enunciate*, *eventuate*, *evince*, and *opine* and use simpler synonyms.
prevent	See preclude, prevent.
primarily	See only.
principal, principle	*Principal* is an adjective meaning most important, or a noun referring to a leader or to money. *Principle* is a noun only. It means basic truth, rule of conduct, fundamental law; *principled* is its related adjective.
prioritize	See *-ize* words.
prior to, before	*Prior to* is appropriate when a notion of requirement is involved. *The law must be passed prior to 1 July.* Otherwise, *before* is the better word.
pristine	describes something that is in its original condition, or primitive. It should not be used as a synonym for *new* or *clean*.
probable, possible	Analysts, particularly military analysts, are tempted to use *probable* or *possible* when *what probably is* or *what possibly is* is the proper formulation: *the attache saw what probably is a missile*, not *the attache saw a probable missile*. Could the officer have seen an improbable (or impossible!) missile?

C05757260

propel	See compel, impel, propel.
protagonist	the leading or principal character, not necessarily a champion of an idea or course of action. *Chief protagonist* is redundant. (See redundancies.)
proved, proven	*Proved* is preferred as the participle, *proven* as the adjective except for energy contexts such as *proved reserves* or *proved fields.*
purportedly	See qualifiers.
qualifiers	Do not weaken judgments supported by direct evidence by inserting words like *apparently, evidently, seemingly, purportedly.* Conversely, you cannot strengthen judgments based on weak evidence by using words like *obviously, undoubtedly, clearly.* These adverbs are an instance of modifiers that do little or no work. Often you will find adjectives that are open to the same criticism. (See subjective words and the discussion of adjectives and adverbs in section 9.3.)
reason, because	After an opening like *the reason for,* the clause containing the reason should begin with *that,* not *because* or *why. The reason for his failure was that he was ill.* Better still would be *He failed because he was ill.*
rebound	See redound, rebound.
rebut, refute	If you *rebut* a point of view, you argue to the contrary; if you *refute* a point of view, you win the argument. New evidence can sometimes *refute* an earlier report or a piece of intelligence analysis; otherwise, *rebut* is generally the appropriate word in DI writing.
redound, rebound	*Redound* means to have an effect. *The plan redounds to his credit. Rebound* means to bounce back. *The economy rebounded last month.*

C05757260

redundancies are phrases that succumb to repetition. They expose bad habits or, worse, carelessness. The author who writes *It is a true fact that they are offering free gifts* is not watching his words. Below are selected examples observed over the years by the "redundancy police":

accidentally misfired	military troops
adequate enough	mutual cooperation
advance reservation	naval marines
as has been mentioned previously	old adage
both agree	own personal
build a new house	past career
bureaucratic redtape	past history
chief mainstay	personal autograph
church seminarians	personal charisma
close confidant	past custom
close personal friend	personal popularity
combine together	piecemeal on a piece basis
completely surrounded	professional career
consensus of opinion	rally together
could possibly	relocate elsewhere
current status	separate isolation cells
established tradition	separate out
exact same	share together
exile abroad	single greatest
exports beyond their borders	single most
eyewitness at the scene	small cottage
first began	small village
final vestiges	sound logic
foreign imports	still continues
free gift	still remains
future potential	still retains
future prospects	sufficient enough
future successor	sum total
historical monuments	tandem couple
historical past	temporary respite
holy shrine	temporary suspension
in close proximity	thin veneer
interact together	top business magnate
joint coalition	true facts
little booklet	trusted confidant
live studio audience	underlying premise
long litany	unexpected surprise
major crisis	unite together
major milestone	well-known reputation
meet personally	young baby

refute See rebut, refute.

regard See consider, regard.

regime has a disparaging connotation and should not be used when referring to democratically elected governments or, generally, to governments friendly to the United States.

regretfully See subjective words.

regrettably See subjective words.

C05757260

relations, ties, links	*Relations* should be followed by the preposition *with. This country is about to establish relations* ***with*** *that one. Ties* (or *links*) should be followed by *to. That country has ties* (*links*) ***to*** *this one.*
relatively, comparatively	*Relatively* should be used only when the intended comparison can be easily grasped. *He has a relatively heavy workload* has, by itself, little meaning. Relative to what? Last year? Last week? His colleagues? The same stricture applies to *comparatively.* (See compare, contrast.)
relevant, important	*Relevant* refers to something that has a bearing on the matter at hand and should be followed by *to. His speech was relevant* ***to*** *the problem.* Do not use *relevant* when you mean *important.*
reluctant, reticent	*Reluctant* means hesitant, unwilling to act and should not be confused with *reticent*, which means uncommunicative or reserved.
represent	means to depict or symbolize, not constitute. *The red line on the map represents the boundary between France and Germany* is proper usage. *South African gold represents most of the world's output* is not.
reticent	See reluctant, reticent.
reveal, expose, disclose, divulge	*Reveal* implies an unveiling of something not previously known; *expose*, to the making public of something reprehensible; *disclose*, to the making public of something that has been private; *divulge*, to the making public of something that has been secret.
Russian submarines	See section 7.6e for information on Russian submarine designators and footnote 39 for a list of submarine names.
sanction	as a noun, has meanings that are almost in opposition: from approval and encouragement to penalty and coercion. It should therefore be used only when the context makes its meaning clear. As a verb, *sanction* picks up only the approval aspect of the noun.
sanguinary, sanguine	*Sanguinary* means accompanied by carnage or bloodthirsty. *Sanguine* means ruddy or optimistic and cheerful.
seemingly	See qualifiers.
semiannual	See biannual, biennial, semiannual.
shall, will	Grammar purists tell us there are fine distinctions to be made between *shall* and *will.* Today, these distinctions are not closely observed even in serious writing. For devotees of grammatical history, the distinctions are: in the first person, *shall* denotes simple futurity; in the second and third persons, *shall* denotes promise, inevitability, command, or compulsion. *Will* is the other way around. In our publications, use *will.* The same distinctions are true for *should* and *would.*
she/her/hers	See gender.
ship	See boat, ship.
should	Except when used to connote moral obligation, *should* is a fuzzy word. Use more precise language in presenting intelligence judgments. (See shall, will.)
significantly	See fill-ins.
single	See redundancies.
situation	See condition, situation, activity.

C05757260

smartphone	a mobile phone that offers advanced capabilities, often with PC-like functionality.
sort	See type.
spam	unsolicited e-mail, sent indiscriminately to multiple mailing lists, individuals, or newsgroups; as a verb it means to send such junk e-mail.
strategy, tactics	*Strategy* is an overall plan of action, usually military action; *tactics* are specific plans or maneuvers designed to advance strategic goals. *Nuclear weapons can be included in both strategic and tactical planning.*
subjective words	The DI is not in the business of deciding whether something is good or bad; therefore, words like *fortunately* and *unfortunately* should not appear in DI writing. Discerning the subjective overtones sometimes requires a keen ear: *naturally*, for example, may give the reader a sense of being talked down to. *Regretfully, regrettably, mercifully, interestingly*, and other subjective words are vulnerable to the same kind of abuse. Stick with terms that focus on the world of our operational readers: motives and the actions that flow from them, choices, strengths and weaknesses, capabilities and intentions. Most of the time you can find a better way to express the thought. (See hopefully, feel, regime, and upbeat, downbeat.)
surveil	If you must use it, confine it to the military or intelligence sense.
table	As a verb, *table* can mean to put a bill aside. In British usage it can also mean to introduce a bill for consideration. Use the word only when the meaning is unmistakable.
tactics	See strategy, tactics.
Taiwan	See China, Taiwan.
technical terms	For the most part, DI analysts are writing for generalists. Generalists may have deep expertise in specific areas, such as missile technology or a country's tribal politics; nonetheless, the analyst's goal is to do away with the specialist's jargon and to put everything into layman's language. If your audience consists of just a few people who thoroughly understand the subject (or who cannot be trusted to follow the reasoning without jargon to guide them), by all means sprinkle your piece with technical terms. Most of the time, however, write for the nonexpert.
that, which	*That*, as a relative pronoun, introduces clauses containing information necessary for the full comprehension of a sentence. Such defining or restrictive clauses are not set off by commas. *The report that was on the general's desk needed revision* suggests that there were several reports, but only the one on the general's desk needed to be revised. *Which* introduces clauses that are not essential to the meaning of a sentence. These nonrestrictive clauses are set off by commas. *The report, which was on the general's desk, needed revision* suggests that there was a report in need of revision, and it happened to be on the general's desk. The distinction between the two types of clauses is not always easy to make. In crisp prose, *that* can, and probably should, often be deleted. *The information that he needs* goes faster as *the information he needs.* When persons are involved the pronoun is *who*, whether the clause is restrictive or nonrestrictive.

C05757260

there is, there are	Try to avoid using *there is* or *there are* to start a sentence; look for a more illuminating verb than *is*. If you do lead off with such a construction, be sure the number of the verb agrees with the subject that follows. Acceptable but minimally informative: *There is an artillery regiment on the border.* Better: *The government has moved an artillery regiment to the border.* Grammatically correct but hard to comprehend: *There are a headquarters building for each unit and numerous other structures.* Better: *The army has built a headquarters building for each unit as well as numerous other structures.*
Third World	refers to the economically underdeveloped or developing nations in Africa, Asia, and Latin America. These nations are also known as *less developed countries*, or *LDCs*, or, preferably, *developing countries*. Some countries within the Third World are more advanced than the others; they are called *newly industrializing countries*, or *NICs*. Among the NICs are Singapore and South Korea. When a reference to such a grouping embraces "noncountries" such as Hong Kong and Taiwan, the more appropriate term is *newly industrializing economies* (avoid the abbreviation *NIEs*). Note that we capitalize (for clarity) the abbreviations *LDC* and *NIC* but not the literal terms they stand for; however, we do capitalize (for distinction or contrast) certain nonliteral terms like *Third World, Cold War, North-South, East-West,* and, if unavoidable, *Free World.*
this	Often used as a demonstrative pronoun, representing in a single word a situation or a thought expressed earlier. Be sure, however, that *this* has a clear antecedent; if it does not, either rework the sentence to make the antecedent unmistakable (proximity is the best solution), add the appropriate word or words after *this*, or devise a formulation that makes the connection without using *this*.
ties	See relations, ties, links.
together with	is often found immediately after the subject of a sentence. *Together with* phrases do not affect the verb. *Lower productivity, together with higher interest rates, is hurting the economy.* The same is true of *along with, as well as, in addition to,* and *like*.
too	in the sense of *very*, is not acceptable in formal writing; in the sense of *excessively*, however, it is likely to be the best word.
torturous, tortuous	*Torturous* means extremely painful. *Tortuous* means twisting, devious, or highly complex. *Many accidents have occurred on the tortuous mountain road.*
traditions	long-established practices or elements of culture passed down from generation to generation. Do not use to describe practices developed over the past few years.
try	is followed by *to*, not *and*.
type	As a noun, *type* should be followed by *of* in constructions like *that type of plane* or, in the plural, *those types of planes*. Never omit the preposition. The same holds true for *kind* and *sort*.
ultimate	See absolutes.
unconventional	See nonconventional, unconventional.
under	See more than, fewer than, over, under, during, while.
undoubtedly	See qualifiers.

C05757260

unfortunately	See subjective words.
uninterested	See disinterested, uninterested.
unique	See absolutes.
universal	See absolutes.
unprecedented	See absolutes.
upbeat, downbeat	should be confined to use as musical terms. In formal prose they sound overly colloquial and may be value-laden as well. (See subjective words.)
upcoming, forthcoming, coming	When you are looking for an adjective meaning *to take place later*, try *forthcoming* or just *coming* instead of *upcoming*. Better yet, give a clue as to when: tomorrow, next week, next month.
upon, on	In almost all cases you can substitute *on* for *upon* as a preposition (*bearing on the case*), but not as an adverb (*he felt overworked and put upon*).
URL	is the abbreviation for uniform resource locator, a protocol for specifying addresses on the Internet.
US	The preferred adjective for our country is *US*, not American. *United States* (written out) is the preferred noun, but *the US* may be used when repetition or space is a problem. You can also use *Washington* as the noun when it is clear that you are referring to the US Government, not the capital city. Never use *we*, *us*, *our*, or *ours* when referring to the United States. *US* (not *our*) *allies disagree*. The first person plural is reserved in intelligence writing for the analysts/estimators/writers themselves.
usage, use	*Usage* means either a manner of use, as in *rough usage*, or a habitual practice creating a standard, as in *good English usage*.
variety of	takes a plural verb when conveying the sense of several or various. *A variety of sources report high casualties.* When the emphasis is on the singular *variety*, rather than on the plural object of *of*, the verb is singular. *A variety of meals is better than eating the same food all the time.*
verbal, oral	A *verbal* message can be either spoken or written. An *oral* message is always spoken.
verbal overkill	Extra words are burdensome to the reader and should be avoided. Here are some samples of verbal overkill and a simple substitute for each: are in a position to (can) at that point in time (then) at the present time (now) currently in progress (going on) due to the fact that (because) in regard to (about) in the event that (if) in the near future (soon) it is highly likely that (probably) it is possible that (may) never before in the past (never) subsequent to (after) the majority of (most) the manner in which (how) whether or not (whether) (See fill-ins and redundancies.)
very, definitely	Use these and other ambiguous intensifiers sparingly.
viable	denotes the capacity of a newly created organism to maintain a separate existence. It is often mistakenly used when *durable*, *lasting*, *workable*, *effective*, or *practical* is the appropriate adjective.
vicious circle	is correct. Although *vicious cycle* is now seen almost as often, it is not accepted in DI writing.

C05757260

war	See footnote 7 for guidance on capitalization.
whether	*Whether* does not always need *or not. He still has not decided whether to go. She is going whether or not he does.*
which	See that, which.
while	as a conjunction, usually has reference to time. *While the President was out of the country, the Army staged a coup.* It can, with discretion, also be used in the sense of *although* or *but. While he hated force, he recognized the need for order.* Avoid using *while* in the sense of *and.* (See more than, fewer than, over, under, during, while.)
who, whom	Most of the time the issue of whether to use *who* (nominative case) or *whom* (objective case) is straightforward. Subject: *Who* is his boss? Object of a verb: *Whom* did the committee choose? Object of a preposition: *Whom* does she work for? The nominative case in the objective slot, as in *Who did the committee choose?* or *Who does she work for?*, has become acceptable in casual English, spoken or written, but it is not acceptable in formal writing. The main difficulty comes in subordinate clauses, when the syntax sometimes gives *who* and *whoever* an objective cast even though structurally they are nominative. *The voters will pick the candidate who they think will do the best job.* (*Who* is the subject of *will do* in the subordinate clause. Do not be thrown off by the interjection *they think.*) *The voters will turn against whoever they think is responsible for their economic hardships. The voters will turn against whomever they blame for their economic hardships.* (In the first of the last two sentences, it might seem that *whoever* is the object of the preposition *against* and should be replaced with *whomever.* The object of *against,* however, is not a single word but the entire clause *whoever . . . economic hardships.* Thus, *whoever,* the subject of the verb in the subordinate clause, is correct. In the second sentence, *whomever,* the direct object of *blame* in the subordinate clause, is properly in the objective case.)
whose	functions as the possessive of both *who* and *which. Of which,* though grammatically correct, sometimes sounds stilted.
will	See shall, will.
with	Do not use *with* in the conjunctive role of *and.* Sometimes this sort of use has unintended consequences. *They are married* ***and have*** *three children.* (Not: *They are married,* ***with*** *three children.*) *He is married* ***and has*** *a child.* (Not: *He is married* ***with*** *one child.*) Too often, *with* is used to attach an additional thought that would be better treated as an independent clause following an *and* or a semicolon. *Economics and history are his mainstays; knowledge of linguistics is an additional qualification.* (Not: *Economics and history are his mainstays,* ***with*** *knowledge of linguistics an additional qualification.*)
with reference to	See fill-ins.
would	See shall, will.
younger	See older, younger.

C05757260

youth	as the opposite of old age is always singular; when it means young persons (male or female) collectively it is always plural; when the word refers to an individual young male it is, of course, singular, and its plural is *youths*. *The nation's youth were encouraged to enroll. A gang of youths started the riot.* Nowadays, rioting young persons probably include females as well as males, and reports of their activities are more likely to say *youths* rather than *young persons*—a trend that we probably should join until someone comes up with a better unisex term.

PREFACE

This publication is a roles and missions manual for G2/S2 sections. As the companion handbook to FM 34-8, this manual is written for officers serving as the G2 or S2 in combat, CS, and CSS units. It provides guidance for officers and NCOs assigned to G2/S2 sections. G2s should find this handbook a useful MTP when executing intelligence training responsibilities.

The proponent of this publication is the United States Army Intelligence Center and Fort Huachuca, Fort Huachuca, AZ. Send comments and recommendations on DA Form 2028 (Recommended Changes to Publications and Blank Forms) directly to Commander, US Army Intelligence Center and Fort Huachuca, ATTN: ATZS-TDL-D, Fort Huachuca, AZ 85613-6000.

This manual does not implement any ISAs. However, it complies with the following STANAGs:

- STANAG 2022, Intelligence Reports, Edition 8.
- STANAG 2077, Order of Battle, Edition 5.
- STANAG 2149, Intelligence Requests, Edition 5.
- STANAG 2844, Counterintelligence Procedures, Edition 2.
- STANAG 2936, Intelligence Doctrine, Edition 2.
- STANAG 6010, Electronic Warfare in the Land Battle, Edition 1.

It also complies with QSTAG 593, Mutual Support Between EW Units; and QSTAG 1034, Intelligence Preparation of the Battlefield.

Unless specifically designated, all references to the intelligence officer at corps, division, brigade, or battalion will be stated as S2.

Acronyms and brevity codes used in this manual are identified only in the glossary.

Unless this publication states otherwise, masculine nouns and pronouns do not refer exclusively to men.

Chapter 1

G2/S2 ROLES AND MISSIONS

WHY YOU NEED THIS HANDBOOK

The G2/S2 must provide continuous intelligence and information for the commander to conduct operations and minimize risk.

Intelligence is the commander's decisionmaking tool. The commander, who drives intelligence, does so for planning before deployment, while enroute, and during operations and redeployment. The S2/NCO—

- Provides the commander timely and accurate intelligence, IPB, I&W, and vulnerability assessments for force protection, targeting, and BDA.
- Makes decisive predictions on when and where an action will take place.
- Prioritizes IR.
- Integrates with other staff elements on I&S issues.
- Provides the commander with a view of all facets of the battlefield.
- Ensures his staff is trained.

PURPOSE OF THIS HANDBOOK

This manual does not replace the doctrine and TTP contained in the other FM 34-series manuals; it does, however, focus on their application. It also summarizes information that helps the S2 manage and coordinate the CCIR. It provides the S2 the roles and missions required for executing the intelligence support function.

The G2/S2 is the “Top Down”/“Bottom Up” integrator of RISTA operations, which have always been performed at the brigade and battalion levels. Three factors help to redefine traditional R&S planning:

- Top Down reporting.
- Bottom Up reporting.
- Digitization.

Systems and technologies available to units make an integrated approach to managing “top down” and “bottom up” reporting feasible. The ACT serves as the nexus of RISTA operations, digitally linking the brigade S2 with the automated capabilities of the DS MI company, resulting in RISTA operations which blend intelligence, R&S, and TA. (See FM 101-5 for G2/S2 responsibilities and Table 1-1 for RISTA collection resources.)

Chapter 2

FORCE PROJECTION

FORCE PROJECTION PRINCIPLES

Future Army operations will rely more heavily on the force projection of US combat power. There is no single method to support force projection. This chapter identifies key principles and considerations for planning and executing IEW force projection.

Successful force projection of IEW support is based on understanding and applying the key principles shown in Figure 2-1.

Other key force projection components are intelligence readiness and a requirement to define responsibilities each echelon performs down to the lowest tactical level. This chapter discusses—

- Intelligence readiness.
- I&W.
- Stages of force projection operations (minus operations).

Considerations are in a logical order but may not be sequential nor applicable for all force projection missions. Corps and division G2s must provide primary planning support for force projection operations because of their expertise. The S2 at each level identifies—

- Personal knowledge deficiencies (e.g., communications architecture, imagery dissemination systems and methods, ability to identify the staff's shortcomings).

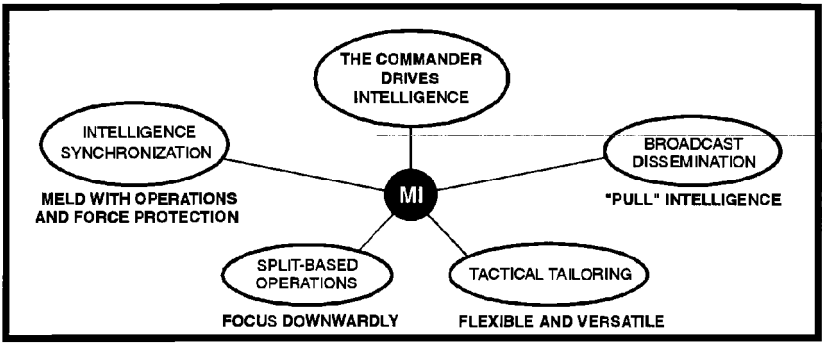

Figure 2-1. Principles of force projection IEW operations.

- Technical limitations (e.g., ASAS, SIDS capability).
- Intelligence gaps with adequate specifics.

INTELLIGENCE READINESS

In a JTF force projection operation, higher echelons will provide intelligence for situation and target development to lower echelons (top down) until the tactical ground force completes entry and secures the lodgment area. The JTF J2 may be reluctant to push everything down through tactical intelligence channels due to the volume of the intelligence information available. The S2 may receive support on a “smart push” basis, and needs to know his requirements to be able to do a “smart pull.”

The most significant change in the evolution of force projection operations is the enhanced information flow through hierarchical and non-hierarchical networks (computer, communications, and personal). The S2 should—

- Review available databases on assigned contingency AIs; conduct IPB on these AIs; and develop appropriate IPB products.
- Be aware of higher HQ SOPs and DIA manuals for specific CM guidance.
- Prepare, practice, and conduct information collection activities as part of in-garrison IO rehearsals.

- Preplan and practice an intelligence "surge" on likely contingency crises.
- Prepare and practice coordination from predeployment through redeployment with personnel from imagery, SIGINT, HUMINT, SWO, CA, PSYOP, and SF units, to include databases and connectivity.
- Ensure the following are a part of the daily operating environment:
  - — RC and other augmentation.
  - — Line numbers and SOPs including a linguist plan with proficiency scores (alert through early entry phases of deployment).
  - — Training (individual and collective).
- Form ad hoc intelligence links and networks early on to meet a developing contingency. Incorporate, request, and receive intelligence from unfamiliar sources (linguists, MI augmentation, other services); exploit NGOs and PVOs once a crisis emerges. Exchange communications protocols with theater and higher HQ and subordinate and lateral units.
- Forward all RIIs to the higher HQ IAW SOPs. The J2, G2, and S2 can focus intelligence downward based on the commander's needs.
- Understand the JTF J2's multiple echelon and broadcast dissemination capability to ensure NRT reporting to all deployed, in transit, or preparing to deploy forces.
- Maintain an intelligence database on the battlefield environment and threats for each contingency. The S2 must state and record the CCIR as PIR, subordinate SOR, and SIR, and include the following:
  - — For the battlefield environment, the commander's approval of the AI, to include separate ground, air, littoral waters, and political AIs.
  - — Maps, terrain, and weather products. Request from National Imagery and Mapping Agency hard copies (unclassified or at the lowest classification). Request authority to declassify these products locally.

— Digitized products (map sheets for ASAS, terrain data, and imagery).

— Physical environmental information. The TERRA BASE program allows S2s to template the effects of terrain on communications and direct fire. During mission analysis, TERRA BASE or other automated terrain products—WINCATS, TOPOSKINNER—provide the S2 a tool to help the commander visualize how terrain can affect friendly and enemy forces. These products can illuminate terrain effects for subordinate commanders in the OPORD brief. [Technique: Use the program at Home Station to develop and sustain proficiency.] The supporting engineer staff officer may also have terrain visualization products.

— Threat or potential threats. The intelligence community, primarily the NGIC, and open sources produce products useful for intelligence readiness. These products can be tailored to best support the commander. (See FM 34-3 for information on intelligence analysis.) INTELLINK will be an S2's primary access to any type of requested strategic intelligence. Examples of strategic level products include—

- Global security forecast.
- Battlefield development plans.
- Automated and hardcopy databases.
- Arms proliferation and military power studies related to the weapons acquisition strategies and the overall military power and potential of selected foreign military forces.
- TECHINT and User Bulletins.
- CIA World Fact Book and DIA country studies.
- Open source studies and articles.
- Other services.

INDICATIONS AND WARNINGS

Theater and national intelligence units monitor regional and global threats to

provide I&W intelligence to the NCA and military commanders. I&W intelligence flows to strategic, operational, and tactical commanders; it prevents surprise, reduces risk, and supports development and refinement of CONPLANs. The S2 must ensure the commander identifies PIR, IR, and targeting requirements for each assigned contingency area. The S2 should—

- Conduct CM and synchronization planning on I&W requirements. Review your unit's collection plan and preplanned SOR for each contingency area. If necessary, refine existing collection plans and SOR.
- Review and modify reporting procedures for I&W contingency areas. This may involve changing intelligence reporting (e.g., increasing reporting on one area and decreasing reporting on another) and message routing addresses and precedence (e.g., FLASH designation).
- Prioritize and forward SOR to higher headquarters.
- Disseminate intelligence and information to the commander, staff, and subordinate units.
- Coordinate for direct dissemination when possible.
- Recommend to the commander whether to maintain or increase unit readiness levels; plan and surge the intelligence effort for the impending operation; or move the unit from its current mission to contingency, branch, or subsequent operations.
- Adjust intelligence readiness steps according to pre-crisis I&W.

STAGES OF FORCE PROJECTION OPERATIONS

REMINDER: All phases of the intelligence cycle are being executed continuously during all stages of force projection.

MOBILIZATION:

Mobilization is a process in which the armed forces augment the AC capability in preparation for war or other national emergencies. It includes activating all or part of the RC assembling and organizing personnel, supplies, and materiel; and certifying the proficiency of individuals and units.

(See FM 100-17 for mobilization process.) In peacetime, AC and RC MI units plan, train, and prepare together to accomplish mobilization and deployment tasks. During the mobilization phase, the S2 should—

- Assist the mobilizing RC unit by preparing and conducting intelligence training and threat update briefings and by disseminating intelligence.
- Identify force requirements for the different types of operations and CONPLANs.
- Employ and adhere to existing procedures.
- If possible, use prior coordinated IMAs to fill gaps created by personnel shortages. These IMAs should already have a working knowledge of your SOPs and understand the mission.
- Monitor intelligence reporting on threat activity and I&W indicators.
- Conduct or coordinate CI and OPSEC training and operations.
- Manage IR and RII from your unit and subordinate units.
- Evaluate reporting.
- Update collection planning.

PREDEPLOYMENT ACTIVITY:

Predeployment activity provides the foundation for subsequent force projection operations.

- I&W will continue throughout force projection operations. The S2 must perform IPB early and continuously. (See FM 33-1, FM 34-130, FM 41-10.)
- Accelerated training will ensure all AC and RC MI units are able to conduct IEW operations. Integrate mobilization and deployment tasks into unit METL and training; emphasize and integrate critical aspects of force projection into battle tasks and planning.
- Focus broadbased knowledge to support CONPLAN refinement (IPB).

- Ensure tactical tailoring or split-based operation planning is based on an existing CONPLAN.

- Establish appropriate relationships; establish higher, lower, and lateral liaisons if they are different.

- Continuously conduct and update CM and IEW synchronization planning.

  — IO synchronization ensures IO are linked to the CCIR and respond in time to influence decisions and operations. IO encompasses more than just MI assets and requires MI support. (See FM 34-40 and FM 100-6.)

— IEW synchronization ensures IEW operations are linked to the CCIR and respond in time to influence decisions and operations. IEW is a subset of IO.

— The commander generates CCIR. CCIR focus on what is critical. They should change as the situation changes. CCIR affect PIR, IR, EEFI, and FFIR.

o Plan imagery coverage for target nomination, validation, and PSA.

o Require from collection assets, timelines for preplanned and dynamic collection requests.

o Plan synchronization through all five steps of the intelligence cycle.

o Ensure each PIR is related to a specific operational decision. (See FM 34-2 and FM 100-6.)

o Prepare an ISM and backward plan so collection production efforts are executed with the operation; deliver focused intelligence to support operational decisions.

o Coordinate with the S3 and signal officer for EW offensive and electronic deception operations, specifically for target nomination, no-fire target criteria, protected frequencies, and synchronized EW effort during all phases of the operation.

o Plan BDA requirements.

o Refine, manage, and update SOR. Monitor and maintain synchronization.

- Anticipate and initiate collection early against long lead-time requirements.

- Ensure CCIR process is continuous and the intelligence cycle and IEW operations remain tied to the commander's decisions and concept of operations.

- Identify collection gaps after you synthesize available information on the AO and coordinate the collection efforts of existing intelligence organizations. (Consider national, EAC, other US forces and services, and HN support.)

- Develop a collection strategy which factors PIR, IR, and METT-TC. Submit RII and other requests for support to adjacent, higher, and HN units. Develop a collection plan which supports all PIR and IR and maintains synchronization.

- Develop your intelligence team:

— *Commander's intelligence support*: The S2 and supporting MI commander form the maneuver commander's intelligence team. ASAS is the primary intelligence processing system supporting this team. A unit may need to augment its S2 staff, to include area experts, TECHINT LNOs, linguists, interrogators, intelligence analysts, and CI agents. Tailor the size and sophistication of the deploying unit's intelligence staff to the mission.

— *ACT*: The DS MI company provides an ACT to support the commander's intelligence team at brigade.

— *Additional attachments*: These could include PSYOP and CA.

— *DISE*: This is a small intelligence support team that provides communications, automated intelligence fusion, and broadcast downlinks in a small package capable of deploying with Army early entry forces.

- Decide whether you will form the DISE from the organic assets of the early entry force or from the corps ACE, supporting EAC MI brigade, or a combination thereof.

- Plan the configuration, which can range from "briefcases" (Mini-DISE) to HMMWVs (DISE vehicular), and are normally staffed by 5 to 12 soldiers, respectively. Build the supporting hardware systems around the Army's ASAS and integrate them with other Army, joint intelligence, and communication capabilities.

- Plan whether the DISE will expand to a full ACE as lodgment operations are completed or will disband once the mission is accomplished.

- Plan situations in which the DISE will go directly to higher headquarters for information without the home base's approval.

- Plan on requirements to support the DISE with 24-hour operations.

— *ISB*: This is the rear element of split-based operations that provides processed and analyzed intelligence to the DISE.

- Plan the automation, communications capacity, and personnel necessary to provide continuous intelligence requirements management, collection, processing, and reporting.

- Plan all procedures for the DISE to "pull" specific intelligence products and reports, obtain status of collection, and "push" the current intelligence picture from the lodgment back to the ARFOR and JTF commanders if not in theater.

— Plan all links to higher intelligence organizations, including the JIC and the elements designed to leverage theater intelligence; focus on support down to the corps and echelons below corps (e.g., the CMISE).

— Coordinate with and understand the capabilities of the JTF to include the NIST if formed.

— Plan to use RC augmentation. Some examples are a mix of CI agents, UAVs, interrogators, and linguists.

- Transportation availability (aircraft or naval vessel) for deployment.

- Sustainability.

- Portability once deployed.

- Disciplined operations. The commander's ability to collect may be affected by nonmilitary decisionmakers. The CINC can contribute to the deploying commander by ensuring at the outset that intelligence is decompartmented and releasable to allied units (if

applicable).

— Review applicable publications (ARs, DA Pamphlets, USSIDs).

— Review SOFAs, ROE, international laws, and other agreements. (Coordinate with SJA on these issues.)

— Review applicable NIMA guidance.

— Establish force deployment priorities based upon METT-T. Sequence initial required forces and capabilities, build-up priorities, and follow-on forces to ensure a sequenced plan, a tailored force, and established command and support relationships. Consider sensors, processors, preprocessors, CI, and HUMINT. Maintain unit integrity.

— Plan communications architecture (build redundancy when possible). Remember to—

  - Plan links to the JTF DISE, if formed, that complements the NIST. (See FM 34-25-3 and FM 34-37).

  - Ensure intelligence links provide the early entry commander vital access to multisource Army and joint intelligence collection assets, processing systems, and databases.

— Ensure collection is synchronized with production, and intelligence is still synchronized with operations (specify reporting procedures and timelines).

— Finalize the IEW OPLAN (terrain and communications deconfliction). Coordinate with the MI commander on his tactical decisionmaking process. Understand the MI commander's SOR that are his specified tasks, implied tasks, task organization, concept of operation (the organization, deployment, allocation, and employment of subordinate MI units), and coordination requirements with forward maneuver units.

— Establish the intelligence crossover point. Estimate the time and establish a measurable criteria to indicate when you have reached that point. Intelligence crossover occurs when enough tactical

collection assets are in theater to reduce the dependency upon strategic

or national assets. (See FM 34-1, Chapter 3.)

- Receive all augmentation and support elements quickly (ACT, DISE) and incorporate them within your unit, SOP, and training.
- Update databases to support the IPB process that will follow. Practice using INTELLINK.
- Support force protection. Intelligence operations—MDCI in particular—identify, locate, and target an enemy's ability to target and affect friendly forces, facilities, and operations. Intelligence support must—
  - — Conduct threat and risk assessment.
  - — Consider elements of fratricide avoidance:
    - Accurate target identification.
    - Collateral weapon effects.
    - Familiarity with supporting units.
    - ROE.
  - — Consider elements of force protection:
    - Information Warfare:
      - OPSEC.
      - Physical destruction.
      - PSYOP.
      - Deception.
      - EW.
    - COMSEC.
    - NBC.

- Personnel security.
- Neutrality maintenance.
- Personal awareness.
- Sniper threat.
- Counterreconnaissance.
- Arms and physical security.

— Using the MDCI process, assess and review friendly vulnerabilities and the threat's ability to exploit them.

- S2s should inform commanders and operators on CI and MDCI analysis.
- Train your MDCI analysts to conduct reverse IPB and think like the enemy S2, to include the enemy's perception of friendly centers of gravity and how he will attack or influence them.
- Incorporate your MDCI analysis into the G2/J2 situation and decision briefings and all planning (especially deception planning).
- Assign CI and MDCI sections appropriate missions and analytical responsibilities, such as rear area threat analysis, and continuously assess effectiveness.

— Identify potential countermeasures to deny the enemy access to friendly critical areas.

— Identify and recommend actions to counter enemy intelligence collection capabilities.

— Implement the following controls to support force projection:

- Establish access to national HUMINT and CI databases, automated links to joint service, coalition, and HN sources to help identify, assess, and develop countermeasures for threats. Develop FLASH precedence reporting procedures.

- Receive and disseminate CI information and specific CI tasks from ASAS and other means such as the CHATS.

- Support further CONPLAN and OPLAN development. MI units continually monitor and update their CONPLANs to reflect the evolving situation, especially during crises.

- Immediately before deployment, update deploying forces with the most recent intelligence on the AO and update your technical databases and situation graphics.

- Develop contingency tailored packages that allow the G2/S2 to place the right force support teams in a deployable posture with an adequate amount of training.

DEPLOYMENT:

Success in force projection operations hinges on the capability of airlift and sealift assets to move forces into the AO. Force protection is more critical during this stage.

- Monitor intelligence reporting on threat activity and I&W indicators. Continuously conduct and update IEW, CM, and synchronization planning.

- Plan enroute updates to eliminate information voids and allow your commander to adjust OPLANs prior to arrival in theater. Request supporting intelligence organizations use SATCOM, broadcast technology, and ADP systems to provide graphic and textual intelligence updates while enroute.

- Continue IPB.

- Provide timely, accurate, and specific infrastructure and weather information. IMETS can provide weather information.

- Use accurate situation development to help the commander understand and reduce risk on the battlefield.

- Use the DST, collection plan, R&S plan, ISM, and SOR to anticipate which decisions the commander and staff will make.

ENTRY OPERATIONS:

During initial entry operations, EAC organizations provide major intelligence support in a "smart push" mode. This support may include departmental, joint, and scalable Army intelligence elements capable of deploying forward. Entry units must continue to "smart pull" the intelligence they need for operations.

- Continue to conduct force protection planning.
- Monitor the buildup of the in-theater capability required to conduct sustained IEW operations and to reduce your total dependence on split-based, "top driven" intelligence from outside the AO. As organic IEW assets flow into the theater, assess their reliability for tactical intelligence. (National and theater organizations will still remain sources of strategic intelligence.) Determine intelligence crossover point.
- Monitor intelligence reporting on threat activity and I&W indicators.
  - — Routinely debrief troops.
  - — Use local nationals employed by or in frequent contact with your force to provide information (area experts must analyze it).
- Ensure liaison personnel and basic communications are in place prior to the scheduled arrival of parent commands.
  - — Deploy HUMINT forces into theater as early as possible.
  - — Contact HN or civil authority. (Contact CA units; see FM 41-10.)
  - — Contact other services.
  - — Contact lateral units.
  - — Coordinate with supporting CI unit for CI support to force protection.
- Emplace ACT, DISE, NIST, and other elements.
  - — Establish security.
  - — Establish communications.

- — Establish analytical capability.
- — Perform IPB.
- — Continue to conduct CM and intelligence synchronization planning. Recommend revised PIR and IR. Refine, manage, and update SOR. Evaluate reporting.
- — Consider space requirements, power, and logistical support for high use or unique items.

- Conduct situation development, target development, and support to targeting. During this stage as combat strength increases, your unit's organic tactical systems will conduct situation and target development (intelligence crossover point).

- Develop measurable criteria to evaluate the results of your collection plan. Reassesses—
  - — "Push" versus "pull" requirements.
  - — Communications architecture.
  - — Reporting procedures and timelines.
  - — Crossover point in intelligence.
  - — Intelligence support to OPLANs and OPORDs, branches, and sequels (to include planning follow-on forces).

WAR TERMINATION AND POSTCONFLICT OPERATIONS:

Upon cessation of hostilities or truce, deployed forces transition to a period of postconflict operations.

Commanders redirect PIR and IR to support units conducting restoration operations (e.g., engineer units conducting infrastructure reconstruction operations, medical and logistics units providing humanitarian relief). The nature of the PIR shifts from assessing threat forces to assessing political, economic, social, religious, and other conditions that affect force protection and the desired end-state; planning residual presence of US forces; and preparing for redeployment of forces.

- Continue to conduct force protection planning.
- Remain open to the possibility that hostilities could resume.
- Monitor intelligence reporting on threat activity and I&W indicators.
- Continue to conduct CM and intelligence synchronization planning. Update collection planning.
- Refine, manage, and update SOR.
- Evaluate reporting.
- Disseminate intelligence.
- Use pre-deployment tactical tailoring procedures to plan a phased redeployment of IEW assets and personnel ensuring continual coverage of the commander's requirements.

REDEPLOYMENT AND RECONSTITUTION:

As the combat power and resources decrease in the AO, force protection and I&W become the focus of the CCIR. This drives the selection of those MI units that must remain deployed and those which may redeploy.

- Monitor intelligence reporting on threat activity and I&W indicators.
- Continue to conduct force protection planning.
- Request intelligence BOS support (theater and national systems) and provide intelligence in support of redeployment and reconstitution (reverse intelligence crossover point).

DEMOBILIZATION:

Demobilization is the process by which MI individuals and units transfer from active to a premobilization or other approved posture. MI units resume intelligence readiness posture. RC MI units transition to peacetime status.

- Monitor intelligence reporting on threat activity and I&W indicators.
- Capture consolidated databases.

- Capture lessons learned via AARs (doctrine and TTP).
- Maintain intelligence readiness (e.g., training).
- Adjust MTOEs and evaluate the need for IMAs.

Chapter 3

MILITARY DECISION-MAKING PROCESS (MDMP)

MDMP in General

- FM 101-5 is the doctrinal source.
- The MDMP is a single, established, and proven analytical technique.
- The commander must follow the one-third/two-thirds planning rule.
- MDMP helps the commander and staff examine a battlefield situation and reach logical decisions.
- The commander can decide to use the complete or abbreviated version.
- Staffs should train on both the complete and abbreviated versions.
- Incomplete execution of the MDMP is a recurring deficiency at the CTCs.

Intelligence in the MDMP

- MDMP is based on continuous IPB, especially initial IPB during mission analysis.
- The commander drives intelligence; IPB is an integrated staff function driven by the commander.
- Train your section to conduct IPB so you can coordinate closely with other staff and BOS representatives.
- You must understand how all the BOS operate and how to integrate intelligence during planning, especially within the targeting process IAW FM 6-20-10.
- "Push" the staff to develop a robust and integrated R&S plan.

Staff Estimates

- FM 101-5 provides a generic staff estimate.
- The generic staff estimate is the base for the commander's operations, personnel, intelligence, logistics, CMO, communications, and special staff estimates.
- These staff estimates are designed to form, analyze, compare, and recommend friendly COAs.
- Staff estimates are continuous, must not be overly time consuming, and do not have to be a written product (time dependent).
- The wargame results and staff estimates help the staff compare COAs.

The Intelligence Estimate

- The purpose, scope, and content of the intelligence estimate changed with draft of FM 101-5.
- The old intelligence estimate was a text-based product derived from IPB that focused on ECOAs, capabilities, strengths, and vulnerabilities.
- This old intelligence estimate is functionally replaced by IPB products.
- A standard staff estimate prepared by the G2/S2 is the new intelligence estimate—it is radically different.
- The new intelligence estimate focuses on the G2/S2's ability to support friendly COAs and is used to compare and approve friendly COAs.

Step 1: Receipt of Mission ■ The mission comes from higher headquarters or is derived from an ongoing mission. ■ On receipt of a new mission, the G3/S3 issues a WARNO to the staff. ■ The staff immediately prepares for mission analysis (SOP preparation). ■ Immediately the commander and staff do a quick initial assessment with emphasis on an initial allocation of available time. ■ The commander issues his initial guidance, and the G3/S3 issues a WARNO to subordinate units.	**Intelligence in Step 1** ■ Collaborate with your higher G2/S2 before and during receipt of mission to facilitate the initial IPB. ■ As part of the initial assessment, look for gaps in your intelligence database and products. ■ Proactively request/prepare terrain products, weather, light, and climatology data; update the MCOO and doctrinal templates; maintain the enemy situation. ■ Focus on the initial time allocation (complete or full MDMP), R&S guidance, and any additional tasks or focus from the commander's initial guidance. ■ Establish/verify an IHL.
Step 2: Mission Analysis 1. Analyze the higher HQ order. (If confused by or you disagree with it, seek immediate clarification or resolution.) 2. Conduct initial IPB. 3. Determine specified, implied, and essential tasks. (It is important to understand specific requirements for each task.) 4. Determine the AI. 5. Review available assets. (The staff must identify additional resources needed to ensure the mission's success.) 6. Determine constraints (normally found in the scheme of maneuver, concept of the operation, and coordinating instructions). 7. Identify critical facts and assumptions. (List all appropriate assumptions from higher; state relevant conditions over which the commander has no control.) 8. Conduct risk assessment. 9. Determine initial CCIR. (Limit to 10 or less.)	**Intelligence in Step 2** ■ Intelligence and intelligence-related products: ❙ AI. ❙ Initial PIR (from the commander.) ❙ Initial OPSEC vulnerabilities and EEFI.***** ❙ MCOO and terrain as described by OCOKA and its effects. ❙ Assumptions (include enemy mission, objectives, threat BOS activities). ❙ Other elements of the battlefield. ❙ Situation templates (unrefined). ❙ Event templates and matrices (unrefined). ❙ Center/centers of gravity. ❙ HVTs. ❙ The IPB portion of the mission analysis brief and associated graphics (OB, weaknesses and peculiarities, activities and capabilities, and COAs). ❙ Collection plan (initial, G2 only).

10. Determine the initial reconnaissance plan. (The resulting R&S annex sets reconnaissance in motion.) 11. Plan use of available time. (The commander and staff refine initial plan for use of available time.) 12. Write the restated mission. Who, what, when, where, and why. 13. Conduct mission analysis briefing. (Given to commander and staff. The briefing is critical to ensure a thorough understanding of planning.) 14. Approve the restated mission. 15. Develop the initial commander's intent. A clear, concise statement of what the force must do regarding the enemy, terrain, and desired end-state. 16. Issue the commander's guidance. This provides additional guidance to focus staff planning. 17. Issue a WARNO. 18. Review facts and assumptions. When facts or assumptions change, the commander and staff must assess their impact.		The R&S plan (initial plan that starts R&S operations) and associated FRAGOs or WARNOs. | Intelligence estimate (initial). ■ These products are used to write Annex B to the OPORD or OPLAN and as the foundation for the DST* later in the MDMP. ■ Based on mission analysis, request information or intelligence based on intelligence gaps. ■ Develop as many ECOAs as time will allow. ■ Your higher HQ OPORD, OPLAN, and/or Annex B will task your unit to perform certain collection or R&S tasks. ■ Start the subsequent steps of CM & intelligence synchronization (FM 34-2) to support the initial collection plan (at a minimum SII, SIR, and SOR). ■ The R&S plan is a coordinated staff effort that must include FS, MEDEVAC, and CONPLANs (e.g., what the brigade does if 2 key scout sections are destroyed). ■ The MI Bn/DS MI Co participates in mission analysis and briefs the collection status and capabilities.
Step 3: COA Development 1. Analyze relative combat power. See FM 34-130 for estimating relative-force ratios. 2. Generate options. Goal is to develop COAs for every feasible ECOA; however, the commander usually limits that option with his guidance. 3. Array initial forces. Identify number of units needed and operational methods; develop a knowledge base to help make decisions. 4. Develop the scheme of maneuver. 5. Assign headquarters. This creates the task organization.	**Intelligence in Step 3** ■ Intelligence and intelligence-related products: | Situation templates (refined and prioritized). | Event templates and matrices (refined). | EWTL (initial).* ■ Ensure the G3/S3 uses the IPB facts, assumptions, and products developed during mission analysis and subsequently refined. ■ Work with the entire staff to ensure that friendly COAs take advantage of the environment and threat situation.*

6. Prepare COA statements and sketches. ■ The G3/S3 uses appropriate media to clearly portray how unit will accomplish the mission (e.g., scheme of maneuver).	■ Key on threat vulnerabilities. ■ Your input is critical in analyzing relative combat power. ■ Do not forget to support deception planning (when appropriate).
Step 4: COA Analysis (Wargme) 1. Gather the tools. 2. List all friendly forces. 3. List known assumptions. 4. List known critical events and DPs; include an HVTL list. 5. Determine evaluation criteria. 6. Select the wargame method. 7. Select a method to record and display results. 8. Wargame the battle and assess results. ■ The wargame is a critical and disciplined process used to visualize the flow of battle. ■ The commander selects the order of comparison of threat to friendly COAs. ■ The staff must evaluate the need for branches and sequels. ■ When technically possible, the staff should capture as much of the wargame on ATCCS as possible; otherwise, use a wargame worksheet or ISM. ■ These wargame results are key to developing DSTs and BOS synch matrix. ■ Use the action, reaction, counteraction method (consider at a minimum maneuver, FS, mobility, counter-mobility, survivability, and IEW). ■ The staff should track force ratios throughout the wargame.	**Intelligence in Step 4** ■ Intelligence and intelligence-related products: ❙ PIR with LTIOV (refined). ❙ HPTs. ❙ Confirmation of the enemy center/ centers of gravity. ❙ Situation templates (final). ❙ Some force protection issues (e.g., NBC vulnerabilities). ❙ EWTL (refined).***** ■ You wear both a "red" and "blue" hat in wargaming. ■ As the enemy commander you project enemy actions or reactions, develop DPs, and project enemy losses. ■ During the wargame you must address all relevant enemy BOS capabilities. ■ As the friendly G2/S2, you identify IR and NAIs; refine the situation template; and participate in the targeting conference. ■ Ensure the G3/S3 honestly portrays friendly capabilities during the wargame.***** ■ Work with entire staff to ensure friendly COAs take advantage of environment and threat situation. ■ Ensure HPTs, AGMs, and TSS support the operation.***** ■ The AGM is approved by the commander and addresses which targets will be attacked, how, when, and the desired effects. ■ TSS are criteria used in deciding whether to pass information as a target nomination.

	■ The MI Bn/DS MI Co commander and collection manager are important players at the wargame.
Step 5: COA Comparison ■ Used to identify COA that has highest probability of success. ■ Staff may use any technique; the decision matrix is the most common. ■ Staff gets its criteria from the commander (e.g., the principles of war or tenets of Army operations).	**Intelligence in Step 5** ■ Intelligence product: ❙ Intelligence estimate (final). ■ Ensure you play a key role during this step.
Step 6: COA Approval ■ If the commander modifies a proposed COA or gives the staff a new COA, staff must wargame that COA.	**Intelligence in Step 6** ■ Intelligence and intelligence-related products: ❙ PIR with LTIOV (approved). ❙ DST (an integrated staff product). ❙ BOS synch matrix.***** ❙ ISM. ❙ Event templates and matrices (final). ❙ The R&S plan (final).***** ❙ Collection plan (refined, G2 only). ■ Start the subsequent steps of CM and intelligence synchronization (FM 34-2) (i.e., development of new SII, SIR, and SOR). ■ If the commander designates you to perform BDA to support one of his decisions, you must thoroughly plan the BDA support and tie that plan into the collection plan.
Step 7: Orders Production ■ Based on the commander's decision and final guidance.	**Intelligence in Step 7** ■ Intelligence and intelligence-related products: ❙ OPORD or OPLAN Annexes B (Intelligence), L (R&S), P (C^2W)*****, Q (OPSEC)*****, S (Deception)*****, and T (EW).*****
***** The G2 participates in developing the products but is not the proponent.	

ACCELERATING THE MDMP:

The MDMP involves three techniques that can be applied in different situations: deliberate, abbreviated, and accelerated. Only the accelerated technique is discussed herein because it is the most difficult to implement. (See CALL Newsletter Update No. 95-12.)

The accelerated technique may be used when one or more of the following conditions apply:

- Commander has a staff available to assist him in developing the plan, but little time to use a more formal process.
- Commander does not have a staff, or the staff is not accessible.

When these conditions apply, the commander must rely primarily on TLP to develop his plan. The accelerated technique assists the commander in developing a tentative plan. Under extreme circumstances, this may be little more than a mental process; nonetheless, the commander can use it to assist him and key staff members (S2/S3/FSO/XO) as he develops his plan.

The accelerated technique follows the basic procedures in the deliberate and abbreviated processes, but the differences are more significant. The major differences between the abbreviated and accelerated techniques involve the commander's guidance and the COA development phase (Figure 3-1). The accelerated technique is characterized by active participation by the commander, and development of one COA that is suitable, feasible, and flexible.

In some situations, the products developed using the accelerated technique may be the same as those developed when using the deliberate or abbreviated technique. Because time is the key factor, the accelerated technique will normally result in the development of a FRAGO.

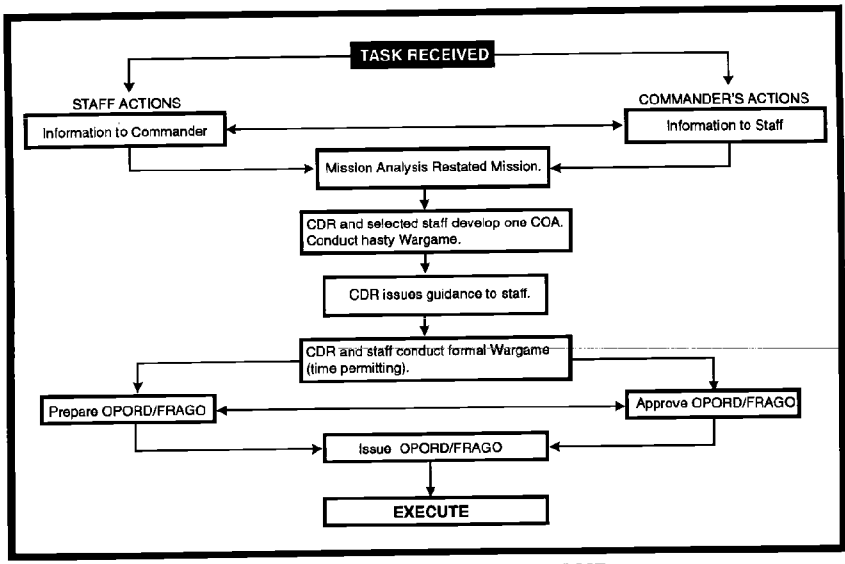

Figure 3-1. Accelerated MDMP.

MISSION ANALYSIS:

ISSUE: The commander and staff must be able to rapidly conduct the mission analysis to determine the restated mission.

DISCUSSION: When using the deliberate or abbreviated technique, the staff conducts a detailed mission analysis to develop the restated mission. As previously stated, resorting to a mental process in lieu of a detailed restated mission is acceptable; however, this should be the exception rather than the norm. The staff may be forced to brief their initial estimates orally, without the use of charts or viewgraphs. Conduct as formal a mission analysis as time allows. During the mission analysis, there are no major differences between the three techniques. There are no techniques that will significantly reduce the amount of time required to conduct the mission analysis. Anticipation, prior preparation, and experience by the staff are the keys to a timely mission analysis process.

TECHNIQUES:

- Commander must get personally involved by supervising and managing the mission analysis process.

- In extreme situations, the staff must be prepared to brief the commander without the use of visual aids.

COA DEVELOPMENT:

ISSUE: When time is severely limited, providing the commander's guidance after the mission analysis may not be the most appropriate time.

DISCUSSION: Instead, the commander may decide to immediately begin personally developing *one* COA with input from selected staff officers. There is probably not time to seek input from every staff officer, so the commander must determine relevant and critical staff officers (e.g., S2, F3, FSO, XO). This team may vary depending on the type of mission. For example:

- In the defense include staff engineer.

- During SASO include CA, PAO, SJA, PSYOP.

- In other situations, include subordinate commanders because of their experience.

This team must then quickly develop a flexible COA to accomplish the mission. The key to success, when using the accelerated technique, is to rapidly develop a base plan with appropriate branches that is flexible, feasible, suitable, and acceptable. *DO NOT WORRY ABOUT DEVELOPING THE PERFECT COA; THERE IS NOT TIME FOR IT*. This is the major distinction between the accelerated technique and the others.

Once the COA is developed, the commander might consider conducting a hasty wargame. In extreme situations, this may be the only opportunity to conduct the wargame process. Next, the commander should begin to quickly develop his guidance to the staff. The accelerated technique is

characterized by an active role of the commander, and very specific guidance to the staff.

TECHNIQUES:

- Focus on developing one COA with branch plans that is flexible, feasible, suitable, and acceptable.

- The commander plays the central role when developing this COA.

COMMANDER'S GUIDANCE:

Once the commander has developed the COA, he must issue guidance to his staff so it can refine and wargame the COA. The commander's guidance to the staff must be directive and specific. The staff's responsibility is to support the commander's plan, not to develop the perfect plan. Well-developed and clearly communicated commander's guidance can be a significant timesaver. The commander's guidance should serve to keep the staff focused by establishing parameters to work within. Commander's guidance must be constantly reviewed and analyzed. As the situation changes and information becomes available, the commander may have to alter his guidance to the staff.

COA ANALYSIS:

ISSUE. The commander and staff must rapidly conduct the COA analysis process.

DISCUSSION: Conducting the wargame process using the accelerated technique is the most difficult of the three processes because only one COA was developed. The purpose of the COA analysis is not to analyze and compare multiple COAs that result in a recommendation to the commander, but to synchronize and integrate the commander's directed COA. This wargame session should focus on refining the branches or contingencies to the base plan and follow the formal wargame process as much as time allows. Focus on the most critical events. You do not have time to wargame the entire operation. When wargaming using the accelerated technique, the commander's involvement is even more important. The staff should use the box technique, focusing on actions at the objective or the engagement area. If time permits, wargame other critical events as well. The staff must work to support the commander's plan. However, as the staff works to refine the plan, it cannot become so biased that it develops a plan that is infeasible and insupportable. If the staff determines that it cannot support the commander's plan, then a new COA must be developed.

TECHNIQUES:

- If time permits, conduct a hasty wargame session during the COA development step. Ensure you identify and develop branches to the base plan.
- Involve the commander. He must supervise the wargame session, actively participate, make decisions, and provide guidance as required.
- Use the box technique, focusing on the most critical event first.

DECISION:

When using the accelerated technique, a decision brief is not required because only one COA was developed. The only decision that may be required is if the developed COA becomes unsuitable, infeasible, or unacceptable. If this occurs, another COA must be developed.

ADVANTAGES:

- Requires less time.
- Facilitates adaptation to a rapidly changing situation.
- Allows commander to compensate for lack of a staff or an experienced staff.

DISADVANTAGES:

- Significantly limits staff initiative and flexibility.
- Very directive, explores only one friendly COA.
- May result in only an oral order or FRAGO.

CHAPTER 4

S2 OPERATIONS CHECKLISTS

Intelligence operations will usually begin with a notice tasking statement. CONPLANs, training, the N-Hour sequence, and the MDMP contribute to mission readiness. The S2 can use the following checklists to monitor intelligence readiness prior to receipt of a mission and subsequently to verify preparations and facilitate mission planning.

The timelines used could apply to any echelon.

- Mission Checklist (Table 4-1).
- N-Hour Critical Times (Table 4-2).
- N-Hour Critical Actions List (Table 4-3).
- Mission Planning Sequence (Table 4-4).
- Reconnaissance Planning (Table 4-5).

Table 4-1. Mission checklist .

Mission Day Minus	ACTION	REMARKS
A-28	Notify attachments to provide updated access rosters prior to A-Day.	
	Provide open access to national and strategic databases.	
	Initiate verification of clearances within battalion.	Include sensitive positions and RTOs.
	Coordinate security briefings for unit personnel.	Include all OPSEC program components and SAEDA program.
	Coordinate contingency AI briefings.	
	Verify access to intelligence databases through division or higher.	Disseminate hard copy products to subordinate units.
	Inspect unit areas and equipment for physical security deficiencies.	Coordinate for support and access. Check equipment compatibility.
	Review section files.	Designate deployable and nondeployable records.
	Obtain current TECHINT/User Bulletins and DIA Top Ten Equipment Acquisition list from 203d MI Bn (TECHINT).	Acquire information on disposition directives from JCS and theater commander.
A-21	Obtain higher HQ access roster.	Update as required throughout mission cycle.
	Coordinate security force requirements with tasked units and MP.	
	Identify linguists in unit or update current file.	Provide list, crosscheck with S1 data.
	Provide updated list of telephone numbers to be cut off at N+2 to the S1.	
A-14	Finalize security plans and instructions.	Check guard/MP patrols.
A-8	Coordinate security requirements for filler personnel.	Barrier material, lighting, container seals, security of vehicle holding area, motor pool, empty barracks.

Table 4-1. Mission checklist (continued).

Mission Day Minus	ACTION	REMARKS
A-8	Prepare DA Form 3964 for classified material transported with deploying elements.	
	Brief MI battalion LNO on duties.	
A-7	Finalize MI battalion personnel and equipment support list.	Ensure copy placed in SDO book.
	Update section alert notification roster.	
	Continually monitor intelligence WATCHCON levels.	
A-4	Check alert rosters in SDO book and completion of all unit OPSEC and SAEDA briefings.	
A-Day	Brief RDC on battalion security plan.	EEFI material, handle accordingly.
	Issue guard instructions.	
	Provide access rosters to rear detachment personnel, higher and supported HQ.	

Table 4-2. N-Hour critical times.

N-Hour	EVENT	REMARKS
N-Hour	Notify and assemble units.	
	Initiate telephone control.	
	Initiate area security plan.	
	List questions for N+2 brief.	
N+1:30	Prepare staff equipment to go to staging area.	
	Verify basic load, load plans.	Maps, batteries, etc.
N+1:45	Depart for N+2 brief location.	
	Distribute updated access roster.	
	Secure battalion conference room.	
N+2:00	Present N+2 briefing.	
	Coordinate with CI to initiate OPSEC plan; inspect battalion area for physical security violations.	
N+3:30	Present the intelligence estimate.	
N+3:45	Confirm transfer of company arms room keys to the rear detachment S2 before departing to staging area.	
	Verify security clearances of attachments through supporting S2.	
N+4:30	Sweep battalion area with CI personnel.	
N+5:00	Impose restrictions on incoming/ outgoing mail.	When given proper authority.
N+6:30	Issue OPORD at staging area.	
N+8:00	Ensure rear detachment is briefed on security.	
	Provide latest intelligence update to commander and staff. Have LNOs, DS MI CDR attend.	

NOTE: Modify times depending on mission requirements and SOPs.

Table 4-3. N-Hour critical actions list.

H-HOUR		ACTION	ACTION OFFICER(S)
	_____	Mission Receipt	
1	_____	WARNO----------	CDR, S2/S3
-	_____	Do IPB----------	S2 (w/asst from ENGR, Terrain, Weather, etc)
2	_____	Mission Analysis	
2	_____	Brief Mission to CDR----------	Coordinating Staff
-	_____	Initial CDR's Guidance	
2	_____	Do COAs----------	CDR, S2/S3
3	_____	Staff IPB & COAs----------	S2, S3
4	_____	Do Staff Estimates----------	Unit Staff
-	_____	COA Analysis (wargaming)----------	CDRs, Unit Staff
5	_____	Select Best COA----------	S3, Selected Staff
6	_____	Do DST----------	S2/S3, FSO, ADA, ENGR, SIG, CHEM
5	_____	Brief DST	
7	_____	Brief Selected COA----------	Selected Staff
-	_____	CDR's Decision	
7	_____	WARNO Scouts/Patrols Recon----------	S2/Asst S2/BICC officer/S3
8	_____	Mission Brief	
8	_____	OPORD Prep/Staff Coord----------	Unit Staff
8	_____	Turn in OPORD Annex	
9	_____	Proof OPORD	
10	_____	Issue Targeting Overlay----------	FSO
11	_____	Brief Scouts/Patrols Recon----------	S2/Asst S2/BICC officer/S3/ENGR/FSO/ADA
12	_____	Execution Matrix----------	S3
13	_____	BOS Synchronization Matrix----------	Unit Staff
14	_____	Maps/Charts Prep----------	Unit Staff
14	_____	CDR's Map Updated----------	S2/S3
15	_____	OPORD Rehearsal----------	XO, S3
16	_____	OPORD Briefing----------	XO
17	_____	Initial Backbrief	
17	_____	TF CDR Brief Higher HQ----------	CDR, S2, S3
17	_____	Co/Bn CDR Backbrief	
18	_____	Rehearsal----------	Unit Staff, CDR
19	_____	Final INTEL Update----------	S2
	_____	LD/LC	

NOTE: These items are not listed in a definite order; some may not occur at all.

Table 4-4. Mission planning sequence .

S2 ACTIONS UPON RECEIPT OF A MISSION:

1. Receive and analyze mission:
   - Receive CDR's guidance and assist in development of CDR's PIR.
   - Understand CDR's intent.

2. Define the battlefield environment:
   - Identify AO and AI.
   - Identify battlefield characteristics that will influence friendly and threat operations.
   - Identify intelligence gaps.
   - Develop preliminary IR.
   - Identify specified and implied intelligence tasks:
     - **Specified:** From OPORD Annex B, R&S Appendix, tasks to subordinate units, MI task organization for combat, coordinating instructions, and collection plan.
     - **Implied:** Mission dependent METT-T.
       M—**Mission** (CDR's intent, PIR, scheme of maneuver).
       E —**Enemy** (OB and IPB to develop collection IR).
       T—**Troops** (Organic and Higher Assets).
       T—**Terrain and Weather** (R&S asset LOS, LOCs, obstacles, weather effects on system's collection ability).
       T—**Time Available** (Plan, Move, Operate, Report).
   - Determine availability of organic/attached/supporting intelligence assets.

3. Request support/information from higher HQ if items/information are not available organically:
   - Maps/Imagery/sketches/blueprints of objectives, NAIs.
   - Collection plan, asset available times and asset tracks.
   - Weather - light data and climatic summary.
   - Enemy OB data.
   - Terrain products (LOC/vegetation/CCM/MCOO/elevation/LOS/hydrology).
   - Higher R&S plan.
   - Determine R&S assets you and higher HQ will control (intelligence architecture).
   - Determine availability, coordinate intelligence support from non-MI systems and organizations (AN/TPQ-36/37, OH-58D, FISTV, AN/TPS-25A, AN/TPS-58B, Engr, Co/teams, Cavalry, chemical units).
   - Obtain SOI; sign and countersign information through unit SIGO.
   - Advise higher of your recommended PIR and expected intelligence gaps.

4. Distribute maps, imagery, and sketches (maintain accountability).

5. Brief staff on abbreviated intelligence estimate to assist their mission planning.

6. Issue WARNO to R&S assets.

7. Describe the battlefield's effects:
   - Analyze terrain.
   - OCOKA factors.
   - Effect on friendly and enemy operations.
   - Analyze weather effects on terrain, troops, equipment, and friendly and enemy operations.

Table 4-4. Mission planning sequence (continued).

8. Assess other characteristics of the battlefield (mission dependent):
   - Politics.
   - Population.
   - Demographics.
   - Social ethnic/Religion.
   - Economic

9. Evaluate threat:
   - Evaluate enemy OB, current disposition and strength, committed and reinforcing units (maneuver, artillery, engineer, ADA, NBC, UW, air, intelligence assets, smoke, E-O sensors) and current significant activities.
   - Evaluate threat capabilities and tactics.
   - Develop/refine intelligence database and threat models.
   - Prepare doctrinal templates.
   - Prepare threat critical event lists.

10. Determine ECOAs:
   - Use doctrinal templates to develop event and situation templates (include all forces that can affect mission completion), AAs and MCs.
   - Identify enemy mission and intent.
   - Determine (in simple terms) how the enemy sees us acting in this operation.
   - Determine how the enemy is currently disposed and what must be accomplished to get from now to his desired end state, given that this ECOA must account for our actions determined in 3 above.
   - Determine enemy concept of the operation and subunit tasks. How will each of the following contribute to accomplishing the intent determined in 2 above:
     - Maneuver.
     - RISTA.
     - FS.
       - Artillery/mortars/rockets.
       - CAS.
       - Aviation.
       - NBC weapons.
       - EA.
     - Air defense - Recommend task organization for MI assets.
   - Identify most likely and most dangerous ECOAs.
   - Identify IR and NAIs for each friendly COA identified; TAIs with S3/FSO for each COA.
   - Develop HPTs for each friendly COA with S3/FSO.
   - Assist in developing HVTs for each ECOA.
   - Integrate EA into targeting.
   - Determine BDA criteria (damage required for each target, a means to determine damage).
   - Finalize and prioritize PIR (obtain CDR's approval).
   - Define indicators and SIR.
   - Send WARNO on threat to subordinate units to facilitate planning.

11. Develop ISM:
   - Tie to PIR/IR (include LTIOV).
   - Include timeline, required decisions, decision criteria, SIR, collection assets.
   - Plan for system cross-cue, back-up coverage.
   - Ensure it answers CDR's requirements for intelligence, targeting, and BDA in time to make decisions.

Table 4-4. Mission planning sequence (continued) .

- Participate in staff wargame of DST and targeting plan (as opposing CDR).
- Never hold MI assets in reserve.

12. Develop R&S plan and overlay to support DST (with support from S3/FSO/ENGR/ ADO) (see **Reconnaissance Planning** below):
- Determine indicators, SIR, NAIs, DPs, TAIs.
- Ensure NAI/TAI support synchronization or R&S plan with fire plan and scheme of maneuver.
- Identify intelligence gaps and request collection support from higher (RII).
- Develop communications plan/reporting schedule.
- Wargame R&S and collection plan.
- Update ISM, R&S, and/or collection plan.
- Receive, consolidate, and deconflict subordinate R&S plans and overlays.
- Consider "Reconnaissance Fundamentals" [Maximum reconnaissance force forward, orient on the location or movement of the reconnaissance objective, report all information rapidly and accurately, retain freedom to maneuver, gain and maintain enemy contact, develop the situation rapidly (FM 17-95).]
- Consider "R&S Principles" [(1) Tell the commanders what they need to know in time for them to act and (2) Do as much as possible ahead of time (FM 34-2-1)].

RECONNAISSANCE PLANNING

While the DMP for reconnaissance operations is conducted in the same manner as for any other combat operation, the following steps will assist the reconnaissance planner in ensuring that the unique features of reconnaissance operations are addressed.

Reconnaissance Mission Analysis

■ Identify Reconnaissance Objectives. Reconnaissance mission analysis must identify the objectives of the unit's reconnaissance effort. These objectives are obtained from—
- PIR.
- DPs.
- HPTs/HVTs.
- Confirming Events. (These are enemy actions and counteractions that confirm an ECOA and are determined by event analysis.)

The reconnaissance planner may determine that some of the above requirements may be accomplished by RFIs to higher HQ, but all of those that are not must become reconnaissance objectives.

■ Identify Reconnaissance AO. Reconnaissance planners identify the area in which reconnaissance forces will be operating, either specified by control measures such as LOAs or CFLs or implied by the location of reconnaissance objectives.

■ Restate Reconnaissance Missions. Once reconnaissance objectives have been determined, the mission for each element of the unit reconnaissance force must be determined from task analysis and stated as a subunit task. The task analysis process—determining specified, implied, and essential reconnaissance tasks and identifying limitations and constraints—is described in FM 101-5. Reconnaissance missions will be determined to be reconnaissance-in-force or zone, area, route, or force-oriented reconnaissance missions.

■ Identify Available Reconnaissance Force. Reconnaissance planners must identify the subunits that are available to execute the unit's reconnaissance effort and their current and projected status.

Table 4-4. Mission planning sequence (continued) .

■ Identify Available Equipment. Reconnaissance planners must identify the equipment available in an FMC status that will be used by elements of the reconnaissance force to accomplish reconnaissance tasks.

RCOA Development

■ Identify Required Reconnaissance Force. Reconnaissance planners must identify the force required to accomplish the unit's reconnaissance objectives. The number and type of elements involved will be based on the following:

- Number, type, location, and sequencing of reconnaissance objectives. Some objectives will require constant surveillance. Some will be time-phased and need only be observed for part of the battle. Some elements of the reconnaissance force will be able to accomplish several reconnaissance objectives.

- Type of reconnaissance mission. A route reconnaissance will require a different element than a reconnaissance-in-force.

- Strength, composition, and disposition of enemy security force. For each element of the reconnaissance force, the decision will have to be made whether it will have to infiltrate or penetrate the enemy security force. Infiltrations dictate stealthy elements and techniques while penetrations will require the correct reconnaissance force ratio.

■ Identify Required Equipment. Each reconnaissance objective will require specific reconnaissance equipment based on the following:

- Proximity of the reconnaissance element to the objective. What is the effective observation range?
- Environmental conditions. What will be the impact of severe weather? Night?
- Signature provided by the target. Does it emit a signal? Heat? Does it need to talk to anyone?

■ Determine the Reconnaissance Scheme. The RCOA must ensure that all reconnaissance objectives are addressed by elements of the reconnaissance force that can provide the read on the objective required by the commander. The reconnaissance force must therefore be in the right place, at the right time, and with the right observation, communications, and force protection equipment. The RCOA must deploy the reconnaissance force in depth to ensure that contact is not lost with moving reconnaissance targets. It must identify reconnaissance objectives that cannot be addressed so that RFIs may be prepared or risk accepted. In developing the RCOA, reconnaissance planners must answer the following questions:

- Are all PIR, HPT, DP, and confirming events addressed as reconnaissance objectives or RFI?
- What role will other BOS/combat operations play in the reconnaissance scheme?
  - FS (to include EA and SEAD for air insertions/extractions).
  - Air defense.
  - Mobility/counter-mobility.
  - CSS.
  - Deception.
  - OPSEC.
- How will this RCOA—
  - Maintain focus on the reconnaissance effort?
  - Gain and **maintain** contact with reconnaissance targets?
  - Provide early warning?
- How will we ensure that reconnaissance operations remain the bde/TF initial main effort?

Table 4-4. Mission planning sequence (continued) .

- What is the reconnaissance force's relationship with security force?
- How far forward will we conduct reconnaissance? Is there a force in front of us? What are the control measures?
- How will fire support be integrated into this RCOA?

■ Determine Task Organization, C^2 Relationships. Once the reconnaissance force and its associated equipment are determined, it must be task organized to accomplish the RCOA in the most efficient manner. The C^2 structure must address unity of effort by identifying the COR. **The COR must have the control structure and authority to direct the reconnaissance force.** Reconnaissance operations often take place over large distances and long periods of time where communications systems are subject to attack. The communications plan will require careful attention to the use of retransmitted teams and redundant systems.

■ Identify Control Measures. While reconnaissance operations require the same positive control measures as any other, some require special attention.
- LOA. This measure identifies the forward edge of the reconnaissance battlespace and is usually associated with a CFL or FSCL.
- BHL. Reconnaissance forces operate throughout the unit's AO, but must be able to coordinate the acceptance of reconnaissance targets entering their battlespace with the unit to their front.
- TF Forward Boundary. In brigade operations there will often be a need to identify a brigade zone forward of the subordinate maneuver TFs.

■ Determine CSS Requirements:
- Resupply: How often, by whom, where, how?
- CasEvac: By whom, how?
- Reconstitution: From where will reconstituted reconnaissance forces come? What are the priorities?

RCOA Analysis and Wargaming

■ Key Events to Wargame During Analysis of an RCOA:
- Infiltration or penetration of the enemy security force.
- Insertion/extraction methods.
- Backup communications plan.
- CasEvac operations.
- Change in reconnaissance objectives based on new information.
- Handover of reconnaissance target leaving reconnaissance unit's LOS or AO.

R&S Ten Keys To Success

1. Commander's intent and **CCIR** drive R&S.
2. Support **R&S** early with integrated staff products.
3. Be adept at abbreviated **IPB** for **Quick** or **Combat Decision Making Process.**
4. S2 focus on the event template to capture the moving enemy.
5. S2 then provides **situation template,** depicting enemy in the engagement area.
6. Use automation tools like **ASAS** to enhance products.
7. Deploy organic R&S assets early and request support from higher. Issue S3 **FRAGO** with S2 graphic overlay.
8. Provide continuous coverage throughout the depth of the battlefield.
9. Use all possible assets from national level to scouts.
10. Evaluate reporting and provide **immediate and continuous feedback** to the commander.

APPENDIX A

UNIT INTELLIGENCE TRAINING CHECKLIST

This checklist will help a newly assigned brigade or battalion S2 maintain technical and tactical intelligence proficiency. Its building-block approach is systematic. The phases are supported by tasks to be completed for certification during the time specified. Some tasks may not apply to a particular echelon of staff.

PHASE I - ORIENTATION PHASE

This phase covers basic orientation to the division and the unit's mission. **This phase should be completed within the first 30 days** . The goal is to quickly acquaint the S2 with an understanding of the battalion, brigade, and division roles within corps, possible missions, and deployment areas.

Initial/Date	Task
_____	Coordinate with and receive briefing from outgoing S2.
_____	Review unit's intelligence library of publications listed in Appendix J.
_____	Read unit METL and latest training brief to determine overall unit missions and status.
_____	Receive unit CDR in-brief.
_____	Talk with unit CDR; ask what are his desires for intelligence and intelligence products. Tailor intelligence to the needs of the CDR.
_____	Visit and receive briefing from ACofS G2, Deputy G2, G2 Operations Chief, G2 Plans Chief, G2 Training Chief.
_____	Meet with subordinate S2's and gain an understanding of—
_____	● Their commander's intelligence priorities.

- Personnel and equipment status.
- Training proficiencies and deficiencies.
- Areas where they need your echelon's help.

Visit MI battalion or DS MI Co commander for unit and equipment briefings, display, and demonstrations.

Study division, brigade, and battalion OPLANs.

Review and evaluate intelligence annex to unit SOPs. (Use FM 34-1, FM 101-5, your SOP, and intelligence annex to the division SOP.) Provide CDR an updated evaluation of the unit intelligence annexes. Develop an SOP if one is missing or outdated.

Receive an organizational and functional briefing from the next higher G2/S2.

Study the CDR's current PIR and IR as developed.

Meet and discuss intelligence missions, products, and training with the—

- Scout platoon leader.
- GSR platoon leader.
- Local division CI team.
- ACT.
- ACE Chief, IPS Chief, and CM Chief.
- EWO.
- Terrain detachment team.

Determine all organic or assigned division intelligence collection assets that may support collection efforts. (See Appendix G.)

Learn to use section's automation equipment and programs.

_____ Learn the connectivity, reporting, and requesting procedures.

_____ Meet with next higher echelon G2/S2 to discuss the CM process.

_____ Review unit's collection plan.

_____ Become knowledgeable of the unit's and division's FSOP, RSOP, and deployment procedures.

_____ Read unit and division history.

_____ Obtain SI access through the SSO and review SCI billets for unit.

_____ Review unit's arms room security SOP.

_____ Inventory all sensitive items in one company.

_____ Review key control program SOP.

_____ Review physical security and crime prevention SOP.

_____ Receive a crime prevention and physical security program briefing from the MP and Directorate of Security.

_____ Become familiar with the S2 section vehicles and generators, as necessary.

_____ Become familiar with the TOC SOP, setup, and multisystem, multiechelon connectivity.

_____ Visit G2 training for intelligence training products.

_____ Test an arms room’s J-SIIDS.

_____ Visit unit staff sections and attached sections from other units (FSO, ADA, NBC, SOCCE, and ENGR).

_____ Develop and implement a detailed internal security inspection program that covers intelligence areas within the unit.

_____ Develop working relationship with higher echelon G2/S2.

_____ Review mission and section METL and battle tasks. Have section members give their assessment of current training level.

PHASE II - FUNDAMENTAL PHASE

This is the most critical phase for the newly assigned S2. The knowledge, insight, and assessments of I&S will establish the foundation for future development. This phase focuses on the IPB process, intelligence production and dissemination, collection operations, and security. **This phase should be completed within 90 days** .

Initial/Date **Task**

_____ Present to unit personnel an officer professional development class on the threat.

_____ Update unit's collection plan as needed; submit revisions to the CDR and forward a copy to higher HQ G2/S2.

_____ Brief the CDR on division and corps IEW assets.

_____ Brief next lower units on division and corps IEW assets.

_____ Inspect unit map program. Identify basic map load and training requirements.

_____ Inspect and evaluate unit training for intelligence tasks, including awareness of AR 381-10.

_____ Determine country and area study requirements from open and classified sources based on contingency and assigned OPLANs.

_____ Begin country studies.

_____ Understand additional duty responsibilities as required:

_____ ● Security manager.
_____ ● Physical security officer.
_____ ● Personnel security officer.
_____ ● Crime prevention officer.
_____ ● Key custodian.
_____ ● Top secret document custodian.
_____ ● Information systems security officer.

_____ Receive briefing and training from unit SIGO on communications procedures and communications equipment PMCS.

_____ Become familiar with capabilities, limitations, and vulnerabilities of unit's equipment (tanks, Bradleys, other assigned, attached, DS systems, or OPCON BOS operating in the unit's battlespace; particularly the TA and information dissemination capabilities).

_____ Update, as needed, the unit's—

_____ ● Arms room SOP.
_____ ● Physical security SOP.
_____ ● Key control SOP.
_____ ● Crime prevention program.

_____ Conduct random unannounced security spot checks. Report the results and any recommendations to the CDR.

_____ Brief CDR on the unit's intelligence estimate.

_____ Brief CDR on the intelligence collection and reporting system from platoon through corps.

_____ Develop, update, and evaluate an S2 section METL and battle tasks.

_____ Be knowledgeable on CTC threat vehicles, E-O devices, doctrine, and tactics. Teach a class on this subject at least once in this phase.

_____ Visit nearest battle simulation center and become familiar with computer operations.

_____ Visit and observe training of primary weapon systems in the division.

_____ Understand current division policy on CONUS and OCONUS transportation of classified material.

_____ Work with commanders. Ask what intelligence they want during FTXs and OPORD briefings.

_____ Know how to read a TACFIRE direction system message. Let FSO know you want to receive these during FTXs and deployments.

_____ Work with FSO to develop and review unit targeting and BDA procedures.

_____ Know unit air LNO. Request BDA and in-flight reports that will bolster reporting.

_____ Obtain recent CTC and applicable CALL. Develop plan to correct any deficiencies.

_____ Obtain inspector general checklist and CIP checklists; conduct internal inspection on all S2 functional areas. Brief CDR on inspection results and solutions.

_____ Review language proficiency requirements; assist S3 in coordinating training. Retain list of unit's capabilities; include unpaid abilities.

_____ Conduct classified materials inventory; learn destruction and verification methods; review destruction and transfer SOPs.

_____ Constantly review clearance requirements, applications, and updates.

PHASE III - DEVELOPMENTAL PHASE

This phase will build and expand on the knowledge gained during Phase II. It will cover the same basic intelligence functions but in greater detail. **This phase should be completed within 180 days.**

Initial/Date	Task
_____	Fully understand the functions of the S2 at the unit's TOC and how S2 functions drive other TOC functions.
_____	Submit REDTRAIN requests through applicable higher S2 to G2 training, as required.
_____	Review threat OB holdings and files. Order update material as required.
_____	Determine available intelligence databases and actually "work the system" to obtain data in support of a CONPLAN. Brief CDR on the results.
_____	Identify gaps of information in battle books, OB holdings and files, and intelligence annexes. Submit RIIs to satisfy intelligence requirements.
_____	Identify S2 and intelligence weaknesses from the last EXEVAL and present a correction plan to the CDR.
_____	Evaluate intelligence training classes and provide written results to the CDR.
_____	Evaluate unit soldier's knowledge of intelligence training tasks and provide a written report to the CDR.
_____	Determine if all ADP systems are accredited. Brief CDR on steps needed to correct any problems.

_____ Demonstrate a thorough understanding of the intelligence reporting system during FTXs.

_____ Act as threat CDR during the wargaming process and TF rehearsals.

_____ Develop an internal S2 section intelligence cross-training program. Have section soldiers teach the classes.

_____ Determine unit's security posture during FTXs and recommend corrective actions to the CDR.

_____ Become familiar with and teach a class on doctrine, tactics, and current vehicles of a CONPLAN threat.

PHASE IV - ADVANCE PHASE

This phase will take the S2 who has mastered the intelligence fundamentals through **the first year,** during which the unit will have participated in the full annual training program.

Initial/Date **Task**

_____ Successfully complete an EXEVAL.

_____ Successfully deploy section and perform S2 operations during a CTC rotation.

_____ Successfully deploy section and perform S2 operations during a BCTP Warfighter Exercise.

_____ Qualify or familiarize yourself on all unit weapon systems.

_____ Update unit's intelligence annex as required.

_____ Research a classified intelligence topic that is relevant to the unit's mission and brief the CDR on the conclusion.

_____ Accurately predict threat actions during FTXs using IPB and all intelligence assets.

_____ Successfully integrate with higher echelon G2/S2.

APPENDIX B

INTELLIGENCE PREPARATION OF THE BATTLEFIELD PRODUCTS

This following examples of various overlays, templates, and matrices are constructed and used during the IPB process to enhance the battlespace visualization of the commander and staff. These samplings are not all-inclusive. Your products will be dictated by your mission statement, resources available to you, and the time allowed.

Figures B-1 through B-6 are terrain overlays. Figures B-7 through B-13 are templates and associated matrices. Figure B-14 is a sample of an ADA-tailored IPB.

The MCOO includes—

- **MCs** and **AAs** stated in terms of concealment and cover, size and deployment type of formation that can move along them (armored battalion in company wedge), speed the formation can reasonably achieve; dismounted, mounted, and aerial routes; trails and passes that will allow column movement if unopposed.

- **Obstacles** in terms of what they are an obstacle to.

- **Key terrain**.

- **Restricted terrain** in terms of what size force can deploy there and what mobility work could be done to "unrestrict" it.

- **Severely restricted** terrain in terms of what will allow a dismounted force to traverse it and at what speed.

- **IVLs**. Without a 1- or 5-meter resolution terrain product, IVLs will have to be determined by historical knowledge or ground reconnaissance.

- **Soils** and **weather analysis** that indicate trafficability and "dig-ability."

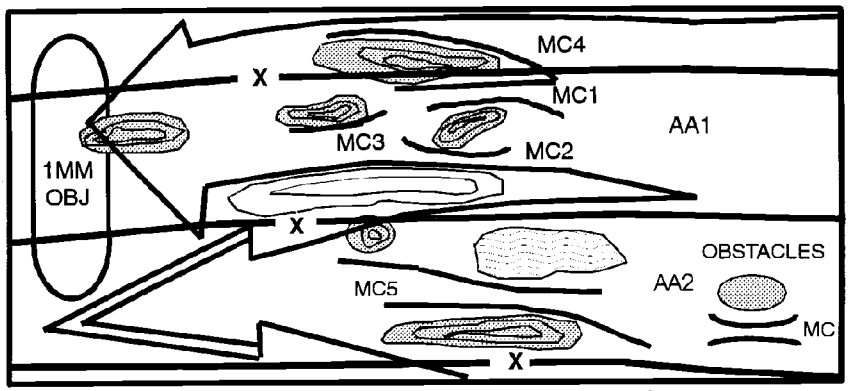

Figure B-1. Modified combined obstacles overlay.

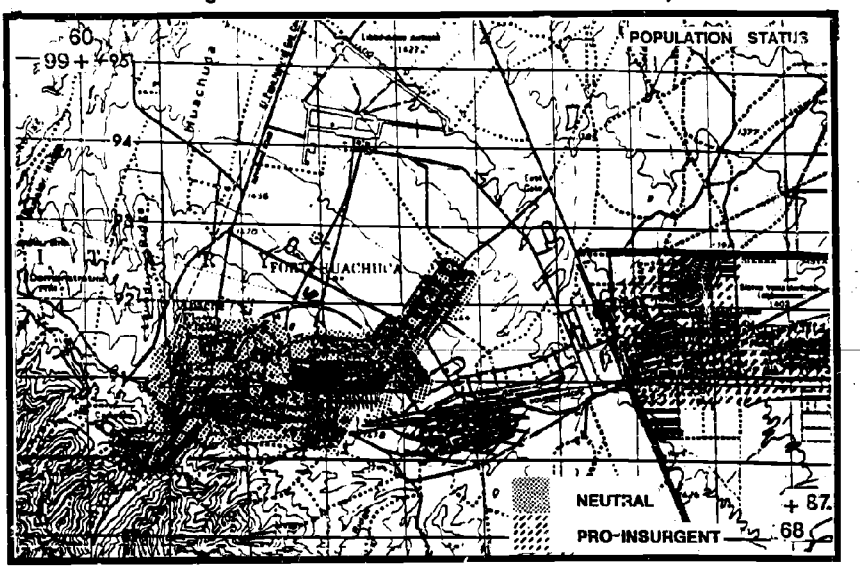

Figure B-2. Population status overlay.

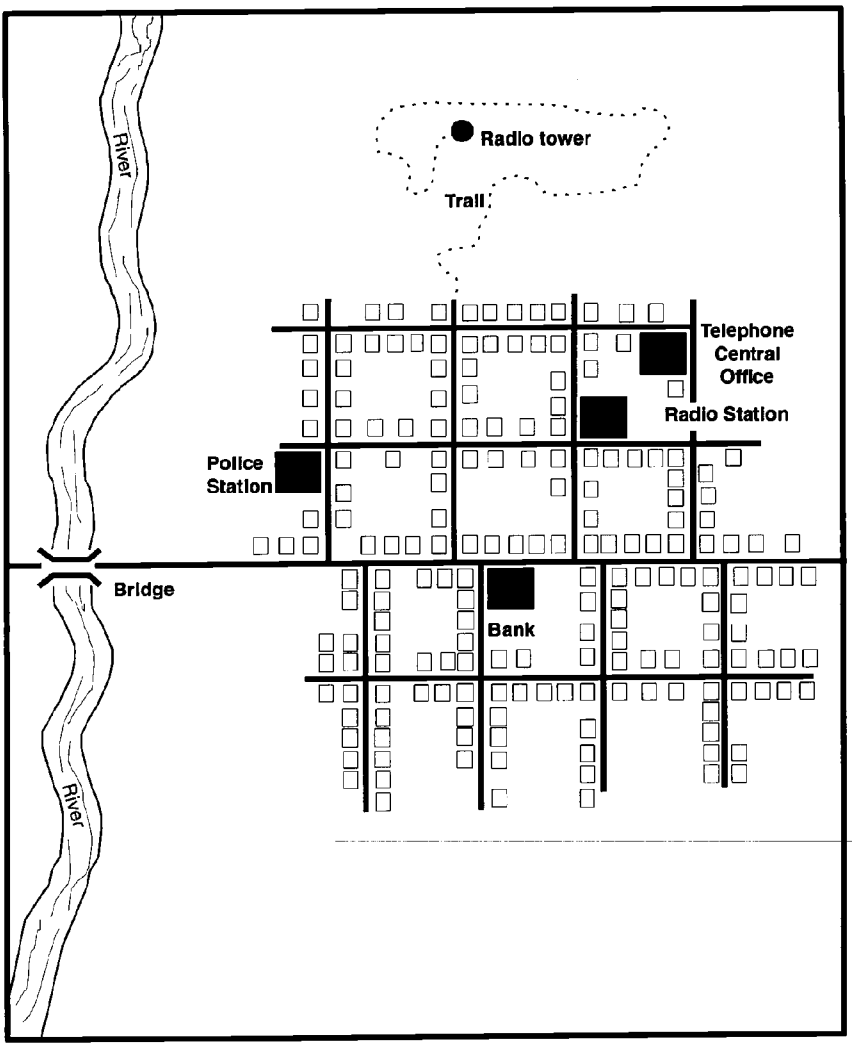

Figure B-3. Key facilities and target overlay.

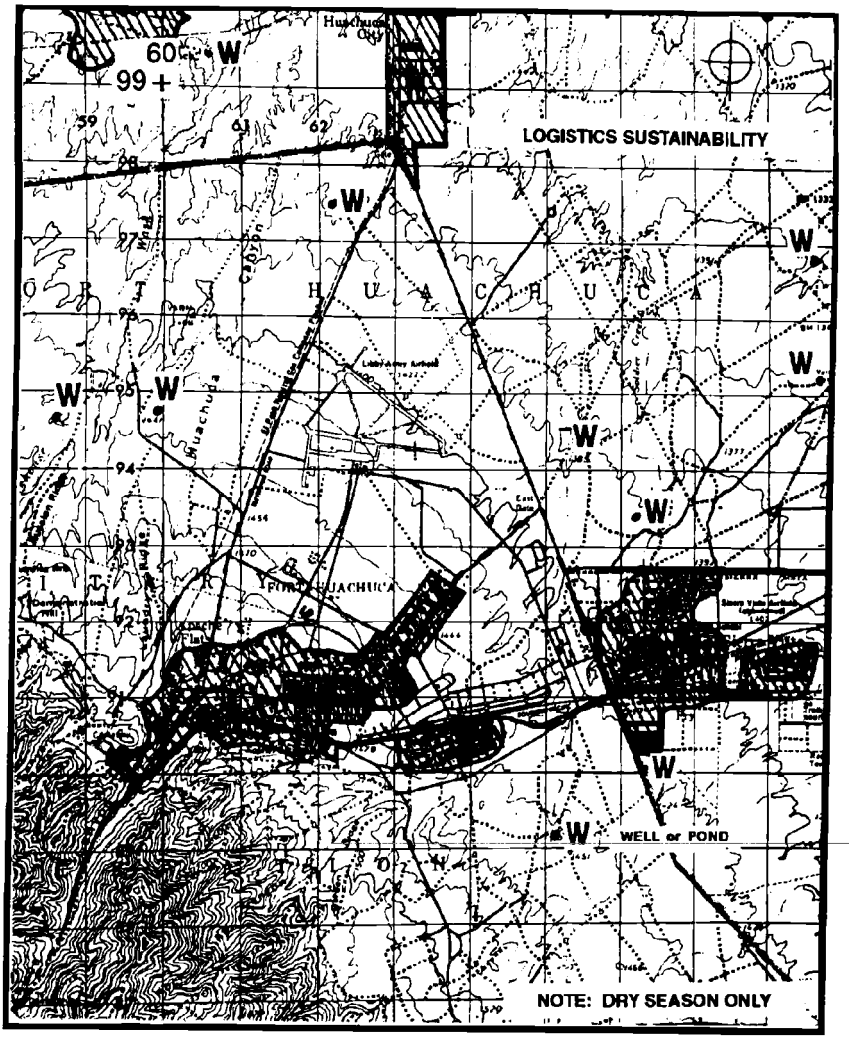

Figure B-4. Logistics sustainability overlay.

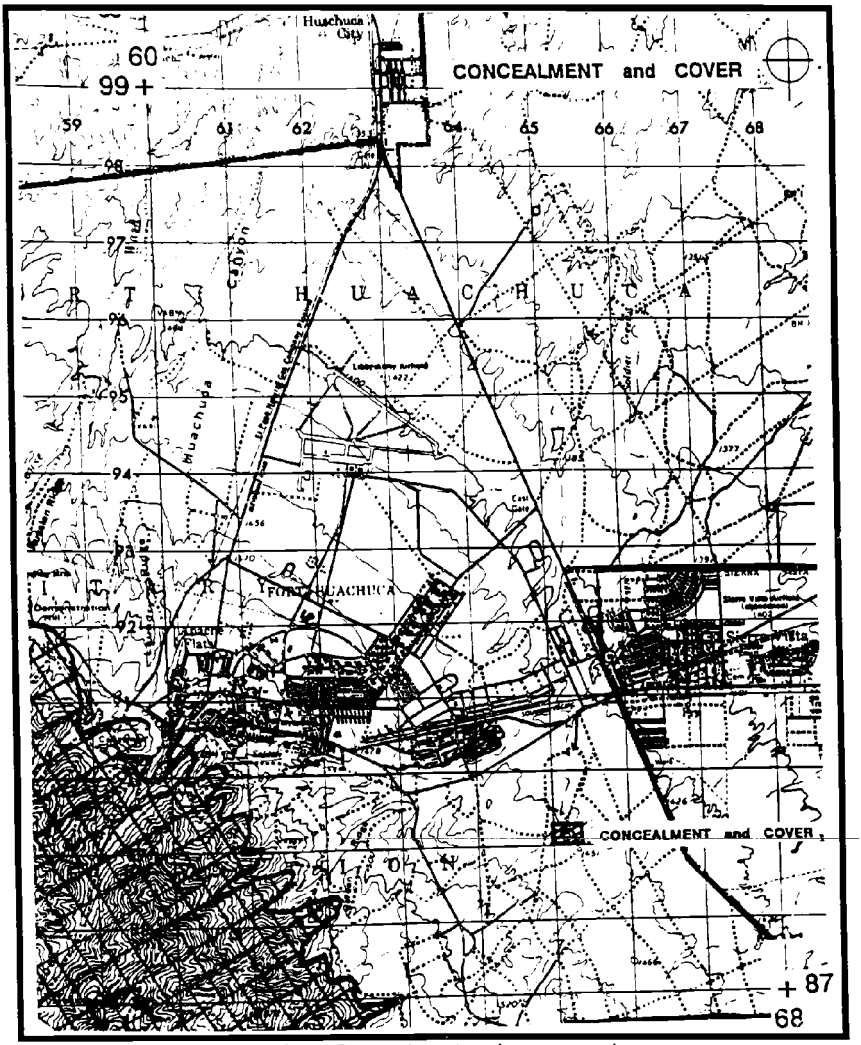

Figure B-5. Concealment and cover overlay.

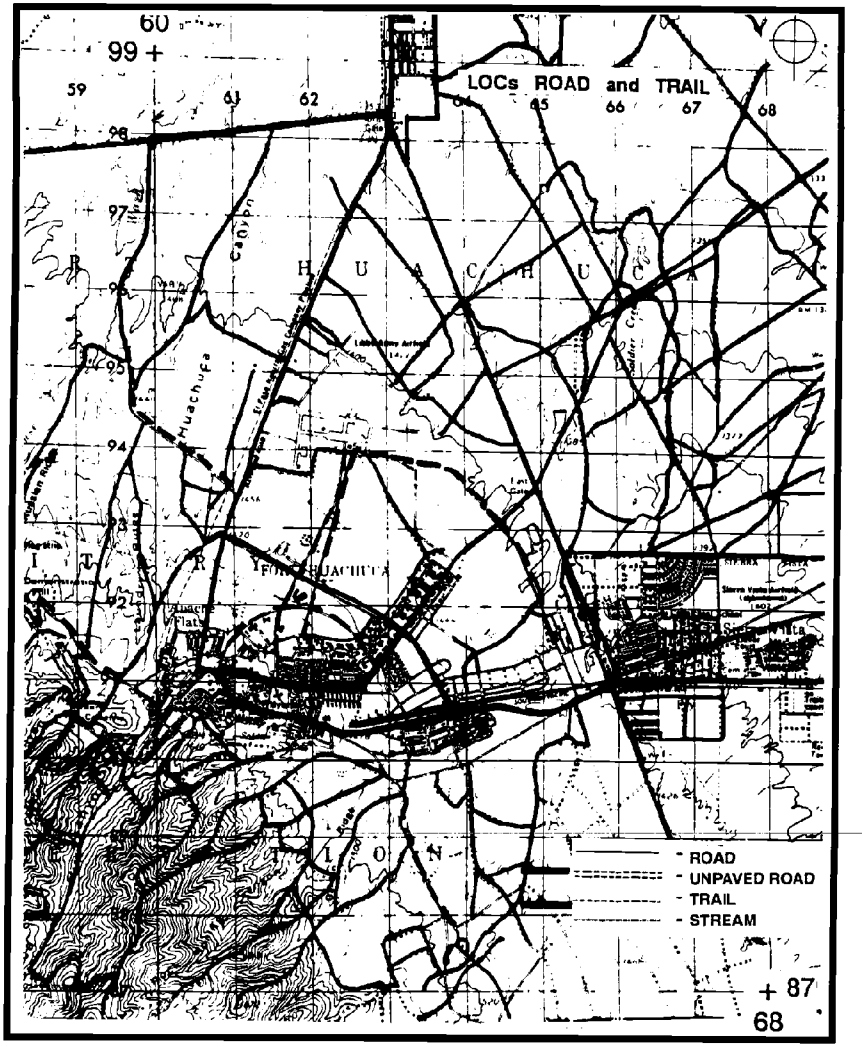

Figure B-6. Lines of communication overlay.

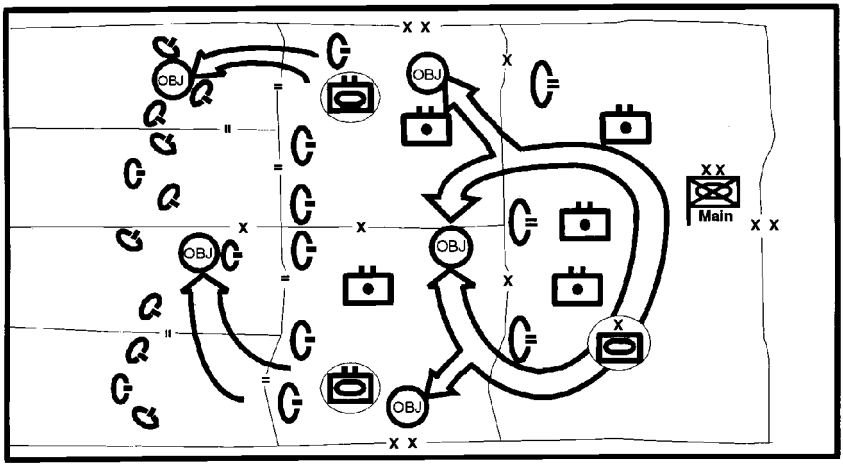

Figure B-7. Doctrinal template - depicts enemy forces according to doctrinal deployment, unconstrained by terrain.

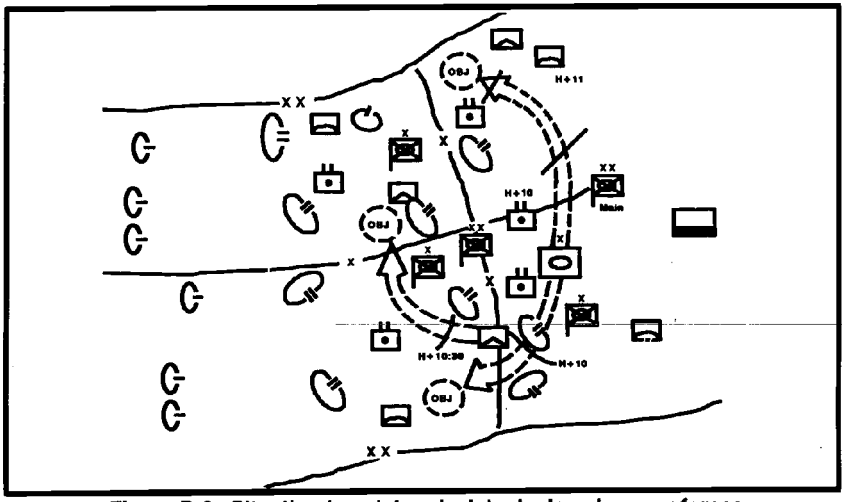

Figure B-8. Situation template - depicts deployed enemy forces adjusted for obstacles and terrain.

The situation template should include the following for mechanized armor-based offense and defense.

In the offense:	**In the defense:**
• Objectives & LOA. • AAs & MCs. • Recon routes, OP & IEW sites. • Firing lines & direct fire range fans. • Formations & deployment lines. • Artillery targets & range fans. • Artillery & ADA position areas. • ADA coverage. • Attack helicopter routes, BPs & range fans. • LZs. • CAS routes. • Situational obstacles. • Chemical agent targets. • Smoke targets	• BPs & direct fire range fans. • Reserve & hide positions. • CATK routes & firing lines. • Counter-SOPs & counterrecon forces. • Recon routes, OP & IEW sites. • Ambush sites. • Artillery targets & range fans. • Artillery & ADA position areas. • ADA coverage. • Attack helicopter routes, BPs & range fans. • Tactical & protective obstacles. • CAS routes. • Situational obstacles. • Chemical agent targets. • Smoke targets.

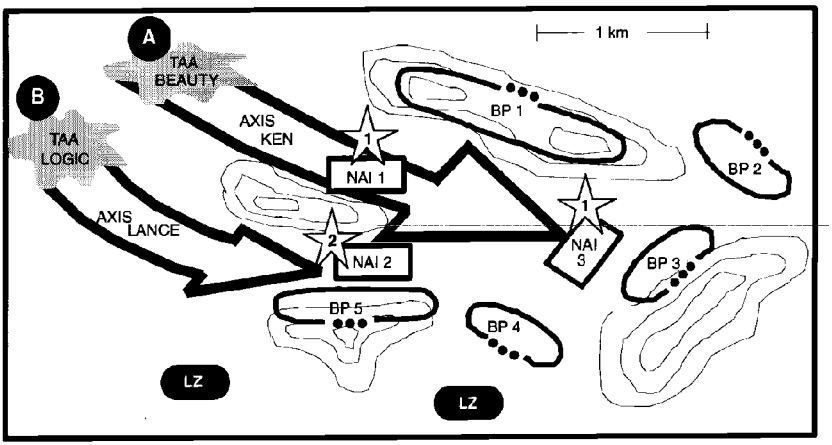

Figure B-9. Decision support template.

DP No.	1	2
Decision Criteria	Insurgent Camp is in NAI 1 or 3.	Insurgent Camp is in NAI 2.
Maneuver	A Co receives 3/B, occupy TAA BEAUTY, O/O movement to CATK along AXIS KEN.	A Co occupies TAA BEAUTY, O/O occupy BPs 1, 2, and 3.
FS	Priority: A, B, C.	Priority: C, B, A.
M-CM-S	1/A/13th Engr to A.	1/A/13th Engr to C.

Figure B-10. Partial BOS synchronization matrix.

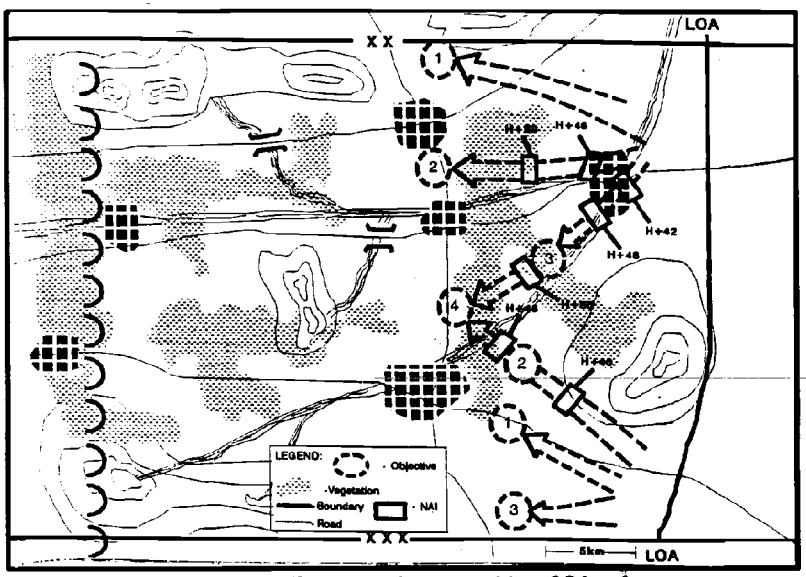

Figure B-11. Event template - considers COAs of reinforcing or counterattacking forces.

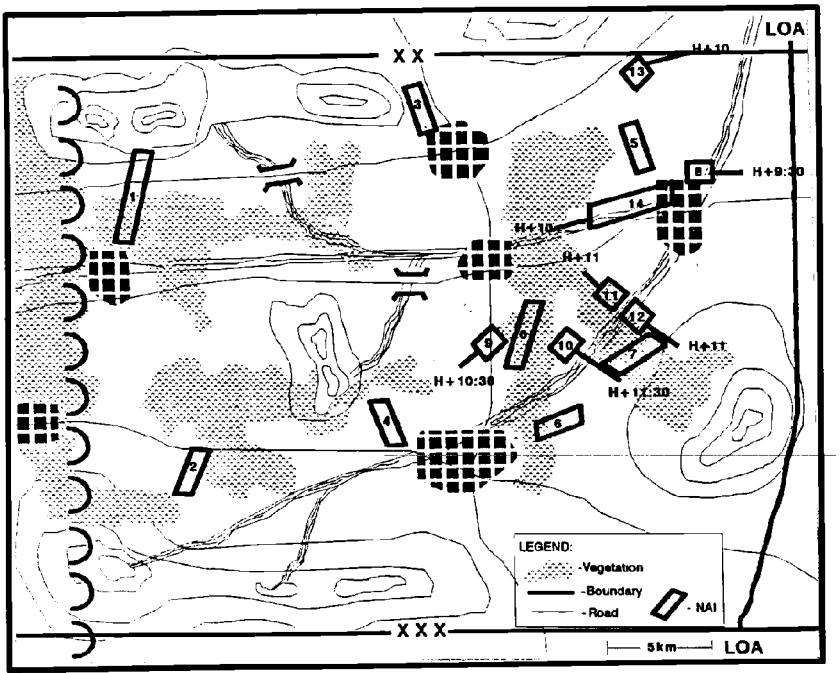

Figure B-12. Event template - depicts key events in each threat COA.

NAI	EST TIME	INDICATORS THAT WOULD HELP CONFIRM COA 1	COA 2	COA 3	OTHER
1	H-15		AASLT Forces		
2	H-15		AASLT Forces		
3	H-15	AASLT Forces		ASSLT Forces	
4	H-15		Infil of LT Inf		
5	H-4		LT Inf ATK NAI 5		
6	H-4	LT Inf ATK NAI 7	LT Inf ATK NAI 6		
7	H-4	LT Inf ATK NAI 8		LT Inf ATK NAI 7	
8	H-4	■Poised to ATK		LT Inf ATK NAI 8	
9	H-4	■Poised to ATK	■Poised to ATK		TD ATKs
10	H-4		■Poised to ATK	■Poised to ATK Abreast	TD ATKs
11	H-6			■Shifts N	
12	H-18				1 or 2 Bdes ATK N
13	H-18				1 or 2 Bdes ATK S
■ Indicates ECOAs.					

Figure B-13. Event matrix.

CONSIDERATIONS FOR AIR IPB

1. DEFINE THE BATTLEFIELD .

- AI for air IPB is significantly larger than ground IPB.
  - – Includes airfields which can range supported unit AO to include those within aerial refueling radius.
  - – AAAs which lead into supported unit's AO.
  - – Three types of air avenues:
    - * F/W Attack = Normally follows ground forces.
    - * F/W Transport = Bombers and R/W lift uses terrain to mask ingress and egress routes.
    - * R/W Attack = Normally follows ground forces.

2. DESCRIBE THE BATTLEFIELD'S EFFECTS . See the following example of weather effects on aviation operations.

TYPE AIR-CRAFT	MINIMUM VIS	WIND-SPEED & DIREC-TION[1]	PRECIPI-TATION	TEMPER-ATURE & HUMIDITY[2]	ILLUMI-NATION
Fixed Wing	2.5 nmi vis 2.5 nmi AGL ceiling in hilly terrain 1.0 nmi AGL in flat terrain	For airborne operations speed must be <13 knots	Severe weather within 3 miles of target will hinder acquisition. Freezing rain greatly limits lift capability	Temp >100 and humidity <80% will degrade payload capability	Little air-to-air or point CAS capability at night except newest F/W
Rotary Wing	1.0 nmi vis 300 ft AGL	For airmobile operations speed must be <13 knots	Same	Same	No CAS without illumina-tion except newest R/W

[1] Strong winds perpendicular to AAA increase difficulty in hitting target.
[2] Amount of degradation differs with type of aircraft.

Figure B-14. Sample of an ADA-tailored IPB.

- Terrain Analysis.
  - Determine impact of geographic factors on the ability of the aircraft to approach, acquire, and engage a target.
  - Predict how an aircraft would most likely approach target or area to deliver ordnance.
  - Locate positions that rotary wing could use for stand-off and/or pop-up attacks.
  - Determine locations of possible LZs, DZs, and the AAAs to these areas.
  - AAAs do not stop at FLOT or FEBA and they do not enter your AO solely from the FLOT or FEBA; watch your flanks and rear.
  - The closer an aircraft is to a target the greater an influence terrain will have on the aircraft and how it is employed.
  - The best method for formulating AAAs is based on fixed factors:
    * Locations of enemy airbase or staging area (known or suspected).
    * Position of friendly targets.
    * Most aircraft will fly a straight-in approach from the airbase to the vicinity of the target.

    Reason: Shorter overall mission time, less fuel needed, more payload or ordnance.
  - Exceptions which cause deviation from this rule:
    * Heavy concentrations of air defense.
    * Major terrain features that can mask the approach of aircraft at low altitudes.
    * Terrain that may force unnecessary exposure.
    * Terrain exceeding the operating ceiling of rotary-wing aircraft.
  - What happens in the vicinity of the target?
    * Most attacking aircraft will drop lower to use terrain masking and minimize early warning and exposure times to associated air defenses.
    * How will the enemy aircraft approach the target (Hi-Hi-Lo, Lo-Hi-Lo, or Lo-Lo-Hi, etc)?
    * To engage the target the pilot must be able to see it (visual, radar, sensor).
    * The pilot must approach his target so he can see it at far enough distance to allow lock-on and engagement by his weapon system.
    * The pilot will maximize his standoff range to increase survivability.
  - How to determine the direction of attack:
    * Know the enemy HPT; what friendly asset he must destroy.
    * Know the location of these assets.
    * Know the location of known or suspected enemy airbases and FARP.

Figure B-14. Sample of an ADA-tailored IPB (continued).

* Determine AAA which could be used by fixed- or rotary-wing aircraft making the attack.
* Determine locations from which stand-off and pop-up rotary-wing attacks are most likely.
* These locations will provide terrain masking for the aircraft to hide behind.
* The location must also provide observation and fields of fire into the target area when the aircraft pops-up.
* This type of location + a masked ingress and egress route = a stand-off or pop-up position.
* Within the vicinity of the target, consider the following:
  _ LOS acquisition of the target.
  – Weapon stand-off capability.
  – Pilot reaction time.
  – Aircraft survivability.
  – Standard tactics.

3. EVALUATE THE THREAT.

- Should address the following:
  – AOB—How many and what type aircraft. (Include different models such as Mi-24 E or F because they all have varying payloads, optics, and weapon systems.)
  – Capabilities of the aircraft in the enemy inventory.
  – Types of ordnance available to the enemy.
    * Guns.
    * Rockets.
    * Tactical ASMs, CBUs, PGM, AAM, NBC, and mines.
  – Capabilities:
    * Range.
    * Guidance (aerial, ground).
    * Release altitude.
  – Doctrine:
    * Raid sizes and composition.
    * Ingress and egress altitude and speed.
    * Delivery profiles.
    * Use of EP and SEAD.
  – C^2:
    * Most non-Western aircraft operate under strict ground control. They are vectored toward a target rather than being sent to an area to seek

Figure B-14. Sample of an ADA-tailored IPB (continued).

targets on their own. The vector is from ground emplaced beacons which normally operate in HF range.
- – Work to template high value C^2 targets:
  - * GCI nodes.
  - * FAC.
  - * RNP.
  - * Beacons.
- – Maintenance and Sortie Generation Capability:
  - * OR rates determine the percentage of aircraft able to fly. OR rate x number of aircraft = the maximum aircraft that can fly at any one time.
  - * The average sortie generation rate for most modern air forces is 2.5 to 3 for first 24-hour period. Second and succeeding day's planning factor is 5% of available number of aircraft.
  - * To get sortie generation rate: number of aircraft x sortie generation rate = number of sorties in a 24-hour period.
  - * To estimate number of sorties in your AO, consider ground situation, enemy main effort, enemy doctrine.

4. DETERMINE THREAT COURSES OF ACTION.

- Enemy air operations are conducted in support of their ground operations. The most important part of determining enemy air COAs is to understand the ground situation and enemy ground COAs.

- With the information and analysis you've done in the first three steps, determine how the enemy will employ his air assets.

- Consider enemy doctrine, AAAs, terrain in the target area, and current weather conditions.

- You must answer the following questions:
  - – When will the enemy commit his air assets?
  - – Where will the enemy commit his air assets (target area)?
  - – What air assets will the enemy commit (number of aircraft)?
  - – How will the aircraft attack in the target area (AAA or delivery profile)?

Figure B-14. Sample of an ADA-tailored IPB (continued).

APPENDIX C

RECONNAISSANCE AND SURVEILLANCE PLANNING

R&S planning is continuous. You must understand the commander's intent for each mission. After mission analysis, the commander should tell you the key information needed before and during the mission. This key information is the commander's PIR and IR. The PIR and IR provide the initial focus to R&S planning. Plan to conduct R&S throughout the depth of the battle in space and time. (See FM 34-2-1.)

G2/S2 R&S RESPONSIBILITIES (Table C-1)

Table C-1. G2/S2 R&S responsibilities.

REQUIREMENT	EFFECTS
Coordinate with higher, flank, forward units.	Better guidance from higher & integration with adjacent units; less redundancy & gaps in coverage.
Identify R&S requirements; rehearse R&S plan.	Success of unit mission.
Supervise & coordinate the command's aerial & ground reconnaissance (include LRRPs).	Better use of survl systems (GSR/REMBASS employment), LRRPs, and tasking UAVs or other aerial assets to answer CDR's PIR.
Brief GSR, REMBASS, and patrol team leaders (plt leaders of every BOS in AO to collect) (e.g., LLVI, LRSD, scouts).	Effectiveness of R&S assets which, in turn, affects success of R&S effort.
Prepare R&S WARNO and OPORD early-on.	Start the reconnaissance effort ASAP.
Update R&S OPORD as info is received.	Effectiveness of R&S effort and unit mission.
Provide R&S plan to higher, lower, and adjacent units.	R&S effectiveness and other unit actions; prevention of negative effects.

EXAMPLE: The primary R&S planning objective is to task subordinate units (all possible assets; e.g., MI, MP, FA, Signal, Engr, FSB) to cover NAIs important to brigade mission or directed by higher HQ. Subordinate units plan the use of available R&S assets to satisfy taskings from the brigade and their own requirements. They strive to complete their plans quickly (using the 1/3, 2/3 rule) so R&S assets have time to prepare and execute the plan. As soon as they are complete, the subordinate unit plans are consolidated at brigade to form the brigade R&S plan. You now have a draft plan that shows when and in what areas to begin R&S planning.

R&S PLANNING PROCESS (Figure C-1)

I. PLANNING PROCESS.

A. Initial Requirements:

1. Did higher HQ provide tasking requirements?
2. Was the commander's PIR and IR stated and included?
3. Did commander provide R&S intent?
4. Did S2 brief the staff on enemy collection capabilities?
5. Were other staff tasks performed?

B. SIR Developed (IPB Driven):

1. Did S2 identify air or ground AA?
2. Did situation and event templates reflect probable or prioritized ECOAs?
3. Was NAI developed in detail? (What is expected? When? Where?)
4. Were collectible indicators at NAIs developed?
5. Were SIR developed from NAIs and indicators?
6. Were reporting requirements developed for priority collection missions to allow the commander time to change plans?

C. Possible Collectors Analyzed:

1. Did S2 coordinate with staff, S2, and G2 to identify all available collection assets?
2. Did S2 analyze asset capabilities to develop collection requirements based on range to target, time available, target characteristics, terrain, weather, enemy (obscurant use), and communication?
3. Did S2 analyze collection redundancy (is it necessary)?

Figure C-1. R&S planning process.

4. Did staff identify support requirements (communication nets, retransmission, FS, NBC reconnaissance support, logistic support, special equipment support)?
5. Did S2 identify gaps in collection?
6. Did S2 back brief S3 or the commander on R&S concept?
7. Were WARNOs sent to appropriate assets?
8. What were timelines?
   a. When was mission received?
   b. What is NLT time for execution?
   c. When was templating done?
   d. When was tentative plan made? Back briefed?
   f. When was initial reporting needed?
   g. Who was in charge of R&D planning?
   h. Who was in charge of counterreconnaissance planning?
   i. What is LTIOV.

II. PREPARATION FOR R&S OPERATIONS.

A. Specific Collection Instructions:

1. What assets could be available? Used? **(See Figure C-4.)**
   a. Scouts.
   b. Patrols.
   c. Forward Observers.
   d. Armor.
   e. Aviation.
   f. Infantry.
   g. EW.
   h. REMBASS.
   i. Chemical.
   j. UAV.
   k. Medical.
   l. CI teams.
   m. GSR.
   n. OPs and LPs.
   o. Signal.
   p. Antitank.
   q. Engineer.
   r. Cavalry.
   s. MP.
   t. ADA.
   u. SOF.
   v. Support units.
   w. GRCS.
   x. Interrogation teams.

2. Did the S2 provide detailed instructions to tasked assets? Did the instructions include—
   a. Who is tasked?
   b. What to look for?
   c. Why to look?
   d. When to look?
   e. Where to look?
   f. What you could expect to see?
   g. How to get there?
   h. Who to coordinate with?

Figure C-1. R&S planning process (continued).

i. Passage of lines and recognition signals?
j. Reporting requirements?
k. Friendly assets in AO?
l. Resupply?
m. Obstacles?
n. MEDEVAC?
o. NBC hazards?

3. Was the collection location appropriate (concealment, collectable)?
4. Were there sufficient control measures included to control assets during mission?
5. Did the S2 request assistance from higher HQ for identified collection gaps?
6. Did the R&S plan cover all collection requirements?
7. Were assets overtasked?
8. Was redundancy appropriate for this mission?

B. Coordination:

1. What is format of plan (collection plan, overlay, matrix)?
2. Were direct or indirect fires or jamming coordinated between staff and S2?
3. Was a CI vulnerability assessment made?
4. Was additional equipment (special) planned for?
5. Were communication nets established to meet reporting needs?
6. Were commanders and staff briefed on plan before execution?
7. Did commander or S3 approve final plan?
8. Did assets know specific requirements (PIR and IR)?
9. Was plan disseminated to all involved or with a need to know (FRAGO, overlay)?
10. Was plan sent to higher HQ?

C. Asset Internal Coordination:

1. Was equipment checked?
2. Were internal procedures clarified?
3. Did coordination between assets occur?
4. Was mission rehearsed?
5. Was plan developed far enough in advance for assets to prepare or rehearse?
6. Was plan developed in time for higher HQ to review?

III. EXECUTION.

A. Continuity of R&S and counterreconnaissance operations:

Figure C-1. R&S planning process (continued).

1. Did unit plan provide for operations when scout or other R&S assets are inoperable?
2. Did unit SOP provide for operations during briefings, debriefings, or rehearsals?
3. Are unit and leaders cross-trained to facilitate substitutions or replacement of scouts?

B. Asset and Unit Response:

1. Did assets depart and set up on time?
2. Did assets use concealment, cover, and camouflage?
3. Were assets able to observe enemy undetected?
4. Was low-level deception used?
5. What were meteorological report requirements?
6. Were enemy locations pinpointed?
7. Was objective reconnoitered?
8. Were obstacles identified and marked?
9. Were routes marked?
10. Did assets submit route/obstacle overlay?
11. Was enemy reconnaissance located?
12. Were counterreconniassance missions performed?
13. Did assets help with C^2 during attack?
14. Did assets help direct or control fires?
15. Was terrain reconnoitered (trafficability reported)?

C. Reporting:

1. Were reports timely, accurate, and concise?
2. Were assets debriefed?

D. Results:

1. Did S2 plot asset reports (track results of plan)?
2. Did S2 identify inadequately tasked or unproductive assets and change tasking (with approval of commander and S3)?
3. Did reports or analysis answer PIR and IR?
4. Was R&S plan updated and recoordinated?
5. Were templates updated?

E. Dissemination:

1. Was commander briefed on answer to PIR?
2. Has commander updated PIR?
3. Did units get intelligence based on priority?
4. Did higher HQ get answers to taskings?
5. Did assets receive feedback on level of success?

Figure C-1. R&S planning process (continued).

OTHER R&S PLANNING CONSIDERATIONS (Figure C-2)

1. General.
   a. Combat information is knowledge of the enemy, weather, and terrain.
   b. R&S collection should answer the commander's PIR and IR.
   c. Every soldier is an important HUMINT collection asset.

2. Analysis of information collected on PIR and IR is an objective process.

3. Determine requirements:
   a. Set priorities. Develop SIR and SOR. Do not let the R&S elements decide what answers the commander's PIR.
   b. Terrain and weather.
   c. Tactical situation (deep, close, rear).
   d. Focus the R&S mission.

4. Develop R&S plan based on the principles of reconnaissance:
   a. Timely information.
   b. Aggressive reconnaissance.
   c. Continuous reconnaissance.
   d. Focus combat power.
   e. Relevant information (focused on PIR and CCIR).
   f. Reconnaissance OPSEC. Coordinate with G3/S3 to establish control measures which deconflict and help protect R&S assets on the battlefield.
   g. Accurate information.
   h. Complementary with operations.
   i. Consideration of threat counterreconnaissance threat.
   j. Destruction of threat reconnaissance elements when detected.
   k. Plan for CasEvac, resupply, and reconstitution for teams in the field.

5. Identify METT-T.

6. Develop communications plan and reporting schedule.

7. Issue WARNO to R&S asset leaders.

8. Coordinate R&S plan with—
   a. Commander and commanders of areas in which teams will operate.
   b. Adjacent and higher G2/S2.

Figure C-2. R&S planning considerations.

c. Unit S1/S3/S4.
d. FSO.
e. SIGO.
f. Engineer LNO.
g. ADA LNO.
h. Chemical Officer.
i. G3/S3 to tie R&S plan into the maneuver plan.

9. Brief R&S team leaders and all other R&S assets.

10. Advise higher and lower S2 of R&S plan.

11. Request support from higher headquarters.

12. Write R&S tasks into paragraph 3 of the OPORD.

13. Evaluate reports, review requirements, and identify intelligence gaps.

14. Analyze reports to deny or confirm your templates; then update templates.

15. Ensure combat information is passed immediately to those elements that can react to it.

16. Update the R&S plan based on known intelligence.

17. Plan for future operations.

18. Maximize use of all available assets.

Figure C-2. R&S planning considerations (continued).

You can now begin adding some detail to the R&S plan. Integrate any requirements from higher HQ. Translate the initial PIR and IR into indicators on which R&S assets can collect. Use the indicators to develop the SIR and SOR. The SIR and SOR ensure assets are collecting specific information that answers the PIR and IR.

Once you have a picture of the coverage required for the R&S effort, prioritize the SIR. Assign a high priority to those SIR that, when answered, will provide the greatest amount of intelligence in the shortest amount of time. After you prioritize the SIR, draft the R&S plan and distribute to the appropriate R&S assets. It is critical that you deploy R&S assets early-on and update them as additional information is received.

TOOLS TO TRACK DEPLOYED R&S ASSETS

Three methods are used to track deployed R&S assets:

- Reconnaissance base OPORD (Figure C-3).
- R&S overlay (Figure C-4).
- R&S tasking matrix (Figure C-5).

Select any method as long as the assets receive clear, specific instructions. Some S2s use all three methods by attaching the R&S overlay and R&S tasking matrix to the reconnaissance order prior to dissemination. When possible, using all three is best because each asset then has a graphic, a matrix, and a written set of instructions.

RECONNAISSANCE ORDER:

The reconnaissance order is the narrative instructions for deployed assets. Figure C-3 is an example of a brigade reconnaissance order.

RECONNAISSANCE ORDER

1. SITUATION.
   a. Enemy forces.
   b. Friendly forces.
   c. Attachments and detachments.
   d. Assumptions (OPLAN only).

2. MISSION. Expressed as task and purpose derived from planning process. Clearly stated reconnaissance objectives.

3. EXECUTION. Commander's intent, derived during planning process:

a. Concept of Operation. State how reconnaissance assets are operating in relation to the parent organization. This scheme must identify if the reconnaissance force is infiltrating or penetrating the enemy's security forces (or both) and how this will occur.

Figure C-3. Example of a brigade reconnaissance OPORD.

(1) Manuever.
(2) FS. (Refer to FS annex if required.)
(a) Scheme of fires that specifies what fires are available and how to get them.
(b) Engagement criteria.
(c) Scheduled fires in support of insertions and extractions.
(3) Mobility and survivability.
(4) Air defense.
(5) C^2W.

b. Tasks to maneuver units. [List all units from task organization into subparagraphs, and only unique items for those units; all other tasks go into d below.] For each of the elements in the reconnaissance force, state the following:
(1) How to get there.
(2) Where to look (NAI for static targets).
(3) What to look for.
(4) When to look for it.
(5) Plan to maintain contact with moving target.
(6) What equipment to bring.
(7) How (what communications systems, how often) to report.
(8) To whom to report:
(a) Brigade reconnaissance teams.
(b) Task forces.
(c) MI company (EW, UAV, other).
(d) ADA battery.
(e) Engineer battalion.
(f) FA battalion.
(g) Chemical company.
(h) MP platoon.
(i) Signal company.
(j) FSB.

c. Tasks to combat support units (if applicable).
(1) Fires (or refer to FS annex).
(a) Air support.
(b) Chemical support.
(c) FA support.
(2) Mobility and survivability. (Refer to mobility and survivability annex if required.)

Figure C-3. Example of a brigade reconnaissance OPORD (continued).

(3) Air defense. (Refer to air defense annex if required.)
(4) C^2W. (Refer to C^2W annex if required; address applicable subcomponents of C^2W: deception, EW, psychological warfare, UAVs.)

d. Coordinating instructions.
(1) Time or condition when OPORD or OPLAN becomes effective.
(2) EEFI.
(a) PIR.
(b) EEFI.
(c) FFIR.
(3) Risk reduction control measures.
(4) Environmental considerations.
(5) Any additional coordinating instructions.
(a) LD or defend NLT _____ .
(b) MOPP level.
(c) Rally points, alternate positions.
(d) Rehearsal time, type, location.
(e) Extraction plan.
(f) PZ and LZ.
(g) Fratricide avoidance measures.
(h) ROE and actions on contact.
(i) IHL.

4. SERVICE SUPPORT. State the concept of logistic support.
a. Support concept.
b. Material and services (resupply location or time and days of supply, emergency resupply, vehicle evacuation).
c. Medical evacuation (CasEvac plan).
d. Personnel (reconstitution plan).
e. Civil-military cooperation. NA.
f. Miscellaneous.

5. COMMAND AND SIGNAL.
a. Command (C^2 structure, report plan).
b. Signal (nets used, retransmission or relay plan).

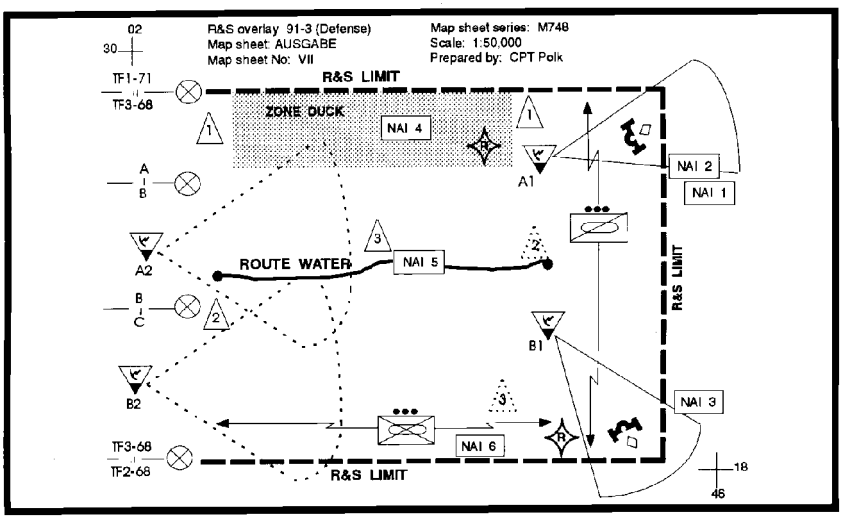
Figure C-3. Example of a brigade reconnaissance OPORD (continued) .

R&S OVERLAY:

The R&S overlay is the R&S plan in graphic format. Its purpose is to show exactly where and when R&S assets are operating. Use FM 101-5-1 for overlay graphics and symbols. Due to various R&S operational techniques and the unique nature of some SASO missions, you will need to construct some new graphics and explain them in your legend (Figure C-4).

The R&S overlay has two parts: (1) The graphic display of deployed or planned deployment of R&S assets, and (2) The marginal data consisting of the legend, administrative data, specific instructions to each asset, and the distribution list. The latter part consists of standard wording found on all overlays. (See top of Figure C-4.)

With digitized systems coming online, the location, heading, range to target, system health, and logistical data will be available NRT in digital, preformatted report format available to the S2/S3/S4 in the TOC, TAC, and ALOC.



INSTRUCTIONS:

SCOUTS: Establish forward screen NLT 1600 at coordinate_____. Target enemy recon (BRDM, BMP, tanks). Coordinate with B Co for route to screen position and GSR team.

REMBASS: Establish two strings vicinity____and____ NLT 1800. Target enemy dismount recon and MR troops infiltrating along forest trails. Coordinate passage with B Co, Scout platoon, and GSR team.

GSR: Establish position A1 vicinity____NLT 1700. Target enemy recon (BDRM, BMP, tanks, dismounted troops). Coordinate with A Co for passage, Scout platoon, and REMBASS team. Establish position A2 on order. Coordinate with B Co for position. Establish position B1 vicinity____ NLT 1700. Target enemy recon. Coordinate with B Co for passage, Scout platoon, and REMBASS team. Establish position B2 on order. Coordinate with C Co for position.

PATROLS: A Co conduct recon and security patrols in Zone Duck. Begin patrols NLT 1830 to 0600. Target enemy dismounted troops, BMP, and BRDMs. Coordinate with GSR team and Scout platoon. C Co establish screen along southern flank NLT 1800. Target enemy recon, BMP, BRDM, tanks. Coordinate with Scout platoon and GSR team.

OP/LP: Position as per battalion R&S SOP.

REPORTS: Report on battalion intelligence net using SALUTE format. Patrol leaders report on intelligence net after each patrol. Report combat information on intelligence or operations net. Assets report using schedule in R&S SOP. React to jamming as per battalion TAC SOP.

DISTRIBUTION: A, B, and C Companies, Scout platoon, GSR team, REMBASS team, S3, FSO, and brigade S2.

Figure C-4. R&S overlay with instructions on acetate.

The key portion of the administrative data contains the written instructions to each R&S asset. The instructions should focus on—

- The required operational timeframes. Give each asset a start and a finish time for each observation or action.

- The target. To answer the PIR, look for specific indicators. Each asset should be told exactly what to look for. Never give broad-based generic mission statements. Specific guidance will promote specific answers.

- Coordinating instructions. All assets at one time or another will move through or near another unit's AO. To keep units from shooting (directly or indirectly) friendly R&S assets, assets and units must coordinate with each other. FSO should restrict fires around R&S assets.

- Reporting requirements. All assets should know when, how often, and what format to use when reporting. Provide frequencies, alternate frequencies, and reactions during jamming, as well as the LTIOV for specific information to be reported.

Initially, the locations for assets are areas in which you recommend that they deploy. After the assets have deployed to the NAI, they report to the S2 or the S3 the actual coordinates from which they can best accomplish their mission. The S2 or the S3 then updates the R&S overlay graphics to show actual locations. Include the following control measures on your R&S overlay:

- Friendly boundaries, R&S limit of responsibility, NAIs, SPs, RPs, and checkpoints.

- Graphics depicting route, area, and zone reconnaissance.

- Primary, alternate, and supplementary positions.

- Sectors of scan for sensors.

R&S TASKING MATRIX:

Another less preferred method of disseminating R&S guidance is the matrix method (Figure C-5).

- **Priority.** The priority number of each mission, which should correspond with the PIR number.
- **NAI.** The NAI number and grid coordinate.
- **START/STOP.** The times for this mission.
- **SIR INSTRUCTIONS.** Explains to the assets exactly what they are looking for (target).
- **TASKINGS.** Lists the actual assets tasked to conduct each mission. An "X" placed under each asset identifies the tasking.
- **COORDINATION.** Tells the assets which units to coordinate with for this mission.
- **REPORTS.** Provides the assets with reporting requirements.

BRIEFING OPORDs

The following OPORDs are additions to the base reconnaissance OPORD (see Figure C-3). GSR, REMBASS, and patrol employment OPORDs would be issued to the teams by the respective platoon leaders.

GSR EMPLOYMENT:

- Give GSR teams adequate time to prepare and deploy.
- Deploy GSRs for best area coverage.
- Deploy GSRs, with a security force, so they scan an area and provide early warning.
- Plan logistical support.
- Limitations:
  - — Limited to LOS acquisition and gives off detectable signal.
  - — Visibility hindered by heavy precipitation, thick vegetation, and broken terrain.
  - — Limited range and ability to identify except by personnel and wheeled or tracked vehicles.

- Brief team leader using the OPORD format at Figure C-6.

1. SITUATION.

   a. Enemy. Intelligence estimate format.

   b. Friendly.
      (1) Current unit locations.
      (2) Scheme of maneuver.
      (3) Boundaries.
      (4) Objectives.

2. MISSION. Who, what, where, when, and why for this R&S mission. Surveillance of threat antiaircraft from location and time.

3. EXECUTION.

   a. Concept of operation.
      (1) Primary and alternate routes to sites (SPs, PPs, checkpoints, RPs).
      (2) Primary, alternate, and supplementary sites.
      (3) Sectors of scan.
      (4) Operating times.

   b. Coordinating instructions.
      (1) Battalion and brigade R&S plan: patrols, scout routes, times, sizes, LP and OP locations, ground and air cavalry screens, REMBASS, asset replacement plan, NAI redundancy coverage backup plan, etc.
      (2) Link-up plan with security forces.
      (3) Obtain target list from FSO (recommend additional targets).
      (4) Coordinate fire control measures with FSO and plan NFA for team locations.
      (5) Obtain obstacle plan from TF engineer and check routes for obstacles.
      (6) Coordinate with supported commander to tie the R&S site into unit defensive plan or scheme of maneuver.
      (7) Review engagement and disengagement criteria.
      (8) Review actions upon mission completion.

Figure C-6. Example of a GSR OPORD.

4. SERVICE SUPPORT. Coordinate with S4, battalion maintenance officer, SIGO for—

a. Class I (Food).
b. Class III (Fuel).
c. Class IV (Barrier materials) (during prepared defense).
d. Class V (Ammunition).
e. Class IX (Repair parts).
f. Organizational maintenance.

5. COMMAND AND SIGNAL.

a. Signal.
(1) Issue SOI extract.
(2) Review reporting requirements and communications connectivity.
(3) Identify multiple reporting paths and methods.
(4) Review communications check requirements.
(5) Execute COMMEX prior to employment.
(6) Review actions upon EA.

b. Command.
(1) Review chain of command.
(2) Review leaders' locations.

6. SAFETY.

Figure C-6. Example of a GSR OPORD (continued).

IREMBASS EMPLOYMENT:

Brief team leader using the reconnaissance OPORD format (see Figure C-3) with the changes shown in Figure C-7.

1. SITUATION.

2. MISSION. Who, what, where, when, and why for this R&S mission. Monitor NAIs, DPs, routes.

3. EXECUTION.

a. Concept of operation.
   (1) SIR required.
   (2) Team leader recommends sensor mix, emplacement sites, and relay sites.
   (3) Primary and alternate routes and transportation to emplacement sites, PPs, and checkpoints.
   (4) Emplacement method.

b. Coordinating instructions.
   (1) Battalion and brigade R&S plan: patrols, scout routes, times, sizes, LP and OP locations, ground and air cavalry screens, IREMBASS.
   (2) Link-up plan with security forces.
   (3) Obtain target list from FSO (recommend additional targets).
   (4) Coordinate fire control measures with FSO.
   (5) Obtain obstacle plan from TF engineer and check routes for obstacles.
   (6) Review engagement and disengagement criteria.
   (7) Actions upon mission completion.

Figure C-7. Sample IREMBASS employment OPORD.

PATROL EMPLOYMENT:

Brief patrol leader using reconnaissance OPORD format (see Figure C-3) with the changes shown in Figure C-8.

1. SITUATION.

2. MISSION.

3. EXECUTION.

   a. Concept of operation.
      (1) Maneuver.
      (2) Fire support.

   b. Subunit tasks.

   c. Coordinating instructions.
      (1) Actions at the objective.
      (2) Time of departure and return.
      (3) Movement techniques and order of movement.
      (4) Routes.
      (5) PPs.
      (6) RPs and actions at RPs.
      (7) Actions upon enemy contact.
      (8) Actions at danger areas.
      (9) Actions at halts.
      (10) Locations of friendly obstacles, mine fields.
      (11) Rehearsals and inspections.
      (12) Debriefings.
      (13) SIR.

Figure C-8. Sample patrol employment OPORD.

DEBRIEFING Debrief patrols using the sample debriefing format below.

1. Size and composition of team. Team leader, assistant team leader, radio operator, and observers.

2. Mission.

3. SIR.

4. Reporting requirements.

5. Time of departure, method of infiltration, and point of departure.

6. Enemy observed enroute.
   a. Ground activity.
   b. Air activity.
   c. Miscellaneous activity.

7. Routes.
   a. Dismounted.
   b. Vehicle.
   c. Air.

8. Terrain.
   a. Key terrain.
   b. Significant terrain.
   c. Decisive terrain.
   d. Terrain compartment.
   e. Terrain corridor.
   f. Map corrections.

9. Enemy forces and installations.

10. Miscellaneous information.
    a. Lack of animals or strange animal behavior. Did animal reaction to patrol's presence generate alarm? If so, when, where, type of animal, activity that caused the alarm, and nature of alarm.

Figure C-9. Sample debrief format.

b. Mutilated plants.
c. Strange, uncommon insects.
d. Abandoned military equipment, number and type.
(1) Out of fuel.
(2) Unserviceable; estimate reason.
(3) Destroyed or damaged; how.
(4) Operational equipment left intact.

e. Abandoned towns or villages.

11. Results of encounters with enemy forces and local populace.

12. Condition of team including disposition of dead and wounded.

13. All of team's maps or any other identifiable material returned with team. For missing items, describe item and approximate location lost.

14. Conclusions and recommendations.

15. Process CEE, CEM, photographs, and videos taken by teams.

16. Time of exfiltration, method of exfiltration, exfiltration point.

17. Routes of return.
a. Dismounted.
b. Flight.

18. Time of return.

19. Point of return.

20. Enemy observed on return route.

21. What pre-mission intelligence support was provided and not needed? What intelligence support was not provided but needed? What intelligence was provided but turned out to be misleading or erroneous?

Figure C-9. Sample debrief format (continued).

R&S TEN KEYS TO SUCCESS :

1. Know that the commander's intent or CCIR drives R&S.

2. Support R&S early with integrated staff products.

3. Be adept at abbreviated IPB for quick or combat decisionmaking process.

4. Focus on the event template to capture the moving enemy.

5. Provide situation template depicting enemy in the engagement area.

6. Use automation tools like ASAS to enhance products.

7. Deploy organic R&S assets early and request support from higher HQ. Issue S3 FRAGO with S2 graphic overlay.

8. Provide continuous coverage throughout the depth of the battlefield.

9. Use all possible assets from national levels to scouts.

10. Evaluate reporting and provide immediate and continuous feedback to the commander.

APPENDIX D

PRIORITY INTELLIGENCE REQUIREMENTS, INFORMATION REQUIREMENTS, AND INDICATORS

PIR are intelligence requirements associated with a decision that will affect the overall success of the command's mission. PIR may change in order or be replaced entirely.

IR are requirements for intelligence to fill a gap in the command's knowledge and understanding of the battlefield or threat forces. They target specific COAs.

Indicators are positive or negative evidence of threat activity or any AO characteristic which points toward threat vulnerabilities or adoption or rejection by the threat of a particular capability, or which may influence the commander's selection of a COA.

During wargaming, the S2 develops a set of PIR for each friendly COA. Each is linked to a specific enemy action that requires a friendly response (DPs).

PIR are those IR critical to accomplishing the mission. Wargaming will dictate which IR will become PIR as the mission runs its course.

The S2 should nominate PIR for approval ONLY FROM THE LIST OF ALREADY PLANNED AND COORDINATED IR.

EXAMPLE OF A POOR PIR:

"Will the enemy attack? If so, how, when, where, and in what strength?"

- The PIR contains five significantly different questions. Which one is the priority? Unless the S2 gives more guidance, the individual collector must determine which part of this PIR to work.

- The S2 probably knows more about the situation than "the enemy might attack somehow, sometime, somewhere, and in some strength." The PIR as stated might prompt some collection assets to collect known information.

- Even for issues that the S2 does not know, the enemy can only select from a limited range of COAs due, for example, to terrain, weather, policies. If the PIR consider IPB, the S2, through more specific tasking, will minimize the chance that collection assets will look for the enemy where they are not likely to be.

- When the staff wargames, it may find some aspects of this question to be irrelevant to the present situation. For example, the defense may be fully capable of defeating an enemy attack regardless of when they actually attack. Why waste collection assets on a question that does not need to be answered?

EXAMPLE OF A GOOD PIR:

There is no "set" of PIR we can present that will be useful for all tactical situations any more than there is a set of maneuver paragraphs that the S3 can plug into any OPORD. Below are examples of *types* of PIR the S2 presents to the commander for approval. Because intelligence needs change over time, most PIR will be important only during certain times.

Referring to PIR as "timephased" is redundant. They are dynamic just as the battle will be dynamic. Just as there are no standard situation templates or friendly COAs that will serve in all situations, there is no standard set of PIR. Good PIR, however, have some things in common:

- They ask only one question.
- They focus on a specific fact, event, or activity.
- They provide intelligence required to support a single decision.
- They are tied to key decisions that the commander has to make.
- They give an LTIOV.

Examples:

- "Will the enemy defend OBJ JAMES using a forward slope defense?"
- What size force is defending OBJ NACO?"
- Which bridges over the San Pedro River are intact?"

Not all PIR are appropriate as questions, particularly those associated with moving targets or formations. PIR are *requirements* and should be stated as such when appropriate. In addition, PIR for moving targets must include the requirement to continue to maintain contact with the target. Simply locating the target once will not prevent it from surprising the commander later.

Example: "Locate and track the enemy's battalion reserve."

APPENDIX E

GRAPHIC REPORT FORMATS

Intelligence personnel use a variety of formats to request, report, and disseminate information (see FM 34-3). Personnel working in a joint environment should use JCS Pub 6-04.11. The formats assimilate information into automated intelligence support systems, such as the ASAS.

This appendix concentrates on graphic report formats, specifically the graphic INTSUM and the graphic intelligence estimate. The INTSUM is the main focus, but a graphic intelligence estimate is also provided.

GRAPHIC INTELLIGENCE SUMMARY

The graphic INTSUM is used by units at all echelons to rapidly convey threat situation dynamics. The graphic INTSUM is a current depiction of significant threat dispositions, activities, strengths, and weaknesses and an assessment of the most probable ECOA. A current, complete graphic INTSUM will provide for efficient collection and enable the commander to exploit fleeting threat vulnerabilities.

The graphic INTSUM can be maintained on conventional maps of any scale as an overlay or created electronically and disseminated to computer and television screens. For example, army-level organizations may utilize a 1:250,000 map scale and focus on an army or front-level threat, whereas in SASO activities the deployed unit may utilize a map scale of 1:25,000 or smaller and focus on a platoon or company-size threat.

The graphic INTSUM (Figure E-1) may contain 12 components:

- Legend and margin information.
- Area orientation.
- Threat unit locations and mission activities.
- Threat mission capabilities assessment.
- Threat boundaries and front-line trace.
- Threat objectives.
- Threat air activity.
- Threat weaknesses and vulnerabilities.
- Threat strengths and capabilities.
- Threat intentions assessment.

- Friendly commander's intent and PIR.
- Predicted future threat activity.

LEGEND AND MARGIN INFORMATION:

Components include—

- Overall classification of the INTSUM, posted top and bottom, to include a "Classified By" line and declassification instructions.
- Title.
- Issuing headquarters.
- "As Of" DTG. Use either local or Zulu time; this is critical since predicted threat activity will be depicted based upon the "As Of" DTG plus a given number of hours.
- Map reference, to include scale, and at least two coordinate registration marks.
- A symbology key can be added for increased clarity and **must** be included if symbols used are not in FM 101-5-1.
- SASO symbology is not standardized, but there are several symbol methodologies that have been developed. (See MIPB Jan-Mar 94, p 35.)

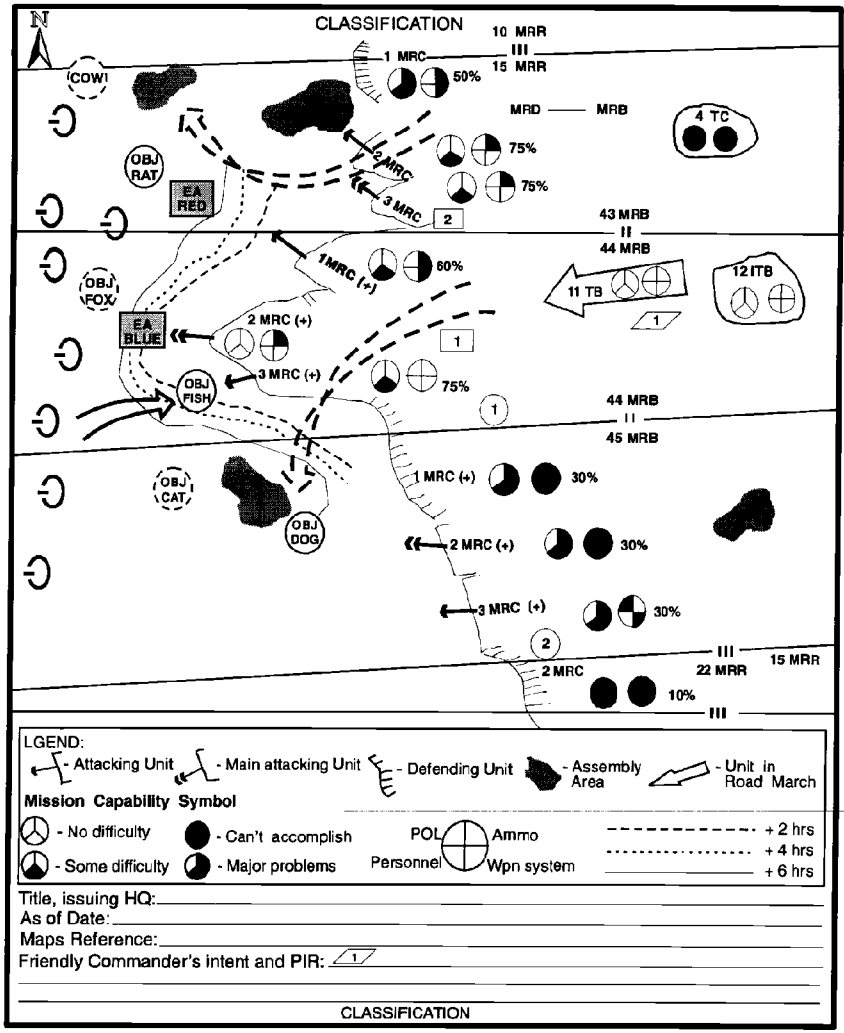

Figure E-1. Graphic INTSUM.

AREA ORIENTATION:

Selected geographic features will be highlighted on the overlay in order to orient the user to the area being displayed. The features selected will depend on the specific AO and type mission in which the friendly unit is involved.

Common features could include cities, rivers, and major relief features. Selected features for some SASO activities may be highlighted on a smaller scale. In an NEO highlighted features could include airports, LOCs, embassies, consulates, and American housing areas, and other features that will play prominently in the operation. Provide only the features necessary for orientation; do not clutter the INTSUM.

THREAT UNIT LOCATIONS AND MISSION ACTIVITIES :

Depict **committed** threat unit locations with a bracket followed by the unit identification. The size of the bracket will indicate the frontage occupied by the unit. The mission of the unit will be shown graphically (Figure E-2).

Depict **uncommitted** threat units with the symbology shown in Figure E-3.

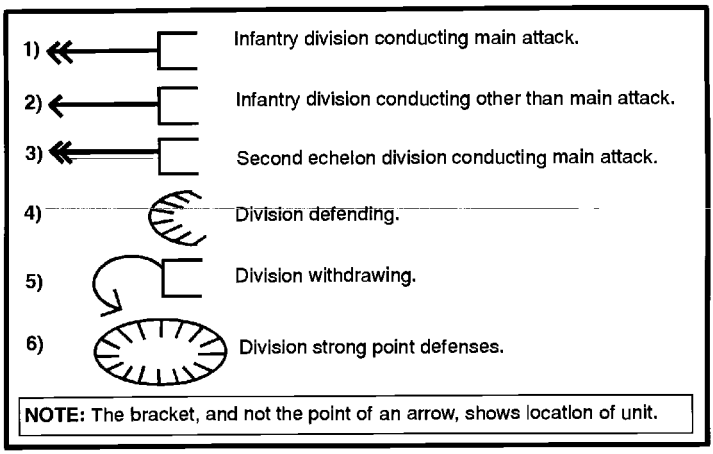

Figure E-2. Threat unit locations and mission activities (committed).

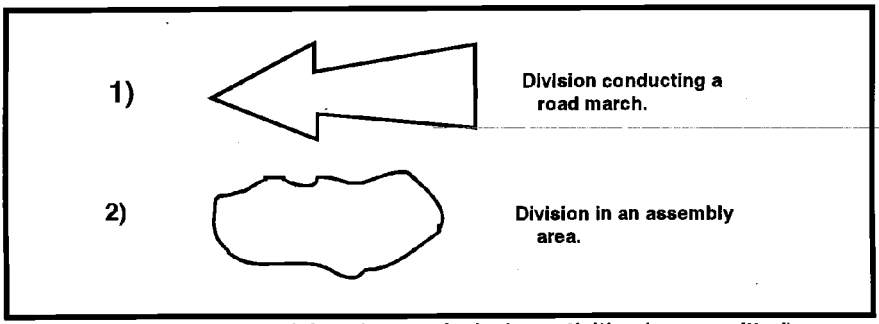

Figure E-3. Threat unit locations and mission activities (uncommitted).

THREAT MISSION CAPABILITIES ASSESSMENT :

Use combat effectiveness graphics to assess and display the capability of a threat unit to perform its mission. Consider all factors, tangible and intangible, in making the assessment; include unit strength, logistics status, maintenance and readiness status, morale, mission, weather, and terrain. Place selected symbols in the vicinity of the unit identification (Figure E-4).

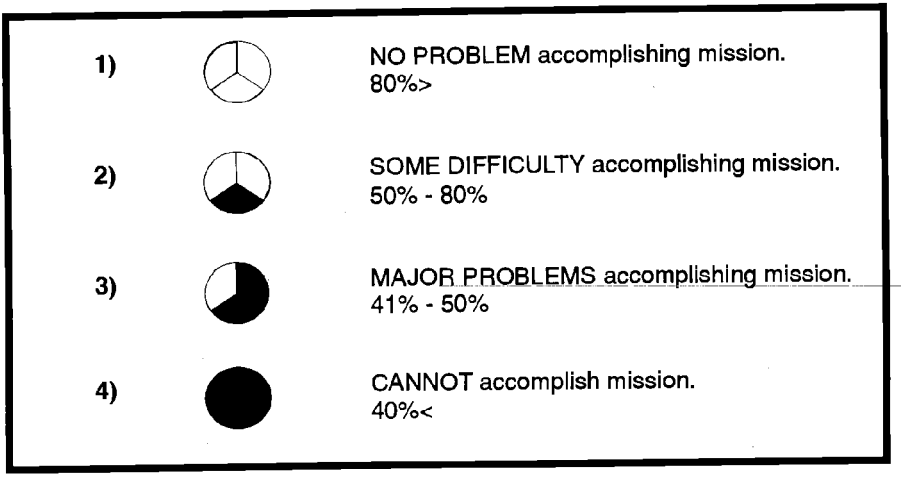

Figure E-4. Threat mission capabilities assessment.

A diminished threat mission capability is due usually to one or more specific problem areas such as damaged or destroyed weapons systems or a lack of ammunition, POL, or replacement personnel. If known, graphically depict these problem areas for each unit immediately next to the threat mission capabilities assessment symbol so the friendly commander can exploit what may be a very crucial, but fleeting, threat vulnerability.

Specific problem areas are indicated by blackening in the appropriate quadrant of the circle. The problem area categories are not static; other problem areas can be selected for display on this symbol as long as the selection is clearly explained in the key. Figure E-5 shows a sample problem area symbol and an example of the problem area symbol used in conjunction with the threat mission capabilities assessment symbol.

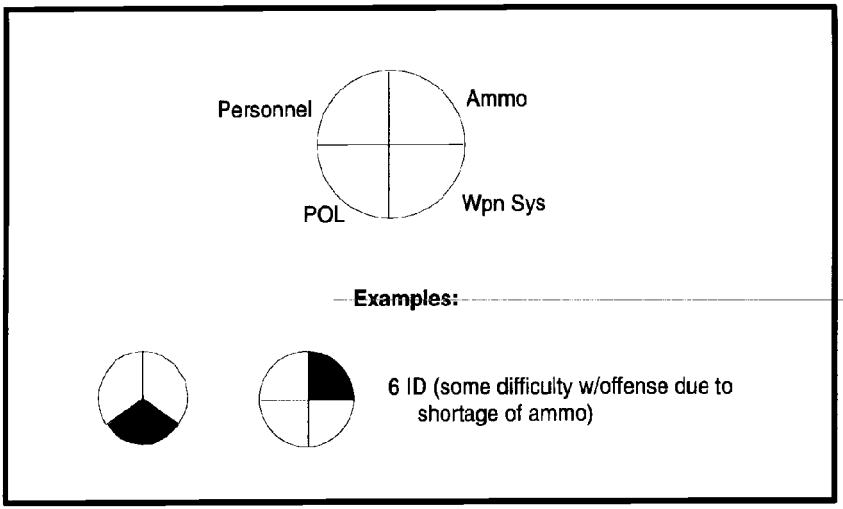

Figure E-5. Threat problem area symbology.

THREAT BOUNDARIES AND FRONT-LINE TRACE:

In conventional military operations, threat boundaries below the division level normally will not be included in the INTSUM. These lower level boundaries are often difficult to delineate and clutter the INTSUM. In some SASO activities, such as support to insurgency and COIN, smaller units will be the rule and must be constantly accounted for on the INTSUM.

The front-line trace will not be shown on the graphic INTSUM. The brackets depicting the frontages of the threat units in contact will suffice for an effective front-line trace. Addition of a front-line trace can be easily confused with the depictions of predicted threat activity.

THREAT OBJECTIVES:

If threat objectives can be discerned, they will be placed on the INTSUM.

THREAT AIR ACTIVITY :

Depict threat air activity on the INTSUM. Use an aircraft symbol with direction of travel and total number of sorties. Some units may opt to break down the sortie count by category, such as fighter (F), bomber (B), and reconnaissance (R). Example: A total sortie count of 12 could be depicted as (12). The same sortie count could also be depicted as (4F/6B/2R). The sortie breakdown should be used only if it will not clutter the INTSUM unnecessarily. Sortie breakdown symbols, such as F, B, and R must also be included (Figure E-6).

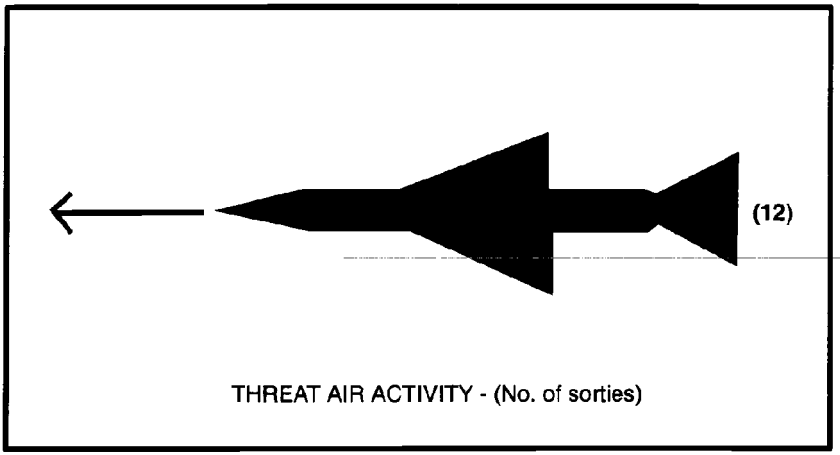

Figure E-6. Threat air activity symbology.

HREAT WEAKNESSES AND VULNERABILITIES:

Show specific weaknesses or vulnerabilities by using a numbered circle on the INTSUM (see Figure E-1). A supporting message could list threat weaknesses and vulnerabilities in narrative form.

THREAT STRENGTHS AND CAPABILITIES :

Show threat strengths and capabilities by using numbered squares (see Figure E-1).

THREAT INTENTIONS ASSESSMENT :

Write an assessment of threat intentions and most probable COA in a concise narrative format; graphically key it to the INTSUM when possible.

FRIENDLY COMMANDER'S INTENT AND PIR :

List the friendly commander's intent and PIR in narrative format on the INTSUM. Graphically key these statements to the overlay.

PREDICTED FUTURE THREAT ACTIVITY :

Draw predicted lines of threat advance or withdrawal and tie them to a timeline to convey as much information about future threat activity as possible (Figure E-7). Predicted lines of advance or withdrawal will be based on the "As Of" time found in the legend and margin information. Remember: Predicted lines are only an aid to planners; current threat situation must be continuously monitored to update the predictions.

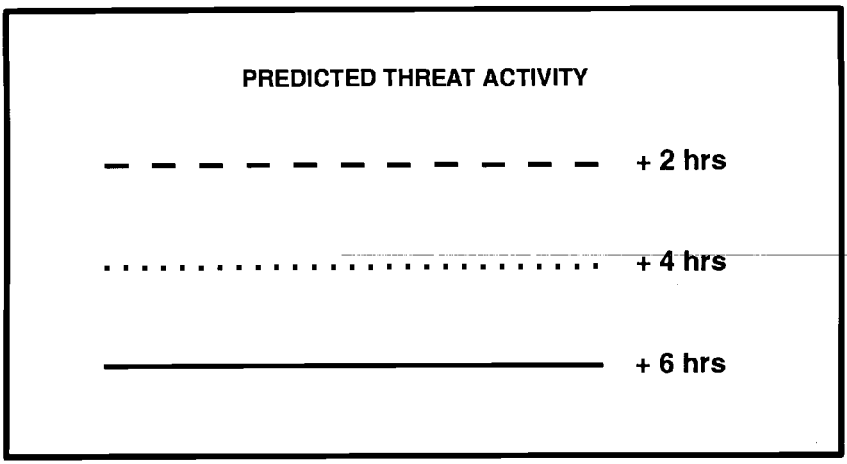

Figure E-7. Predicted threat activity timelines.

APPENDIX F

TARGETING

TARGETING PROCESS

Targeting is the process of selecting targets and matching the appropriate response to them, including operational requirements and capabilities. The purpose of targeting is to disrupt, delay, or limit threat interference with friendly COAs; it requires coordinated interaction between FS operations, intelligence, EW, and plans cells. Targeting is based on the enemy's assets that provide him an advantage (HPTs), friendly scheme of maneuver, and tactical plans. (See FM 6-20-10.)

Target development is one of the six IEW tasks. Mission analysis must precede generating any ECOAs. These ECOAs are the starting point for all other staff actions to wargame against, and to develop follow-on products. The products of the decide function are briefed to the commander. Upon his approval, his decisions are translated into the OPORD with annexes. (See FM 34-130.)

METHODOLOGY

Decisions create the guidelines for the acquisition and engagement of targets. TA and attack are made through a decision cycle. The methodology used to translate the commander's intent into a plan is **DECIDE, DETECT, DELIVER,** and **ASSESS.** Figure F-1 shows the functions of intelligence support to targeting, Figure F-2 shows the targeting methodology, and Figure F-3 is a targeting checklist.

RECEIVE GUIDANCE ON:	• Commander's intent. • HPTs. • Attack criteria. • Lead time between DPs and TAIs. • ROE. • Conditions to establish BDA requirements.
DEVELOP:	• MCOO. • Situation and event templates. • HVTs.
EXPLAIN:	• ECOA as part of wargaming. Based on friendly COA, refine event template; assist in developing HPT list, TSS matrix, and sensor or attack systems matrix.
PRODUCE:	• Collection plan, ISM, and AGM. • SOR.
BRIEF: (Ensure all analysts & collectors understand the CDR's intent.)	• ACE sections (ECOA, HPTL, TSS, and AGM).
COLLECT:	• Information for nomination, validation, and PSA.
DISSEMINATE:	• HPT related information and intelligence to FS immediately. • Pertinent information and BDA per SOP and TTP.
ENSURE:	• Information collection and intelligence production support all FRAGOs.

Figure F-1. Functions of intelligence support to targeting.

DECIDE	DETECT	DELIVER	ASSESS
• Target Development • TVA • HPT and HVT • TSS • Attack Options • Attack Guidance	• Target Detection Means • Detection Procedures • Target Tracking	• Attack • Planned Targets • Targets of Opportunity • Desired Effects • Attack Systems	• Tactical Level • Operational Level • Restrike • Feedback
Tracking your target is applicable during all of these steps.			

Figure F-2. Targeting methodology.

DECIDE:

_____ Do the commander's planning guidance and intent contain enough detail to enable the targeting team to determine—
- — HVTs to nominate as HPTs?
- — Desired effects on each HPT?
- — When to attack each HPT?
- — Any restrictions or constraints?
- — Which HPTs require BDA?

_____ What targeting assets (organic, attached, supporting) are available to detect and attach HPTs?

_____ What detect, deliver, and assess support is needed from higher HQ?

_____ When must requests to higher HQ be submitted to obtain the support when required?

_____ Have target tracking responsibilities been established?

_____ Are systems in place to handoff the detected targets to assets that are capable of tracking them?

_____ What detect, deliver, and assess support is required from subordinate units; when is it required?

Figure F-3. Targeting checklist.

_____ What detect, deliver, and assess support requests have been received from subordinate units; what has been done with them?

_____ Has the AGM been synchronized with the DST and the maneuver and FS plans?

_____ Are all commands using a common datum for locations? If not, are procedures in place to correct differences in data?

DETECT:

_____ Does the collection plan focus on PIR HPTs? (Which includes HPTs designated as PIR?)

_____ What accuracy, timeliness, and validity standards (TSS) are in effect for detection and delivery systems?

_____ Are all TA systems fully employed?

_____ Have backup TA systems been identified for HPTs?

_____ Have responsibilities been assigned to the appropriate unit and/or agency for detecting each HPT?

_____ Are HPTs being tracked?

_____ Have verification procedures using backup systems been established where necessary?

_____ Are TA and BDA requirements distributed properly among systems that can accomplish both?

DELIVER:

_____ Have communications links been established between detection systems, the decisionmaker, and delivery systems?

_____ Have responsibilities been assigned to the appropriate unit and/or agency for attacking each HPT?

_____ Has a backup attack system been identified for each critical HPT? (The primary system may not be available at the time the HPT is verified.)

_____ Have FSCMs or AGMs and clearance procedures been established to facilitate target engagement?

Figure F-3. Targeting checklist (continued).

_____ Have O/O FSCMs or AGMs been established to facilitate future and transition operations?

_____ Have potential fratricide situations been identified; have procedures been established to positively control each situation?

_____ Have responsibilities been assigned to the appropriate unit or agency for tracking specific HPTs and providing BDA on specified HPTs?

_____ What are the procedures to update the HPTL and synchronize the AGM and DST if it becomes necessary to change the scheme of maneuver and FS as the situation changes?

ASSESS:

_____ Are the collection assets linked to specific HPTs still available?

_____ Have the collection asset managers been notified of the attack of a target requiring assessment?

_____ Have assessment asset managers been updated as to the actual target location?

_____ Has all the coordination for the assessment mission, particularly airborne assets, been accomplished?

_____ What is the status of BDA collection?

_____ Has the information from the mission been delivered to the appropriate agency for evaluation?

_____ Has the targeting team reviewed the results of the attack to determine restrike requirements?

_____ Has the target intelligence gathered from the assessment been incorporated into the overall enemy situation development?

Figure F-3. Targeting checklist (continued).

STEP 1 - DECIDE:

DECIDE provides the overall focus and sets priorities for intelligence collection and attack planning (Figure F-4). Targeting priorities must be addressed for each phase or critical event of an operation. The decisions made are reflected in visual products as follows:

- HPTL is a prioritized list of HPTs whose loss to the enemy will contribute to the success of the friendly COA.

- Intelligence collection plan, or R&S plan, answers the commander's PIR, to include those HPTs designated as PIR. The plan, within the availability of additional collection assets, supports the acquisition of more HPTs. Determining the intelligence requirements is the first step in the CM process. (See FMs 34-2 and 34-2-1.)

- TSS matrix addresses accuracy or other specific criteria that must be met before targets can be attacked.

- AGM, approved by the commander, addresses which targets will be attacked, how, when, and the desired effects.

The formats for the HPTLs, TSS, and AGMs are examples only. Targeting personnel must understand all that is involved in building these targeting tools. However, experienced staffs may prefer to develop their own tailored formats.

IPB and Mission Analysis. IPB, including EPB, is a continuous process and starts in the preparation phase. It continues to provide updated as well as new products and supports the targeting process. The intelligence estimate provides key support to target development. MCOOs, doctrinal, situation, event, and DSTs help identify ECOAs, NAIs, TAIs, HVTs.

***TVA and Wargaming*.** The battlefield environment, its effects on combatants, and the threat are considered in IPB analysis to arrive at an intelligence estimate. TVA yields HVTs for a specific ECOA. Target spreadsheets identify the HVTs in relation to a type of operation, and target sheets (see FM 6-20-10, App A) give detailed targeting information for each HVT. This information is used during the IPB and the wargame processes. Both tools are developed by the G2 ASPS.

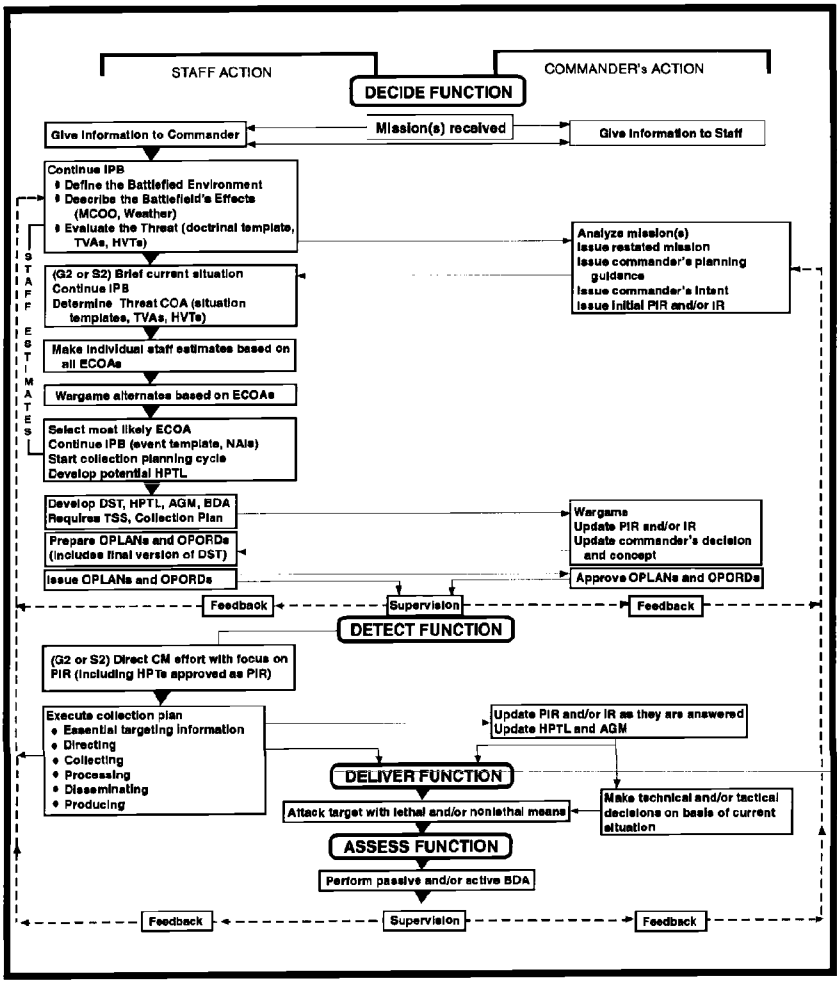

Figure F-4. The targeting process.

TVA, which is a detailed analysis of the enemy in selected COAs, uses the following enemy characteristics:

- Doctrine.
- Tactics.
- Equipment.
- Organizations.
- Expected behavior.

TVA methodology provides a relative ranking of target sets, or categories. It begins when target analysts in the G2/S2 assume the position of enemy commander. The target analyst, in coordination with other staff members, wargames the operation.

During wargaming, alternate friendly COAs are analyzed in terms of their impact on enemy operations and likely responses. The enemy battlefield functions that must be attacked to force the best enemy response are identified. The commander and staff analyze the criticality of friendly battlefield functions on a specific COA. The best places to attack HPTs are identified as TAIs. DPs or decision TPLs are used to ensure that the decision to engage or not to engage occurs at the proper time. Wargaming also identifies HVTs in priority that are critical to the success of the enemy mission. It also identifies the subset of HVTs which are HPTs that must be acquired and attacked for the friendly mission to succeed. HPTs selected are recorded on the DST.

Collection managers evaluate HVTs to determine asset detection capability. HPTs receive priority in the allocation of assets. The FSO determines friendly weapons systems capable of attacking HVTs with lethal fires, and the EWO nominates and coordinates to provide non-lethal fires.

Using the capabilities of the system to attack the targets, the G2/S2 analyzes and synthesizes the threat's response to each attack. Targets should be assigned priorities according to description, signature, degradation, and graphic representation. If targets have the same relative importance, a targeting team must prioritize the targets and seek advice from the FSE targeting analyst and the FAIO. After the targets are prioritized, they are placed on an HPTL (Figure F-5). After the HPTL is approved, the G2 will use it to develop the collection plan.

EVENT OR PHASE:		
PRIORITY	CATEGORY	TARGET

Figure F-5. Example high-payoff target list.

TSS. TSS are criteria applied to enemy activity (acquisitions and battlefield information) used in deciding whether the activity is a target. TSS break nominations into two categories: targets, which meet accuracy and timeliness requirements for attack; and suspected targets, which must be confirmed before any attack.

- HPT. This refers to the designated HPTs which the collection manager is tasked to acquire.
- TIMELINESS. Valid targets are reported to attack systems within the designated timeliness criteria.
- ACCURACY. Valid targets must be reported to the attack system meeting the required TLE criteria. The criteria is the least restrictive TLE considering the capabilities of available attack systems.

Considering these factors, different TSS may exist for a given enemy activity on the basis of different attack systems. For example, an enemy artillery battery may have a 150-meter TLE requirement for attack by cannon artillery and a 1 km requirement for attack helicopters. TSS are developed by the FSE in conjunction with MI personnel. Intelligence analysts use TSS to quickly determine targets from battlefield information and pass the targets to the FSE.

Attack system managers, such as FSEs, FCEs, or FDCs, use TSS to quickly identify targets for attack. Commands can develop *standard* TSS based on anticipated enemy OB and doctrine matched with the normally available attack systems.

The G2/S2 knows the accuracy of acquisition systems, associated TLE, and the expected dwell times of enemy targets. He can then specify whether

information he reports to the attack system manager is a target or a suspected target. Some situations may require the system to identify friendly and neutral from threat before approval to fire is given. HPTs that meet all the criteria should be tracked until they are attacked IAW the AGM. Location of targets that do not meet TSS should be confirmed before they are attacked. The TSS can be depicted in a TSS matrix (Figure F-6).

The matrix lists each system that forwards targets directly to the FSE, FCE, or FDC. The effects of weather and terrain on the collection assets and on enemy equipment are considered. TSS are keyed to the situation. However, the greatest emphasis is on the enemy situation considering deception and the reliability of the source or agency that is reporting.

HPT	TIMELINESS	ACCURACY
COPs	3 hr	150 m
RISTA	30 min	150 m
2S3	30 min	500 m
M-46	30 min	500 m
ADA	15 min	500 m
CPs	3 hr	500 m
Ammunition	6 hr	1 km
Maneuver	1 hr	150 m

Figure F-6. Example target selection standards matrix.

Attack Guidance. Knowing target vulnerabilities and the effect an attack will have on enemy operations allows a staff to propose the most efficient available attack option. Key guidance is whether the commander wishes to disrupt, delay, limit damage, or destroy the enemy. During wargaming, DPs linked to events, areas (NAIs and TAIs), or points on the battlefield are developed. These DPs cue the command decisions and staff actions where tactical decisions are needed.

On the basis of commander's guidance, the targeting team recommends how each target should be engaged in terms of the effects of fire and attack options to use. Effects of fire (see Joint Pub 1-02) can be to **harass, suppress, neutralize,**

or **destroy** the target. The subjective nature of what is meant by these terms means the commander must ensure the targeting team understands his use of them. Applying FS automation system default values further complicates this understanding.

- Harassing fire is designed to disturb the rest of the enemy troops, to curtail movement, and, by threat of losses, to lower morale. The decision to employ harassing fires needs careful consideration. Harassing fire has little real effect on the enemy, subjects gun crews to an additional workload, and increases the threat of counter-battery fires. ROE or the potential for adverse public opinion may prohibit its use. However, harassing fires may be a combat multiplier in some situations. Consider their use in SASO, delaying actions, and economy of force operations.

- Suppressive fire on or about a weapons system degrades its performance below the level needed to fulfill its mission objectives. Suppression lasts only as long as the fires continue. The duration of suppressive fires is either specified in the call for fire or established by SOP. Suppression is used to prevent effective fire on friendly forces. It is typically used to support a specified movement of forces. The FSCOORD needs to ask or calculate the *when* and *how long* questions.

- Neutralization fire is delivered to render the target ineffective or unusable temporarily. Neutralization fire results in enemy personnel or material becoming incapable of interfering with an operation or COA. Key questions the FSCOORD must ask are when and how long does the commander want the target to be neutralized. Most planned missions are neutralization fires.

- Destruction fire is delivered for the sole purpose of destroying material objects. It physically renders the target permanently combat-ineffective unless it is restored, reconstituted, or rebuilt. Setting automated FS default values for destruction of 30 percent does not guarantee achieving the commander's intent. The surviving 70 percent may still influence the operation. Destruction missions are expensive in terms of time and material. **Consider whether neutralization or suppression may be more efficient.**

The decision of what attack system to use is made at the same time as the decision on when to acquire and attack the target. Coordination is required when deciding to attack with two different means (such as EW and combat air operations). Coordination requirements are recorded during the wargame process.

The attack guidance must be approved by the commander and detail the following:

- A prioritized list of HPTs.
- When, how, and desired effects of attack.
- Any special instructions.
- HPTs that require BDA.

This information is developed during the wargame. Attack guidance—

- Applies to planned targets and targets of opportunity.
- May address specific or general target descriptions.
- Is provided to attack system managers via the AGM (Figure F-7).
- May change as the operation progresses.

The AGM must be updated during staff planning meetings and as the enemy situation changes. Consider separate AGMs for each phase of an operation.

PHASE/EVENT: Attack through the security zone				
HPTL	**WHEN**	**HOW**	**EFFECT**	**REMARKS**
COPs	P	GS ARTY	N	PLAN IN INITIAL PREP
RISTA and OPs	P	GS ARTY	N	PLAN IN INITIAL PREP
2S1 and 2S3	P	MLRS	N	PLAN IN INITIAL PREP
2S6, SA9 and SA13	P	GS ARTY	S	SEAD FOR AVN OPS
REGT CP	A	MLRS	N	
RESERVE BN	P	AVN BDE	D	INTENT TO ATTACK RESERVE BN IN EA HOT
LEGEND:	I = IMMEDIATE A = AS ACQUIRED P = PLANNED		S = SUPPRESS N = NEUTRALIZE D = DESTROY	
NOTES: [1]This is only an example of an AGM. Actual matrices are developed on the basis of the situation. [2]An "H" for harassing fires may be included in the EFFECT column during SASO.				

Figure F-7. Example attack guidance matrix.

HPTL. Lists the prioritized HPTs identified during wargaming. They have priority for engagement.

WHEN. Timing the attack of targets is critical to maximizing effects. During wargaming, the optimum time is identified and reflected in the WHEN column. A " **P"** indicates the target should not be engaged now but should be *planned* for future firing (e.g., a preparation, a SEAD program, or a countermobility program) or simply put on file. An **"A"** indicates such targets should be engaged in the sequence received in the headquarters, with respect to the priority noted in the HPTL. An **"I"** indicates the attack

must be *immediate* and is a special case. This designation should be limited to a small percentage of targets and only for the most critical types. Too many immediate targets are disruptive and lower the efficiency of attack systems. Immediate attacks take precedence over all others and are conducted even if attack systems must be diverted from attacks already underway. Examples of important targets include:

- Missile systems capable of NBC attacks.
- Division headquarters.
- NBC weapons storage and support facilities.

MRLS may be considered for immediate attack depending on their demonstrated effectiveness against friendly forces and their tactical employment. The G3/S3 and FSCOORD or FSO must establish procedures within the TOC that allow for immediate attack of targets.

HOW. Links the attack system to the HPT. It is best to identify a primary and backup attack system for attack of HPTs.

EFFECT. Refers to the target attack criteria. The targeting team should specify attack criteria according to the commander's guidance. Target attack criteria should be quantifiable (e.g., percentage of casualties or destroyed elements, time, ordnance, and allocation or application of assets). Also, it can be noted as the number of battery or battalion volleys.

REMARKS. Notes which targets should not be attacked in certain tactical situations (e.g., if the enemy is withdrawing). Examples of how to use this column:

- Accuracy or time constraints.
- Required coordination.
- Limitations on the amount or type of ammunition.
- Any need for BDA.

STEP 2 - DETECT:

DETECT is the next critical function in the targeting process. The G2/S2 is the main figure in directing the effort to detect identified HPTs. To identify who, what, when, and how for TA, the G2/S2 must work closely with the—

- ACE.
- FAIO.
- Targeting officer and FSO.

This process determines accurate, identifiable, and timely requirements for collection systems. The ACE must ensure collection system asset managers understand these requirements.

Information needs for target detection are expressed as PIR and IR. Their priority depends on the importance of the target to the friendly COA and tracking requirements. PIR and IR that support detection of HPTs are incorporated into the overall unit collection plan.

Targets are detected by the maximum use of all available assets. The G2/S2 must focus the intelligence acquisition efforts on the designated HPTs and PIR. Situation development information, through detection and tracking, will be accumulated as collection systems satisfy PIR and IR. The collection manager—

- Considers availability and capabilities of all collection assets within his echelon and those available to subordinate, higher, and adjacent units.
- Considers joint or combined force assets.
- Translates the PIR and IR into SIR and SOR.
- Arranges direct dissemination of targeting information from the collector to the targeting cell or targeting intelligence to the FSE if possible.

Detection Procedures. Use all TA assets effectively and efficiently. Avoid duplication of effort among intelligence available assets unless it is required to confirm target information. At corps and division, the ACE develops and manages the collection plan and ensures that no gaps in planned collection exist. This allows timely combat information to be collected to answer the commander's intelligence and TA requirements. To detect HPTs, give clear and concise

taskings to those TA systems capable of detecting a given target. This information lets analysts develop the enemy situation and identify targets (Figure F-8).

FS personnel provide the G2/S2 with the degree of located accuracy. The accuracy requirements are matched to the TLE of the collection systems. This allows the G2/S2 to develop more detailed TSS. NAIs and TAIs identified are matched with the most capable detection system available. If the target type and its associated signatures (e.g., electronic, visual, thermal) are known, the most capable collection asset can be directed against the target. The asset can be placed in the best position according to estimates of when and where the enemy target will be located.

Assets are positioned based on friendly estimates of where the enemy target is located. Information needed to detect targets are expressed in PIR and IR, which are incorporated into the collection plan. The collection manager translates the PIR and IR into SIR.

The collection manager considers the availability of all collection assets at all echelons. When a target is detected, the information is passed to the FAIO to determine if it is an HPT, its priority, and if it meets the TSS. To ensure that target information is passed quickly, the FAIO should be located in the ACE with communications to the FSE. Once an HPT is discovered, the FAIOs coordinate with their respective G2s/S2s and pass the targets directly to the FSE. If the commander approves the target, it is then passed to a firing unit. Mobile HPTs must be detected and tracked to maintain a current target location. Target tracking is inherent to detection.

BOS	TARGET ACQUISITION MEANS
INTELLIGENCE	SIGINT/EW, IMINT, HUMINT, TECHINT, MASINT systems.
MANEUVER	Patrols, scouts, units in contact, air/ground cavalry/air units.
FS	TAB, AN/TPQ-36/37 radars, FOs, AFSOs, COLTs.
AD	ADA scouts, ADA system's acquisition radars.
MOBILITY, COUNTER-MOBILITY, SURVIVABILITY	Engineer and NBC reconnaissance.
CSS	Truck drivers, base cluster recon/counterrecon patrols.
C^2	MIJI reports.
AIR FORCE	Joint STARS, AWACS.

Figure F-8. BOS detection capabilities.

As the assets collect information for target development, the information is forwarded to ACE intelligence analysts who use the information to perform situation and target development. Once a target specified for attack is identified, the analysts pass it to the FSE. The FSE executes the attack guidance against the target. Coordination between the intelligence staff and the FSE is essential to ensure that the targets are passed to an attack system that will engage the target.

The FAIOs can coordinate with the G2 and FSE to pass HPTs and other targets directly to the FCE at the division artillery TOC or, if approved by the maneuver commander, directly to a firing unit. The result is an efficient attack of targets which have been designated in advance for attack.

When the FAIO gets intelligence information which warrants attack, he notifies the FSE. This allows the FAIO to focus on intelligence analysis and the FSE to manage the control of fires. The targeting officer at the maneuver brigade and the S2 at the battalion perform FAIO functions.

Tracking priorities are based on the commander's concept of the operation and targeting priorities. Tracking is executed through the collection plan. Not all targets will be tracked. Because many critical targets move frequently or constantly, these HPTs require tracking.

Synchronization of Intelligence Collection. While conducting operations, the G2/S2 monitors execution of the collection plan. He uses an ISM to synchronize the intelligence system in order to give answers to PIR in time to affect the decisions they support. As HPTs are identified, he informs the appropriate FSE and cross-cues collection assets to support BDA as needed.

During delivery, NRT collectors and observers are cued to continue tracking targets during their engagement. Planned or cued BDA collection and reporting help determine if the engagement produced the desired effects. If not, continued tracking supports immediate reengagement.

To facilitate hand-off of target and tracking responsibilities, the G2/S2 coordinates with higher and subordinate units. Requirements for intelligence in a given area can then be directed to the unit responsible for that area. Operational graphics are useful when tracking particular threat units or HPTs. Passing responsibility for the target as it crosses the graphic ensures that it is not lost in crossing.

Synchronization continues during the CM process. The G2/S2 uses the products of the targeting process to develop SIR and SOR that synchronize the collection effort with command DPs. He plans and allocates time for collection, processing, and dissemination.

During execution the collection manager monitors the collection and reporting to ensure synchronization. He prompts asset managers to meet timelines, cross-cueing, and retasking as necessary to keep intelligence operations synchronized with command operations.

IEW Systems. The collection manager at each echelon gives appropriate IEW agencies missions through the collection plan and ISM. The intelligence analyst directly supports the collection manager. To properly synthesize information being received from forward units and collection systems intelligence analysts must understand their capabilities and limitations.

Figure F-9 explains the intelligence disciplines that provide targeting information through collection.

DISCIPLINE	FUNCTION
SIGINT/EW	• Friendly SIGINT/EW systems search for, intercept, and locate threat electronic signals emanating from radios, radars, and beacons. • Signatures are caused by electronics associated with the particular C^2 functions of the target. • Signatures identify signals based on characteristics of the signal or content of any messages intercepted. • The signals are then associated with an adversary's OB. • Electronic systems organic to tactical and operational (corps and theater) EW units can locate threat radio, radar, beacon, and C^2 system emissions using DF equipment. • DF efforts have inherent considerations that affect target accuracy such as DF system accuracy, terrain, and distance to target.
IMINT	• Imagery assets can be located in the AEB of the corps MI Bde, GRCS, and GS and DS companies of the Div MI Bn TUAV when fielded. • TUAV is organic to the DS Co of a heavy division. • TUAV is organic to the GS Co in a light infantry division. • FCE is assigned to the GS Co. • Predator UAV and Joint-STARS are USAF assets. They include airborne and ground-based IMINT sensors such as photo, TV, infrared, and MTI radar. • Targets have visual and infrared signatures that can be imaged. • Imagery analysts study results of IMINT missions to determine the presence, location, and assessed damage to threat targets. These films and devices can detect thermal signatures produced by equipment (engines, heaters, or any device producing or absorbing heat). These devices can also differentiate camouflaged equipment and structures. • Mounted sensors in UAVs provide TA capability which can locate threat elements unseen by ground observers and

Figure F-9. Intelligence disciplines.

	can successfully direct engagement of the targets. SLAR can detect the movement of vehicles beyond visual range of ground observers. • Imagery and intelligence analysts look for the threat's patterns of activity or intentions produced from IMINT systems. • Patterns of movement (numbers, direction, times) are analyzed and synthesized with other combat information to determine a threat commander's intentions. • Imagery can be requested from national and theater systems to support area studies and operations. • Imagery can also be used for training in garrison and at CTCs.
HUMINT	• HUMINT is produced by LRSUs, CI teams that are positioned throughout the depth of the battlefield, and interrogation teams that may be at maneuver battalions and higher. • Interrogation of threat prisoners can be focused on the detection of HVT and HPTs. • Interrogators should receive lists of intelligence interests and the commander's PIR. • Giving current HPTLs to the interrogators allows them to focus their efforts on locating these targets while gleaning additional information for situation development. • LRSUs are another HUMINT source. They may be tasked to determine the presence or absence of threat activity within the NAIs developed during the IPB process. • Keying these NAIs to HPTs allows the LRSUs to contribute significantly to the target detection process. • Information gained from LRSUs is real or NRT and can result in immediate engagement. • Due to extensive preparation and support requirements, LRSUs should be planned early and used IAW its doctrine (e.g., depth, target selection, insertion techniques). • CI teams detect subversion, espionage, and terrorist threats to friendly forces, and can also work with the local population to gather items of intelligence interest. • SOF may be tasked through SOCCE assigned at brigade, division, or Corps.

Figure F-9. Intelligence disciplines (continued).

TECHINT	• The TECHINT system is made up of two parts: S&TI and battlefield TECHINT. • S&TI supports strategic level of war intelligence. • Battlefield TECHINT supports operational and tactical levels of war intelligence. • TECHINT aids the commander by providing products that either identify or counter an adversary's monetary technological advantage. • TECHINT is an integral part of all-source intelligence because it involves everyone from individual soldiers to the policy makers. • Foreign material is photographed or captured and exploited for information, capabilities, limitations, and vulnerabilities. • The 203d MI Battalion operates the CMEC for the Army, or forms the Army's component of JCMEC or CCMEC. • Teams are sent from the battalion down to ECB units. • The G2, G3, TECHINT commander, and MI commander comprise the battlefield TECHINT team. • The commanders execute the staff's directives to collect materials for the TECHINT teams to exploit.
MASINT	• A MASINT sensor collects energy emitted by or reflected from an object or event for the purpose of identification and characterization. • Enemy weapon systems have physical characteristics and distinct performance identifiers when used. • Dynamic targets and events are primary candidates for MASINT exploitation by the MI force projection brigades. • These sources create energy emissions across the EM spectrum which carry information about its characteristics and performance via waves or particles. • This information is the signature collected by MASINT sensors; it can be used when developing threat assessments, OBs, IPB, and targeting materials. • MASINT data becomes invaluable during the rapid reprogramming of *smart* weapons and sensors or when changing tactics.

Figure F-9. Intelligence disciplines (continued).

STEP 3 - DELIVER:

DELIVER executes the target attack guidance and supports the commander's battle plan once the HPTs have been located and identified (Figure F-10).

ATTACK OF TARGETS MUST:	■ Satisfy attack guidance developed in *decide* function. ■ Require two categories of decisions—*tactical* and *technical*.
TACTICAL DECISIONS DETERMINE:	■ Desired effect, degree of damage, or both. ■ Attack system to be used. ■ Time of attack. This is determined IAW type of target: Planned target or target of opportunity. ; **PLANNED TARGET:** –Some targets will not appear as anticipated. –Target attack takes place only when the forecasted enemy activity occurs in projected time or place. Detection & tracking of activities associated with target becomes trigger for target attack.
TARGETING TEAM:	
G2 RESPONSIBILITIES:	■ Verifies enemy activity as the planned target to be attacked. ■ Validates target by conducting final check of reliability of source & accuracy (time & location) of target. Passes target to FSE. ■ Current operations officer checks legality of target in terms of the ROE.
FSE RESPONSIBILITIES:	■ Determines if attack systems planned are available & still best systems for attack. ■ Coordinates with higher/lower/adjacent units, other services, allies & HN (important where potential fratricide situations are identified).

Figure F-10. Deliver functions and responsibilities.

	■ Issues fire mission request to appropriate executing units. ■ Informs G2 of target attack. G2 alerts appropriate system responsible for BDA (when applicable). ; **TARGETS OF OPPORTUNITY:** –Are processed the same as planned HPTs. –Those not on HPTL are first evaluated to determine when or if they should be attacked. ■ Decision to attack follows attack guidance & is based on— •Activity of the target. •Dwell time. •Target payoff compared to other targets currently being processed for engagement. –If decision is made to attack immediately, target is processed further. –Availability & capabilities of attack system to engage targets are assessed. –If target exceeds availability or capabilities, send target to higher HQ for immediate attack. –If decision is to defer attack, continue tracking; determine DPs for attack, and modify collection taskings as appropriate.
TECHNICAL DECISIONS (DETERMINED BASED ON TACTICAL DECISIONS):	■ Precise delivery means. ■ Number and type of munitions. ■ Unit to conduct the attack. ■ Response time of the attacking unit. ■ Results in physical attack of targets by lethal and/or nonlethal means. ■ FS cell directs attack system to attack target once tactical decisions have been made. ■ FS cell provides attack system manager with—

Figure F-10. Deliver functions and responsibilities (continued) .

	•Selected time of attack. •Effects desired IAW previous discussion. •Any special restraints or requests for particular munitions types. ■ Attack system manager (FSCOORD, ALO, AVN BDE, LNO, NGLO) determines if his system can meet requirements. If cannot, he notifies FS cell. Some reasons for not being able to meet requirements include— •System not available at specified time. •Required munitions not available. •Target out of range. ■ FS cell must decide if selected system should attack under different criteria or if a different system should be used.
TARGETS OF OPPORTUNITY ARE ATTACKED BASED ON:	■ The target's activity. ■ Estimated assembly area activity.
DESIRED EFFECTS: **DISRUPT** **DELAY** **LIMIT**	■ Planned Targets: •Verify enemy activity as that planned to be attacked. •Reaffirm decision to attack. •Issue the fire mission request (through FS cell) to appropriate executing units. ■ Targets of Opportunity: •Targeting team must decide payoff and availability of attack systems and munitions.
ATTACK SYSTEM:	■ Planned Targets: •Decision made during *decide* function. •Determine system availability & capability. •Targeting team must determine best system available to attack target if system not available or capable.

Figure F-10. Deliver functions and responsibilities (continued).

	■ Targets of Opportunity: •Targeting team must determine attack system, subject to maneuver commander's approval. •Consider all available attack systems. •Attacking targets should optimize capabilities of— –Light and heavy ground forces. –Attack helicopters. –FA. –Mortars. –Naval gun fire. –Combat air operations (CAS and air interdiction). –Offensive EW. •Consider availability & capabilities of each resource using the following: –Desired effects on the target. –Payoff of the target. –Degree of risk to use asset against target. –Impact on friendly operations. •Target attack must be coordinated among two or more attack systems. •Engaging a target by lethal means, along with jamming or monitoring, may be of greater benefit than simply firing at the target.

Figure F-10. Deliver functions and responsibilities (continued).

STEP 4 - ASSESS:

Combat assessment is the determination of the effectiveness of force employment during military operations. It is composed of three elements:

- BDA, which is the timely and accurate estimate of damage resulting from the application of lethal or nonlethal military force against a target.
- MEA, which is an assessment of the military force in terms of weapon systems and munitions effectiveness.

- Reattack recommendation.

In combination, BDA and MEA inform the commander of effects against targets and target sets. Based on this, the threat's ability to make and sustain war and centers of gravity are continuously estimated. During the review of the effects of the campaign, restrike recommendations are proposed or executed. BDA pertains to the results of attacks on targets designated by the commander. Producing BDA is primarily an intelligence responsibility, but requires coordination with operational elements. BDA requirements must be translated into PIR. It accomplishes the following:

- At the tactical level, commanders use BDA to get a series of timely and accurate snapshots of their effect on the enemy. It provides commanders an estimate of the enemy's combat effectiveness, capabilities, and intentions. This helps commanders determine when or if their targeting effort is accomplishing their objectives.

- BDA helps to determine if restrike is necessary. Commanders use BDA to allocate or redirect attack systems to make the best use of available combat power.

The G3 through the targeting team conducts MEA concurrently and interactively with BDA as a function of combat assessment. MEA is used as the basis for recommending changes to increase effectiveness in—

- Methodology.
- Tactics.
- Weapon systems.
- Munitions.
- Weapon delivery parameters.

The G3 develops MEA by determining the effectiveness of tactics, weapons systems, and munitions. Munitions effect on targets can be calculated by obtaining rounds fired on specific targets by artillery assets. The targeting team may generate modified commander's guidance concerning—

- UBL.
- RSR.
- CSR.

The need for BDA for specific HPTs is determined during the **decide** function. Record BDA on the AGM and intelligence collection plan. The resources used for BDA are the same resources used for target development and TA. An asset used for BDA may not be available for target development and TA. The ACE receives, processes, and disseminates to the targeting team the results of attack, which are analyzed in terms of desired effects.

The targeting team must keep the following BDA principles in mind:

- BDA must measure things that are important to commanders, not make important the things that are easily measurable.
- BDA must be objective. When a G2/S2 receives a BDA product from another echelon, he should verify the conclusions (time permitting). G2s/S2s at all echelons must strive to identify and resolve discrepancies among the BDA analysts at different headquarters.
- The degree of reliability and credibility of the assessment relies largely upon collection resources. The quantity and quality of collection assets influence whether the assessment is highly reliable (concrete, quantifiable, and precise) or has low reliability (best guess). The best BDAs use more than one collection discipline to verify each conclusion.

Each BDA has three assessment components (Figure F-11). Each requires different sensors, analytical elements, and timelines. They are not necessarily subcomponents of each BDA report. (See FM 6-20-10, Appendix D.)

COMPONENTS	DESCRIPTION
PDA	• Qualitative physical damage from munitions blast, fragmentation, and fire. • Based on observed or interpreted damage.

FDA	• Effects of military force to degrade or destroy capability of target to perform mission. • Assessment based on all-source intelligence. • Includes an estimate of time to reconstitute or replace target. • Temporary assessment compared to a TSA used for specific missions.
TSA	• The overall impact of the full spectrum of military operations on an entire target system's capability. • Can be applied against an adversary's combat effectiveness. • May address significant subdivisions of a target. • A more permanent assessment.

Figure F-11. BDA functions.

BDA is more than determining the number of casualties or the amount of equipment destroyed. The targeting team can use other information, such as—

- Whether the targets are moving or hardening in response to the attack.
- Changes in deception efforts and techniques.
- Increased communication efforts as the result of jamming.
- Whether the damage achieved is affecting the enemy's combat effectiveness as expected.

BDA may also be passive by compiling information regarding a particular target or area (e.g., the cessation of fires from an area). If BDA is to be made, the targeting team must give intelligence acquisition systems adequate warning for sensors to be directed at the target at the proper time. BDA results may change plans and earlier decisions. The targeting team must periodically update the decisions made during the **decide** function concerning—

- IPB products
- HPTLs.
- TSS.
- AGMs.
- Intelligence collection plans.
- OPLANs.

Based on BDA and MEA, the G2/G3 consider the level to which operational

objectives have been achieved and make recommendations to the commander. Reattack and other recommendations should address operational objectives relative to the—

- Target.
- Target critical elements.
- Target systems.
- Enemy combat force strengths.

BDA key players are the commander, operations officer, FSO, AAO, ALO, and S2. The S2 integrates intelligence and operational data. In coordination with the G3, the G2/S2—

- Recommends HPTs.
- Develops and recommends IR to include those for targeting and BDA. Some requirements become PIR.
- Coordinates with the G3/S3, AAO, and FSO to develop a fully coordinated targeting and BDA plan.
- Develops a synchronized collection plan to answer the commander's IR and tracks and maintains BDA charts and files.
- Tasks or requests collection support from the appropriate unit or agency to collect information required to satisfy the commander's targeting objectives and BDA reporting requirements.
- Establishes procedures to ensure reports from FOs, scouts, troops in contact, pilots, and AVTRs are quickly made available for BDA analysis.
- Matches BDA reporting requirements against the commander's objectives to determine targeting effort drain; develops and maintains historical BDA databases, and disseminates hard and soft copy intelligence and BDA results.
- Uses the results of BDA and combat assessment to determine the need to develop further threat COAs.
  - — Determines priority for collection assets between the targeting effort and

the BDA supporting requirements.

— Determines and updates enemy capabilities based upon results of the targeting effort.

SASO CONSIDERATIONS

Target development and targeting are difficult in an SASO environment. Although the principles of the targeting process still apply in SASO, consider the following:

- ROE tend to be more restrictive than in conventional combat situations. Everyone involved in the targeting process must completely understand the ROE.
- Identification of HVTs, threat intentions, threat locations, and weapons systems is slow to develop and may not be able to be acted upon when fully developed.
- Because of the nature of the threat (usually a relatively small, unconventional enemy may constitute a significant threat to US forces) determination of HVTs (specifically, what constitutes an HVT) is extremely difficult. Thus, it is difficult to develop precise time, location, and rates of march for a threat force.
- "Targets," which blend into the population, are often less visible than conventional targets.
- When identified, targets present less of a window of opportunity in which to react, decreasing decision time.
- Because of considerations of the HN population, targeting must be precise. Selecting the right weapons system for the right target is paramount.
- Interaction and coordination with nontraditional elements and agencies may be required. This may include private organizations, NGOs, other federal agencies, civil agencies, allies or coalition forces, and HN forces.

CARVER TECHNIQUE

ARSOF uses CARVER factors to assess mission, validity, and requirements. They are also used in technical appreciation and target analysis.

The CARVER selection factors assist in selecting the best targets or components to attack. As the factors are considered, they are given a numerical value, which represents the desirability of attacking the target. The values are then placed in a decision matrix. After CARVER values for each target or component are assigned, the sum of the values indicates the highest value target or component to be attacked within the limits of the statement of requirements and commander's intent. Figure F-12 explains the CARVER techniques.

	DESCRIPTION	FACTORS	CRITERIA & VALUES*	SCALE
Criticality	•Means target value. •Primary consideration in targeting. •Target is critical when its destruction or damage has major impact on military, political, or economic operations. •Consider targets within a system in relation to other elements of the target system. •Value of target will change as situation develops. •Target requires use of time-sensitive methods which respond to changing situation. **EXAMPLE:** When one has few locomotives, railroad bridges may be less critical as targets; however, safeguarding bridges may be critical to maneuvering conventional forces requiring use of such bridges.	•Time—How rapidly will impact of target attack affect operations? •Quality—What % of output, production, or service will be curtailed by target damage? •Surrogates—What will be effect on output, production, and service? •Relativity—How many targets? What are their positions? How is their relative value determined? What will be affected in the system or complex stream?	•Immediate halt; target cannot function without it. •Halt within 1 day, or 66%. •Halt within 1 week, or 33%. •Halt within 10 days, or 10%. •No significant affect. *Refers to time or %; curtailment in output, production, or service.	9 to 10 7 to 8 5 to 6 3 to 4 1 to 2

Figure F-12. CARVER techniques.

	DESCRIPTION	FACTORS	CRITERIA & VALUES*	SCALE
Accessibility	•Target is accessible when operations element can reach the target with sufficient personnel and equipment to accomplish mission. •Entails identifying & studying critical paths the operational element must take to achieve objectives & measuring those things that aid or impede access. •You must be able to reach target AND remain there for extended periods. •Basic steps identifying accessibility: –Infiltration from staging base to target. –Movement from point of entry to target/objective. –Movement to target's critical element. –Exfiltration.	•Active & passive EWS. •Detection devices. •AD capabilities within target area. •Road & rail transportation systems. •Type terrain & its use. •Concealment & cover. •Population density. •Other natural or synthetic obstacles & barriers. •Current & climatic weather conditions. •Analysis along each critical path to target should measure time it would take for action element to bypass, neutralize, or penetrate barriers/ obstacles. •Measured by relative ease or difficulty of movement for operational element & likelihood of detection. Consider using standoff weapons in such evaluations.	•Easily accessible standoff weapons can be employed. •Inside a perimeter fence but outdoors. •Inside a building but on ground floor. •Inside a building but on second floor or in a basement; climbing or lowering is required. •Not accessible or inaccessible without extreme difficulty.	9 to 10 7 to 8 5 to 6 3 to 4 1 to 2

Figure F-12. CARVER techniques (continued).

	DESCRIPTION	FACTORS	CRITERIA & VALUES*	SCALE
Recuperability	•Measured in time—How long will it take to replace, repair, or bypass destruction of or damage to the target? •Varies with sources and type of targeted components and availability of spare parts availability.	•Onhand equipment such as railroad cranes, dry docks, and cannibalization. •Restoration and substitution through redundancies. •Onhand spares. •Equivalent OB equipment sets that backup critical equipment or components; effects of economic embargoes and labor unrest.	Replacement, repair, or substitution requires— •1 month or more. •1 week to 1 month. •72 hours to 1 week. •24 to 72 hours. •Same day replacement, repair, or substitution.	9 to 10 7 to 8 5 to 6 3 to 4 1 to 2
Vulnerability	•Target is vulnerable if operational element has means & expertise to successfully attack the target. •Scale of critical component needs to be compared with capability of attacking element to destroy or damage it. •Attacking element may tend to— –Choose special components. –Do permanent damage.	•Depends on— –Nature and construction of the target. –Amount of damage required. –Assets available, (e.g., personnel, expertise, motivation, weapons, explosives, and equipment.)	•Vulnerable to long-range laser target designation, small arms fire, or charges of 5 lbs or less. •Vulnerable to light antiarmor weapons fire or charges of 5 to 10 lbs.	9 to 10 7 to 8

Figure F-12. CARVER techniques (continued).

	DESCRIPTION	FACTORS	CRITERIA & VALUES*	SCALE
	–Maximize effects through use of onsite materials. –Cause the target to self-destruct.		•Vulnerable to medium antiarmor weapons fire, bulk charges of 10 to 30 lbs, or very careful placement of smaller charges.	5 to 6
			•Vulnerable to heavy antiarmor fire, bulk charges of 30 to 50 lbs, or requires special weapons.	3 to 4
			•Invulnerable to all but the most extreme target-ting measures.	1 to 2
Effect	•Measure of possible military, political, economic, psychological & sociological impacts at target & beyond. •Closely related to the measure of target criticality. •Type & magnitude of given effects desired will help planners select targets & target components.	•Primary effect of destruction of 2 adjacent long-range radar sites in EWS may be to open hole in system that is of sufficient size & duration to permit attacker to launch a successful air or missile nuclear strike against defender.	•Overwhelmingly positive effects; no significant negative effects.	9 to 10
			•Moderately positive effects; few significant negative effects.	7 to 8
			•No significant effects; neutral.	5 to 6
			•Moderately negative effects; few significant positive effects.	3 to 4

Figure F-12. CARVER techniques (continued).

	DESCRIPTION	FACTORS	CRITERIA & VALUES*	SCALE
	•Addresses all significant effects, whether desired or not, that may result once selected target component is attacked. •Traditionally, this element addressed effect on local population; now there are broader considerations. •Frequently neutral at tactical level.	•Can include— –Triggering of counter-measures. –Support of negation of PSYOP themes. –Unemploy-ment. –Reprisals against civilian popu-lace. –Collateral damage to other targets. •Possible effects can be specula-tive & thus should be labeled. •Effects of same attack may be different at tactical, opera-tional & strategic levels. **EXAMPLE:** Destruction of a substation may not affect local power but cuts off power to adjacent region.	•Overwhelmingly negative effects; no significant positive effects.	1 to 2

Figure F-12. CARVER techniques (continued).

	DESCRIPTION	FACTORS	CRITERIA & VALUES*	SCALE
Recognizability	•Target's recognizability is degree to which it can be recognized by an operational element or intel collection & recon assets under varying conditions. •Weather impacts visibility. •Rain, snow & ground fog may obscure observation. •Road segments with sparse vegetation & adjacent high ground provide excellent conditions for good observation. •Distance, light & season must also be considered.	•Site & complexity of target. •Existence of distinctive target signatures. •Presence of masking or camouflage. •Technical sophistication & training of attackers.	•Target is clearly recognizable under all conditions & from a distance; requires little or no training. •Target is easily recognizable at small-arms range & requires small amount of training. •Target is difficult to recognize at night or in bad weather, or might be confused with other targets or components; requires some training. •Target is difficult to recognize at night or in bad weather, even within small-arms range; it is easily confused with other targets or components; requires extensive training. •Target cannot be recognized under any conditions, except by experts.	9 to 10 7 to 8 5 to 6 3 to 4 1 to 2

	DESCRIPTION	FACTORS	CRITERIA & VALUES*	SCALE

Figure F-12. CARVER techniques (continued).

CARVER factors and their assigned values are used to construct a CARVER matrix. Table F-1 is a tool for rating the desirability of potential targets and allocating attack resources.

- List the potential targets in the left column.
- For strategic level analysis, list the enemy's systems or subsystems (electric power supply, rail system).
- For tactical level analysis, list the complexes or components of the subsystems or complexes selected for attack by your higher HQ.
- As each potential target is evaluated for each CARVER factor, enter the appropriate value into the matrix.
- Once all the potential targets have been evaluated, add the values for each potential target.
- The sums represent the relative desirability of each potential target; this constitutes a prioritized list of targets.
- Attack those targets with the highest totals first.
- If additional men or munitions are available, allocate these resources to the remaining potential targets in descending numerical order.
- This allocation scheme will maximize the use of limited resources.

The S2 can use the CARVER matrix to present operation planners with a variety of attack options. With the matrix, he can discuss the strengths and weaknesses of each COA against the target. Having arrived at conclusions through the rigorous evaluation process, the S2 can comfortably defend his choices.

Table F-1. Bulk electric power supply.

POTENTIAL TARGETS	C	A	R	V	E	R	TOTAL
Fuel Tanks	8	9	3	8	5	6	41
Fuel Pumps	8	6	2	10	5	3	34
Boilers	6	2	10	4	5	4	31
Turbines	8	6	10	7	5	9	45
Generators	4	6	10	7	5	9	41
Condenser	8	8	5	2	5	4	34
Feed Pumps	3	8	5	8	5	6	33
Water Pumps	3	8	5	8	5	4	33
Generator Step up Transformer	10	10	10	9	5	9	53

APPENDIX G

IEW SYSTEMS

QUICKFIX (AN/ALQ-151(V1)) Advanced QUICKFIX (AN/ALQ-151(V2))

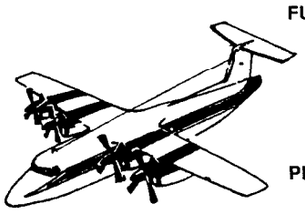
FUNCTION: VHF DF intercept, VHF EA, VHF DF (nets w/TRAILBLAZER for DF). Component of IEWCS AF/VHF/UHF ES

PRIME MOVER: EH-60A, EH-60L (BLACKHAWK)

UNIT AND QTY: HVY DIV: 3 Systems 3 Flt Plt, Avn Bde; LT DIV: 3 Systems, 3 Flt Plt, Avn Bde; AASLT DIV: 3 Systems, 3 Flt Plt, HHOC, MI Bn; ABN DIV: 3 Systems, 3 Flt Plt, Cbt Avn Sqdn; ACR: 3 Systems, 3 Flt Plt, Cbt Avn Sqdn

INTEL APPLICATION: COMINT

Airborne Reconnaissance Low (ARL)



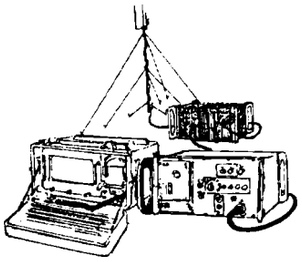
FUNCTION: Ground processing station, ACT 101 remote rcv sets, TACLINK video rcv sets, FLIR system, daylight imaging systems, infrared line scanner, radio intercept/DF systems; interoperates w/ASAS & CTT

PRIME MOVER: DHC-7 arrives ready for immediate employment

UNIT AND QTY: Select Brigades

INTEL APPLICATION: COMINT/IMINT

Commander's Tactical Terminal (CTT), AN/TSC-125



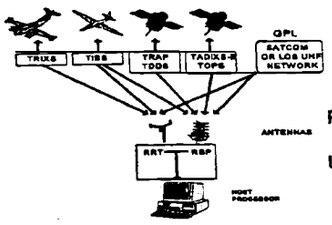
FUNCTION: Communications terminal; GUARDRAIL downlink on TRIXS network; RRS on board RC-12 & U2-R, RRTS; includes OT, RBP, RRT, LOS adaptive array antenna, SDS, embedded COMSEC

PRIME MOVER: NA

UNIT AND QTV: 1- MI at all echelons

INTEL APPLICATION: SIGINT

Joint Tactical Terminal: JTT/H3 (AN/USC-55)
JTT/H-R3 (AN/USR-6)



FUNCTION: Communications terminal, 2 LRUs, 1 RBP, 1 RRT, host processor & antenna array (both user provided); mobile & mountable in F/W & R/W, tracked & wheeled vehicles, shelters

PRIME MOVER: NA

UNIT AND QTY: Avn, ADA, FA, MI at all echelons; integrated into GSM/CGS, ASAS, ETRAC, THAADS, Patriot, JTAGS, TROJAN SPIRIT, AFATDDS, other multiservice systems

INTEL APPLICATION: SIGINT

Ground-Based Common Sensor (GBCS)

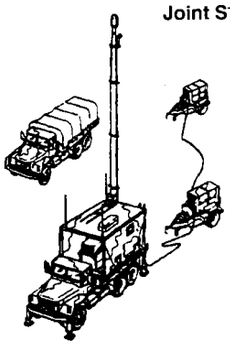
FUNCTION: ES (intercept& DF); EA (jamming); COMINT targeting location data; common subsystems with AQF & MEWSS

PRIME MOVER: EFVS (HVY DIV) or HVY HMMWV (LT DIV)

UNIT AND QTY: 6 GBCS-H per MI Bn (H); 4 GBCS-H per MI Co (ACR); 4 GBCS-L per MI Bn (ABN, AASLT, LT); 6 per MI Bn (H, LT, ABN, AASLT, DIV); 6 per MI Co; ACR

INTEL APPLICATION: COMINT/ELINT

Joint STARS Ground Station Module (GSM) (AN/TSQ-132)

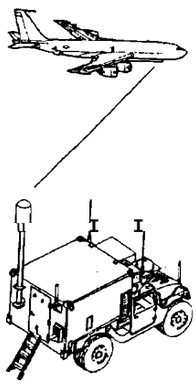


FUNCTION: MTI, FTI, SAR imagery; supports situation development, battle mgt, targeting, force protection, limited BDA/TDA, operations planning

PRIME MOVER: LT - 2xHMMWV; MED - 2X5-ton HMMWV

UNIT AND QTY: 6- Selected DIV; 6- Selected Corps; 1- ACR; 1- EAC

INTEL APPLICATION: IMINT/SIGINT/INTEL/ ARTY/AVN SUPPORT



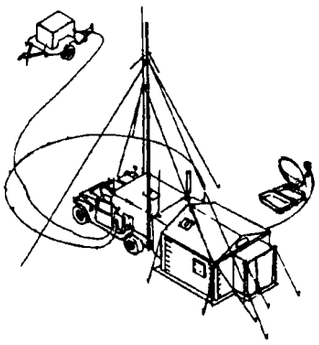
Joint STARS Common Ground Station (CGS)

FUNCTION: MTI, FTI, SAR imagery; supports situation development, battle mgt, targeting, force protection, limited BDA/TDA, operations planning; includes SATCOM & CTT communications

PRIME MOVER: LT - 2xHMMWV

UNIT AND QTY: 5 to 7- DIV; 5 to 7- Corps; 1- ACR; 1- SEP BDE; 1 to 5 EAC

INTEL APPLICATION: IMINT/SIGINT/INTEL/ ARTY/AVN SUPPORT



Integrated Meteorological System (IMETS)

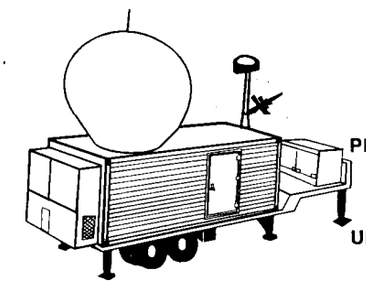
FUNCTION: Receives, processes & disseminates weather data.

PRIME MOVER: Heavy HMMWV mounted

UNIT AND QTY: DIV, Corps, EAC, SEP BDE, ACR, AVN BDE, other task organized contingencies

INTEL APPLICATION: Intelligence Support

Advanced Electronic Processing and Dissemination System (AEPDS)



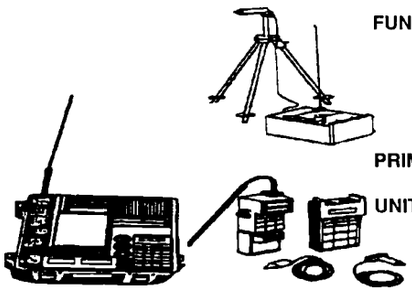
FUNCTION: Mobile, air & ground transportable comm system; receives, processes & exploits SIGINT data from multiple national, theater & organic ELINT/ COMINT systems. Combines functions of EPDS & ETUT into a single downsized system

PRIME MOVER: 30 ft van pulled by a 3-axle 10-ton tractor air deployable on C-130 or larger aircraft

UNIT AND QTV: 1- Corps (rear) 1- Select MI Bde (EAC)

INTEL APPLICATION: SIGINT

Improved Remotely Monitored Battlefield Sensor System (IREMBASS)



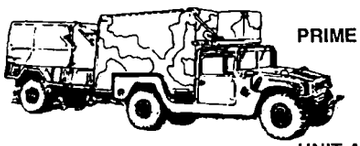
FUNCTION: Unattended ground sensor (seismic/ acoustic, magnetic, infrared, meteorological) that detects, classifies & determines direction of movement

PRIME MOVER: Manpacked and vehicle

UNIT AND QTY: LT DIV - 5 (GS Plt, I&S Co, MI Bn); ASSLT DIV - 5 (GS Plt, I&S Co, MI Bn); ABN DIV - 5 (GS Plt, MI Co (Fwd Spt), MI Bn)

INTEL APPLICATION: MASINT

Mobile Integrated Tactical Terminal (MITT)



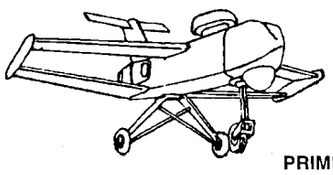
FUNCTION: Replaces THMT & FAST-I in force structure; compatible w/TROJAN, MSE, TIBS, DIN/DSSCS, STU III, TENCAP; TRAP/TADIXS-B, UHF SATCOM, S-BAND w/ROTERM/ CHARIOT

PRIME MOVER: Mobile, ground, air transportable (heavy duty HMMWV, cargo HMMWV, generator trailer, C-130, CH-47)

UNIT AND QTY: DIV and Corps ACE - 1

INTEL APPLICATION: SIGINT/IMINT

Tactical Unmanned Aerial Vehicle (TUAV) - OUTRIDER



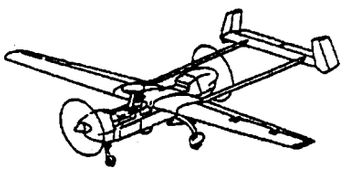
FUNCTION: Operates fwd of FLOT, in all conditions; provides NRT intel, recon, battlefield survl, color E-O camera, FLIR, plug-in optronic payload; future payloads: MTI, SAR, comm/ noncomm DF, intercept, jamming; MET

PRIME MOVER: C-130 or larger, roll-on/roll-off; ground equipment mounted on HMMWVs

UNIT AND QTY: 3 - HVY/AASLT DIV; 5 - LT DIV; 3 - ABN DIV; 3 - ACR; 5 - LT ACR; 1 - SEP BDE

INTEL APPLICATION: IMINT/SIGINT/PSYOP

Unmanned Aerial Vehicle-Short Range (UAV-SR) HUNTER



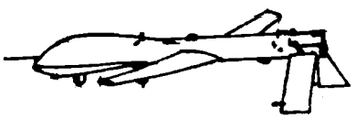
FUNCTION: Operates fwd of FLOT, in all conditions; provides NRT intel, recon, battlefield survl, color CCD, TA, BDA, recon, battlefield survl, E-O/FLIR, UAV data relay; future payloads: MTI, SAR, MET, ES, EA, mine detection, PSYOP, SIGINT, NBC recon

PRIME MOVER: NA

UNIT AND QTY: **Not fielded. For training use only**

INTEL APPLICATION: IMINT/SIGINT/PSYOP

Unmanned Aerial Vehicle (UAV)-Endurance PREDATOR



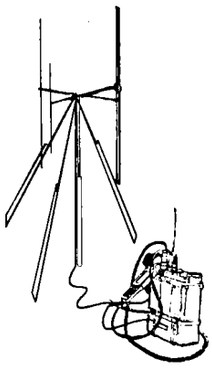
FUNCTION: Operates as stand-off system in all conditions, behind friendly lines; can penetrate into enemy territory; payloads: E-O/FLIR, MTI/SAR, SIGINT, MET, PSYOP, NBC recon, comm/data relay

PRIME MOVER: 2 C-141s or multiple C-130s

UNIT AND QTY: USAF Asset - Deployed in support of Joint Operations

INTEL APPLICATION: IMINT/SIGINT/PSYOP

Lightweight Man-Transportable Radio Direction Finding System (LMRDFS) AN/PRD-12



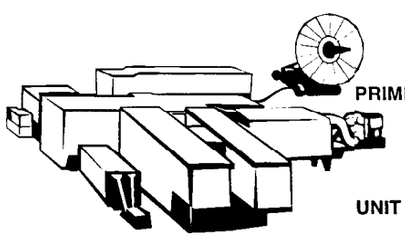
FUNCTION: Lightweight manportable comm intercept/DF system; on emitter location missions, works w/TEAMMATE; ideal in LT, ABN, AASLT, SOF opns; rapid relocation; optimizes collection in fwd AO; CNR for external comm

PRIME MOVER: Manpacked; 60 lbs, carried by 2 soldiers

UNIT AND QTY: 1 - LT ABN; 3 - HVY/AASLT DIV; 3 - ACR; 1 - SEP BDE; 7 - SOF BN; 10 - SOF SA

INTEL APPLICATION: COMINT

Modernized Imagery Exploitation System (MIES)



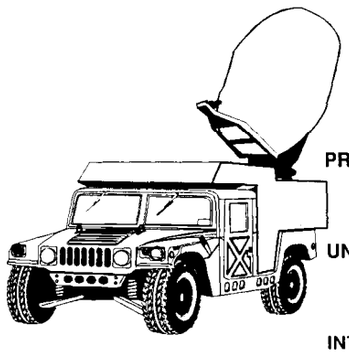
FUNCTION: NRT IMINT; provides exploitation/exploitation mgt, receipt, reporting, SID, archive of imagery & reports; replaces IPDS

PRIME MOVER: 40 ft hardcopy/softcopy exploitation van; 35 ft SATCOM van; 35 ft receive location van; air deployable, C-141, C-5

UNIT AND QTY: Selected MI Bde

INTEL APPLICATION: IMINT

TROJAN SPIRIT (AN/TSQ-190V)



FUNCTION: Satellite terminal; intel processing/dissem, secure voice, data, GPS, FAX, LAN wkstns, video, SID; receive, display, transmit digital imagery, weather/terrain prods among CONUS/OCONUS & deployed

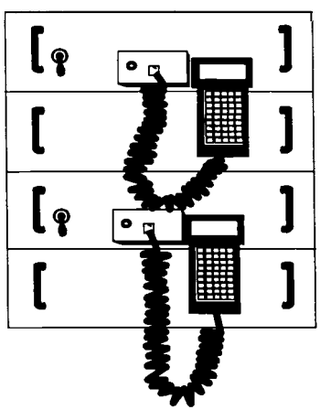
PRIME MOVER: Mounts on 2 heavy variant HMMWVs; tactical SATCOM trailer

UNIT AND QTY: Connectivity: Ft Belvoir TROJAN switching center for worldwide deployment

INTEL APPLICATION: IMINT/SIGINT/CI/ HUMINT/Intelligence Support

---

Synthetic UHF Computer-Controlled Equipment Subsystem (SUCCESS) UHF Radio



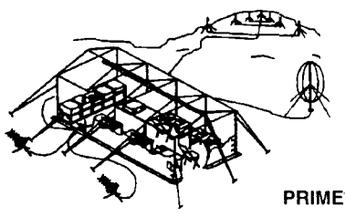
FUNCTION: Auto microprocessor UHF band radio; used w/TENCAP; simultaneous comm when stacked; 2 XMIT/6 RCV channels; SATCOM, point-to-point, TADIXS-B, direct data downlinks; comm w/abn, terrestrial & satellite systems; contains TRE processor

PRIME MOVER: Designed for ground/mobile sheltered environments

UNIT AND QTY: Demand assigned multiple access

INTEL APPLICATION: Intelligence Support

Enhanced TRACKWOLF (AN/TSQ-199)



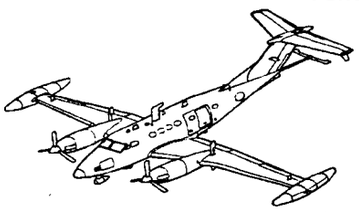
FUNCTION: Targets HF jammers/emitters; 3 netted or stand-alone stations; produces COMINT, TACREPs; spts EAC w/organic long-distance comm resources; open architecture; scaleable tier I-III; external comm via SINCGARS LPI VHF radio, DIN, DSSCS, TROJAN SPIRIT II, SSP-SIGINT, CROSSHAIR, UHF MIL SATCOM (DF Flashnet)

PRIME MOVER: NA

UNIT AND QTY: Special missions at EAC

INTEL APPLICATION: COMINT

Guardrail Common Sensor (GRCS)



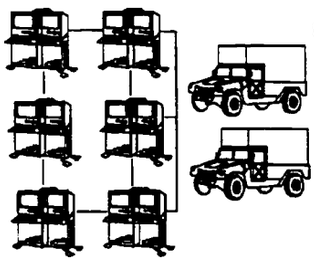
FUNCTION: Collects, identifies, classifies, locates radio signals; provides NRT reporting; gathers LOB & TDOA data; ARF relays platforms btwn IPF & cmds; incorp CHAALS; interfaces w/fixed locations & tactical users; future; expanded coll, LPI capability, embedded trng, 3-channel CTT, retrofit, and auto reporting

PRIME MOVER: Self-deployable; 4 - IPF vans; 3 - IDL trackers

UNIT AND QTY: 1 - Corps AEB

INTEL APPLICATION: ELINT/COMINT

All-Source Analysis System (ASAS)



FUNCTION: Provides auto intel, info & interface data handling for cdrs & ATCCS/ FLCS users; includes IEW sensors, preprocessors, ASAS & FLCS, ABCS HW/SW & info mgt; RWS operates outside ACE

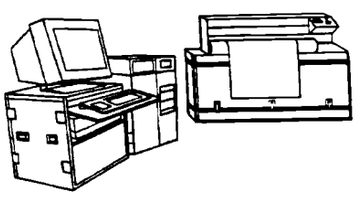
PRIME MOVER: CUCV/HMMWV 5-ton

UNIT AND QTY: 1 ACE set - EAC, Corps, DIV, Sep Bde, ACR; 1 ASAS-RWS at each Bn, Bde & required collateral locations EAC-DIV

INTEL APPLICATION: COMINT/ELINT/IMINT/ CI/HUMINT

Digital Topographic Support System Multi-Spectral Image Processor (DTSS/MSIP)

FUNCTION: Automates terrain TM; produces terrain anal prod; improves response time for IPB; collocated w/ASAS; msg traffic thru MSE; generates/updates multi-spectral imagery; contains 3-D visualization, scanning, map-sizing printer

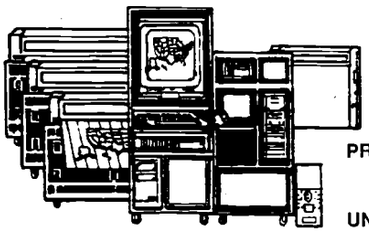


PRIME MOVER: NA

UNIT AND QTY: 1 DIV Terrain TM; 2 - EAC/Corps Terrain TM

INTEL APPLICATION: IMINT/Intelligence Support

Digital Topographic Support System Quick Response Multicolor Printer (DTSS/QRMP)



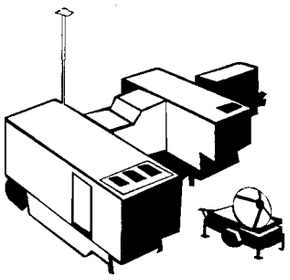
FUNCTION: Automates terrain TM; produces terrain anal prod; improves response time for IPB; collocated w/ASAS; msg traffic thru MSE; provides digital data/terrain anal from battlefield in hard/soft copy

PRIME MOVER: Tactically mobile; 2 LMS-788/gs shelters; 2 HMMWV-H

UNIT AND QTY: 1 DIV Terrain TM; 2 - EAC/Corp Terrain TM

INTEL APPLICATION: IMINT/Intelligence Support

Enhanced Tactical Radar Correlator (ETRAC)



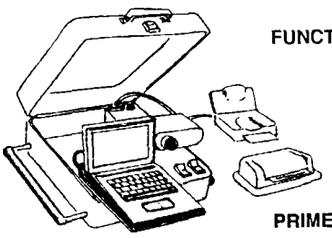
FUNCTION: Advanced mobile SAR processor; receives data from ASAR-2 via U2-R; converts radar to imagery; limited organic exploit for stand-alone opns; includes SUCCESS radio, TENCAP CSP; STU-III, DSVT

PRIME MOVER: Air deployable via C-130, C-141, C-5

UNIT AND QTY: XVIII ABN Corps and V Corps

INTEL APPLICATION: IMINT

CI/HUMINT Automation Tool Set (CHATS)



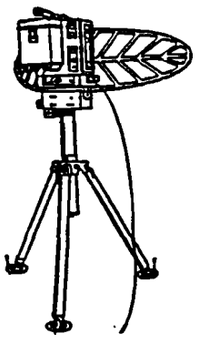
FUNCTION: Provides direct access into CI/HUMINT collateral LAN; uses INMARSAT, TROJAN SPIRIT, SINCGARS, MSE, DSN & phone lines; 2-way data comm; secure FAX; future: GPS, cellular comm, power mgt

PRIME MOVER: 2-manportable cases

UNIT AND QTY: 66th MI Group, Augsburg, GE

INTEL APPLICATION: CI/HUMINT

AN/PPS-5B



FUNCTION: Moving Target Indicators
Range:
6 km-Personnel
10 km-Vehicle

PRIME MOVER: Manpacked and vehicle

UNIT AND QUANTITY: HVY DIV: 12 systems
4/GSR Squad (3)
Survl Plt, I&S Co., MI Bn

AN/PPS-15A

FUNCTION: Moving Target Indicators
Range:
1.5 km-Personnel
3.0 km-Vehicle

PRIME MOVER: Manpacked and vehicle

UNIT AND QUANTITY: LT DIV: 12 systems
3/GSR Squad (4)
Survl Plt, I&S Co., MI Bn

ASSAULT DIV; 8 systems
3/GSR Squad (3)
Survl Plt, I&S Co., MI Bn

ABN DIV: 9 systems
3/I&S Plt (3)
MI Co., (Fwd Spt), MI Bn

APPENDIX H

MILITARY INTELLIGENCE UNITS AND CAPABILITIES

This appendix shows the structure of the MI Battalion (Heavy Division), the MI Battalion (Light Divisions, Airborne, Air Assault), and the Corps MI Brigade. The MI unit structures constitute approved MI force design.

DIVISION MI BATTALION

The MI Battalion (Heavy Division) (Figure H-1) provides dedicated IEW support to the heavy division. It responds to missions assigned by the commander and staff. (MI battalion IEW assets are shown in Appendix G.)

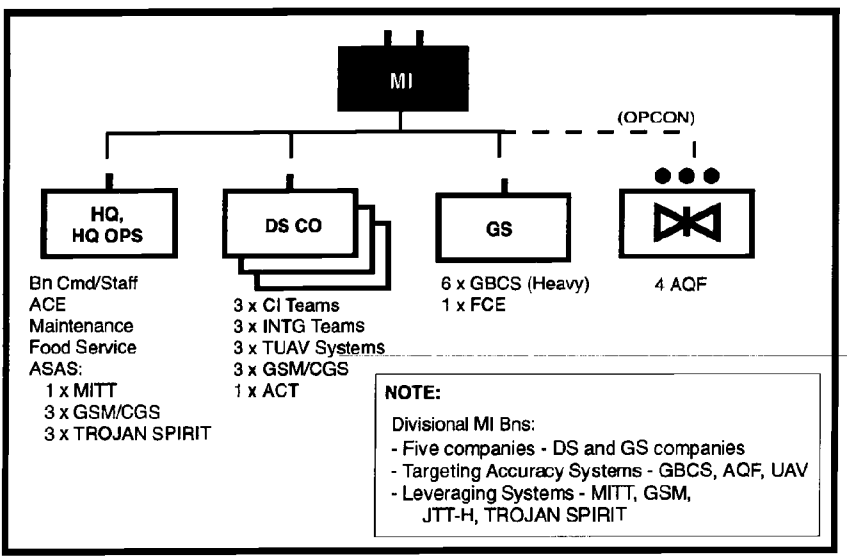


Figure H-1. MI Battalion (Heavy Division).

LIGHT, AIRBORNE, AND AIR ASSAULT DIVISION

The MI Battalion is organized as shown in Figure H-2.

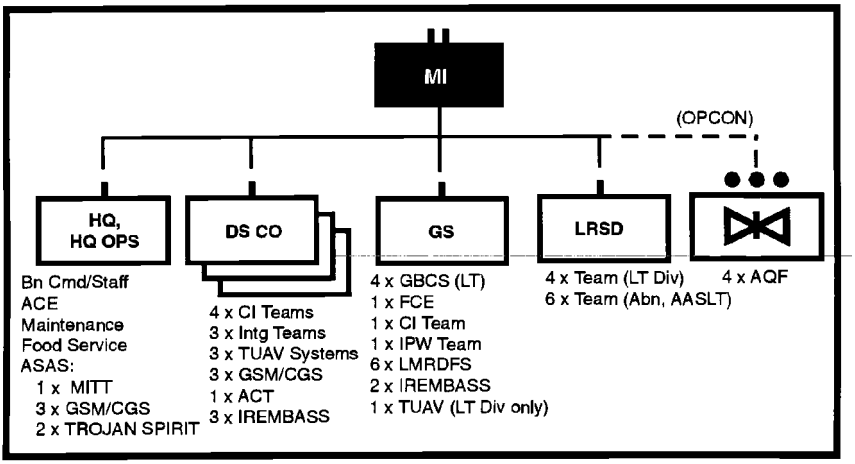

Figure H-2. MI Battalion (Light, Airborne, Air Assault Division).

CORPS MI BRIGADE:

The Corps MI Brigade (Figure H-3) provides dedicated IEW support to the Corps and its subordinate units.

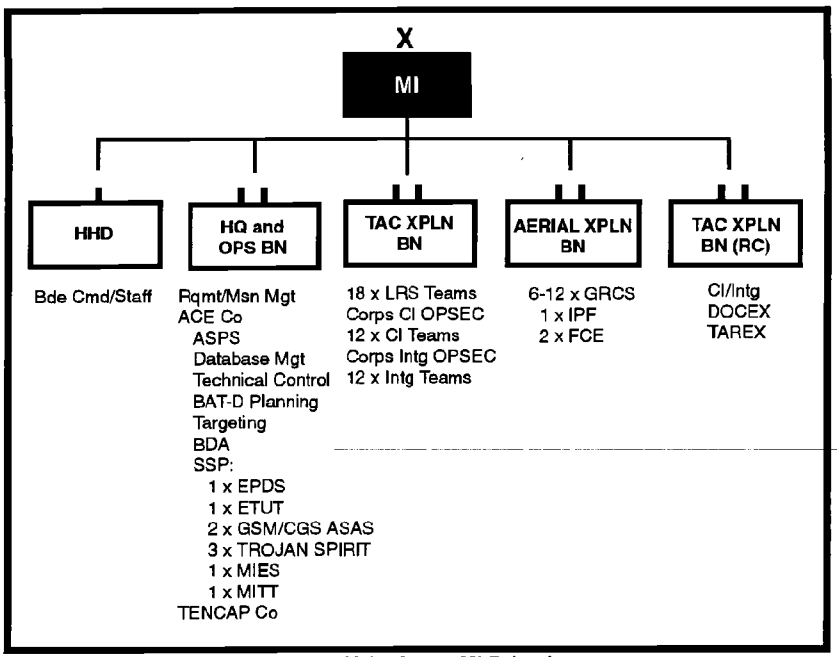

Figure H-3. Corps MI Brigade.

Figures H-4 and H-5 show the organizations of the MI Detachment, Support Company, Special Forces Group and the Special Forces Battalion, respectively.

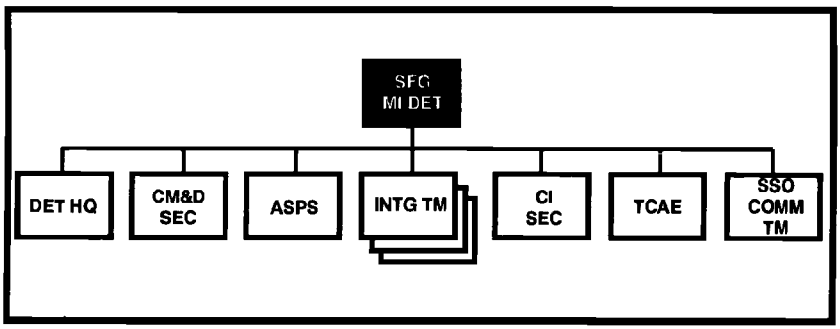

Figure H-4. Organization, MI Detachment, Spt Co, SFG.

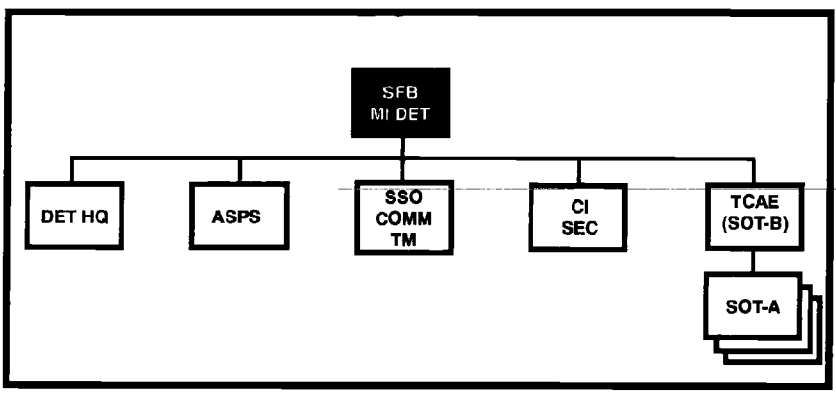

Figure H-5. Organization, MI Detachment, Spt Co, SFB.

APPENDIX I

INTELLIGENCE TRANSITION CHECKLIST

This checklist provides for transition of intelligence responsibility for an area between units. Status of all items listed must be thoroughly coordinated between the transitioning S2s to ensure an effective hand-off of responsibility.

INTELLIGENCE TRANSITION CHECKLIST

_____ CURRENT SITUATION.

_____ Threat disposition:

_____ Maneuver.
_____ Artillery.
_____ Counter-Air.
_____ Intelligence.
_____ Mobility-Countermobility-Survivability.
_____ Logistics.
_____ C^3.
_____ Deception.

_____ Threat strength:

_____ Percentage strength of units.
_____ BDA.

_____ Personnel.
_____ Equipment.
_____ Weapons.
_____ Logistics.

_____ Threat vulnerabilities.
_____ Threat capabilities.
_____ Probable COA.

_____ FRIENDLY INTELLIGENCE SITUATION.

_____ Collection plan.

_____ IMINT.
- _____ Required coverage.
- _____ Focus (CCIRs).

_____ SIGINT.
- _____ Required coverage.
- _____ Focus (EEFI/PIR).

_____ HUMINT.
- _____ NAIs.
- _____ Surveillance.
- _____ CI/IPW.
- _____ DOCEX.
- _____ Focus (RFI/PIR).

_____ Collection asset status.
- _____ Assets.
- _____ Asset schedule - previous 24 hours next 24 hours.

_____ POCs.
_____ Downlinks and COMINT.
_____ Reporting times (as of time to report and due times).
_____ COS/DEA/DOS.

_____ Lists of stay-behind elements.
- _____ Intelligence assets.
- _____ Communications architecture and frequencies.
- _____ CIA.
- _____ DIA national MIST.
- _____ JCMEC and FMIB.

_____ SIGINT.
- _____ Technical data (adds, changes, deletes).
- _____ MCSF.

_____ EPW.
- _____ Numbers, locations, Category A, SOFA.
- _____ Handover to JTF or ARFOR.
- _____ HN handover.

_____ HN Intelligence/security.
- _____ Support, assets, communications.
- _____ POCs and LNOs.

_____ KEY TERRAIN.

_____ MAP UPDATES AND CORRECTIONS.

_____ DETAINABLE, OF INTEREST, AND PROTECTABLE LISTS.

_____ INTELLIGENCE COLLECTION PLAN.

_____ COORDINATION FOR STAY-BEHIND PERSONNEL.

_____ COVER, SECURITY, OPSEC STATUS, AND PLAN.

_____ LIST OF STAY-BEHIND PRODUCTS:

_____ Intelligence map with current situation and sources.

_____ All-source intelligence support and sources.

_____ Imagery products and sources.

_____ Current weather forecast and on-hand weather, light data, and sources.

_____ Historical documents, locations, and sources.

_____ ENCLOSURES:

_____ List of threat, strengths, capabilities, COAs, weaknesses and vulnerabilities, and effects of friendly action.
_____ Threat situation overlays.
_____ Troop list of friendly collectors.
_____ Friendly collector location overlays.
_____ Intelligence communications net diagrams and POC list.
_____ Key terrain overlays.
_____ Map updates and corrections (may be overlay).
_____ Detainable, of interest, and protectable lists.
_____ Intelligence collection plan.

APPENDIX J

INTELLIGENCE REFERENCE LIST

NOTE: This list is not all inclusive. Include the series of field manuals for your particular unit; for example, FM 44-series for Air Defense. Make sure the publications clerk is aware of your requirements. Refer also to the References section in this manual.

APPENDIX K

WEATHER ELEMENTS AND SUPPORT

A working knowledge of weather elements is essential to provide your commander with a complete picture of potential adverse weather effects on the battlefield.

INTERACTION OF BATTLEFIELD ENVIRONMENT ELEMENTS

Weather conditions, terrain, BIC, illumination, and background signatures are some primary conditions found in a battlefield environment (Figure K-1).

A weather element is an atmospheric variable that is measured in a weather observation. A weather parameter is derived from one or more weather elements. Example: Density altitude is a weather parameter derived from the element's barometric pressure and temperature.

Weather conditions such as wind, precipitation, and clouds can impact or can be influenced by the other conditions of the battlefield. All of these conditions are interdependent, to a certain degree, and must be considered as a whole (Figure K-2).

WEATHER EFFECTS AND TERRAIN

Terrain features affect weather elements such as visibility, temperature, humidity, precipitation, winds, clouds. The most common example of terrain affecting weather is that on the windward side of high terrain, such as mountains, the rainfall rate will be greater than on the leeward (opposite) side.

Weather conditions have a definite effect on the terrain and can enhance or limit military operations such as trafficability, water crossing (fording), and the first-round accuracy of supporting FA fires. The responsibility for determining mobility and counter-mobility is given to the terrain team at division.

ATMOSPHERIC PRESSURE: Atmospheric pressure is the pressure exerted by the atmosphere at a given point and measured by a barometer in inches of mercury (Hg) or in millibars (Mb).

Pressure Altitude: This is indicated in an altimeter when 29.92 is set in the barometric scale window. High pressure altitude is critical to the lift capability of fixed wing aircraft.

Density Altitude: This is a place in the atmosphere corresponding to a particular value of air density. High pressure is critical to helicopter operations.

CLOUDS: The amount of sky covered by clouds is usually described in eighths: Overcast (8/8ths), broken (5 to 7/8ths), or scattered (1 to 4/8ths). Cloud conditions are described by the amount of cloud cover and the height of the base of the cloud AGL. A cloud ceiling is the height of the lowest broken or overcast layer, and is expressed in feet. A higher layer of several scattered layers of clouds is designated as a cloud ceiling when the sum of the coverage of the lower layers exceeds 4/8ths.

DEW POINT TEMPERATURE: Dew point is the temperature to which the air must be cooled for the air to become saturated and allow dew, and probably fog, to form.

HUMIDITY: This is the state of the atmosphere with respect to water vapor content. It is usually expressed as:

Relative Humidity: The ratio between the air's water content and the water content of saturated air.

Absolute Humidity: The measure of the total water content in the air. It is high in the tropical ocean areas and low in the arctic.

PRECIPITATION: Precipitation is any moisture falling from a cloud in frozen or liquid form. Rain, snow, hail, drizzle, sleet, and freezing rain are common types. The intensity of precipitation is described as light, moderate, and heavy.

Light Rain: Drops are easily seen, very little spray, and puddles form slowly, and accumulation is a trace to 0.10 in/h.

Figure K-1. Common weather elements.

Moderate Rain:	Drops are not easily seen, spray noticeable, puddles form rapidly, and accumulation rates are 0.11 to 0.30 in/h.
Heavy Rain:	Drops are not seen, rain comes in sheets with heavy spray, puddles form quickly, and the rate is more than 0.30 in/h.
Light Snow:	Visibility is equal to or greater than 5/8 miles, or 1,000 meters in falling snow; and a trace to 1 in/hr accumulates.
Moderate Snow:	Visibility is 5/16 to ½ statute miles, or 500 through 900 meters in falling snow with 1 to 3 in/hr accumulation.
Heavy Snow:	In heavy snow, visibility is cut to less than 1/4 statute miles, or 400 meters, with more than accumulation of 3 in/h.

TEMPERATURE: Temperature is the value of heat or cold recorded by a thermometer normally at 6 feet AGL at the observation site. Temperatures are normally given in both Fahrenheit and Celsius values. It is sometimes referred to as the ambient air temperature.

VISIBILITY: A measurement of the horizontal distance at the surface or aloft that the unaided human eye can discern a large object or terrain feature. Visibility is reported in meters or fractions of a mile, and is reported as a prevailing value of the visibility in all directions. Thus, a visibility report of 1,600 meters may not reveal that fog is diminishing visibility to 400 meters in the northwest if the observer has good visibility in other directions. However, such an event would typically be carried in the weather observation's remarks section.

WIND SPEED AND DIRECTION: These two measure the rate of movement of the air past a given point and the direction from which the wind is blowing. A gust is a rapid fluctuation in wind speed with a variation of 10 knots or more between peak and lull. Gust spread is the instantaneous difference between a peak and a lull and is important for helicopter operations.

Figure K-1. Common weather elements (continued).

WEATHER ELEMENTS	THRESHOLD VALUES	IMPACTED SYSTEMS
VISIBILITY	1.0 km 3.0 km	•DRAGON, Machine guns. •Main gun, TOW, CAS, thermal viewers.
CLOUDS	500 ft 1,000 ft 1,500 ft 5,000 ft	•NOE operations, airborne, helicopter TA. •CAS. •COPPERHEAD engagements. •Visual reconnaissance, ADA TA.
SURFACE WIND	6 kn 13 kn 18 kn 30 kn	•Chemical. •Airborne-round parachute. •Military free fall-ram air parachutes, artillery smoke loses its effectiveness, artillery fire accuracy. •Helicopter maneuver.
TEMPERATURE	>32^{C}C < 0^{C}C	•Helicopter lift capabilities. •NVG (PVS-5).
WINDCHILL	<10^{C}C	Personnel survival.
PRECIPITATION	Moderate Freezing	•Ground maneuver, chemical, laser systems, GSR. •Ground maneuver.

Figure K-2. IPB weather overlay criteria.

BATTLEFIELD-INDUCED CONTAMINANTS

During combat operations, visibility can become severely reduced by BIC. These contaminants are either induced directly by combatants or occur as by-products from battlefield operations.

Two significant sources of battlefield contaminants are dust produced by HE artillery or mortar rounds and deliberately employed smoke. HE rounds used in a pre-attack barrage not only may kill enemy forces but also may restrict the visibility of your own troops by dust caused by the HE if you do not consider the direction of the wind. Smoke produced by smoke generators, vehicle exhaust emission

systems, smoke pots, indirect fire, and smoke rounds also produce battlefield contaminants.

Wind speed and direction are critical to maintaining an effective smoke screen. Rain can remove BIC quickly. Weather inversions over valley areas can sustain airborne contaminants for long periods.

Other sources of BIC that will lower visibility in the AO are clouds of dust from vehicle traffic or smoke from fires. These types of contaminants not only blind you but also may help your adversary in detecting troop movements and pinpointing your location.

A unique BIC affecting visibility occurs in conditions when temperatures are in the range of -30EC or -22EF or colder. When a source of moisture or water vapor is released into the cold air by internal combustion engines, artillery fires, or launched self-propelled munitions, visibility can be reduced to zero when the moisture freezes instantly and changes into ice fog.

Ice fog may restrict visibility across a whole valley and can linger for hours. Ice fog crystals permit ground objects to be seen from above while severely restricting visibility on the ground—an advantage for aerial reconnaissance.

On airfields an ice fog created by fixed-wing aircraft may cover an entire runway. Visibility can be reduced so that other aircraft cannot take off or land if the wind is calm. The ice fog also draws attention to the airfield location.

Launching missiles such as the TOW in very cold air can create an ice fog. As the TOW moves to the target, the exhaust blast exits into the air where it condenses and creates the ice fog. If the wind is calm, this fog follows the trajectory of the missile and reduces launch point visibility to such an extent that the operator loses sight of the target. Also, the launch point can be identified by threat forces from the condensation trail of the missile.

ILLUMINATION

Natural light is critical in planning operations where NVD are used or in operations timed to use only available light. Natural light values vary as a function of the position of the sun, moon, stars, and clouds. Light data are available from your SWO for any time period and place. These data are particularly important for determining first and last light, moonrise, and moonset, and are most effective for planning use of NVD.

Variables such as altitude, cloud cover, terrain-produced shadows, visibility, and direction of vehicle or aircraft movement in relation to the sun or the moon can also affect light level availability.

Artificial light is intended to increase visibility but, under certain weather conditions, this does not always occur. Example: Low cloud ceilings will limit the area covered and effective time of flares. Rain, snow, or fog can reduce flare effectiveness. However, under the right conditions, cloud cover can enhance the effects of artificial light due to cloud base reflection. Snow- or sand-covered terrain also reflect both natural and artificial light.

BACKGROUND SIGNATURES

Temperature, wind, and precipitation have a major influence on your ability to pick out a target from the background in the infrared spectrum. They also affect seismic (sound and acoustic) signatures. Detection of objects in the infrared spectrum depends on a temperature contrast between the object and its surrounding environment. This difference is known as the background signature.

Snow, rain, and wind influence the background signature because they can change the surface temperature of objects. These elements lower object temperatures and thus reduce the differential between a target and its background.

A heavy layer of snow produces a washout during any part of the day since it causes both the object and the background to exhibit the same temperature.

Precipitation also degrades seismic sensors through the introduction of background noise (rain), while a snow-covered surface will dampen sound and the movement of troops.

SEVERE OR HAZARDOUS WEATHER

In addition to a continuous need for forecast updates, you need non-forecasted or unanticipated severe or hazardous weather warnings. WETMs normally issue severe weather warnings and advisories. Check for the values at which each weather element becomes known as severe. You will be concerned with conditions such as—

- Tornadoes.
- Thunderstorms producing winds in excess of 45 knots and hail greater than 3/4 of an inch.
- Hurricanes and typhoons.
- Precipitation (rain or snow) when X inches fall in Y hours.
- Surface winds in excess of X knots.
- Maximum and minimum temperatures; when a forecast value misses the actual temperature by X degrees.

You want to know that an earlier forecast for light snow was amended to a forecast of a 16-inch accumulation within the next 12 hours. We cannot over emphasize that you need to work with your next higher HQ S2/G2 and the SWO so that your needs are realistically stated and can be supported. All of your weather support needs should be reviewed every 6 months in garrison and as required in the field.

LIGHT DATA

Another weather-related element that your commander needs is light data. NVD and NVG have made many night operations feasible. Your SWO provides official times for sunrise and sunset, BMCT and EECT, BMNT and EENT, length of absolute darkness, moonrise, moonset, lunar phase in percent, and time periods for using NVD and NVG. Light data to support NVD is needed because there are times when there is not enough moon or starlight to use them.

Civil twilight is sufficient for conduct of combat operations while nautical twilight permits most ground movements without difficulty. Nautical twilight allows a general visibility of up to 400 meters (1,320 ft) and lets you distinguish silhouettes from the background.

The actual duration of light varies with latitude and time of year. For example, in the vicinity of 35 to 40 degrees north latitude, civil twilight generally occurs 30 to 45 minutes before sunrise and after sunset. In the tropics, twilight is shorter.

Once light requirements are determined, relay them to your next higher S2 and SWO. This information is important for your commander because he needs to know not only when he can begin friendly military operations (day or night) but also when threat operations could begin.

OTHER CONSIDERATIONS

Although HF radio wave propagation forecasts are not normally available to the SWO, he can make arrangements before he deploys to receive these forecasts. When available, they should be given to every signal and intelligence organization. The SIGO should know that when HF is not effective, it may be because of solar activity rather than enemy jamming.

The USAF Global Weather Central can routinely provide solar forecast products to the SWO even in the field. Other data, such as tidal information and sea state conditions, can be obtained from the SWO but are normally provided only to specific Army units upon request.

RECEIPT OF FORECASTS

Every tactical echelon should receive the weather forecast prepared and briefed to the commander at the next higher echelon. With no SWO at a maneuver brigade, you receive both the forecast briefed at division covering the division AO and the forecast made by the division SWO specifically for your brigade. Each forecast message received should be worked by you to discover the direct weather impacts on your unit.

A commander wants the weather forecast. He also needs the effects and impacts of the forecasted weather interpreted for his specific operations, systems, and personnel. Schedule your forecasts so they arrive in time for you to prepare your commander's briefing.

HOW G2 OR S2 RECEIVE WEATHER SUPPORT

It is your responsibility to provide weather and weather effects information to your commander and supported or subordinate units. Methods may vary among units and echelons. At higher echelons, the SWO has primary responsibility for providing weather support. There, the G2 simply contacts the SWO, states requirements, and receives the needed weather support.

If you have no SWO, you must pass the request up the chain of command to a level where one is assigned. Once your requirements have been validated, weather support products flow back over the same path. In addition to weather forecast products, the SWO can provide specialized weather effects products. You must provide the threshold values used in developing these products.

You alert your commander and staff about the adverse impact of the forecasted weather. You prepare two simple charts to use during your commander's stand-up briefing. You can post these charts in the CP for reference.

Update the charts when a new forecast is issued by the WETM. Methods used in briefing your commander during the morning and evening briefings may vary greatly among commands. The formats below are a guide and should be modified to suit your situation.

The first chart (Figure K-3) illustrates how the weather elements and parameters contained in the forecast might be displayed on the board. Blown up to poster size and covered with acetate, this chart can be updated easily.

WEATHER FORECAST
VALID FOR 121200Z to 131200Z

LOCATION: PUNGSAN

24-HOUR FORECAST:

SKIES:	CLEAR MORNING AND NIGHT, PARTLY CLOUDY IN THE AFTERNOON, BASES 3,000 FEET.
VISIBILITY:	UNLIMITED, OCCASIONALLY 1 TO 2 MILES IN BLOWING SNOW DURING AFTERNOON.
WINDS:	NORTH TO NORTHWEST, 10 TO 15 KNOTS, OCCASIONAL GUSTS TO 25 KNOTS IN AFTERNOON.
TEMPERATURES:	MAX: 10EF MIN: -20EF

72-HOUR OUTLOOK:

CLOUDY SKIES, SNOW FLURRIES DURING AFTERNOON HOURS LOWERING VISIBILITY TO 2 TO 4 MILES.

TEMPERATURES: MAX: 20EF MIN: -5EF

LIGHT DATA:

BMNT: 1247Z MOONRISE: 1924Z
BMCT: 2221Z MOONSET: 0819Z
SUNRISE: 2251Z
SUNSET: 0820Z NVG USE:
EECT: 0851Z

Figure K-3. Example of a weather forecast chart.

Figure K-4 shows color codes as one way to display potential weather impacts on operations, systems, and personnel in your unit. Another way would be to write the words "moderate" and "severe" in those blocks affected. Do not list all the equipment or systems, but have the list available to answer questions posed by the commander or staff. Stress those critical systems during the verbal portion of your briefing.

If the weather conditions change significantly during the period covered by the SWO's forecast, then an updated impact chart will have to be prepared. Because a brigade or battalion's AI is small, the SWO's forecast is likely to be uniform across the AI.

WEATHER IMPACT CHART
PERIOD 121200Z to 131200Z

IMPACTED ITEMS	CLOUDS	PRECIPI-TATION	WIND	VISIBILITY	TEMPER-ATURE
NBC DEFENSE	GREEN	GREEN	GREEN	GREEN	RED
NIGHT VISION DEVICES	GREEN	GREEN	GREEN	AMBER EXCEPT 07 /0 05Z	AMBER
CSS	GREEN	AMBER	AMBER	AMBER	AMBER
TOW/DRAGON	GREEN	GREEN	AMBER	GREEN	RED

GROUND RADAR	GREEN	GREEN	AMBER	GREEN	GREEN
PERSONNEL	GREEN	GREEN	RED	GREEN	RED
THREAT	GREEN	GREEN	GREEN	AMBER	GREEN

GREEN No impact
AMBER Moderate impact (Normal effectiveness reduced 25 to 75%)
RED Severe impact (Normal effectiveness reduced to 0 to 25%)

Figure K-4. Example of a weather impacts display chart.

CRITICAL WEATHER FACTORS

Figure K-5 shows major critical weather factors that can enhance or degrade combat operations, systems, and personnel.

LOW VISIBILITY:	Low visibility (less than 3 km). • Can be beneficial to threat and friendly forces. • Conceals the center of gravity and maneuver of offensive forces. • Increases possibility of achieving surprise. • Disadvantages. –Hinders $C^{2.}$ –Reduces effectiveness of R&S and TA, especially during the defense.
SURFACE WINDS:	• Strong winds can reduce effectiveness of downwind forces by blowing dust, smoke, sand, rain, or snow on them. • Upwind force generally has better visibility and can advance faster and easier. • Strong winds limit airborne and aviation (primarily helicopters) operations. • Winds in excess of 35 knots can— –Cause personal injury. –Damage materiel and structures. –Create false radar returns. –Reduce visibility because of blowing sand, dust, and other battlefield debris.
PRECIPITATION:	• Affects trafficability, visibility, personnel effectiveness, and a wide variety of tracked and wheeled military equipment. • Heavy rains can make some unsurfaced, low-lying, and off-road areas impassable.

Figure K-5. Critical weather factors.

	• Both rain and snow can drastically reduce personnel effectiveness by limiting visibility, causing discomfort, increasing fatigue, and creating other physical and psychological problems.
CLOUD COVER:	• The type and amount of cloud cover and the altitude of cloud bases and tops influence aviation operations. • CAS employing fixed-wing aircraft would like a ceiling of at least 2,500 feet (762 m), but can be employed with ceilings as low as 500 feet. • Threat CAS rotary-wing aircraft and aerial resupply missions require a minimum ceiling of 300 feet (100 m). • Affects ground operations by reducing illumination and visibility or by enhancing effects of artificial light.
TEMPERATURE AND HUMIDITY:	• Have a direct impact on personnel and vehicle performance. • Excessively high temperatures cause heat-related injuries to personnel and vehicle engine wear that leads to equipment failure. • Very low temperatures increase cold weather injuries, cause damage to vehicle cooling systems and engines, decrease the effectiveness of vehicle lubrication, and create excessive logistics requirements.

Figure K-5. Critical weather factors (continued).

WEATHER EFFECTS ON THREAT SYSTEMS

MILITARY ASPECTS OF WEATHER:

US Forces must be prepared to fight in a variety of climatic conditions on short notice. Key to accomplishing our missions under any circumstances is

understanding how weather affects both friendly and threat forces and their operations, systems, and personnel.

Current weather conditions and weather forecasts for the AO and AI are analyzed to determine the effects on friendly and enemy operations. This is significant when threat forces have the capability to employ NBC weapon systems.

THREAT EQUIPMENT:

Some of the major arms merchants today are the former Soviet Union, Sweden, Brazil, Britain, Germany, France, Italy, and the United States. However, the major arms purchasers continue to be the underdeveloped or Third-World countries in the Middle East, Latin America, and Asia.

The types of threat equipment we may encounter on future battlefields will vary from artillery and mortars produced during World War II to the Austrian-produced GHN-45, a 155-mm towed gun with a range of 39,600 meters (using ERFB-BB technology). Almost all the Third-World countries have bought or made their own versions of Soviet-produced tanks, APCs, artillery, AAA, and assorted SAM and SSM systems. Tables K-1, K-2, and K-3 list the weather effects from cloud ceilings, reduced visibility, and precipitation, respectively.

Not listed are a large variety of threat combat equipment (wheeled and tracked) affected by moderate or heavy rain and snow.			

WEATHER AND ENVIRONMENTAL ELEMENTS AND PARAMETERS IMPACTING ARMY SYSTEMS AND OPERATIONS:

Table K-4 is compiled from a study conducted by the US Army Intelligence School as part of the IEWMAA. Each TRADOC branch was asked to survey the impact of weather and environmental elements on their operations, systems, and personnel and rate them as either **essential (E)** or **desired (D)**. Also included are other Army agencies' requirements.

- **E**—Some positive action had to be taken by the user based on severe current or forecasted weather conditions.

- **D**—Some impact, but the degree of impact is uncertain or not mission-threatening.

For each element or parameter listed, at least one responder identified it as essential for one or more of their operations, systems, or personnel.

Some data elements and parameters are known to have an impact, but exact critical thresholds have not been determined. Others cannot be measured or sensed with present technology. But identifying these data elements or parameters now allows for further research in how to collect the raw data (where applicable), determine the frequency of collection, establish data accuracy, and learn other supporting information.

As users and planners continue to learn more about weather and environmental impacts, the misconception that there is a hypothetical Army "all-weather" system or operation fades.

Table K-5 shows windchill factors.

Table K-4. Weather and environmental data elements impacting Army systems and operations.

		LITTLE DANGER FOR PROPERLY CLOTHED PERSONS		**CONSIDERABLE DANGER**			**VERY GREAT DANGER**					
DANGER FROM FREEZING OF EXPOSED FLESH												

HOT WEATHER ENVIRONMENT:

In hot weather, important factors are temperature and relative humidity. Primary concerns are physical exhaustion and dehydration. You must consider both because a common work task will take longer and additional water may have to be transported during hot weather. The following are specific concerns:

Water Adequacy. Water supplies and the enforcement of its intake before, during, and after physical activity is critical for survival.

Workload Correlation. Adapt workload or training activities to environmental heat stress conditions.

Rest Periods. Provide adequate break time for physically active personnel in a hot environment.

Chilled Drinking Water. Soldiers will often reject warm drinking water even when they are significantly dehydrated.

Physical Activity. Soldiers' introduction to physical exertion in a hot climate upon arriving from a temperate climate should be as gradual as circumstances allow. They will need 1 to 2 weeks' time to physiologically adjust to the new climate. Lighten physical activity during this period to ensure optimum performance.

Salt. Sodium intake must be maintained in hot weather. Two good meals a day normally provide enough salt for most soldiers.

Humidity. A low WBGT index (e.g., in the morning) may not be a totally safe indicator if the humidity is high. High humidity retards cooling by evaporation of sweat and decreases the urge to drink sufficient water.

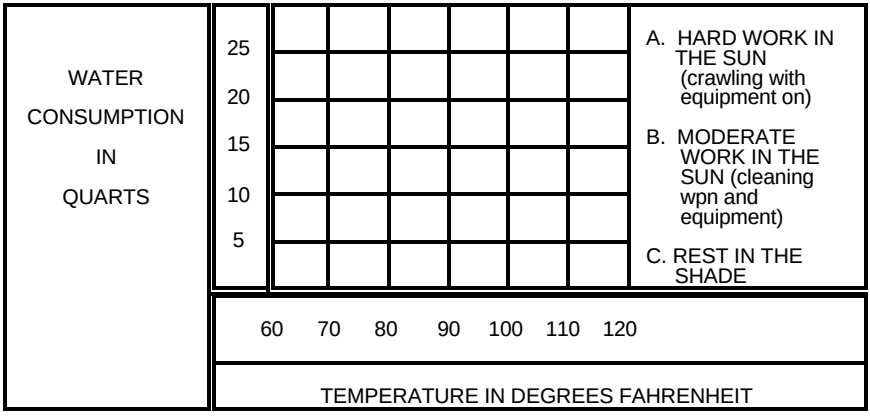
Water Spray. A water mist will cool a person. But it should never be substituted for adequate consumption of water before, during, and after strenuous activities in the heat.

The SWO can provide temperature measurement, forecast, and relative humidity forecasts from the following tables. If you need air temperature values measured at your particular location, use the thermometer included in the FALOP BWK.

HOT WEATHER WATER REQUIREMENTS:

Table K-6 shows the water needs for soldiers at 3 activity levels over an 8-hour work period. To determine soldiers' average water needs, you have to know the air temperature and decide the level of activity the troops will be doing. Example: If a soldier is doing 8 hours of hard work in the sun (curve C) when the average temperature for the day is 100EF, his water requirements for the day will be around 15 quarts. This amount of water can be converted into extra weight the soldier must carry. One quart is equal to 2 pounds, so the 15 quarts of water would weigh 30 pounds.

Table K-6. Daily water consumption requirement s for three levels of activity.



HOT WEATHER WORK TIME LIMITS:

Table K-7 shows the time limits during which work can be performed safely in hot weather. In computing the time limits, consider both air temperature and relative humidity. The values are based on a sitting soldier in BDUs doing light work. Do not consider these tables as absolute limits—especially since light, moderate, or heavy work are difficult to quantify. Table K-8 indicates work time in hot weather based on the WBGT index. Table K-9 shows conversion factors.

Table K-7. Work time in hot weather operations.

TEMPERATURE		RELATIVE HUMIDITY (%)					
(EC)	(EF)	10	30	50	70	90	100
60	140	1 HR	.25 HR				
54	130	2 HR	.5 HR	.25 HR	NO WORK RECOMMENDED		
49	120	4 HR	2 HR	.5 HR	.25 HR		
43	110	12 HR	4 HR	2 HR	.5 HR	.25 HR	
38	100	NO LIMIT	12 HR	4 HR	2 HR	1 HR	.5 HR
32	90	WITH PRECAUTIONS			12 HR	6 HR	4 HR

Table K-8. WBGT index (light work).

HEAT CONDITION/ CATEGORY *	WBGT(^{o}F)	WATER INTAKE QUARTS/HOUR	WORK/REST CYCLE (MINUTES)
1	78.0 to 81.9	AT LEAST ½	CONTINUOUS
2	82.0 to 84.9	AT LEAST 1.2	50/10
3	85.0 to 87.9	AT LEAST 1	45/15
4	88.0 to 89.9	AT LEAST 1-½	30/30
5 **	90.0 and ABOVE	MORE THAN 2	20/40

* MOPP gear or body armor adds at least 10 ^{o}F to the WBGT index.
** Suspend PT and strenuous activity. If operational (non-training) mission requires strenuous activity, enforce water intake to minimize expected heat injuries.

Table K-9. Conversion factors.

GLOSSARY

Section I. Acronyms and Abbreviations

A

A	as acquired (effect used in AGM)
AA	avenue of approach
AAA	air avenue of approach
AAM	air-to-air missile
AAO	Army Aviation Officer
AAR	after-action report
AASLT	air assault
ABCS	Army Battle Command System
abn	airborne
AC	Active Component
ACE	analysis and control element
ACofS	Assistant Chief of Staff
ACR	armored cavalry regiment
ACT	analysis and control team
AD	air defense
ADA	air defense artillery
ADO	air defense officer
ADP	automated data processing
AEB	aerial exploitation battalion
AEPDS	Advanced Electronic Processing and Dissemination System
AF	audio frequency
AFATDS	Advanced Field Artillery Tactical Data System
AFSO	aerial fire support observer
AGL	above ground level
AG/LT	assault gun/light tank
AGM	attack guidance matrix
AI	area of interest
ALO	air liaison officer
ALOC	administrative and logistics center
AMSS	Automatic Meteorological Sensor System
AO	area of operations
AOB	air order of battle
APC	armored personnel carrier
AQF	Advanced QUICKFIX

AR	Army Regulation
ARF	airborne relay facilities
ARFOR	Army force
ARL	airborne reconnaissance low
ARSOF	Army Special Operations Forces
arty	artillery
ASAR	Advanced Synthetic Aperture Radar
ASAS	All-Source Analysis System
ASM	air space management
ASPS	all-source production section
asst	assistant
AT	antitank
ATCCS	Army Tactical Command and Control System
ATGM	antitank guided missile
ATK	attack
ATR	automated target recognition
ATW	antitank weapon
AUTL	Army Universal Task List
auto	automated
avn	aviation
AVTR	airborne video tape recorder
AWACS	Airborne Warning and Control System

B

B	bomber
BAT-D	battlefield deception
BCTP	battle command training program
BDA	battle damage assessment
BDE	brigade
BDU	battle dress uniform
BHL	battle handover line
BIC	battle-induced contaminants
BICC	battalion information control center
BMCT	beginning of morning civil twilight
BMNT	beginning of morning nautical twilight
BMO	battalion maintenance officer
bn	battalion
BOS	battlefield operating system
BP	battle position
BWK	belt weather kit

C

C^2	command and control
C^2I	C^2 and intelligence
C^2W	command and control warfare
C^3	command, control, and communications
C^3I	C^3 and intelligence
C^4I	C^3, computers, and intelligence
C^4I^2	C^4I and information
CA	Civil Affairs/combat assessment
CALL	Center for Army Lessons Learned
CARVER	criticality, accessibility, recuperability, vulnerability, effect, and recognizability
CAS	close air support
Cas Evac	casualty evacuation
CATK	counterattack
CB	counterbattery
cbt	combat
CBU	cluster bomb unit
CCIR	commander's critical information requirements
CCM	cross-country movement
CCMEC	Combined Captured Materiel Exploitation Center
CD	counter-drug
CDMP	combat decision-making
CDR	commander
CEE	captured enemy equipment
CEM	captured enemy materiel
CFE	Conventional Forces In Europe
CFL	coordinated fire line
CFSO	Counterintelligence Force Protection Source Operations
CGS	J-STARS common ground station
CHAALS	Communication High Accuracy Airborne Location System
CHARIOT	Portable S-Band Receive/Transmit Terminal
CHATS	CI/HUMINT Automation Tool Set
chem	chemical
CI	counterintelligence
CIA	Central Intelligence Agency
CINC	commander in chief
CIP	Command Inspection Program
CIR	critical intelligence requirements
CM	collection management
cmd	command

CMEC	Captured Materiel Exploitation Center
CMISE	Corps Military Intelligence Support Element
CMO	civil-military operations
CNR	combat net radio
co	company
COA	course of action
COIN	counterinsurgency
coll	collection
COLT	combat observation lasing team
COMINT	communications intelligence
comm	communications
COMMEX	communications exercise
COMSEC	communications security
CONPLAN	contingency plan
CONUS	continental United States
coord	coordination
COP	command observation post
COR	chief of reconnaissance
COS	critical occupational speciality
CP	command post
CS	combat support
CSBM	Confidence and Security Building Measures
CSP	communications system processor
CSS	combat service support
CSR	controlled supply rate
CTC	combat training center
CTT	commander's tactical terminal
CUCV	commercial utility cargo vehicle

D

D	destroy (effect used in AGM); desirable (weather designator)
DA	Department of the Army
DDMP	deliberate decision-making process
DEA	Drug Enforcement Administration
DF	direction finding
DIA	Defense Intelligence Agency
DIN	Defense Intelligence Network
DISE	Deployable Intelligence Support Element
dissem	dissemination
div	division

DMP	decision-making process
DOCEX	document exploitation
DOD	Department of Defense
DOS	Department of State
DP	decision point
DS	direct support
DSN	Defense Secure Network
DSSCS	Defense Special Security Communications System
DST	decision support template
DSVT	digital subscriber voice terminal
DTG	date-time group
DTSS/MSIP	Digital Topographical Support System/Multi-Spectral Image Processor
DTSS/QRMP	Digital Topographical Support System/QUICK-Response Multicolor Printer
DZ	drop zone

E

E	essential (weather designator)
EA	electronic attack; engagement area (used in AGM)
EAC	echelons above corps
ECB	echelons corps and below
ECOA	enemy course of action
EECT	end of evening civil twilight
EEFI	essential elements of friendly information
EENT	end of evening nautical twilight
EFVS	electronic fighting vehicle system
e.g.	for example
ELINT	electronic intelligence
EM	electromagnetic
ENGR	engineer
E-O	electro-optical
EP	electronic protection
EPB	electronic preparation of the battlefield
EPDS	Electronic Processing and Dissemination System
EPW	enemy prisoner of war
ERFB-BB	extended-range full-bore-based bleed
ES	electronic warfare support
est	estimated
etc	and so forth
ETRAC	Enhanced Tactical Radar Correlator

ETUT	Enhanced Tactical Users Terminal
EW	electronic warfare
EWO	electronic warfare officer
EWS	early warning system
EWTL	electronic warfare target list
EXEVAL	external evaluation

F

°F	degree Fahrenheit
F	fighter (sortie category)
FA	field artillery
FAC	forward air controller
FAIO	field artillery intelligence officer
FALOP	forward area limited observation program
FARP	forward arming and refueling point
FAST	Forward Area Support Terminal
FAST-I	Forward Area Support Terminal-Improved
FAX	facsimile
FBIS	Foreign Broadcast Information Service
FCE	fire control element
FDA	functional damage assessment
FDC	fire direction center
FDO	fire direction officer
FEBA	forward edge of the battle area
FFIR	friendly forces information requirements
FISTV	first support team vehicle
FLCS	Force Level Control System
FLIR	forward-looking infrared
FLOT	forward line of own troops
flt	flight
FM	field manual
FMC	fully mission capable
FMIB	Foreign Materiel Intelligence Battalion
FO	forward observer
FofF	field of fire
FRAGO	fragmentary order
FS	fire support
FSB	forward support battalion
FSC	fire support center
FSCL	fire support coordination line
FSCM	fire support coordinating measure

FSCOORD	fire support coordinator
FSE	fire support element
FSO	fire support officer
FSOP	field standing operating procedure
FSU	fire support unit
ft	feet
FTI	fixed target indicator
F/W	fixed wing
fwd	forward

G

G2	Assistant Chief of Staff, G2 (Intelligence)
GBCS-(H/L)	ground-based common-sensor (heavy/light)
GCI	ground control intercept
GE	Germany
GHz	gigahertz
GL	grenade launcher
GPS	global positioning system
GRCS	GUARDRAIL Common Sensor
GS	general support
GSM	J-STARS ground station module
GSR	ground surveillance radar

H

H	harrassing fires
HA	humanitarian assistance
HE	high explosive
HF	high frequency
Hg	mercury
HHD	headquarters and headquarters detachment
HHOC	headquarters, headquarters and operations company
HMMWV	high mobility multipurpose wheeled vehicle
HN	host nation
HPT	high-payoff target
HPTL	high payoff target list
HQ	headquarters
hr	hour
HUMINT	human intelligence
HVT	high-value target
hvy	heavy

H/W	hardware

I

I	immediate (effect used in AGM)
IAW	in accordance with
I&S	intelligence and security
I&W	indications and warnings
ID	identify
IDL	interoperable data link
IEW	intelligence and electronic warfare
IEWCS	Intelligence Electronic Warfare Common Sensor
IEWMAA	IEW mission area analysis
IFV	infantry fighting vehicle
IHL	intelligence handover line
IMA	individual mobilization augmentee
IMETS	Integrated Meteorological System
IMINT	imagery intelligence
incorp	incorporate
INF	Intermediate-range Nuclear Forces intelligence
infil	infiltration
info	information
in/h	inches per hour
INMARSAT	International Maritime Satellite
intel	intelligence
intg	interrogation
INTSUM	intelligence summary
IO	information operations
IPB	intelligence preparation of the battlefield
IPDS	Imagery Processing and Dissemination System
IPF	integrated processing facility
IPS	intelligence production section
IPW	interrogation, prisoners of war
IR	information requirements
I-REMBASS	Improved Remotely Monitored Battlefield Sensor System
ISA	International Standardization Agreement
ISB	intelligence support base
ISM	intelligence synchronization matrix
ISSO	information systems security officer
IVL	intervisibility lines

J

J2	Intelligence Directorate
JCMEC	Joint Captured Materiel Exploitation Center
JCS	Joint Chiefs of Staff
JIC	Joint Intelligence Center
J-SIIDS	Joint-Service Interior Intrusion Detector System
JSTARS	Joint Surveillance Target Attack Radar System
JTAGS	Joint Tactical Ground Station
JTF	joint task force
JTT/H	joint tactical terminal/hybrid
JTT/H-R3	joint tactical terminal/hybrid-receive only

K

km	kilometer

L

LAN	local area network
LAV	light armored vehicle
LC	line of contact
LD	line of departure
LEA	Law Enforcement Agency
LLSO	low-level source operations
LLVI	low-level voice intercept
LMRDFS	Lightweight Man-Transportable Radio Direction Finding System
LNO	liaison officer
LOA	limit of advance
LOB	line of bearing
LOC	line of communication
LOS	line of sight
LP	listening post
LPI	low probability of intercept
LRP	long-range patrol
LRRP	long-range reconnaissance patrol
LRS	long-range surveillance
LRSD	long-range surveillance detachment
LRSU	long-range surveillance unit
LRU	long-range unit
LT	light
LTIOV	latest time information is of value
LZ	landing zone

M

m	meter
MASINT	measurement and signals intelligence
Mb	millibar
MC	movement corridor
MC&G	mapping, charting, and geodesy
MCOO	modified combined obstacles overlay
MCSF	Mobile Cryptologic Support Facility
MDCI	multidiscipline counterintelligence
MDMP	military decision-making process
MEA	munitions effects assessment
med	medium
MEDEVAC	medical evacuation
MET	meteorological
METL	mission essential task list
METT-T	mission, enemy, terrain and weather, troops, and time available
METT-TC	mission, enemy, terrain and weather, troops, and time available civilians
MEWSS	Mobile Electronic Warfare Support System
MGS	magnetic grid system
mgt	management
MI	military intelligence
MIES	Modernized Imagery Exploitation System
MIJI	meaconing, intrusion, jamming, and interference
min	minute
MIPB	Military Intelligence Professional Bulletin
MIRS	Miniaturization Imagery Receive System
MIST	military intelligence support team
MITT	Mobile Integrated Tactical Terminal
MLRS	multiple launch rocket system
MOPP	mission-oriented protection posture
MP	military police
MR	moon rise
MS	moon set
MSE	mobile subscriber element
MT	medium tank
MTI	moving target indicator
MTOE	modified table of organization and equipment
MTP	mission training plan

N

N	north; neutralize (effect used in AGM)
NA	not applicable
NAI	named area of interest
NATO	North Atlantic Treaty Organization
NBC	nuclear, biological, and chemical
NCA	National Command Authority
NCO	noncommissioned officer
NEO	noncombatant evacuation operation
NFA	no fire area
NGIC	National Ground Intelligence Center
NGLO	naval gunfire liaison officer
NGO	non-governmental organization
NIMA	National Imagery Mapping Agency
NIST	National Intelligence Support Team
NLT	no later than
nmi	nautical miles
NOD	night observation device
NOE	nap of the earth
noncomm	noncommunications
NRT	near-real time
NVD	night vision devices
NVG	night vision goggles

O

OB	order of battle
OCOKA	obstacles & fields of fire, concealment & cover, key terrain, and avenues of approach
OCONUS	outside continental United States
O/O	on order
OOTW	operations other than war (see SASO)
OP	observation post
OPCON	operational control
OPLAN	operations plan
opns	operations
OPORD	operations order
OPSEC	operations security
OR	operational readiness
OT	operator terminal

P

P	planned
PAO	public affairs office

PDA	physical damage assessment
PEO	peace enforcement operations
photo	photography
PGM	precision-guided munitions
PIR	priority intelligence requirements
PKO	peacekeeping operations
plt	platoon
PMCS	preventive maintenance checks and services
POL	petroleum, oils, lubricants
PP	passage point
prep	preparation
PSA	post-strike assessment
PSYOP	psychological operations
PT	physical training
PVO	private volunteer organization
PZ	pickup zone

Q

QSTAG	Quadripartite Standardization Agreement
qty	quantity

R

R	reconnaissance (sortie category)
R&D	research and development
R&S	reconnaissance and surveillance
RAS	rear area security
RBP	red/black processor
RC	Reserve Components
RCOA	reconnaissance course of action
rcv	receive
RDC	rear detachment commander
recon	reconnaissance
REDTRAIN	readiness training
regt	regiment
REMBASS	Remotely Monitored Battlefield Sensor System
RFI	request for information
RII	request for intelligence information
RISTA	reconnaissance, intelligence, surveillance, and target acquisition
RL	rocket launcher
RNP	radio navigational points (USAF)
ROE	rules of engagement

ROTERM	receive only terminal
RP	release point
rqmts	requirements
RRS	radio relay system
RRT	radio receiver transmission
RRTS	radio relay test set
RSOP	readiness standing operating procedure
RSR	required supply rate
RTO	radiotelephone operator
R/W	rotary wing
RWS	remote workstation

S

S	South; suppress (effect used in AGM)
SA	small arms
S&TI	Scientific & Technical Intelligence
S1	Adjutant (US Army)
S2	Intelligence Officer (US Army)
S3	Operations and Training Officer (US Army)
S4	Supply Officer (US Army)
S5	Civil Affairs Officer (US Army)
SAEDA	Subversion and Espionage Directed Against the US Army
SALUTE	size, activity, location, unit, time, and equipment
SAM	surface-to-air missile
SAR	synthetic aperture radar
SASO	stability and support operations (formerly OOTW)
SATCOM	satellite communications
SCI	sensitive compartmented information
SDO	staff duty officer
SDS	security data system
SEAD	suppression of enemy air defenses
sep bde	separate brigade
SF	Special Forces
SI	special intelligence
SID	secondary imagery dissemination
SIDS	Secondary Imagery Dissemination System
SIGINT	signals intelligence
SIGINT/EW	signals intelligence/electronic warfare
SIGO	signal officer
SII	statement of intelligence interest

SINCGARS	Single-Channel Ground and Airborne Radio System
SIR	specific information requirements
SITMAP	situation map
SJA	Staff Judge Advocate
SLAR	side-looking airborne radar
SOCCE	Special Operations Command and Control Element
SOF	special operations forces
SOFA	Status of Forces Agreement
SOI	signals operating instructions
SOP	standing operating procedure
SOR	specific orders and requests
SOT-A	support operations team-Alpha
SOT-B	support operations team-Bravo
SP	start point
SPIRIT	Special Purpose Integrated Remote Intelligence Terminal
sqdn	squadron
SR	sunrise
SS	sunset
SSM	surface-to-surface missile
SSO	special security office
SSP	single-soure processing
ST	student text
STANAG	Standardization Agreement
STU III	Secure Telephone Unit-Third Generation
SUCCESS	Synthesized UHF Computer Controller Enhanced Subsystem
survl	surveillance
S/W	software
SWO	staff weather officer

T

TA	target acquisition
TAA	tactical assembly area
TAB	target acquisition battery
tac	tactical
TAC	tactical command post
TACFIRE	tactical fire direction system
TACLINK	tactical link
TACSAT	tactical satellite

TADIXS-B	Tactical Data Information Exchange System-Broadcast
TAI	target area of interest
TAREX	target exploitation
TB	tank brigade
TD	tank division
TDA	target development assessment
TDDS	TRAP Data Dissemination System
TDMP	tactical decision-making process
TDOA	time differential of arrival
TECHINT	technical intelligence
TENCAP	Tactical Exploitation of National Capabilities
TF	task force
tgt	target
THAADS	Theater High Altitude Area Defense System
THMT	tactical high mobility terminal
TIBS	Tactical Information Broadcast System
TLE	target location error
TLP	troop-leading procedures
TOC	tactical operations center
TOPS	Tactical Onboard Processing System (for TADIXS-B)
TOW	tube-launched, optically tracked, wire-guided
TPL	time phase line
TRAP	Tactical Related Applications
TRIXS	Tactical Reconnaissance Intelligence Exchange System
trng	training
TROJAN SPIRIT	Special Purpose Integrated Remote Intelligence Terminal
TRRIP	Theater Rapid Response Intelligence Package
TSA	target system assessment
TSOP	tactical standing operating procedure
TSS	target selection standards
TTP	tactics, techniques, and procedures
TUAV	tactical unmanned aerial vehicle
TVA	target value analysis

U

UAV	unmanned aerial vehicle
UBL	unit, basic load
UHF	ulltra high frequency
USAF	US Air Force
USMTF	United States Message Text Formats
USSID	United States Signal Intelligence Directive

UW	unconventional warfare

Section II. Terms.

Global security forecast. A forecast of where, when, and between whom conflicts can occur.

Battlefield development plans. A 5- to 20-year forecast of how selected threat forces will organize and operate on the battlefield.

Automated and hardcopy databases. Databases such as the Stylized Country Force Assessments and the Army Force Planning and Data Assumptions which provide detailed projections on OB, equipment, logistics, and readiness (ground, air, naval forces) of potential threats 2 to 25 years into the future.

TECHINT and User Bulletins. Provide a high resolution view of threat equipment and weapons systems and capabilities, and complement traditional OB information. They can be obtained from NGIC.

Open source studies and articles. State Department background papers, FBIS, public libraries, universities, and corporations with contracts in countries of interest). Databases of sources need to be researched and exercised in advance of mission execution.

Other services. The USMC, other nation's information, fact books, and fact sheets on tactics, terrain, and country studies.

DENNIS J. REIMER
General, United States Army
Chief of Staff

Official:

JOEL B. HUDSON
Administrative Assistant to the
Secretary of the Army
04459

DISTRIBUTION:

Active Army, Army National Guard, and U. S. Army Reserve: To be distributed in accordance with initial distribution number 115447, requirements for FM 34-8-2.

DIRECTOR'S READING LIST

2018

DEFENSE INTELLIGENCE AGENCY

COMMITTED TO EXCELLENCE IN DEFENSE OF THE NATION

As intelligence officers, our most critical asset is our mind. Self-study increases our speed, creativity, and confidence.

Without self-study, our expertise is limited to our direct experiences. Reading vastly multiplies our experiences in life—as parents, as friends, as spouses, and as leaders.

By reading, we can learn from the experiences of an immeasurable number of people. And, hopefully, our reading allows us to learn from the mistakes of others, before we make those mistakes ourselves. Old ideas give us new ideas. History really does teach us something. It inspires, motivates, and elevates us.

Lieutenant General Robert P. Ashley, Jr.
Director, Defense Intelligence Agency

"Not all readers are leaders,
but all leaders are readers."

HARRY S. TRUMAN
33RD PRESIDENT
OF THE UNITED STATES OF AMERICA

National Archives (111-P-20038A)

"The problem with being too busy to read is that you learn by experience (or by your men's experience), i.e. the hard way. By reading, you learn through others' experiences, generally a better way to do business, especially in our line of work where the consequences of incompetence are so final for young men. Thanks to my reading, I have never been caught flat- footed by any situation, never at a loss for how any problem has been addressed (successfully or unsuccessfully) before. It doesn't give me all the answers, but it lights what is often a dark path ahead."

JAMES N. MATTIS
UNITED STATES SECRETARY OF DEFENSE
GENERAL, UNITED STATES MARINE CORPS (RET.)

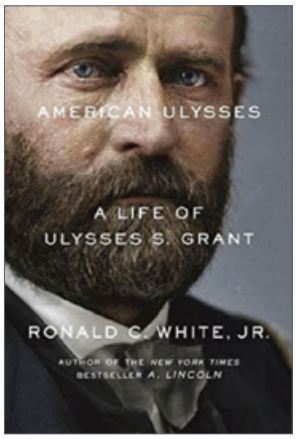
LEADERSHIP AND PROFESSIONAL DEVELOPMENT

01



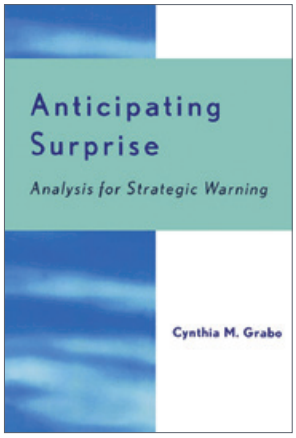
American Ulysses: A Life of Ulysses S. Grant

Ronald White, Random House: 2016

★★★

In his time, grouped routinely with George Washington and Abraham Lincoln in the "Trinity of Great American Leaders," Ulysses S. Grant, the battlefield commander–turned–commander-in-chief, fell out of favor in the twentieth century. In American Ulysses, Ronald C. White argues that we need to revise our estimates of him in the twenty-first. White shows Grant to be a generous, curious, introspective man and leader—a willing delegator with a natural gift for managing the rampaging egos of his fellow officers. His wife, Julia Dent Grant, long marginalized in the historic record, emerges in her own right as a spirited and influential partner. One of those rare books that successfully recast our impression of an iconic historical figure, American Ulysses gives us a finely honed, three-dimensional portrait of Grant the man—husband, father, leader, writer, and more.

02

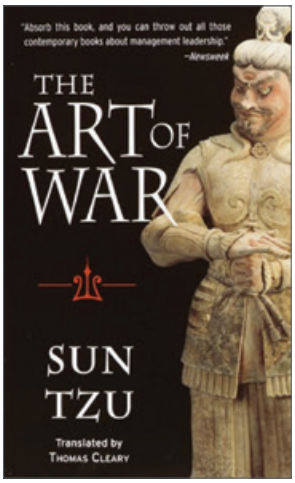


Anticipating Surprise: Analysis for Strategic Warning

Cynthia M. Grabo, Lulu.com: 2012

Assigned to the National Indications Center, Cynthia Grabo served as a senior researcher and writer for the U.S. Watch Committee throughout its existence (1950 to 1975), and in its successor, the Strategic Warning Staff. During this time, she saw the need to capture the institutional memory associated with strategic warning. In the summer of 1972, the DIA published her "Handbook of Warning Intelligence" as a classified document, followed by two additional classified volumes, one in the fall of 1972 and the last in 1974. Now condensed from the original three declassified books into this one, Grabo's authoritative interpretation of an appropriate analytic strategy for intelligence-based warning is presented in a commercial reprint of this classic study. (Originally published by the Joint Military Intelligence College)

03



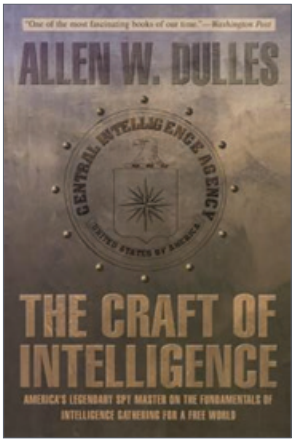
The Art of War

Sun Tzu (translated by Thomas Cleary), Shambhala: 2005

★★★

Conflict is an inevitable part of life, according to this ancient Chinese classic of strategy, but everything necessary to deal with conflict wisely, honorably, and victoriously is already present within us. Compiled more than two thousand years ago by a mysterious warrior-philosopher, The Art of War is still perhaps the most prestigious and influential book of strategy in the world, as eagerly studied in Asia by modern politicians and executives as it has been by military leaders since ancient times. As a study of the anatomy of organizations in conflict, The Art of War applies to competition and conflict, on every level from the interpersonal to the international. Its aim is invincibility, victory without battle, and unassailable strength through understanding the physics, politics, and psychology of conflict.

04

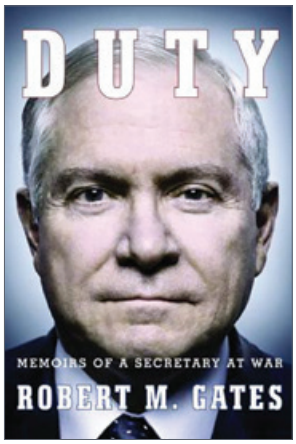


The Craft of Intelligence: America's Legendary Spymaster on the Fundamentals of Intelligence Gathering for a Free World

Allen Dulles, Lyons Press: Reprint 2016

Allen Dulles was a high-ranking officer of the CIA's predecessor—the Office of Strategic Services—and was present at the inception of the CIA, where he served eight of his ten years there as director. This classic spycraft, based on Dulles's incomparable experience as diplomat, international lawyer, and America's premier intelligence officer, sums up what he learned about intelligence from nearly a half-century of experience in foreign affairs.

05



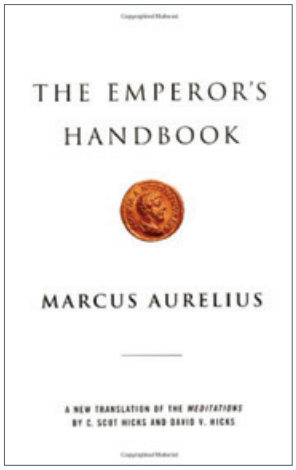
Duty: Memoirs of a Secretary at War

Robert Gates, Knopf: 2014

★★★

Forthright and unsparing, Duty is Gates's behind-the-scenes account of his nearly five years as a Secretary of Defense at war: the battles with Congress, the two presidents he served, the military itself, and the vast Pentagon bureaucracy. Gates describes his efforts to help George W. Bush turn the tide in Iraq, his role as a guiding (and often dissenting) voice for Barack Obama, and, most importantly, his ardent devotion to and love for American soldiers. Offering unvarnished appraisals of our political leaders, Duty tells a powerful and deeply personal story, giving us an unprecedented look at two administrations and the wars that have defined them.

06



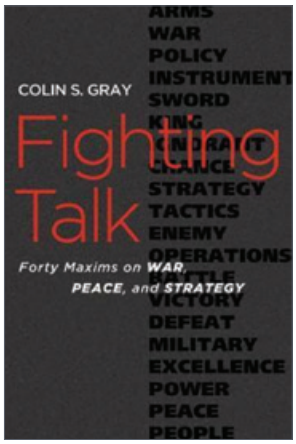
The Emperor's Handbook: A New Translation of the Meditations

Marcus Aurelius (translated by David Hicks and C. Scot Hicks), Scribner: 2002

★★★

Marcus Aurelius' Meditations—a practical book of timeless advice from one of the most powerful individuals in history— is available here for the first time in a highly accessible translation, including several unique features for contemporary readers and users of daily wisdom guides. The Emperor's Handbook offers a vivid and fresh translation of this important piece of ancient literature. It brings Marcus's words to life and shows his wisdom to be as relevant today as it was in the second century.

07



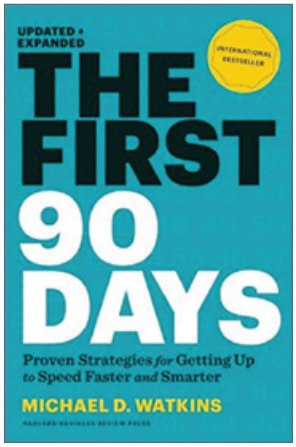
Fighting Talk: Forty Maxims on War, Peace, and Strategy

Colin S. Gray, Potomac: 2009

★★★

Gray presents an inventive treatise on the nature of strategy, war, and peace, organized around forty maxims. This collection of mini-essays will forearm politicians, soldiers, and the attentive public against many—probably most—fallacies that abound in contemporary debates about war, peace, and security. While one can never guarantee strategic success, which depends on policy, military prowess, and the quality of the dialogue between the two. A strategic education led by the judgments in these maxims increases the chances that one's errors will be small rather than catastrophic.

08



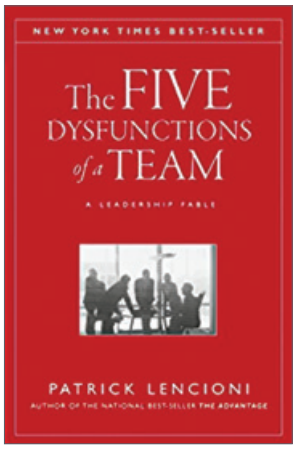
The First 90 Days: Proven Strategies for Getting Up to Speed Faster and Smarter

Michael D. Watkins, Harvard Business Review Press: Updated and Expanded 2013

★★★

In this updated and expanded version of the international bestseller The First 90 Days, Michael D. Watkins offers proven strategies for conquering the challenges of transitions—no matter where you are in your career. Watkins, a noted expert on leadership transitions and adviser to senior leaders in all types of organizations, also addresses today's increasingly demanding professional landscape, where managers face not only more frequent transitions but also steeper expectations once they step into their new jobs. By walking you through every aspect of the transition scenario, Watkins identifies the most common pitfalls new leaders encounter and provides the tools and strategies you need to avoid them.

09

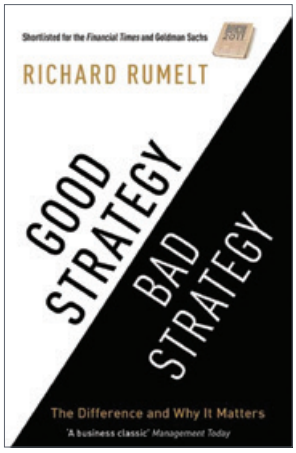


The Five Dysfunctions of a Team: A Leadership Fable

Patrick Lencioni, Jossey-Bass: 2002

In The Five Dysfunctions of a Team, Patrick Lencioni once again offers a leadership fable that is enthralling and instructive. Throughout the story, he reveals the five dysfunctions which go to the very heart of why teams—even the best ones—often struggle. He outlines a powerful model and actionable steps that can be used to overcome these common hurdles and build a cohesive, effective team. Lencioni has written a compelling fable with a powerful yet deceptively simple message for all those who strive to be exceptional team leaders.

10



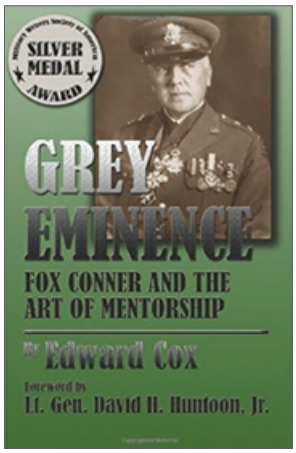
Good Strategy / Bad Strategy

Richard Rumelt, Currency: 2011

★★★

Developing and implementing a strategy is the central task of a leader, whether the CEO at a Fortune 100 company, an entrepreneur, a church pastor, the head of a school, or a government official. Richard Rumelt shows that there has been a growing and unfortunate tendency to equate Mom-and-apple-pie values, fluffy packages of buzzwords, motivational slogans, and financial goals with "strategy." He debunks these elements of "bad strategy" and awakens an understanding of the power of a "good strategy." Rumelt argues that the heart of a good strategy is insight—into the true nature of the situation, into the hidden power in a situation, and into an appropriate response. He shows you how insight can be cultivated with a wide variety of tools for guiding your own thinking.

11



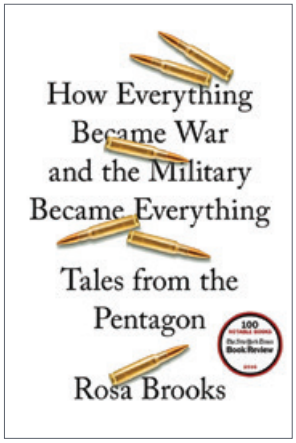
Grey Eminence: Fox Conner and the Art of Mentorship

Edward Cox, New Forums Press: 2011

★★★

To those who have heard of him, Fox Conner's name is synonymous with mentorship. He is the "grey eminence" within the Army, whose influence helped to shape the careers of George Patton, George Marshall, and—most notably—President Eisenhower. After a career that spanned four decades, this master strategist ordered all of his papers and journals burned. Because of this, Conner is an oblique figure in military history. What little is known about Conner comes primarily through stories about his relationship with Eisenhower, and as a passing reference in the memoirs of other great men. This book combines existing scholarship with long-forgotten references and unpublished original sources to achieve a more comprehensive picture of this dedicated public servant. The portrait that emerges provides a four-step model for developing strategic leaders that still holds true today.

12



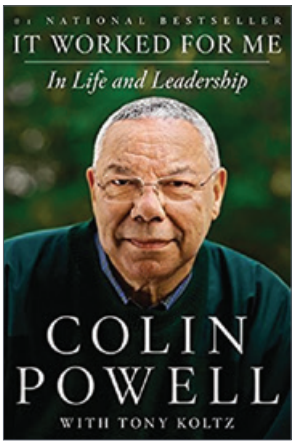
How Everything Became War and the Military Became Everything: Tales from the Pentagon

Rosa Brooks, Simon and Schuster: 2016

★★★

The first serious book to examine what happens when you erase the ancient boundary between war and peace. Once, war was a temporary state of affairs—a violent but brief interlude between times of peace. Today, America's wars are everywhere and forever: our enemies change constantly and rarely wear uniforms, and virtually anything can become a weapon. As war expands, so does the role of the US military. Today, military personnel don't just "kill people and break stuff." Instead, they analyze computer code, train Afghan judges, build Ebola isolation wards, eavesdrop on electronic communications, develop soap operas, and patrol for pirates.

13

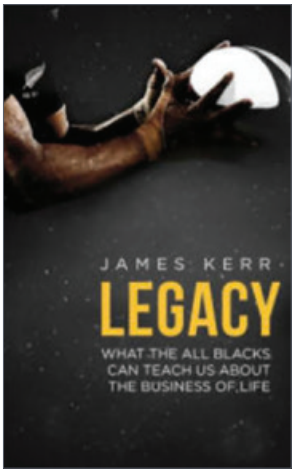


It Worked for Me: In Life and Leadership

Colin Powell, Harper: 2012

Colin Powell, one of America's most admired public figures, reveals the principles that have shaped his life and career in this inspiring and engrossing memoir. It Worked for Me: In Life and Leadership is a trove of wisdom for anyone hoping to achieve their goals and turn their dreams into reality. A message of strength and endurance from a man who has dedicated his life to public service, this is a book with the power to show readers everywhere how to achieve a more fulfilling life and career.

14



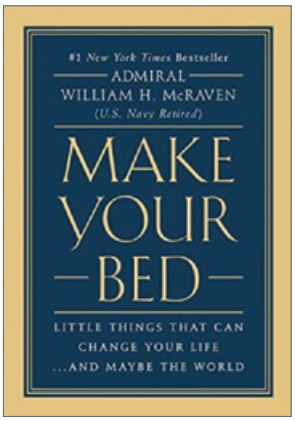
Legacy

James Kerr, Constable & Robinson: 2013

★★★

In Legacy, best-selling author James Kerr goes deep into the heart of the world's most successful sporting team, the legendary All Blacks of New Zealand, to reveal 15 powerful and practical lessons for leadership and business. Legacy is a unique, inspiring handbook for leaders in all fields, and asks the questions: What are the secrets of success—sustained success? How do you achieve world-class standards, day after day, week after week, year after year? How do you handle pressure? How do you train to win at the highest level? What do you leave behind you after you're gone?

15



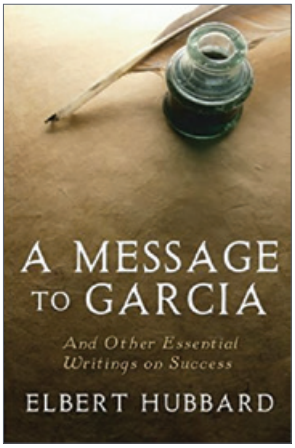
Make Your Bed – Little Things That Can Change Your Life…and Maybe the World

William McRaven, Grand Central Publishing: 2017

★★★

Based on a speech to the graduating class of the University of Texas at Austin, Admiral William H. McRaven shares the ten principles he learned during Navy Seal training that helped him overcome challenges not only in his training and long Naval career, but also throughout his life. McRaven explains how anyone can use these basic lessons to change themselves—and the world—for the better. Told with great humility and optimism, this timeless book provides simple wisdom, practical advice, and words of encouragement that will inspire readers to achieve more—even in life's darkest moments.

16



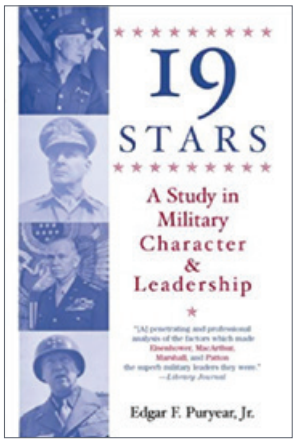
A Message to Garcia

Elbert Hubbard, Classic House: 2009 [First published in 1899]

★★★

Written in 1899, this inspirational essay, loosely based on an actual event in the Spanish-American War, praises Lieutenant Andrew Rowan for his perseverance and obedience. Charged with delivering an important message to a Cuban general, the lieutenant did not abandon his mission in the face of many obstacles. "To take a message to Garcia" was for years a popular American slang expression for taking initiative and still used today by many military leaders as a model of an exemplary work ethic.

17



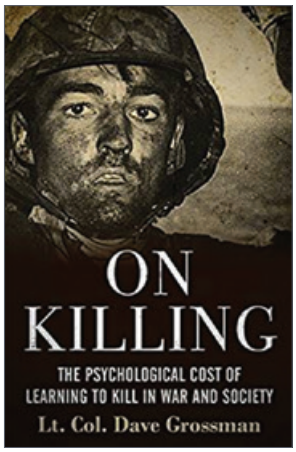
Nineteen Stars: A Study in Military Character and Leadership

Edgar Puryear, Presidio Press: 2003

★★★

Nineteen Stars is an in-depth study of American military leadership and character. Puryear makes a comparative study of the careers of four of the most successful US WWII generals: Marshall, MacArthur, Eisenhower and Patton. By examining these men from their cadet years at West Point to the conclusion of WWII, he determines why these men became our top commanders and attempts to answer the question: Can one learn successful military leadership or must one be born to command? A model of character and leadership is revealed here in the careers of the quietly confident Marshall, the military genius of MacArthur, the beloved Eisenhower, and the go-for-broke Patton.

18



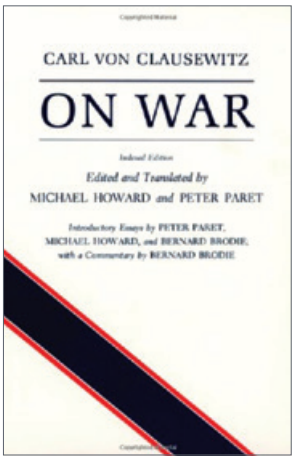
On Killing: The Psychological Cost of Learning to Kill in War and Society

Dave Grossman, Back Bay Books: 2009 [First Published in 1995]

★★★

The good news is that most soldiers are loath to kill. However, armies have developed sophisticated ways of overcoming this instinctive aversion. Contemporary civilian society, particularly the media, replicates the Army's conditioning techniques, and, according to Lt. Col. Dave Grossman's thesis, is responsible for our rising rate of murder among the young. Upon its initial publication, many hailed On Killing as a landmark study of the techniques the military uses to overcome the powerful reluctance to kill, of how killing affects soldiers, and of the societal implications of escalating violence. Now, Grossman has updated this to include information on 21st-century military conflicts, recent trends in crime, suicide bombings, school shootings, and more.

19



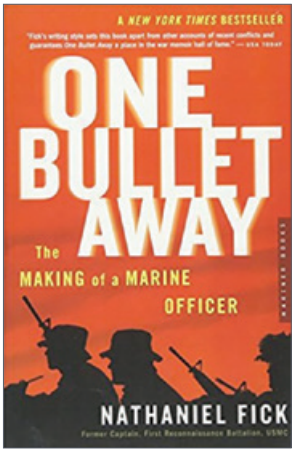
On War

Carl von Clausewitz, Clausewitz Press: 2017

★★★

Fascinated by the leading military figures of his day, Prussian General Carl von Clausewitz spent over ten years writing a book—On War—that he would never finish. The book examines the tactics of Napoleon, Frederick II of Prussia, and others. In this insightful, well-informed work of military analysis, Von Clausewitz theorizes that war is an instrument of political commerce. On War is the most significant attempt in Western history to understand war, both in its internal dynamics and as an instrument of policy. Since the work's first appearance in 1832, it has been read throughout the world, and has been stimulating generations of soldiers, political leaders, and intellectuals.

20

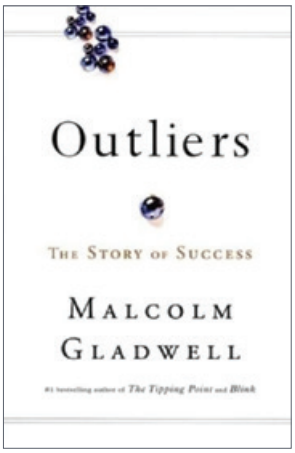


One Bullet Away: The Making of a Marine Officer

Nathaniel Fick, Reprint 2006

If the Marines are "the few, the proud," Recon Marines are the fewest and the proudest. Nathaniel Fick unveils the process that makes Marine officers such legendary leaders and shares his hard-won insights into the differences between military ideals and military practice, which can mock those ideals. In this deeply thoughtful account of what it's like to fight on today's front lines, Fick reveals the crushing pressure on young leaders in combat. Split-second decisions might have national consequences or horrible immediate repercussions, but hesitation isn't an option. One Bullet Away never shrinks from blunt truths, but ultimately it is an inspiring account of mastering the art of war.

21



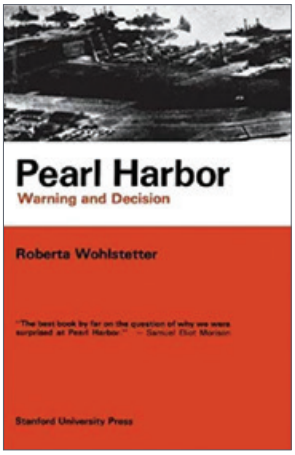
Outliers: The Story of Success

Malcolm Gladwell, Little, Brown and Company: 2008

★★★

In this stunning and fascinating book, Malcolm Gladwell takes us on an intellectual journey through the world of "outliers"—the best and the brightest, the most famous, and the most successful. He asks the question: What makes high-achievers different? His answer is that we pay too much attention to what successful people are like, and too little attention to where they started: that is, their culture, their family, their generation, and the idiosyncratic experiences of their upbringing. Along the way, he explains the secrets of software billionaires, what it takes to be a great soccer player, why Asians are good at math, and what made the Beatles the greatest rock band.

22

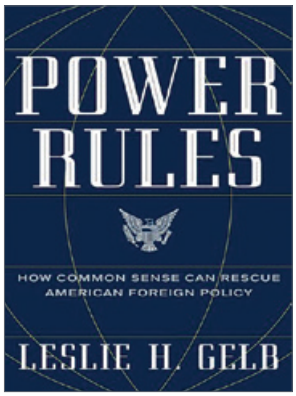


Pearl Harbor: Warning and Decision

Roberta Wohlstetter, Stanford University Press: 1962

It would be reassuring to believe that Pearl Harbor was just a colossal and extraordinary blunder. What is disquieting is that it was a supremely ordinary blunder; it was a dramatic failure of a remarkably well-informed government to call the next enemy move. Pearl Harbor: Warning and Decision is a unique physiology of a great national failure to anticipate. Wohlstetter shows how easy it was to slip into the rut in which the Japanese found us, it can only remind us how likely it is that we are in the same kind of rut right now. The danger is not that we shall read the signals and indicators with too little skill; the danger is in a poverty of expectations—a routine obsessing with a few dangers that may be familiar rather than likely.

23

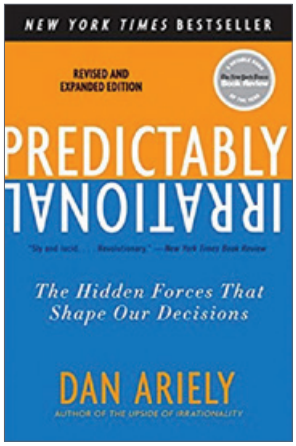


Power Rules: How Common Sense Can Rescue American Foreign Policy

Leslie Gelb, Harper Perennial: 2010

Power Rules is the provocative account of how to think about and use America's power in the world, from Pulitzer Prize winner Leslie H. Gelb, one of the nation's leading foreign policy minds and practitioners. Gelb offers guidelines to the U.S. president on how to use American power effectively in today's tumultuous world. He also argues that American leaders have failed to recognize three key power realities. First, the world is not flat; it is highly pyramidal in power. Second, power is neither soft (persuasion and values) nor hard (military force), but is psychological based on the skilled use of carrots and sticks. Third, he asserts, the world has not entered the post-American era; rather, the United States remains the sole global leader, but without the power to dominate.

24

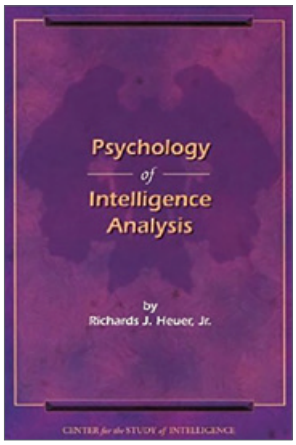


Predictably Irrational, Revised and Expanded Edition: The Hidden Forces That Shape Our Decisions

Dan Ariely, Harper Perennial: 2010

Irrational behavior is a part of human nature, but as MIT professor Ariely has discovered in 20 years of researching behavioral economics, people tend to behave irrationally in a predictable fashion. Drawing on psychology and economics, behavioral economics can show us why patients get greater relief from a more expensive drug over its cheaper counterpart and why honest people may steal office supplies or communal food, but not money. According to Ariely, our understanding of economics, now based on the assumption of a rational subject—should in fact—be based on our systematic, unsurprising irrationality. Ariely argues that greater understanding of previously ignored or misunderstood forces (emotions, relativity and social norms) that influence our economic behavior brings a variety of opportunities for reexamining individual motivation and consumer choice, as well as economic and educational policy.

25

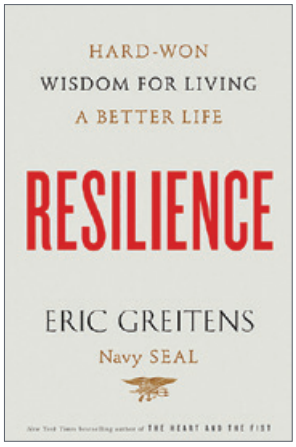


Psychology of Intelligence Analysis

Richard Heuer, Military Bookshop: 2010

This volume pulls together and republishes, with some editing, updating, and additions, articles written from 1978 to 1986 for internal use within the CIA Directorate of Intelligence. Based on reviewing cognitive psychology literature, these articles revealed how people process information to make judgments on incomplete and ambiguous information. Richard Heuer has selected the experiments and findings that seem most relevant to intelligence analysis and most in need of communication to intelligence analysts. He then translates the technical reports into language intelligence analysts can understand, and interpreted the relevance of these findings to the problems intelligence analysts face.

26



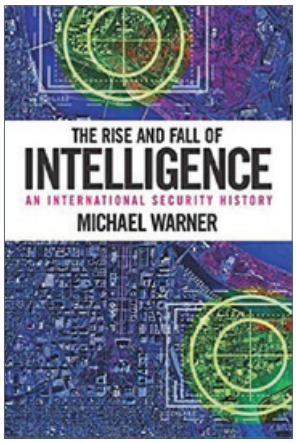
Resilience: Hard-Won Wisdom for Living a Better Life

Eric Greitens, First Mariner Books Edition: 2015

★★★

In 2012, Eric Greitens unexpectedly heard from a former SEAL team comrade, a brother-in-arms he had not seen in a decade. Zach Walker had been one of the toughest of the tough, but ever since he returned home from war to his young family in a small logging town, he had been struggling. Zach and Eric started writing and talking nearly every day, as Eric set down his thoughts on what it takes to build resilience in our lives. Eric's letters, drawing on both his own experience and wisdom from ancient and modern thinkers, are now gathered and edited into this timeless guidebook. Greitens shows how we can build purpose, confront pain, practice compassion, develop a vocation, find a mentor, create happiness, and much more. Resilience is an inspiring meditation for the warrior in each of us.

27

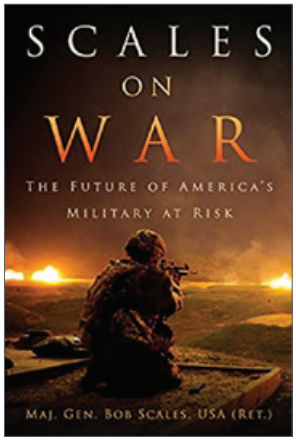


The Rise and Fall of Intelligence: An International Security History

Michael Warner, Georgetown University Press: 2014

Historian Michael Warner addresses the birth of professional intelligence in Europe at the beginning of the twentieth century and the subsequent rise of US intelligence during the Cold War. He brings this history up to the present day as intelligence agencies used the struggle against terrorism and the digital revolution to improve capabilities in the 2000s. Throughout, the book examines how states and other entities use intelligence to create, exploit, and protect secret advantages against others, and emphasizes how technological advancement and ideological competition drive intelligence, improving its techniques, and creating a need for intelligence and counterintelligence activities to serve and protect policymakers and commanders.

28



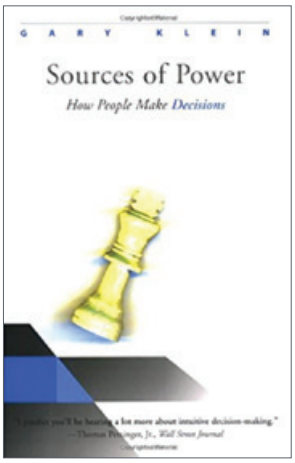
Scales on War: The Future of America's Military at Risk

MG (Ret) Bob Scales, Naval Institute Press: 2016

★★★

Scales on War is a collection of ideas, concepts, and observations about contemporary war taken from over thirty years of research, writing, and personal experience by retired Major General Bob Scales. Scales' unique style of writing utilizes contemporary military history, current events, and his philosophy of ground warfare to create a very personal and expansive view of the future direction of American defense policies. Scales on War shows that, as a result of America's focus on winning wars with technology rather than people, America's enemies have learned how to win battles by defeating such technology. As a well-known warfare expert, Scales demonstrates how only a resurgent land force of Army and Marine small units will restore America's fighting competence.

29

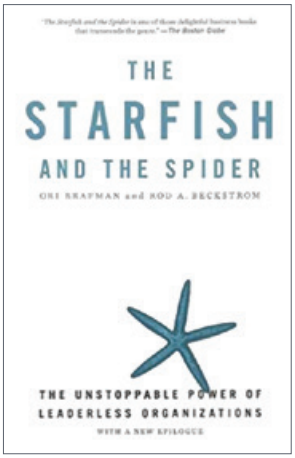


Sources of Power: How People Make Decisions

Gary Klein, The MIT Press: 1999

Based on observations of humans acting under real-life constraints, from time pressure, high stakes, personal responsibility, and shifting conditions, Sources of Power is a study by professionals of people from different occupations: firefighters, critical care nurses, pilots, nuclear power plant operators, battle planners, and chess masters. Each chapter builds on key incidents and examples to make the description of the methodology and phenomena more vivid. In addition to providing information professionals in management, psychology, engineering, can use that and other fields, the book presents an overview of the research approach of naturalistic decision making and expands our knowledge of the strengths people bring to difficult tasks.

30



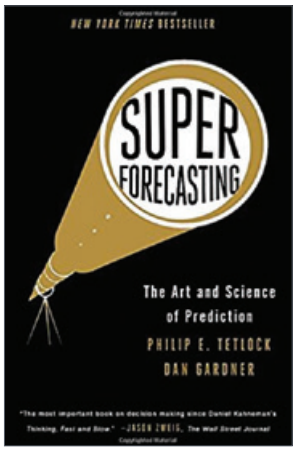
The Starfish and the Spider: The Unstoppable Power of Leaderless Organizations

Ori Braufman and Rod A. Beckstrom, Penguin Group: 2006

★★★

If you cut off a spider's head, it dies; if you cut off a starfish's leg it grows a new one, and that leg can grow into an entirely new starfish. Traditional top-down organizations are like spiders, but now starfish organizations are changing the face of business and the world. Ori Braufman and Rod Beckstrom have discovered some unexpected answers, gripping stories, and a tapestry of unlikely connections. The Starfish and the Spider explores what happens when starfish take on spiders and reveals how established companies and institutions, from IBM to Intuit to the U.S. government, are also learning how to incorporate starfish principles to achieve success.

31

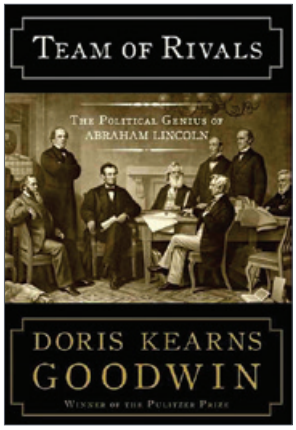


Superforecasting

Phil Tetlock and Dan Gardner, Broadway Books: Reprint Edition 2016

In Superforecasting, Tetlock and coauthor Dan Gardner offer a masterwork on prediction, drawing on decades of research, and the results of a massive, government-funded forecasting tournament. The Good Judgment Project involves tens of thousands of ordinary people—including a Brooklyn filmmaker, a retired pipe installer, and a former ballroom dancer—who set out to forecast global events. Some of the volunteers have turned out to be astonishingly good. In this groundbreaking and accessible book, Tetlock and Gardner show us how we can learn from this elite group. Superforecasting offers a demonstrably effective way to improve our ability to predict the future, whether in business, finance, politics, international affairs, or daily life.

32

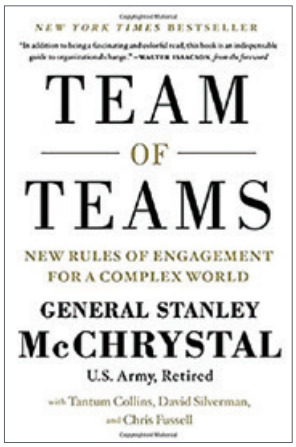


Team of Rivals: The Political Genius of Abraham Lincoln

Doris Kearns Goodwin, Simon & Schuster: 2005

Acclaimed historian, Doris Kearns Goodwin illuminates Lincoln's political genius in this highly original work, as the one-term congressman and prairie lawyer rises from obscurity to prevail over three gifted rivals of national reputation to become president. Goodwin demonstrates Lincoln's character, forged by experiences that raised him above his more privileged and accomplished rivals. He possessed an extraordinary ability to put himself in the place of other men, to experience what they were feeling, and to understand their motives and desires. This capacity enabled Lincoln, as president, to bring his disgruntled opponents together, create the most unusual cabinet in history, and marshal their talents to the task of preserving the Union and winning the war. Team of Rivals is a brilliant multiple biography that centers on Lincoln's mastery of men, and how this ability shaped the most significant presidency in the nation's history.

33

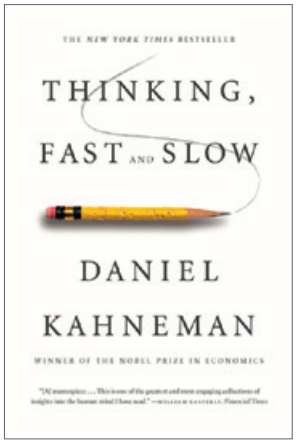


Team of Teams: New Rules of Engagement for a Complex World

GEN (Ret) Stanley McChrystal, Collins, Silverman, and Fussell, Penguin: 2015

In this powerful book, General McChrystal and his colleagues show how the challenges they faced in Iraq can be relevant to countless businesses, nonprofits, and other organizations. The world is changing faster than ever, and the smartest response for those in charge is to give small groups the freedom to experiment while driving everyone to share what they learn across the entire organization. As the authors argue through compelling examples, the team of teams strategy has worked everywhere from hospital emergency rooms to NASA. It has the potential to transform organizations large and small.

34

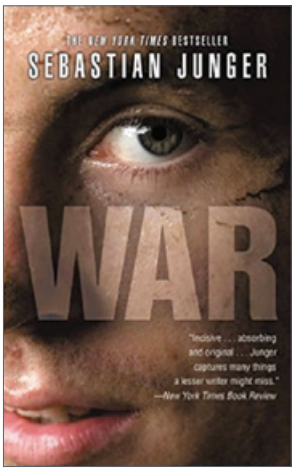


Thinking Fast and Slow

Daniel Khaneman, Farrar Straus Giroux: 2011

In the international bestseller, Thinking Fast and Slow, Daniel Khaneman, the renowned psychologist and winner of the Nobel Prize in Economics, takes us on a groundbreaking tour of the mind and explains the two systems that drive the way we think. System 1 is fast, intuitive, and emotional; System 2 is slower, more deliberative, and more logical. The impact of overconfidence on corporate strategies, the difficulties of predicting what will make us happy in the future, the profound effect of cognitive biases on everything from playing the stock market to planning our next vacation—each of these maybe better understood only by knowing how the two systems shape our judgments and decisions.

35



War

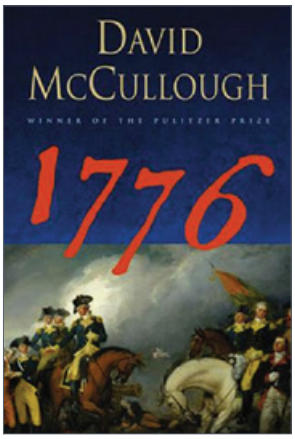
Sebastian Junger, Twelve: 2010

★★★

Over fifteen months, Sebastian Junger followed a single platoon based at a remote outpost in eastern Afghanistan. His objective was both simple and ambitious; to convey what soldiers experience and what war actually feels like. In these pages, he gives insight into the truths of combat: the fear, the honor, and the trust among men. He describes things that few civilians will ever witness or go through—the endless, body-numbing anticipation of battle, the adrenaline-fueled confusion of an ambush, and the unquestioned and automatic risks soldiers take in combat situations to protect their brothers. Junger draws on biology, psychology, and military history to explain the decisions soldiers make and to put their ordeals into context. In the vivid prose, War, relates the physical toil, the suffocating heat, the sounds of gunfire, and the agony of loss.

HISTORY

36



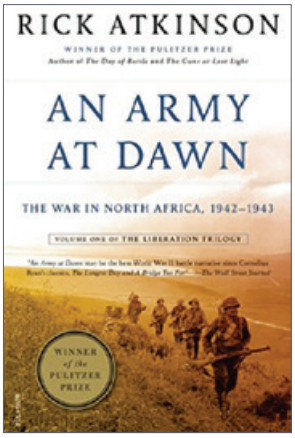
1776

David McCullough, Simon & Schuster: 2005

★★★

David McCullough presents the stirring story of the year of our nation's birth, interweaving the actions and decisions that led Great Britain to undertake a war against her rebellious colonial subjects. Based on extensive research in both American and British archives, 1776 is a powerful drama written with extraordinary narrative vitality. It is the story of Americans in the ranks, men of every shape, size, and color, farmers, schoolteachers, shoemakers, no-accounts, and mere boys turned soldiers. And it is the story of the King's men, the British commander, William Howe, and his highly disciplined redcoats who looked on their rebel foes with contempt and fought with a valor too little known.

37

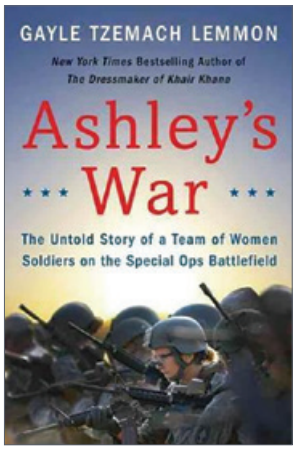


An Army at Dawn: The War in North Africa 1942-1943 (The Liberation Trilogy)

Rick Atkinson, Holt Paperbacks: 2007

Opening with the daring amphibious invasion in November 1942, An Army at Dawn follows the American and British armies as they fight the French in Morocco and Algiers, and then take on the Germans and Italians in Tunisia. Battle by battle, an inexperienced and sometimes poorly led army gradually becomes a superb fighting force. At the center of the tale are the extraordinary but flawed commanders who come to dominate the battlefield: Eisenhower, Patton, Bradley, Montgomery, and Rommel. In this first volume of the Liberation Trilogy, Rick Atkinson shows why no modern reader can understand the ultimate victory of the Allied powers without a grasp of the great drama that unfolded in North Africa in 1942 and 1943.

38

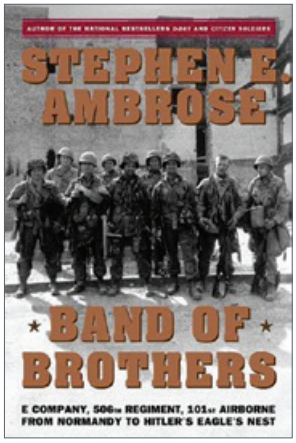


Ashley's War: The Untold Story of a Team of Women Soldiers on the Special Ops Battlefield

Gayle Tzemach Lemmon, Harper: 2015

Gayle Tzemach Lemmon uses on-the-ground reporting and an understanding of the complexities of war to tell the story of Cultural Support Team-2 (CST-2), a unit of women handpicked from the Army to serve in this highly specialized and challenging role. The pioneers of CST-2 proved for the first time, that women might be physically and mentally tough enough to become part of the elite. At the center of this story is a friendship cemented by "Glee," video games, and the shared perils and seductive powers of up-close combat. At the heart of the team is the tale of a beloved and effective soldier, Ashley White.

39



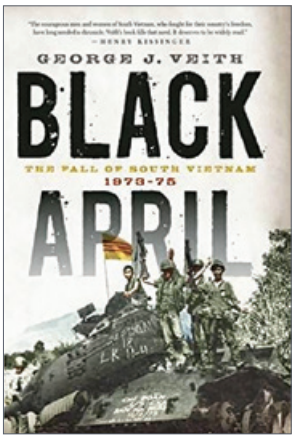
Band of Brothers: E Company, 506th Regiment, 101st Airborne from Normandy to Hitler's Eagle's Nest

Steven E. Ambrose, Simon & Schuster: 2007

★★★

Stephen E. Ambrose's iconic story of the ordinary men who became World War II's most extraordinary soldiers: Easy Company, 506th Parachute Infantry Regiment, 101st Airborne Division, US Army. From the rigorous training in Georgia in 1942 to the disbanding in 1945, Ambrose tells the story of this remarkable company. They were rough-and-ready guys, battered by the Depression, mistrustful and suspicious. However, in training and combat, they learned selflessness and found the closest brotherhood they ever knew. They discovered that in war, men who loved life would give their lives for them. E Company was a company of men who went hungry, froze, and died for each other. A company that took 150 percent casualties. A company where the Purple Heart was not a medal—it was a badge of office.

40

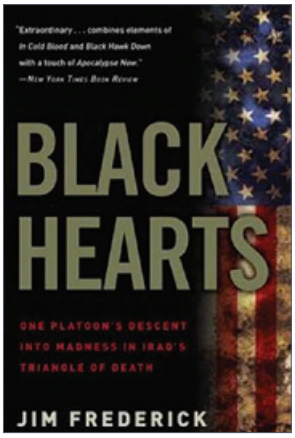


Black April: The Fall of South Vietnam, 1973-1975

George Veith, Encounter Books: 2012

The defeat of South Vietnam was arguably America's worst foreign policy disaster of the 20th Century. Yet a complete understanding of the endgame—from the 27 January 1973 signing of the Paris Peace Accords to South Vietnam's surrender on 30 April 1975—has eluded us. Black April addresses that deficit through a culmination of exhaustive research in three distinct areas: primary source documents from American archives, North Vietnamese publications containing primary and secondary source material, and dozens of articles and numerous interviews with key South Vietnamese participants. This book represents one of the largest Vietnamese translation projects ever accomplished, including almost one hundred rarely or never before seen North Vietnamese unit histories, battle studies, and memoirs.

41



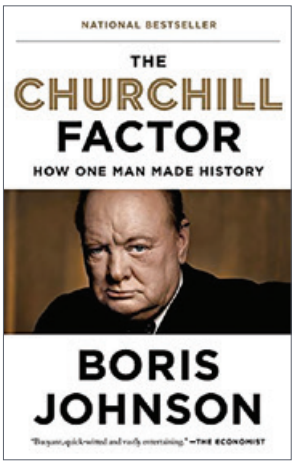
Black Hearts: One Platoon's Descent into the Madness of Iraq's Triangle of Death

Jim Frederick, Broadway: 2010

★★★

This is the story of a small group of soldiers from the 101st Airborne Division's fabled 502nd Infantry Regiment—a unit known as "the Black Heart Brigade." Deployed in late 2005 to Iraq's so-called Triangle of Death, a veritable meat grinder just south of Baghdad, the Black Hearts found themselves in arguably the country's most dangerous location at its most dangerous time. Black Hearts is a timeless story about men in combat and the fragility of character in the savage crucible of warfare. But it is also a timely warning of new dangers emerging in the way American soldiers are led on the battlefields of the twenty-first century.

42



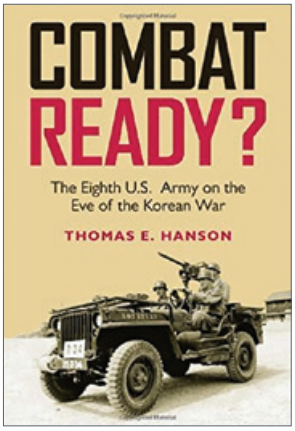
The Churchill Factor: How One Man Made History

Boris Johnson, Riverhead Books: 2015

★★★

Fearless on the battlefield, the king had to order Churchill to stay out of action on D-day; he pioneered aerial bombing and few could match his experience in organizing violence on a colossal scale, yet he hated war and scorned politicians who had not experienced its horrors. He was the most famous journalist of his time and perhaps the greatest orator of all time, despite a lisp and the chronic depression he kept at bay by painting. His maneuvering positioned America for entry into World War II, even as it ushered in England's postwar decline. His open-mindedness made him a trailblazer in health care, education, and social welfare, though he remained incorrigibly politically incorrect. Most of all, he was a rebuttal to the idea that history is the story of vast and impersonal forces; he is proof that one person—intrepid, ingenious, determined—can make all the difference.

43



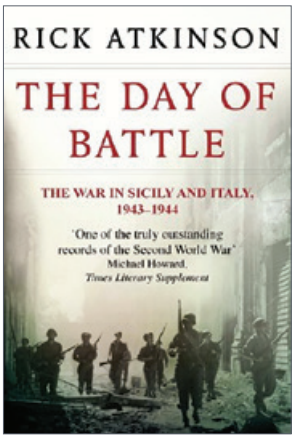
Combat Ready?: The Eighth U.S. Army on the Eve of the Korean War

Thomas E. Hanson, Williams-Ford Texas A&M University Military History Series: 2010

★★★

In Hanson's careful study of combat preparedness in the Eighth Army from 1949 to the outbreak of hostilities in 1950, he concedes that the U.S. soldiers sent to Korea suffered gaps in their professional preparation, from missing and broken equipment to unevenly trained leaders at every level of command. But after a year of progressive, focused, and developmental collective training—based largely on the lessons of combat in World War II—these soldiers expected to defeat the Communist enemy. By recognizing the constraints under which the Eighth Army operated, Hanson asserts that scholars and soldiers will be able to discard what Douglas Macarthur called the "pernicious myth" of the Eighth Army's professional, physical, and moral ineffectiveness.

44

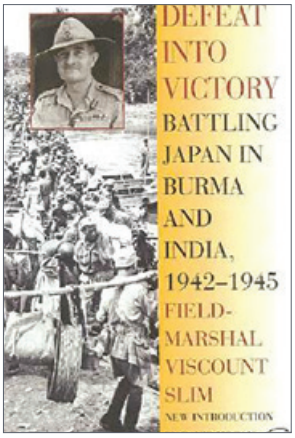


The Day of Battle: The War in Sicily and Italy, 1943-1944 (The Liberation Trilogy)

Rick Atkinson, Henry Holt: 2008

Rick Atkinson follows the strengthening American and British armies as they invade Sicily in July 1943 and then, mile by bloody mile, fight their way north toward Rome. The decision to invade the so-called soft underbelly of Europe was controversial, but once under way, the commitment to liberate Italy from the Nazis never wavered. The battles at Salerno, Anzio, the Rapido River, and Monte Cassino were particularly lethal, yet as the months passed, the Allied forces continued to drive the Germans up the Italian peninsula. Moreover, with the liberation of Rome in June 1944, ultimate victory at last began to seem inevitable. Drawing on a wide array of primary source material, written with great drama and flair, The Day of Battle is a masterly account of one of history's most compelling military campaigns.

45



Defeat into Victory: Battling Japan in Burma and India, 1942-1945

Field-Marshal Viscount William Slim, Cooper Square Press: 2000

Field-Marshal Slim's classic account of the Burma Campaign in World War II is divided into six books: Defeat; Forging the Weapon; The Weapon is Tested; The Tide Turns; The Decisive Battle; and Victory. This memoir is widely regarded as a classic of high command. Though told from the perspective of a Field-Marshall, Slim still imparts lessons that are relevant for tactical leaders to this day, such as the difficulties of jungle fighting and the importance of mission command in distributed operations. Impressively, Field-Marshal Slim is not afraid to admit some of this own shortcomings as a commander. This is a narrative, which captures both the high drama and the harsh reality of war.

46

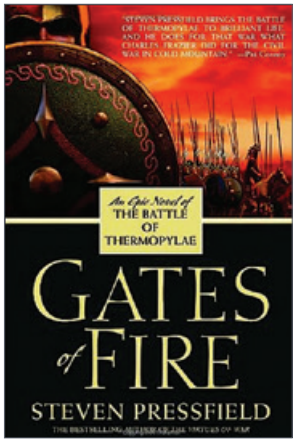
G-2: Intelligence for Patton

Oscar Koch and Robert G. Hays, Schiffer: 1999 [First published 1971]

★★★

This personal record, written by Brigadier General Oscar W. Koch—who served during World War II as chief of intelligence for General George S. Patton, Jr., one of the most colorful military leaders in American history—examines the enigmatic science of military intelligence. General Koch traces the growth and development of the infant science through detailed accounts of the intelligence role in some of the most celebrated battles of the war, and through his personal remembrances of Patton and his relationships with members of his intelligence staff. His story moves from the African campaign through Sicily, into France on D-Day, and on to the Battle of the Bulge—pointing out how the work of the intelligence staff made the differences in the final reckoning. General Koch's book is more than a historical study, however. It is the exciting story of the operations behind the cloak and dagger illusions.

47



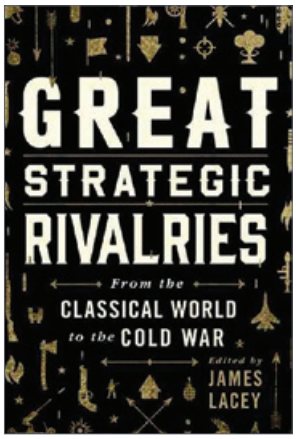
Gates of Fire: An Epic Novel of Thermopylae

Steven Pressfield, Bantam Books: 1998

★★★

Thermopylae: the 480 BC battle that went down in history as an example of heroism. For three days, a small force of Greeks defended a narrow pass from a huge Persian army. Narrated by the sole survivor of the epic battle - a squire in the Spartan heavy infantry- Gates of Fire is a mesmerizing depiction of one man's indoctrination into the Spartan way of life and death, and the legendary men and women who gave the culture an immortal gravity. Culminating in an electrifying and horrifying epic battle, Gates of Fire weaves history, mystery, and heartbreaking romance into a literary page-turner that brings the Homeric tradition into the twenty-first century.

48



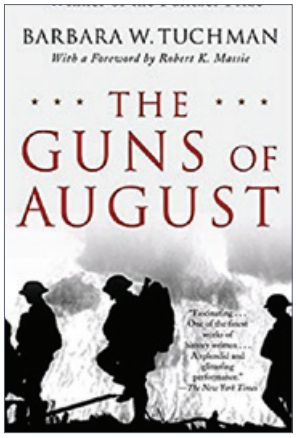
Great Strategic Rivalries: From the Classical World to the Cold War

James Lacey (editor), Oxford University Press: 2016

★★★

From the legendary antagonism between Athens and Sparta during the Peloponnesian War to the Napoleonic Wars and the two World Wars of the twentieth century, long-term strategic rivalries littered the past. History tells us that such enduring rivalries can end in one of three ways. First in a series of exhausting conflicts, in which one side eventually prevails—as in the case of the Punic Wars between ancient Rome and Carthage. Second in a peaceful and hopefully orderly transition, like the rivalry between Great Britain and the United States at the turn of the twentieth century. Lastly a one-sided collapse, such as the conclusion of the Cold War with the fall of the Soviet Union. However, in spite of a wealth of historical examples, the future of state rivalries remains a matter of conjecture.

49



The Guns of August

Barbara Tuchman, Random House: 2004 [First Published in 1962]

★★★

In this landmark, Pulitzer Prize winning account, renowned historian Barbara W. Tuchman re-creates the first month of World War I: thirty days in the summer of 1914 that determined the course of the conflict, the century, and ultimately our present world. Beginning with the funeral of Edward VII, Tuchman traces each step that led to the inevitable clash, and inevitable it was, with all sides plotting their war for a generation. Dizzyingly comprehensive and spectacularly portrayed with her famous talent for evoking the characters of the war's key players, Tuchman's magnum opus is a classic for the ages.

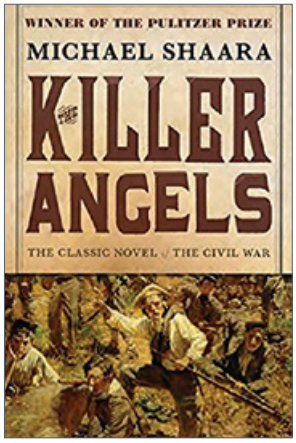
50

Hell in a Very Small Place: The Siege of Dien Bien Phu

Bernard B. Fall, Da Capo Press: Reprint 2002

The siege of Dien Bien Phu, in which a guerrilla force of Viet Minh destroyed a technologically superior French colonial army, must rank with Waterloo, Gettysburg, Midway, Stalingrad, and Tet as one of the decisive battles in military history. Not only did Dien Bien Phu put an end to French imperial efforts in Indo-china, but it also convinced the Viet Minh, when they came to power in Communist North Vietnam, that similar tactics would prevail in their war with the United States. Fall accurately predicted that if the United States did not learn from France's mistakes, it too would fail in Vietnam.

51



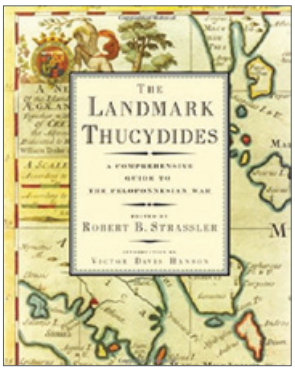
Killer Angels: The Classic Novel of the Civil War

Michael Shaara, Random House: 1987 [First published in 1974]

★★★

In the four bloodiest and courageous days of our nation's history, two armies fought for two conflicting dreams. One dreamed of freedom, the other of a way of life. Far more than rifles and bullets were carried into battle. There were memories. There were promises. There was love. And, far more than men fell on those Pennsylvania fields. Bright futures, untested innocence, and pristine beauty were also the casualties of war. Michael Shaara's Pulitzer Prize-winning masterpiece is unique, sweeping, unforgettable—the dramatic story of the battleground for America's destiny.

52



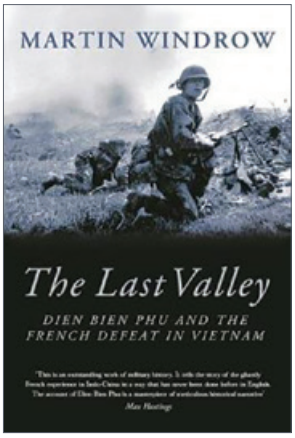
The Landmark Thucydides: A comprehensive Guide to the Peloponnesian War

Robert B. Strassler, Simon & Shuster: 1996

★★★

Thucydides called his account of two decades of war between Athens and Sparta "a possession for all time," and it is the first and still most famous work in the Western historical tradition. Considered essential reading for generals, statesmen, and liberally educated citizens for more than 2,000 years, The Peloponnesian War is a mine of military, moral, political, and philosophical wisdom. Strassler's edition provides a new coherence to the narrative overall by effectively reconstructing the lost cultural context that Thucydides shared with his original audience.

53

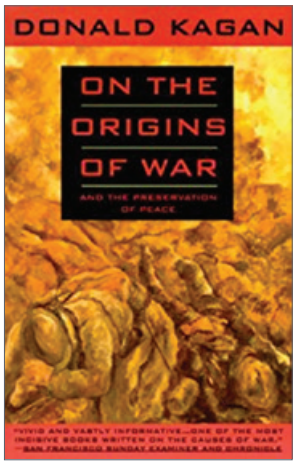


The Last Valley Dien Bien Phu and the French Defeat in Vietnam

Martin Windrow, Da Capo Press: 2014

In December 1953, the French army occupying Vietnam challenged the elusive Vietnamese army to engage in a decisive battle. When French paratroopers landed in the jungle on the border between Vietnam and Laos, the Vietnamese quickly isolated the French force and confronted them at their jungle base in a small place called Dien Bien Phu. The hunters—the French army—had become the hunted, desperately defending their out-gunned base. The siege in the jungle wore on as defeat loomed for the French. Depleted, demoralized, and destroyed, eventually the French withdrew from the country. Created from the withdraw, the ominous division of the country at U.S. insistence, was the short-lived Republic of South Vietnam-for which 55,000 Americans would die for in the next twenty years.

54

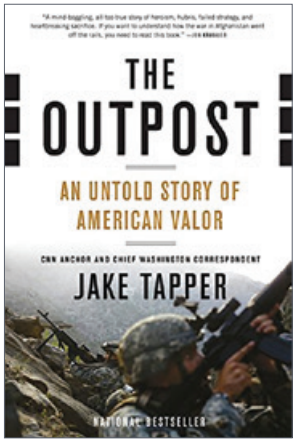


The Origins of War: And the Preservation of Peace

Donald Kagan, Anchor: 1996

War has been an unpleasant fact for centuries. By lucidly revealing the common threads that connect the ancient confrontations between Athens and Sparta and between Rome and Carthage with the two calamitous World Wars of the twentieth century, renowned historian Donald Kagan reveals new and surprising insights into the nature of war and peace. Vivid, incisive, and accessible, Kagan's powerful narrative warns against complacency and urgently reminds us of the importance of preparedness in times of peace.

55



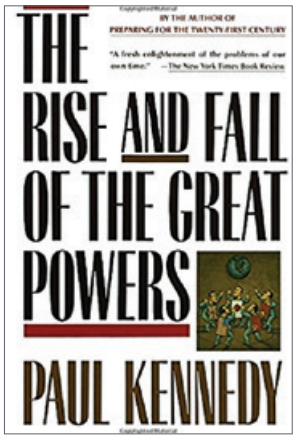
The Outpost: An Untold Story of American Valor

Jake Tapper, Hachette Book Group: 2012

★★★

At 5:58 AM on October 3, 2009, viciously attacked is Combat Outpost Keating, located in frighteningly vulnerable terrain in Afghanistan just 14 miles from the Pakistani border. Though the 53 Americans there prevailed against nearly 400 Taliban fighters, their casualties made it the deadliest fight of the war for the U.S. that year. Four months after the battle, a Pentagon review revealed that there was no reason for the troops at Keating to have been there in the first place. In The Outpost, Jake Tapper gives us the powerful saga of COP Keating, from its establishment to eventual destruction, introducing us to an unforgettable cast of soldiers and their families, and to a place and war that has remained profoundly distant to most Americans.

56

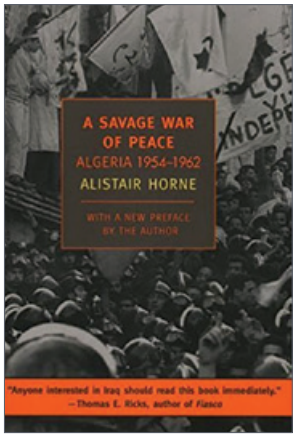


The Rise and Fall of the Great Powers: Economic Change and Military Conflict from 1500 to 2000

Paul Kennedy, First Vintage: 1989

The Rise and Fall of Great Powers: Economic Change and Military Conflict from 1500 to 2000, by Paul Kennedy, explores the politics and economics of the Great Powers from 1500 to 1980 and the reason for their decline. It then continues by forecasting the positions of China, Japan, the European Economic Community, the Soviet Union, and the United States through the end of the 20th century.

57

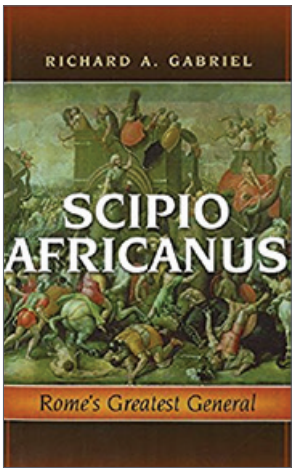


A Savage War of Peace: Algeria 1954-1962

Alistair Horne, NYRB Classics: 2006\0

The Algerian War, from 1954 to 1962, brought down six French governments, led to the collapse of the Fourth Republic, returned de Gaulle to power, and came close to provoking a civil war on French soil. The conflict caused more than a million Muslim Algerians to die and drove as many European settler into exile. Above all, an unholy marriage of revolutionary terror and repressive torture marked the war. Nearly a half century has passed since this savagely fought war ended in Algeria's independence, and yet—as Alistair Horne argues in his new preface to his now-classic work of history—its repercussions continue to be felt not only in Algeria and France, but throughout the world.

58



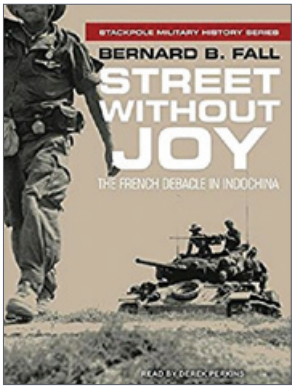
Scipio Africanus: Rome's Greatest General

Richard A. Gabriel, Potomac Books: 2008

★★★

Scholars celebrate the importance of Hannibal, even though Scipio defeated the legendary general in the Second Punic War and was the central military figure of his time. In this scholarly and heretofore unmatched military biography of the distinguished Roman soldier, Richard A. Gabriel establishes Scipio's rightful place in military history as the greater of the two generals. His book offers a complete bibliography of all extant sources regarding Scipio's life. The result is a rich, detailed, and contextual treatment of the life and career of Scipio Africanus, one of Rome's greatest generals, if not the greatest of them all.

59

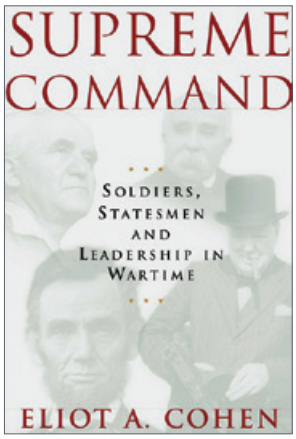


Street Without Joy: The French Debacle in Indochina

Bernard B. Fall, Stackpole Books: 2005

Originally published in 1961, before the United States escalated its involvement in South Vietnam, Street without Joy offered a clear warning about what American forces would face in the jungles of Southeast Asia: a costly and protracted revolutionary war fought without fronts against a mobile enemy. In harrowing detail, Fall describes the brutality and frustrations of the Indochina War, the savage eight-year conflict—ending in 1954 after the fall of Dien Bien Phu—in which French forces suffered a staggering defeat at the hands of Communist-led Vietnamese nationalists. With its frontline perspective, vivid reporting, and careful analysis, Street without Joy was required reading for policymakers in Washington and GIs in the field and is now considered a classic.

60

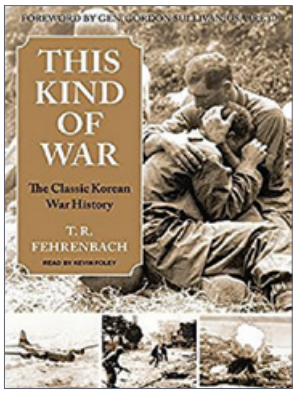


Supreme Command: Soldiers, Statesmen, and Leadership in Wartime

Eliot A. Cohen, Anchor: 2003

The orthodoxy regarding the relationship between politicians and military leaders in wartime democracies contends that politicians should declare a military operation's objectives and then step aside and leave the business of war to the military. In this controversial examination of civilian-military relations in wartime democracies, Eliot A. Cohen chips away at this time-honored belief with case studies of statesmen who dared to prod, provoke, and even defy their military officers to great effect. By examining the shared leadership traits of four politicians who triumphed in extraordinarily varied military campaigns, Cohen argues that active statesmen make the best wartime leaders, pushing their military subordinates to succeed where they might have failed if left to their own devices. Thought provoking and soundly argued, Cohen's Supreme Command is essential reading not only for military and political players but also for informed citizens and anyone interested in leadership.

61



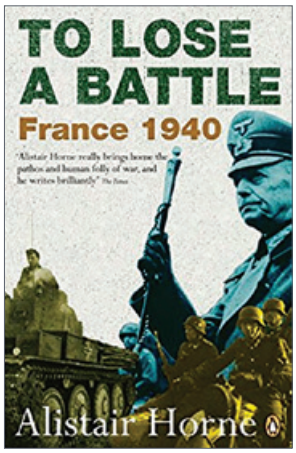
This Kind of War: A Study of Unpreparedness: The Classic Korean War History

T.R. Fehrenbach, Potomac Books; 50th Anniversary Edition: 2001

★★★

Updated with maps, photographs, and battlefield diagrams, this special fiftieth anniversary edition of the classic history of the Korean War is a dramatic and hard-hitting account of the conflict written from the perspective of those who fought it. Partly drawn from official records, operations journals, and histories, it is based largely on the compelling personal narratives of the small-unit commanders and their troops. Unlike any other work on the Korean War, it provides both a clear panoramic overview and a sharply drawn "you were there" account of American troops in fierce combat against the North Korean and Chinese communist invaders. As Americans and North Koreans continue to face each other across the 38th Parallel, This Kind of War commemorates the past and offers vital lessons for the future.

62

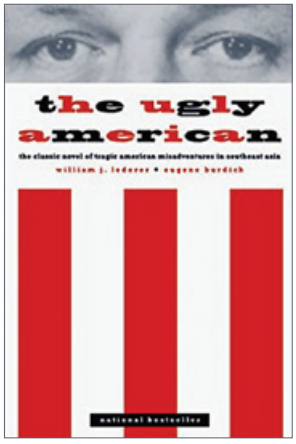


To Lose a Battle: France 1940

Alistair Horne, Penguin: 2007

In 1940, the German army fought and won an extraordinary battle with France in six weeks of lightning warfare. With the subtlety and compulsion of a novel, Horne's narrative shifts from minor battlefield incidents to high military and political decisions, stepping far beyond the confines of military history to form a major contribution to our understanding of the crises of the Franco-German rivalry. Told in two parts, the first section deals with the events that led up to the invasion in May 1940, while the second describes Germany's advance through France. Although the book rightfully praises the German offensive, Horne also notes Germany's mistakes that eventually led to its downfall.

63



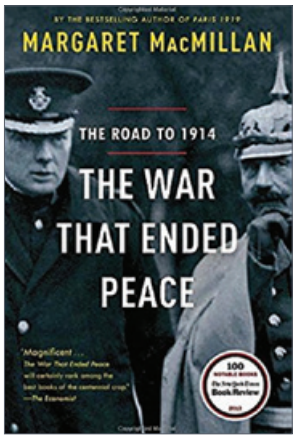
The Ugly American

Eugene Burdick and William J. Lederer, W.W. Norton and Company: 1999

★★★

First published in 1958, The Ugly American became a runaway national bestseller for its slashing exposé of American arrogance, incompetence, and corruption in Southeast Asia. Based on fact, the book's eye-opening stories and sketches drew a devastating picture of how the United States was losing the struggle with Communism in Asia. Combining gripping storytelling with an urgent call to action, the book prompted President Eisenhower to launch a study of our military aid program that led the much-needed reform. Modern reviews of the book have drawn parallels between South East Asia of the Cold War and the Middle East of today.

64



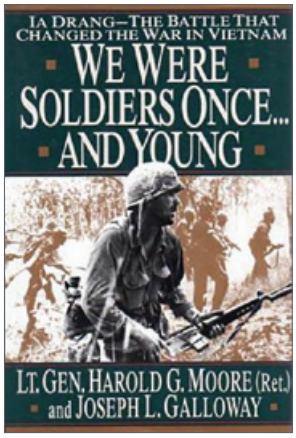
The War that Ended Peace: The Road to 1914

Margaret MacMillan, Random House: 2013

★★★

The century since the end of the Napoleonic wars had been the most peaceful era Europe had known since the fall of the Roman Empire. In the first years of the twentieth century, Europe believed it was marching to a golden, happy, and prosperous future. But instead, complex personalities and rivalries, colonialism and ethnic nationalisms, and shifting alliances helped to bring about the failure of the long peace and the outbreak of a war that transformed Europe and the world. The War That Ended Peace brings vividly to life the military leaders, politicians, diplomats, bankers, and the extended, interrelated family of crowned heads across Europe who failed to stop the descent into war. There are the would-be peacemakers as well, among them prophets of the horrors of future wars whose warnings went unheeded. With indelible portraits, MacMillan shows how the fateful decisions of a few powerful people changed the course of history. The War That Ended Peace is also a wise cautionary reminder of how wars happen in spite of the near-universal desire to keep the peace.

65



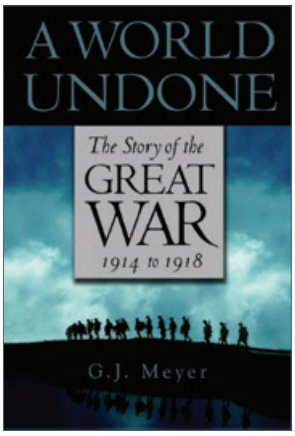
We Were Soldiers Once… and Young: Ia Drang-The Battle That Changed the War in Vietnam

Harold G. Moore and Joseph L. Galloway, Presidio Press: 2004 [First published in 1992]

★★★

In November 1965, dropped by helicopter into a small clearing in Ia Drang Valley were 450 men of the 1st Battalion, 7th Cavalry, under the command of Lt. Col. Hal Moore. Immediately 2,000 North Vietnamese soldiers surrounded them. Three days later, only two and a half miles away, a sister battalion was chopped to pieces. Together, these actions at the landing zones X-Ray and Albany constituted one of the most savage and significant battles of the Vietnam War. How these men persevered, sacrificed themselves for their comrades and never gave up, makes a vivid portrait of war at its most inspiring and devastating. This devastating account rises above the specific ordeal it chronicles to present a picture of men facing the ultimate challenge, dealing with it in ways they would have found unimaginable only a few hours earlier.

66

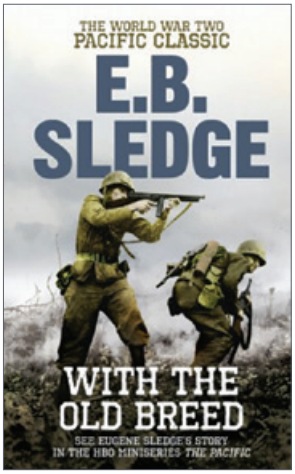


A World Undone: The Story of the Great War, 1914-1918

G.J. Meyer, Delacorte Press Books: 2006

The Great War defined the 20th century with countless tragedies and changes that have carried into today's society. A World Undone focuses on various significant unconnected events and the political and military leaders who lead the war—from the British Cabinet to Prussia—that ended with the death of 20 million people and the near end of civilization that had dominated the world up-to 1914.

67



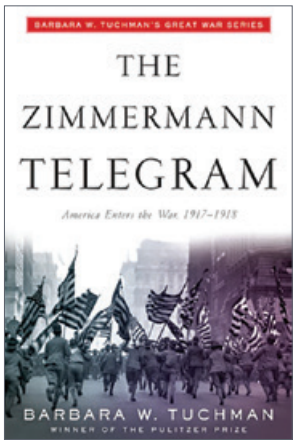
With the Old Breed: At Peleliu and Okinawa

E.B. Sledge, Oxford University Press: 2007 [First published in 1981 by Presidio Press]

★★★

An Alabama boy steeped in American history and enamored of such heroes as George Washington and Daniel Boone, Eugene B. Sledge became part of the war's famous 1st Marine Division—3rd Battalion, 5th Marines. Even after intense training, he was shocked to be thrown into the battle of Peleliu, where "the world was a nightmare of flashes, explosions, and snapping bullets." By the time Sledge hit the hell of Okinawa, he was a combat vet, still filled with fear but no longer with panic. Based on notes Sledge secretly kept in a copy of the New Testament, With the Old Breed captures with utter simplicity and searing honesty the experience of a soldier in the fierce Pacific Theater. Here is what saved, threatened, and changed his life. Here, too, is the story of how he learned to hate and kill—and came to love—his fellow man.

68



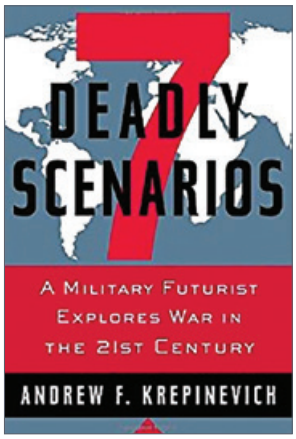
The Zimmermann Telegram

Barbara Tuchman, Random House: 1985

In January 1917, the war in Europe was, at best, a tragic standoff. Britain knew that all was lost unless the United States joined the war, but President Wilson was unshakable in his neutrality. At just that moment, a crack team of British decoders in a quiet office known as Room 40 intercepted a document that would change history. The Zimmermann telegram was a top-secret message to the president of Mexico, inviting him to join Germany and Japan in an invasion of the United States. How Britain managed to inform the American government without revealing that the German codes had been broken makes for an incredible story of espionage and intrigue, as only Barbara W. Tuchman could tell it.

GLOBAL ANALYSIS

69



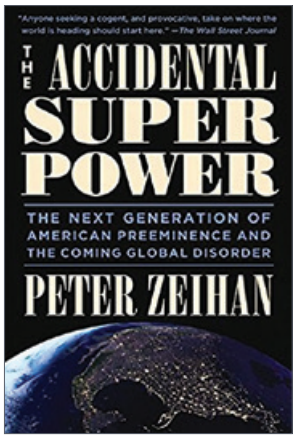
7 Deadly Scenarios: A Military Futurist Explores the Changing Face of War in the 21st Century

Andrew Krepinevich, Bantam; Reprint 2010

★★★

A global pandemic finds millions swarming across the U.S. border. Black-market nukes levels major American cities. China's growing civil unrest ignites a global showdown. Pakistan's collapse leads to a hunt for its nuclear weapons. What if the worst that could happen, actually happens? How will we respond? Are we prepared? These are the questions that Andrew F. Krepinevich asks—and answers—in this timely and often chilling book. As a military expert and consultant, Krepinevich must think the unthinkable based on the latest intelligence and geopolitical trends—and devise a response in the event our worst nightmares become reality.

70



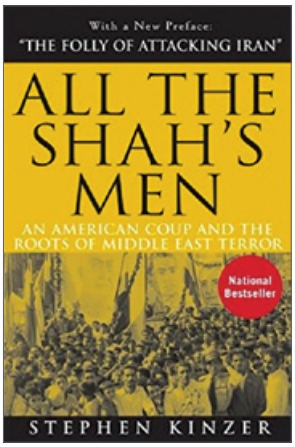
The Accidental Superpower: The Next Generation of American Preeminence and the Coming of Global Disorder

Peter Zeihan, Hachette Book Group: 2014

★★★

Near the end of the Second World War, the United States made a bold strategic gambit that rewired the international system. A global arrangement, enforced by the U.S. Navy, abolished and replaced empires. With all the world's oceans safe for the first time in history, made available for everyone were markets and resources. Enemies became partners. The Accidental Superpower examines how the hard rules of geography are eroding the American commitment to free trade; how much of the planet is aging into a mass retirement that will enervate markets and capital supplies; and how, against all odds, the ever-ravenous American economy that is rapidly approaching energy independence.

71

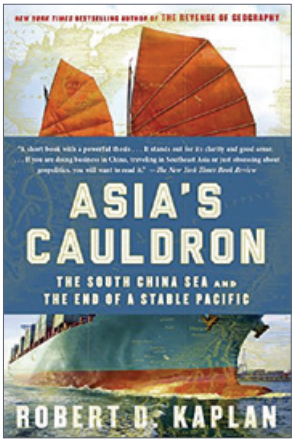


All the Shah's Men: An American Coup and the Roots of Middle East Terror

Stephen Kinzer, Wiley: Reprint 2008

With a thrilling narrative that sheds much light on recent events, this national bestseller brings to life the 1953 CIA coup in Iran that ousted the country's elected prime minister, ushered in a quarter-century of brutal rule under the Shah, and stimulated the rise of Islamic fundamentalism and anti-Americanism in the Middle East.

72

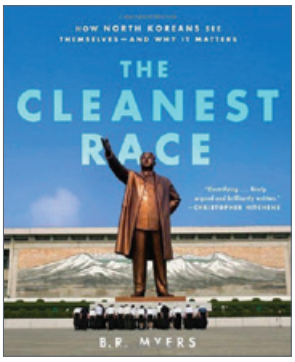


Asia's Cauldron: The South China Sea and the End of a Stable Pacific

Robert D. Kaplan, Random House: 2014

Over the last decade, the center of world power has been quietly shifting from Europe to Asia. With oil reserves of several billion barrels, an estimated nine hundred trillion cubic feet of natural gas, and several centuries' worth of competing territorial claims, the South China Sea in particular is a simmering pot of potential conflict. The underreported military buildup in the area where the Western Pacific meets the Indian Ocean means that it will likely be a hinge point for global war and peace for the foreseeable future. In Asia's Cauldron, Robert D. Kaplan offers up a vivid snapshot of the nations surrounding the South China Sea, the conflicts brewing in the region at the dawn of the twenty-first century, and their implications for global peace and stability.

73



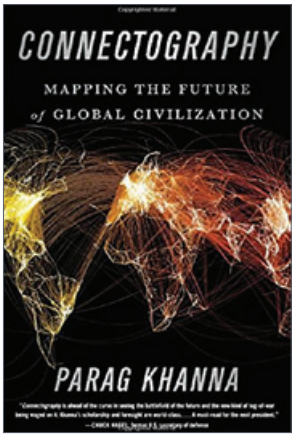
The Cleanest Race: How North Koreans See Themselves and Why It Matters

B.R. Myers, Melville House: 2011

★★★

Drawing on extensive research into the regime's domestic propaganda, including films, romance novels, and other artifacts of the personality cult, Myers analyzes each of the country's official myths in turn—from the notion of Koreans' unique moral purity to the myth of an America quaking in terror of "the Iron General." In a concise, but groundbreaking historical section, Myers also traces the origins of this official culture back to the Japanese fascist thought in which North Korea's first ideologues were schooled. What emerges is a regime completely unlike the West's perception of it. The implications for US foreign policy are as obvious as they are troubling.

74

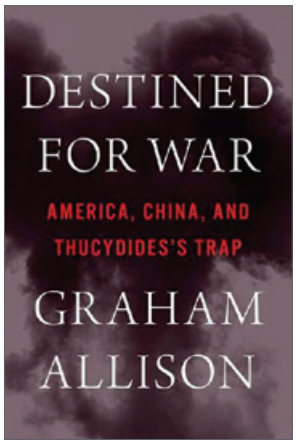


Connectography – Mapping the Future of Global Civilization

Parag Khanna, Random House: 2016

Connectivity is the most revolutionary force of the twenty-first century. Mankind is reengineering the planet, investing up to ten trillion dollars per year in transportation, energy, and communications infrastructure linking the world's burgeoning megacities together. Connectivity, not geography, is our destiny. In Connectography, Khanna shows how militaries are deployed to protect supply chains as much as borders, and how nations are less at war over territory than engaged in tugs-of-war over pipelines, railways, shipping lanes, and Internet cables. The new arms race is to connect to the most markets.

75



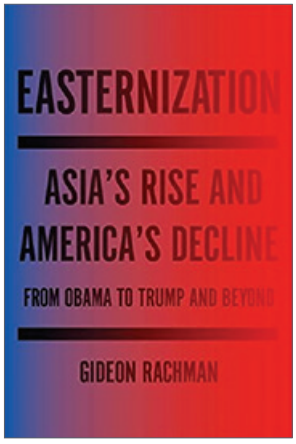
Destined for War: Can America and China Escape the Thucydides' Trap?

Graham Allison, Houghton Mifflin Harcourt: 2017

★★★

China and the United States are heading toward a war neither wants. The reason is Thucydides' Trap, a deadly pattern of structural stress that results when a rising power challenges a ruling one. Over the past 500 years, these conditions have occurred sixteen times and war broke out in twelve of them. Today, as an unstoppable China approaches an immovable America the seventeenth case looks grim. Unless China is willing to scale back its ambitions or Washington can accept becoming number two in the Pacific, a trade conflict, cyberattack, or accident at sea could soon escalate into all-out war. In Destined for War, Harvard scholar Graham Allison reveals how clashing powers have kept the peace in the past—and what painful steps the United States and China must take to avoid disaster today.

76

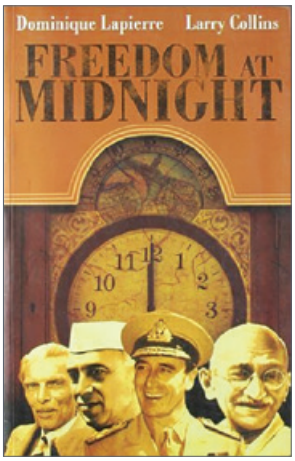


Easternization: Asia's Rise and America's Decline

Gideon Rachman, Other Press: 2017

Easternization is the defining trend of our age—the growing wealth of Asian nations is transforming the international balance of power. This shift to the East is shaping the lives of people all over the world, the fate of nations, and the great questions of war and peace. A troubled but rising China is now challenging America's supremacy, and the ambitions of other Asian powers—including Japan, North Korea, India, and Pakistan—have the potential to shake the whole world. Meanwhile the West is struggling with economic malaise and political populism, the Arab world is in turmoil, and Russia longs to reclaim its status as a great power. As it becomes clear that the West's historic power and influence is receding, Gideon Rachman offers a road map to the turbulent process that will define the international politics of the twenty-first century.

77

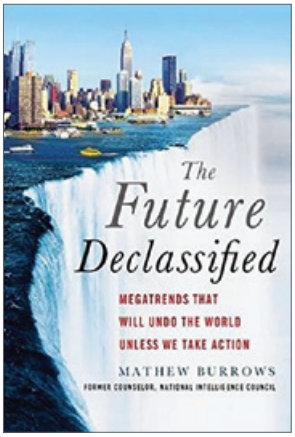


Freedom at Midnight

Dominique Lapierre and Larry Collins, Schand: 1975

Lapierre and Collins provide an account of the year leading to India's independence and the clashes that happened afterwards between Muslims and Hindus. With testimonies of those who witnessed and were involved with the country's historic changes, including the last viceroy Lord Louis Mountbatten, the reader gains insight into the decisions made by the political leaders who drove these changes. The authors walk through the challenges Gandhi, the first India Prime Minister Jawaharlal Nehru, and the founder of Pakistan Muhammad Ali Jinnah met as politics, religious differences, and ideologies clashed.

78

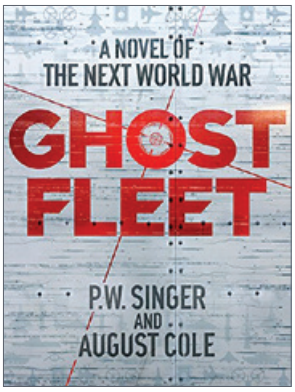


The Future, Declassified: Megatrends That Will Undo the World Unless We Take Action

Mathew Burrows, St. Martin's Press: 2014

Twenty-five years ago when Mathew Burrows went to work for the CIA as an intelligence analyst, the world seemed frozen. Then came the fall of the Berlin Wall and the implosion of the Soviet Union; suddenly, unpredictability became a universal theme and foresight was critical. For the past decade, Burrows has overseen the creation of the Global Trends report, and now he has expanded it into a full-length narrative—forecasting the tectonic shifts that will drive us to 2030. As Burrows argues, we are living through some of the greatest and most momentous developments in history. Either we take charge and direct those or we are at their mercy. The stakes are particularly high for America's standing in the world and for ordinary Americans who want to maintain their quality of life. Running the gamut from scary to reassuring, this riveting book is essential reading.

79



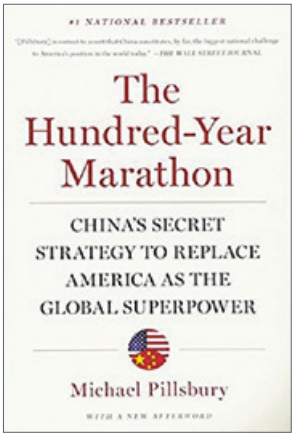
Ghost Fleet: A Novel of the Next World War

P.W. Singer and August Cole, First Mariner Books: 2015

★★★

The United States, China, and Russia eye each other across a twenty-first century version of the Cold War, which suddenly heats up at sea, on land, in the air, in outer space, and in cyberspace. The fighting involves everything; from stealthy robotic-style attack of drone strikes to old warships, from the Navy's "ghost fleet"; fighter pilots unleash a Pearl Harbor; American veterans become low-tech insurgents; teenage hackers battle in digital playgrounds; Silicon Valley billionaires mobilize for cyber-war; and a serial killer carries out her own vendetta. Ultimately, victory will depend on blending the lessons of the past with the weapons of the future.

80



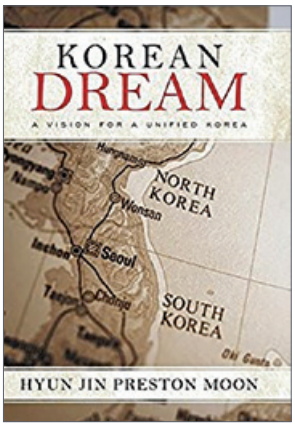
The Hundred-Year marathon: China's Secret Strategy to Replace America as the Global Superpower

Michael Pillsbury, Henry Holt and Company: 2016

★★★

For more than forty years, the United States has played an indispensable role helping the Chinese government build a booming economy, develop its scientific and military capabilities, and take its place on the world stage, in the belief that China's rise will bring us cooperation, diplomacy, and free trade. But what if the "China Dream" is to replace us, just as America replaced the British Empire, without firing a shot? Based on interviews with Chinese defectors and newly declassified, previously undisclosed national security documents, The Hundred-Year Marathon reveals China's secret strategy to supplant the United States as the world's dominant power, and to do so by 2049, the one-hundredth anniversary of the founding of the People's Republic.

81



Korean Dream: A Vision for a Unified Korea

Hyun Jin Preston Moon, Archway: 2016

★★★

North Korea today is a rogue state threatening global peace and challenging the conscience of humanity. In the South, Koreans now face long-term social consequences from the pursuit of economic development at all costs. In Korean Dream, Dr. Hyun Jin Preston Moon presents an innovative way forward on the Korean peninsula. He explains lucidly why Korean unification is the ultimate answer to security, economic, and social problems created through 70 years of division. He goes a step further, offering a groundbreaking approach to peace rooted in the founding principles and cultural practices that have made Koreans one people for millennia.

82

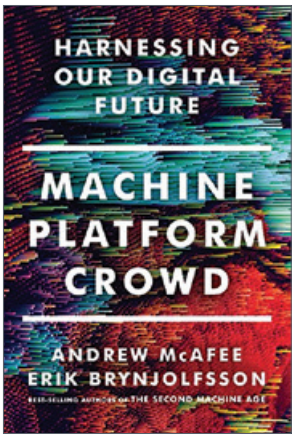
Lee Kuan Yew: The Grand Master's Insights on China, the United States, and the World

Graham Allison, Robert D. Blackwell, and Ali Wyne, The MIT Press: 2013

★★★

Almost single-handedly responsible for transforming Singapore into a Western-style economic success, Lee Kuan Yew offers a unique perspective on the geopolitics of East and West. This book gathers key insights from interviews, speeches, and Lee's voluminous published writings and presents them in an engaging question and answer format. Lee offers his assessment of China's future, asserting, among other things, "China will want to share this century as co-equals with the U.S." He affirms the United States' position as the world's sole superpower but expresses dismay at the vagaries of its political system. He offers strategic advice for dealing with China and discusses India's future, Islamic terrorism, and economic growth, among other topics. Lee does not pull punches, offering his unvarnished opinions on multiculturalism, the welfare state, education, and the free market.

83



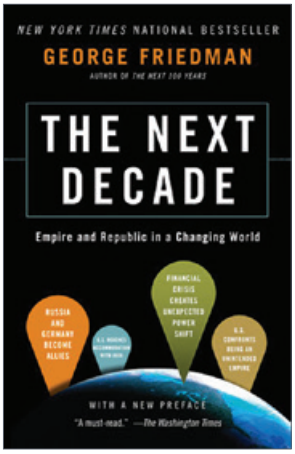
Machine, Platform, Crowd: Harnessing Our Digital Future

Andrew McAfee, W. W. Norton & Company: 2017

★★★

We live in strange times. A machine plays the strategy game Go better than any human; upstarts like Apple and Google destroy industry stalwarts such as Nokia; ideas from the crowd are repeatedly more innovative than corporate research labs. We must rethink the integration of minds and machines, of products and platforms, and of the core and the crowd. In all three cases, the balance now favors the second element of the pairings, with massive implications for how we run our companies and live our lives. Andrew McAfee and Erik Brynjolfsson deliver both a penetrating analysis of a new world and a toolkit for thriving in it. For startups and established businesses, or for anyone interested in what the future holds, Machine, Platform, Crowd is essential reading.

84



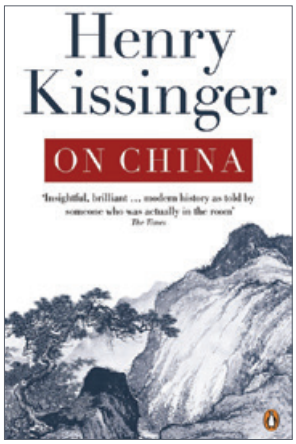
The Next Decade

George Friedman, Anchor: 2012

★★★

In the long view, history is seen as a series of events—but individuals and their actions determine the course of those events. During the next ten years, individual leaders will face significant transitions for their nations: the United States' relationships with Iran and Israel will be undergoing changes, China will likely confront a major crisis, and the wars in the Islamic world will subside. Unexpected energy and technology developments will emerge, and labor shortages will begin to matter more than financial crises. Distinguished geopolitical forecaster George Friedman analyzes these events from the perspectives of the men and women leading these global changes, focusing in particular on the American president, who will require extraordinary skills to shepherd the United States through this transitional period.

85



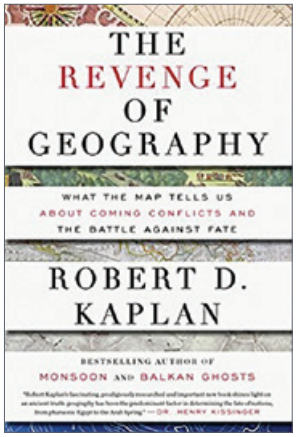
On China

Henry Kissinger, Penguin Books: 2012

★★★

In this sweeping and insightful history, Henry Kissinger turns for the first time at book length to a country he has known intimately for decades and whose modern relations with the West he helped shape. On China illuminates the inner workings of Chinese diplomacy during such pivotal events as the initial encounters between China and tight line modern European powers, the formation and breakdown of the Sino-Soviet alliance, the Korean War, and Richard Nixon's historic trip to Beijing. With a new final chapter on the emerging superpower's twenty-first-century role in global politics and economics, On China provides historical perspective on Chinese foreign affairs from one of the premier statesmen of our time.

86

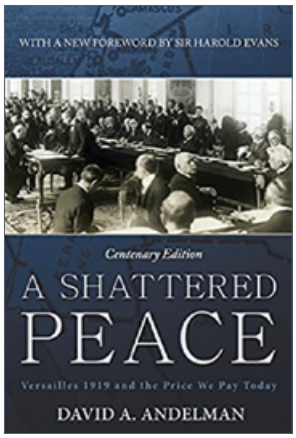


The Revenge of Geography: What the Map Tells Us About Coming Conflicts and the Battle Against Fate

Robert D. Kaplan, Random House: 2012

In The Revenge of Geography, Kaplan builds on the insights, discoveries, and theories of great geographers and geopolitical thinkers of the near and distant past to look back at critical pivots in history and then to look forward at the evolving global scene. Kaplan traces the history of the world's hot spots by examining their climates, topographies, and proximities to other embattled lands. Kaplan then applies the lessons learned to the present crises in Europe, Russia, China, the Indian subcontinent, Turkey, Iran, and the Arab Middle East. The result is a holistic interpretation of the next cycle of conflict throughout Eurasia. A brilliant rebuttal to thinkers who suggest that globalism will trump geography, this indispensable work shows how timeless truths and natural facts can help prevent this century's looming cataclysms.

87



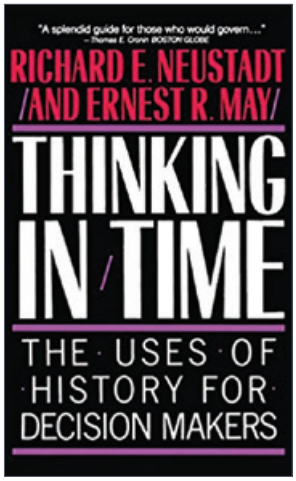
A Shattered Peace: Versailles 1919 and the Price We Pay Today

David A. Andelman, Wiley General Trade: 2014

★★★

For more than half a century, it has been widely recognized that the Treaty of Versailles, founded on retribution against Germany and the Austro-Hungarian Empire, created the circumstances that led inevitably to World War II. Less acknowledged and understood is the treaty's profound impact on many other parts of the world—an impact that echoes to this day across Asia, the Balkans, and throughout the Middle East. Andelman takes a fresh new look at the Treaty of Versailles as the point of origin for many of today's most critical international issues. This revealing history exposes the powerful lessons that a six-month period in a long ago era has for us today.

88

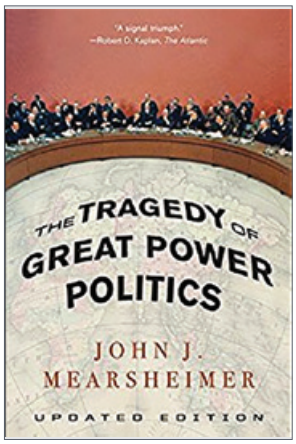


Thinking in Time: The Uses of History for Decision-Makers

Richard E. Neustadt and Ernest R. May, The Free Press: 1986

For generations Americans have described and deplored the ignorance of history displayed by policymakers or, what is worse, the misuse of historical analogies. Since the 1950s Professors Neustadt and May have been working individually through their writing and consulting on this subject; in the past decade they have been collaborators in a course at Harvard's John F. Kennedy School of Government focusing explicitly on "using history." This excellent book is a product of that course: case histories from both domestic and foreign policy areas and a set of precepts-what to ask about history and how to ask it. Professional historians, enjoying the luxury of unhurried reflection, might say that the book's "method" is no more than a systematic and common-sense statement of the obvious-but the authors demonstrate that the "obvious" has too often been ignored, with unfortunate results.

89



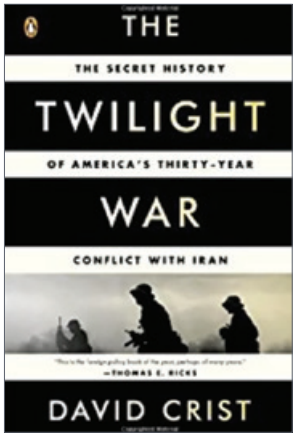
The Tragedy of Great Power Politics (Updated Edition)

John J. Mearsheimer, W.W. Norton & Company: 2001

★★★

The updated edition of this classic treatise on the behavior of great powers takes a penetrating look at the question likely to dominate international relations in the twenty-first century: can China rise peacefully? In clear, eloquent prose, Mearsheimer explains why the answer is no: a rising China will seek to dominate Asia, while the United States, determined to remain the world's sole regional hegemon, will go to great lengths to prevent that from happening. The tragedy of great power politics is inescapable.

90

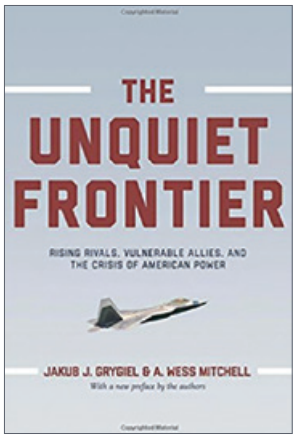


The Twilight War: The Secret History of America's Thirty-Year Conflict with Iran

David Crist, Penguin Press 2012

For three decades, the United States and Iran have engaged in a secret war—it is a conflict not acknowledged and a story not told. A senior historian for the federal government with unparalleled access to senior officials and key documents of several U.S. administrations, Crist has spent more than ten years researching and writing The Twilight War. He breaks new ground on virtually every page, and he reveals in vivid detail for the first time a number of important stories of military and intelligence operations by both sides, both successes and failures, and their typically unexpected consequences. The Twilight War adds vital new depth to our understanding of this acute dilemma. It is also a thrillingly engrossing read, animated by a healthy irony about human failings in the fog of not-quite war.

91



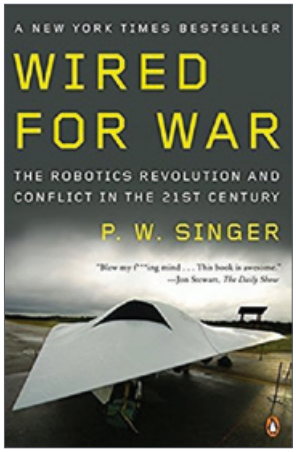
The Unquiet Frontier: Rising Rivals, Vulnerable Allies, and the Crisis of American Power

Jakub J. Grygiel, A. Wess Mitchell, Princeton University Press: 2016

★★★

From the Baltic to the South China Sea, newly assertive authoritarian states sense an opportunity to resurrect old empires or build new ones at America's expense. Hoping that U.S. decline is real, nations such as Russia, Iran, and China are testing Washington's resolve by targeting vulnerable allies at the frontiers of American power. The Unquiet Frontier explains why the United States needs a new grand strategy that uses strong frontier alliance networks to raise the costs of military aggression in the new century.

92



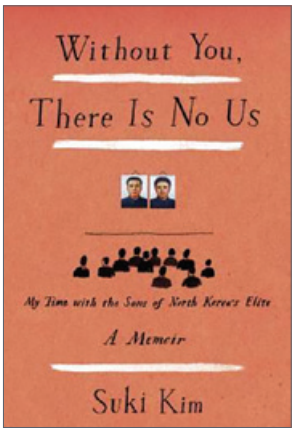
Wired for War: The Robotics Revolution and Conflict in the 21st Century

P.W. Singer, The Penguin Press: 2009

★★★

In Wired for War, P. W. Singer explores the greatest revolution in military affairs since the atom bomb: the dawn of robotic warfare. We are on the cusp of a massive shift in military technology that threatens to make real the stuff of I, Robot and The Terminator. Blending historical evidence with interviews of an amazing cast of characters, Singer shows how technology is changing not just how wars are fought, but also the politics, economics, laws, and the ethics that surround war itself. Travelling from the battlefields of Iraq and Afghanistan to modern-day "skunk works" in the midst of suburbia, Wired for War will tantalize a wide readership, from military buffs to policy wonks to gearheads.

93

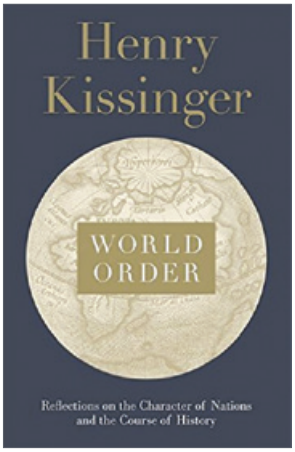


Without You, There Is No Us: My Time with the Sons of North Korea's

Suki Kim, Crown: 2014

It is 2011, and all universities in North Korea have been shut down for an entire year, the students sent to construction fields—except for the 270 students at the all-male Pyongyang University of Science and Technology (PUST), where Suki has gone undercover as a missionary and a teacher. As the weeks pass, she is mystified by how easily her students lie, unnerved by their obedience to the regime. At the same time, they offer Suki tantalizing glimpses of their private selves—their boyish enthusiasm, their eagerness to please, the flashes of curiosity that have not yet been extinguished. She in turn begins to hint at the existence of a world beyond their own—at such exotic activities as surfing the Internet or traveling freely and, more dangerously, at electoral democracy and other ideas forbidden in a country where defectors risk torture and execution. However, when Kim Jong-il dies and the boys she has come to love appear devastated, she wonders whether a bridge may form between the gulf of her world and theirs. Without You, There Is No Us offers a moving and incalculably rare glimpse of life in the world's most unknowable country, and at the privileged young men, she calls "soldiers and slaves."

94



World Order

Henry Kissinger, Penguin Books: 2015

Henry Kissinger offers, in World Order, a deep meditation on the roots of international harmony and global disorder. Kissinger reveals his analysis on the ultimate challenge for the twenty-first century: how to build a shared international order in a world of divergent historical perspectives, violent conflict, proliferating technology, and ideological extremism. Drawing on his experience as one of the foremost political leaders of the modern era, and his experience as national security advisor and secretary of state, World Order guides readers through crucial episodes in recent world history. Provocative and articulate, blending historical insight with geopolitical prognostication, World Order is a unique work that could come only from a lifelong policy maker and diplomat.

DEFENSE INTELLIGENCE AGENCY

COMMITTED TO EXCELLENCE IN DEFENSE OF THE NATION

Joint Publication 1-02

Department of Defense Dictionary of Military and Associated Terms

8 November 2010

(As Amended Through

15 February 2016)

PREFACE

1. Scope

The Joint Publication (JP) 1-02, *Department of Defense Dictionary of Military and Associated Terms,* sets forth standard US military and associated terminology to encompass the joint activity of the Armed Forces of the United States. These military and associated terms, together with their definitions, constitute approved Department of Defense (DOD) terminology for general use by all DOD components.

2. Purpose

This publication supplements standard English-language dictionaries and standardizes military and associated terminology to improve communication and mutual understanding within DOD, with other federal agencies, and among the United States and its allies.

3. Application

This publication applies to the Office of the Secretary of Defense, the Services, the Joint Staff, combatant commands, DOD agencies, and all other DOD components. It is the primary terminology source when preparing correspondence, to include policy, strategy, doctrine, and planning documents. Criteria for inclusion of terminology in JP 1-02 is enumerated in Department of Defense Instruction 5025.12, *Standardization of Military and Associated Terminology,* and Chairman of the Joint Chiefs of Staff Instruction (CJCSI) 5705.01, *Standardization of Military and Associated Terminology*.

4. Publication Format

This edition of JP 1-02 has been published in two basic parts:

a. Terms and definitions. These are annotated with the source publication.

b. Abbreviations and acronyms. The source publication establishes the authoritative context for proper understanding and management of the associated term.

5. JP 1-02 Online Availability and Update Schedule

JP 1-02 is accessible online as a searchable database and in PDF format at the following Internet address: http://www.dtic.mil/doctrine/dod_dictionary and at the following NIPRNET

address: https://jdeis.js.mil/jdeis/. The contents of JP 1-02 are updated on a monthly basis to include any terminology additions, modifications, or deletions made within the previous calendar month in accordance with CJCSI 5705.01.

For the Chairman of the Joint Chiefs of Staff:

WILLIAM E. GORTNEY
Vice Admiral, USN
Director, Joint Staff

TABLE OF CONTENTS

MAIN BODY 1

APPENDIX

A Abbreviations and Acronyms A-1

B Administrative Instructions B-1

Intentionally Blank

A

acceptability — The joint operation plan review criterion for assessing whether the contemplated course of action is proportional, worth the cost, consistent with the law of war; and is militarily and politically supportable. See also **adequacy; feasibility.** (JP 5-0)

access — In counterintelligence and intelligence use, a. a way or means of approach to identify a target; or b. exploitable proximity to or ability to approach an individual, facility, or information that enables target to carry out the intended mission. (JP 2-01.2)

access to classified information — The ability and opportunity to obtain knowledge of classified information by persons with the proper security clearance and a need to know of specified classified information. (JP 2-01)

accompanying supplies — Unit supplies that deploy with forces. (JP 4-01.5)

accountability — The obligation imposed by law or lawful order or regulation on an officer or other person for keeping accurate record of property, documents, or funds. (JP 1)

acoustic intelligence — Intelligence derived from the collection and processing of acoustic phenomena. Also called **ACINT.** (JP 2-0)

acquisition and cross-servicing agreement — Agreement, negotiated on a bilateral basis with United States allies or coalition partners, that allow United States forces to exchange most common types of support, including food, fuel, transportation, ammunition, and equipment. Also called **ACSA.** See also **cross-servicing.** (JP 4-08)

actionable intelligence — Intelligence information that is directly useful to customers for immediate exploitation without having to go through the full intelligence production process. (JP 2-01.2)

action phase — In amphibious operations, the period of time between the arrival of the landing forces of the amphibious force in the operational area and the accomplishment of their mission. See also **amphibious force; amphibious operation; landing force; mission.** (JP 3-02)

activation — Order to active duty (other than for training) in the federal service. See also **active duty; federal service.** (JP 4-05)

active air defense — Direct defensive action taken to destroy, nullify, or reduce the effectiveness of hostile air and missile threats against friendly forces and assets. See also **air defense.** (JP 3-01)

active defense — The employment of limited offensive action and counterattacks to deny a contested area or position to the enemy. See also **passive defense.** (JP 3-60)

active duty — Full-time duty in the active military service of the United States, including active duty or full-time training duty in the Reserve Component. Also called **AD.** See also **active duty for training; inactive duty training**. (JP 4-05)

active duty for special work — A tour of active duty for reserve personnel authorized from military and reserve personnel appropriations for work on active or reserve component programs. Also called **ADSW.** (JP 1-0)

active duty for training — A tour of active duty that is used for training members of the Reserve Component to provide trained units and qualified persons to fill the needs of the Armed Forces in time of war or national emergency and such other times as the national security requires. Also called **ADT.** (JP 4-05)

Active Guard and Reserve — National Guard and Reserve members who are on voluntary active duty providing full-time support to National Guard, Reserve, and Active Component organizations for the purpose of organizing, administering, recruiting, instructing, or training the Reserve Components. Also called **AGR.** (CJCSM 3150.13)

activity — 1. A unit, organization, or installation performing a function or mission. 2. A function, mission, action, or collection of actions. Also called **ACT.** (JP 3-0)

act of mercy — In personnel recovery, assistance rendered to evaders by an individual or elements of the local population who sympathize or empathize with the evaders' cause or plight. See also **evader; evasion; recovery; recovery operations.** (JP 3-50)

acute radiation dose — Total ionizing radiation dose received at one time and over a period so short that biological recovery cannot occur. (JP 3-11)

acute radiation syndrome — An acute illness caused by irradiation of the body by a high dose of penetrating radiation in a very short period of time. Also called **ARS.** (JP 3-11)

Adaptive Planning and Execution system — A Department of Defense system of joint policies, processes, procedures, and reporting structures, supported by communications and information technology, that is used by the joint planning and execution community to monitor, plan, and execute mobilization, deployment, employment, sustainment, redeployment, and demobilization activities associated with joint operations. Also called **APEX system.** (JP 5-0)

adequacy — The joint operation plan review criterion for assessing whether the scope and concept of planned operations can accomplish the assigned mission and comply with the planning guidance provided. See also **acceptability; feasibility.** (JP 5-0)

administrative chain of command — One of the two branches of the chain of command described in Joint Publication 1, *Doctrine for the Armed Forces of the United States*, through which command is exercised from the President through the Secretary of Defense to the Secretaries of the Military Departments, and from which forces are

assigned to combatant commands to compose the operational command structure baseline. (DODI 8260.03)

administrative command structure — The organizational hierarchy through which administrative leadership is exercised, as contrasted by the operational command structure through which operational authority is exercised. (DODI 8260.03)

administrative contracting officer — Contracting officer whose primary duties involve contract administration. Also called **ACO.** See also **contracting officer; procuring contracting officer.** (JP 4-10)

administrative control — Direction or exercise of authority over subordinate or other organizations in respect to administration and support. Also called **ADCON.** (JP 1)

administrative loading — A loading method that gives primary consideration to achieving maximum utilization of troop and cargo space without regard to tactical considerations. Also called **commercial loading.** (JP 3-02.1)

advanced force operations — Operations conducted to refine the location of specific, identified targets and further develop the operational environment for near-term missions. Also called **AFO.** (JP 3-05

advance guard — Detachment sent ahead of the main force to ensure its uninterrupted advance; to protect the main body against surprise; to facilitate the advance by removing obstacles and repairing roads and bridges; and to cover the deployment of the main body if it is committed to action. (JP 3-07.2)

adversary — A party acknowledged as potentially hostile to a friendly party and against which the use of force may be envisaged. (JP 3-0)

adversary template — A model based on an adversary's known or postulated preferred methods of operation illustrating the disposition and activity of adversary forces and assets conducting a particular operation unconstrained by the impact of the operational environment. (JP 2-01.3)

Aegis — A ship-based combat system that can detect, track, target, and engage air, surface, and subsurface threats, including ballistic missiles on some modified ships. (JP 3-01)

aerial port — An airfield that has been designated for the sustained air movement of personnel and materiel as well as an authorized port for entrance into or departure from the country where located. Also called **APORT.** See also **port of debarkation; port of embarkation**. (JP 3-17)

aeromedical evacuation — The movement of patients under medical supervision to and between medical treatment facilities by air transportation. Also called **AE.** (JP 4-02)

aeromedical evacuation control team — A core team assigned to a component-numbered air force air operations center air mobility division that provides operational planning, scheduling, and execution of theater aeromedical evacuation missions and positioning of aeromedical evacuation ground forces. Also called **AECT.** See also **aeromedical evacuation; air mobility division.** (JP 3-17)

aeromedical evacuation unit — An operational medical organization concerned primarily with the management and control of patients being transported via an aeromedical evacuation system or system echelon. (JP 4-02)

aeronautical chart — A specialized representation of mapped features of the Earth, or some part of it, produced to show selected terrain, cultural and hydrographic features, and supplemental information required for air navigation, pilotage, or for planning air operations. (JP 2-03)

aerospace defense — 1. All defensive measures designed to destroy or nullify attacking enemy aircraft and missiles and also negate hostile space systems. 2. An inclusive term encompassing air defense, ballistic missile defense, and space defense. See also **air defense**; **space defense.** (JP 3-27)

afloat pre-positioning force — Shipping maintained in full operational status to afloat pre-position military equipment and supplies in support of combatant commanders' operation plans, consisting of the three maritime pre-positioning ships squadrons, the Army's afloat pre-positioning stocks-3 ships, and the Defense Logistics Agency, and the Air Force ships. Also called **APF.** See also **maritime pre-positioning ships.** (JP 4-01.2)

afloat pre-positioning operations — Pre-positioning of ships, preloaded with equipment and supplies that provides for an alternative to land-based programs. Also called **APO**. See also **operation.** (JP 4-01.6)

agency — In intelligence usage, an organization or individual engaged in collecting and/or processing information. Also called **collection agency.** See also **agent**; **intelligence process**; **source.** (JP 2-01)

agent — In intelligence usage, one who is authorized or instructed to obtain or to assist in obtaining information for intelligence or counterintelligence purposes. (JP 2-01.2)

aimpoint — 1. A point associated with a target and assigned for a specific weapon impact. 2. A prominent radar-significant feature used to assist an aircrew in navigating and delivering their weapons. See also **desired point of impact.** (JP 3-60)

air and missile defense — Direct [active and passive] defensive actions taken to destroy, nullify, or reduce the effectiveness of hostile air and ballistic missile threats against friendly forces and assets. Also called **AMD.** (JP 3-01)

air apportionment — The determination and assignment of the total expected effort by percentage and/or by priority that should be devoted to the various air operations for a given period of time. (JP 3-0)

air assault — The movement of friendly assault forces by rotary-wing aircraft to engage and destroy enemy forces or to seize and hold key terrain. See also **assault.** (JP 3-18)

air assault force — A force composed primarily of ground and rotary-wing air units organized, equipped, and trained for air assault operations. (JP 3-18)

air assault operation — An operation in which assault forces, using the mobility of rotary-wing assets and the total integration of available firepower, maneuver under the control of a ground or air maneuver commander to engage enemy forces or to seize and hold key terrain. (JP 3-18)

airborne — 1. In relation to personnel, troops especially trained to effect, following transport by air, an assault debarkation, either by parachuting or touchdown. 2. In relation to equipment, pieces of equipment that have been especially designed for use by airborne troops during or after an assault debarkation as well as some aeronautical equipment used to accomplish a particular mission. 3. When applied to materiel, items that form an integral part of the aircraft. 4. The state of an aircraft, from the instant it becomes entirely sustained by air until it ceases to be so sustained. Also called **ABN.** (JP 3-17)

airborne alert — A state of aircraft readiness wherein combat-equipped aircraft are airborne and ready for immediate action to reduce reaction time and to increase survivability. See also **combat air patrol; ground alert.** (JP 3-01)

airborne assault — The use of airborne forces to parachute into an objective area to attack and eliminate armed resistance and secure designated objectives. (JP 3-18)

airborne early warning — The detection of enemy air or surface units by radar or other equipment carried in an airborne vehicle, and the transmitting of a warning to friendly units. Also called **AEW**. (JP 3-52)

airborne mission coordinator — The designated individual that serves as an airborne extension of the component commander or supported commander responsible for the personnel recovery mission. Also called **AMC.** See also **combat search and rescue; personnel recovery coordination cell.** (JP 3-50)

airborne operation — An operation involving the air movement into an objective area of combat forces and their logistic support for execution of a tactical, operational**,** or strategic mission. See also **assault; assault phase.** (JP 3-18)

air-breathing missile — A missile with an engine requiring the intake of air for combustion of its fuel, as in a ramjet or turbojet. (JP 3-01)

air-capable ship — A ship other than an aircraft carrier, nuclear; amphibious assault ship (general purpose); or amphibious assault ship (multipurpose) from which aircraft can take off, be recovered, or routinely receive and transfer logistic support. Also called **ACS.** (JP 3-04)

air corridor — A restricted air route of travel specified for use by friendly aircraft and established for the purpose of preventing friendly aircraft from being fired on by friendly forces. (JP 3-52)

aircraft carrier — A warship designed to support and operate aircraft, engage in attacks on targets afloat or ashore, and engage in sustained operations in support of other forces. Also called **CV or CVN.** (JP 3-32)

air defense — Defensive measures designed to destroy attacking enemy aircraft or missiles in the atmosphere, or to nullify or reduce the effectiveness of such attack. Also called **AD.** See also **active air defense; aerospace defense; passive air defense.** (JP 3-01)

air defense area — 1. **overseas** — A specifically defined airspace for which air defense must be planned and provided. 2. **United States** — Airspace of defined dimensions designated by the appropriate agency within which the ready control of airborne vehicles is required in the interest of national security during an air defense emergency. (JP 3-01)

air defense artillery — Weapons and equipment for actively combating air targets from the ground. Also called **ADA.** (JP 3-01)

air defense identification zone — Airspace of defined dimensions within which the ready identification, location, and control of airborne vehicles are required. Also called **ADIZ.** (JP 3-52)

air defense region — A geographical subdivision of an air defense area. (JP 3-01)

air defense sector — A geographical subdivision of an air defense region. (JP 3-01)

air defense warning condition — An air defense warning given in the form of a color code corresponding to the degree of air raid probability with yellow standing for when an attack by hostile aircraft or missiles is probable; red for when an attack by hostile aircraft or missiles is imminent or is in progress; and white for when an attack by hostile aircraft or missiles is improbable. Also called **ADWC.** (JP 3-01)

air domain — The atmosphere, beginning at the Earth's surface, extending to the altitude where its effects upon operations become negligible. (JP 3-30)

airdrop — The unloading of personnel or materiel from aircraft in flight. See also **air movement; free drop; free fall; high velocity drop; low velocity drop.** (JP 3-17)

air expeditionary task force — A deployed numbered air force or command echelon immediately subordinate to a numbered air force provided as the United States Air Force component command committed to a joint operation. Also called **AETF.** (JP 3-30)

airfield — An area prepared for the accommodation (including any buildings, installations, and equipment), landing, and takeoff of aircraft. See also **departure airfield; landing area; landing site.** (JP 3-17)

Air Force special operations air component — The Air Force component of a joint special operations force, normally composed of a special operations wing, special operations group, or squadron, and element of an Air Force special tactics personnel. Also called **AFSOAC**. (JP 3-05)

Air Force special operations air detachment — A squadron-size headquarters that could be a composite organization composed of different Air Force special operations assets, normally subordinate to an Air Force special operations air component, joint special operations air component, joint special operations task force, or a joint task force. Also called **AFSOAD.** (JP 3-05)

Air Force special operations forces — Those Active and Reserve Component Air Force forces designated by the Secretary of Defense that are specifically organized, trained, and equipped to conduct and support special operations. Also called **AFSOF.** (JP 3-05)

airhead — 1. A designated area in a hostile or potentially hostile operational area that, when seized and held, ensures the continuous air landing of troops and materiel and provides the maneuver space necessary for projected operations. Also called **a lodgment area**. (JP 3-18) 2. A designated location in an operational area used as a base for supply and evacuation by air. See also **beachhead.** (JP 3-17)

airhead line — A line denoting the limits of the objective area for an airborne assault. See also **airhead; assault phase; objective area.** (JP 3-18)

air interdiction — Air operations conducted to divert, disrupt, delay, or destroy the enemy's military surface capabilities before it can be brought to bear effectively against friendly forces, or to otherwise achieve objectives that are conducted at such distances from friendly forces that detailed integration of each air mission with the fire and movement of friendly forces is not required. (JP 3-03)

airland — Move by air and disembark, or unload, after the aircraft has landed or while an aircraft is hovering. See also **air movement.** (JP 3-17)

air land operation — An operation involving movement by air with a designated destination for further ground deployment of units and personnel and/or further ground distribution of supplies. See also **airland.** (JP 3-17)

air liaison officer — The senior tactical air control party member attached to a ground unit who functions as the primary advisor to the ground commander on air power. Also called **ALO.** See also **liaison.** (JP 3-09.3)

airlift capability — The total capacity expressed in terms of number of passengers and/or weight/cubic displacement of cargo that can be carried at any one time to a given destination by available airlift. See also **airlift requirement.** (JP 3-17)

airlift control team — A core team within the joint air operations center with intratheater airlift functional expertise to plan, coordinate, manage, and execute intratheater airlift operations in support of the joint force air component commander. Also called **ALCT.** See also **air operations center; air mobility division; intratheater airlift.** (JP 3-17)

airlift mission commander — A commander designated when airlift aircraft are participating in airlift operations specified in the implementing directive. See also **joint force air component commander.** (JP 3-17)

airlift requirement — The total number of passengers and/or weight/cubic displacement of cargo required to be carried by air for a specific task. See also **airlift capability.** (JP 3-17)

air mobility — The rapid movement of personnel, materiel and forces to and from or within a theater by air. See also **air refueling.** (JP 3-17)

Air Mobility Command — The Air Force component command of the United States Transportation Command. Also called **AMC.** (JP 3-17)

air mobility control team — A core team within the joint air operations center that directs or redirects air mobility forces in response to requirements changes, higher priorities, or immediate execution requirements. Also called **AMCT.** See also **air operations center; air mobility; air mobility division.** (JP 3-17)

air mobility division — Located in the joint air operations center to plan, coordinate, task, and execute the air mobility mission consisting of the air mobility control team, airlift control team, air refueling control team, and aeromedical evacuation control team. Also called **AMD.** See also **air mobility; joint air operations center.** (JP 3-17)

air mobility liaison officer — A rated United States Air Force mobility air forces officer selected, trained, and equipped to assess, train, advise, and assist with mobility air forces and ground force integration for air movement and sustainment. Also called **AMLO.** (JP 3-17)

air movement — Air transport of units, personnel, supplies, and equipment including airdrops and air landings. See also **airdrop; airland.** (JP 3-17)

air operations center — The senior agency of the Air Force component commander that provides command and control of Air Force air and space operations and coordinates with other components and Services. Also called **AOC.** (JP 3-30)

air refueling — The refueling of an aircraft in flight by another aircraft. Also called **AR.** (JP 3-17)

air refueling control team — A core team within the joint air operations center that coordinates aerial refueling to support combat air operations or to support a strategic airbridge. Also called **ARCT.** See also **air operations center; air mobility division; air refueling.** (JP 3-17)

air route — The navigable airspace between two points, identified to the extent necessary for the application of flight rules. (JP 3-52)

air sovereignty — A nation's inherent right to exercise absolute control and authority over the airspace above its territory. (JP 3-27)

airspace control — Capabilities and procedures used to increase operational effectiveness by promoting the safe, efficient, and flexible use of airspace. (JP 3-52)

airspace control area — Airspace that is laterally defined by the boundaries of the operational area, and may be subdivided into airspace control sectors. (JP 3-01)

airspace control authority — The commander designated to assume overall responsibility for the operation of the airspace control system in the airspace control area. Also called **ACA.** See also **airspace control; airspace control area; airspace control system; control; operation.** (JP 3-52)

airspace control order — An order implementing the airspace control plan that provides the details of the approved requests for airspace coordinating measures. Also called **ACO.** (JP 3-52)

airspace control plan — The document approved by the joint force commander that provides specific planning guidance and procedures for the airspace control system for the joint force operational area. Also called **ACP.** See also **airspace control system; joint force commander.** (JP 3-52)

airspace control procedures — Rules, mechanisms, and directions that facilitate the control and use of airspace of specified dimensions. See also **airspace control authority; airspace control order; airspace control plan.** (JP 3-52)

airspace control system — An arrangement of those organizations, personnel, policies, procedures, and facilities required to perform airspace control functions. Also called **ACS.** (JP 3-52)

airspace coordinating measures — Measures employed to facilitate the efficient use of airspace to accomplish missions and simultaneously provide safeguards for friendly forces. Also called **ACMs.** See also **airspace control area; airspace coordination area; high-density airspace control zone; weapons engagement zone.** (JP 3-52)

airspace coordination area — A three-dimensional block of airspace in a target area, established by the appropriate commander, in which friendly aircraft are reasonably safe from friendly surface fires. Also called **ACA.** (JP 3-09.3)

airspace management — The coordination, integration, and regulation of the use of airspace of defined dimensions. (JP 3-52)

air superiority — That degree of dominance in the air battle by one force that permits the conduct of its operations at a given time and place without prohibitive interference from air and missile threats. (JP 3-01)

air support coordination section — In amphibious operations, the section of the Navy tactical air control center designated to coordinate, control, and integrate all direct support aircraft and assault support operations. Also called **ASCS**. (JP 3-02)

air support operations center — The principal air control agency of the theater air control system responsible for the direction and control of air operations directly supporting the ground combat element. Also called **ASOC.** See also **close air support; operation; tactical air control center.** (JP 3-09.3)

air support request — A means to request preplanned and immediate close air support, air interdiction, air reconnaissance, surveillance, escort, helicopter airlift, and other aircraft missions. Also called **AIRSUPREQ.** (JP 3-30)

air supremacy — That degree of air superiority wherein the opposing force is incapable of effective interference within the operational area using air and missile threats. (JP 3-01)

air tasking order — A method used to task and disseminate to components, subordinate units, and command and control agencies projected sorties, capabilities and/or forces to targets and specific missions. Also called **ATO.** (JP 3-30)

air terminal — A facility on an airfield that functions as an air transportation hub and accommodates the loading and unloading of airlift aircraft and the intransit processing of traffic. (JP 3-17)

air traffic control section — In amphibious operations, the section of the Navy tactical air control center designed to provide initial safe passage, radar control, and surveillance for close air support aircraft in the operational area. Also called **ATCS**. (JP 3-02)

alert order — 1. A crisis action planning directive from the Secretary of Defense, issued by the Chairman of the Joint Chiefs of Staff, that provides essential guidance for planning

and directs the initiation of execution planning for the selected course of action authorized by the Secretary of Defense. 2. A planning directive that provides essential planning guidance, directs the initiation of execution planning after the directing authority approves a military course of action, but does not authorize execution. Also called **ALERTORD.** See also **course of action; execution planning.** (JP 5-0)

alliance — The relationship that results from a formal agreement between two or more nations for broad, long-term objectives that further the common interests of the members. See also **coalition; multinational.** (JP 3-0)

allocation —Distribution of limited forces and resources for employment among competing requirements. See also **apportionment.** (JP 5-0)

allocation request — A daily message that provides an estimate of the total air effort, to identify any excess and joint force general support aircraft sorties, and to identify unfilled air requirements for preplanned missions. Also called **ALLOREQ.** (JP 3-30)

allowable cabin load — The maximum payload that can be carried on an individual sortie. Also called **ACL.** (JP 3-17)

all-source intelligence — 1. Intelligence products and/or organizations and activities that incorporate all sources of information in the production of finished intelligence. 2. In intelligence collection, a phrase that indicates that in the satisfaction of intelligence requirements, all collection, processing, exploitation, and reporting systems and resources are identified for possible use and those most capable are tasked. See also **intelligence.** (JP 2-0)

ammunition lot — A quantity of homogeneous ammunition, identified by a unique lot number, which is manufactured, assembled, or renovated by one producer under uniform conditions and which is expected to function in a uniform manner. (JP 3-04)

amphibian — A small craft, propelled by propellers and wheels or by air cushions for the purpose of moving on both land and water. (JP 4-01.6)

amphibious advance force — A temporary support force assigned to the amphibious force that conducts shaping operations in the amphibious objective area or operational area prior to the arrival of the amphibious force. (JP 3-02)

amphibious air traffic control center — The centralized air traffic control agency on an amphibious warfare ship responsible for operational control of aircraft departing from and recovering on the ship and tactical control of airborne helicopters in support of amphibious assaults. Also called **AATCC.** (JP 3-02)

amphibious assault — A type of amphibious operation that involves establishing a force on a hostile or potentially hostile shore. See also **assault; assault phase.** (JP 3-02)

amphibious assault vehicle launching area — An area, in the vicinity of and to seaward of the line of departure, to which landing ships proceed and launch amphibious assault vehicles. (JP 3-02)

amphibious breaching — The conduct of a deliberate breaching operation specifically designed to overcome antilanding defenses in order to conduct an amphibious assault. (JP 3-02)

amphibious bulk liquid transfer system — Hosereel system providing capability to deliver fuel and/or water from ship to shore. Also called **ABLTS.** (JP 4-01.6)

amphibious construction battalion — A permanently commissioned naval unit, subordinate to the commander, naval beach group, designed to provide an administrative unit from which personnel and equipment are formed in tactical elements and made available to appropriate commanders to operate causeways, transfer barges, warping tugs, and assault bulk fuel systems, and to meet salvage requirements of the naval beach party. Also called **PHIBCB.** (JP 3-02)

amphibious defense zone — The area encompassing the amphibious objective area and the adjoining airspace required by accompanying naval forces for the purpose of air defense. Also called an **ADZ**. (JP 3-02)

amphibious demonstration — A type of amphibious operation conducted for the purpose of deceiving the enemy by a show of force with the expectation of deluding the enemy into following an unfavorable course of action. (JP 3-02)

amphibious force — An amphibious task force and a landing force together with other forces that are trained, organized, and equipped for amphibious operations. Also called **AF.** See also **amphibious operation; amphibious task force; landing force.** (JP 3-02)

amphibious objective area — A geographical area of sufficient size for conducting necessary sea, air, and land operations, and within which is located the objective(s) to be secured by the amphibious force. Also called **AOA.** See also **amphibious force; mission.** (JP 3-02)

amphibious operation — A military operation launched from the sea by an amphibious force to conduct landing force operations within the littorals. Also called **PHIBOP**. See also **amphibious force; landing force; mission; operation.** (JP 3-02)

amphibious raid — A type of amphibious operation involving swift incursion into or temporary occupation of an objective followed by a planned withdrawal. See also **amphibious operation.** (JP 3-02)

amphibious squadron — A tactical and administrative organization composed of amphibious warfare ships used to transport troops and their equipment for an amphibious operation. Also called **PHIBRON.** (JP 3-02)

amphibious task force — A Navy task organization formed to conduct amphibious operations. Also called **ATF.** See also **amphibious force; amphibious operation; landing force.** (JP 3-02)

amphibious vehicle — A wheeled or tracked vehicle capable of operating on both land and water. See also **landing craft.** (JP 3-02)

amphibious vehicle availability table — A tabulation of the type and number of amphibious vehicles available primarily for assault landings and for support of other elements of the operation. (JP 3-02)

amphibious vehicle employment plan — A plan showing in tabular form the planned employment of amphibious vehicles in landing operations, including their employment after the initial movement to the beach. (JP 3-02)

amphibious warfare ship — A combatant ship having organic capability to embark, land, and support landing forces in amphibious operations and which has characteristics enabling long duration operations on the high seas. (JP 3-02)

amphibious withdrawal — A type of amphibious operation involving the extraction of forces by sea in ships or craft from a hostile or potentially hostile shore. See also **amphibious operation.** (JP 3-02)

analysis and production — In intelligence usage, the conversion of processed information into intelligence through the integration, evaluation, analysis, and interpretation of all source data and the preparation of intelligence products in support of known or anticipated user requirements. See also **intelligence process.** (JP 2-01)

antemortem data — Medical records, samples, and photographs taken prior to death. These include (but are not limited to) fingerprints, dental x-rays, body tissue samples, photographs of tattoos, or other identifying marks. These "pre-death" records would be compared against records completed after death to help establish a positive identification of human remains. See also **mortuary affairs.** (JP 4-06)

Antideficiency Act violations — The incurring of obligations or the making of expenditure (outlays) in violation of appropriation law as to purpose, time, and amounts as specified in the defense appropriation or appropriations of funds. (JP 1-06)

antiradiation missile — A missile which homes passively on a radiation source. Also called **ARM.** See also **guided missile.** (JP 3-01)

antisubmarine warfare — Operations conducted with the intention of denying the enemy the effective use of submarines. Also called **ASW.** (JP 3-32)

antiterrorism — Defensive measures used to reduce the vulnerability of individuals and property to terrorist acts, to include rapid containment by local military and civilian forces. Also called **AT.** See also **counterterrorism; terrorism.** (JP 3-07.2)

anti-vehicle land mine — A mine designed to immobilize or destroy a vehicle. Also called **AVL**. (JP 3-15)

application — 1. The system or problem to which a computer is applied. 2. In the intelligence context, the direct extraction and tailoring of information from an existing foundation of intelligence and near real time reporting. (JP 2-0)

apportionment — In the general sense, distribution of forces and capabilities as the starting point for planning, etc. See also **allocation.** (JP 5-0)

approach schedule — In amphibious operations, this schedule indicates, for each scheduled wave, the time of departure from the rendezvous area, from the line of departure, and from other control points and the time of arrival at the beach. (JP 3-02)

apron — A defined area on an airfield intended to accommodate aircraft for purposes of loading or unloading passengers or cargo, refueling, parking, or maintenance. (JP 3-34)

area air defense commander — The component commander with the preponderance of air defense capability and the required command, control, and communications capabilities who is assigned by the joint force commander to plan and execute integrated air defense operations. Also called **AADC.** (JP 3-01)

area command — A command that is composed of elements of one or more of the Services, organized and placed under a single commander and designated to operate in a specific geographical area. See also **command.** (JP 3-10)

area damage control — Measures taken before, during, or after hostile action or natural or manmade disasters, to reduce the probability of damage and minimize its effects. Also called **ADC.** (JP 3-10)

area of influence — A geographical area wherein a commander is directly capable of influencing operations by maneuver or fire support systems normally under the commander's command or control. (JP 3-0)

area of interest — That area of concern to the commander, including the area of influence, areas adjacent thereto, and extending into enemy territory. This area also includes areas occupied by enemy forces who could jeopardize the accomplishment of the mission. Also called **AOI.** See also **area of influence.** (JP 3-0)

area of operations — An operational area defined by the joint force commander for land and maritime forces that should be large enough to accomplish their missions and protect

their forces. Also called **AO.** See also **area of responsibility; joint operations area; joint special operations area.** (JP 3-0)

area of responsibility — The geographical area associated with a combatant command within which a geographic combatant commander has authority to plan and conduct operations. Also called **AOR.** See also **combatant command.** (JP 1)

area search — Visual reconnaissance of limited or defined areas. (JP 3-50)

Armed Forces of the United States — A term used to denote collectively all components of the Army, Marine Corps, Navy, Air Force, and Coast Guard (when mobilized under Title 10, United States Code, to augment the Navy). See also **United States Armed Forces.** (JP 1)

arming — As applied to explosives, weapons, and ammunition, the changing from a safe condition to a state of readiness for initiation. (JP 3-15)

arms control agreement — The written or unwritten embodiment of the acceptance of one or more arms control measures by two or more nations. (JP 2-01)

Army air-ground system — The Army system which provides for interface between Army and tactical air support agencies of other Services in the planning, evaluating, processing, and coordinating of air support requirements and operations. Also called **AAGS.** (JP 3-09.3)

Army corps — An intermediate headquarters between divisions and the theater army consisting of two or more divisions together with supporting brigades. (JP 3-31)

Army Service component command — Command responsible for recommendations to the joint force commander on the allocation and employment of Army forces within a combatant command. Also called **ASCC.** (JP 3-31)

Army special operations forces — Those Active and Reserve Component Army forces designated by the Secretary of Defense that are specifically organized, trained, and equipped to conduct and support special operations. Also called **ARSOF.** (JP 3-05)

Army support area — The specific support area for a theater Army that is outside of a division or corps's operational area established primarily for the positioning, employment, and protection of theater support units; and where the majority of the sustaining operations occur. (JP 3-31)

arrival zone — In counterdrug operations, the area in or adjacent to the United States where smuggling concludes and domestic distribution begins (by air, an airstrip; by sea, an offload point on land, or transfer to small boats). See also **transit zone.** (JP 3-07.4)

ascent phase — That portion of the flight of a ballistic missile or space vehicle that begins after powered flight and ends just prior to apogee. (JP 3-01)

assault — 1. In an amphibious operation, the period of time between the arrival of the major assault forces of the amphibious task force in the objective area and the accomplishment of the amphibious task force mission. (JP 3-02) 2. To make a short, violent, but well-ordered attack against a local objective, such as a gun emplacement, a fort, or a machine gun nest. (JP 3-18) 3. A phase of an airborne operation beginning with delivery by air of the assault echelon of the force into the objective area and extending through attack of assault objectives and consolidation of the initial airhead. See also **assault phase.** (JP 3-18)

assault breaching — A part of amphibious breaching in support of an amphibious assault involving a fire support mission using precision guided munitions to neutralize mines and obstacles in the surf zone and on the beach. (JP 3-02)

assault craft unit — A permanently commissioned naval organization, subordinate to the commander, naval beach group, that contains landing craft and crews necessary to provide lighterage required in an amphibious operation. Also called **ACU.** (JP 3-02)

assault echelon — In amphibious operations, the element of a force comprised of tailored units and aircraft assigned to conduct the initial assault on the operational area. Also called **AE.** See also **amphibious operation.** (JP 3-02)

assault follow-on echelon — In amphibious operations, that echelon of the assault troops, vehicles, aircraft, equipment, and supplies that, though not needed to initiate the assault, is required to support and sustain the assault. Also called **AFOE.** (JP 3-02)

assault phase — In an airborne operation, a phase beginning with delivery by air of the assault echelon of the force into the objective area and extending through attack of assault objectives and consolidation of the initial airhead. See also **assault.** (JP 3-18)

assault schedule — In amphibious operations, this schedule provides the formation, composition, and timing of waves landing over the beach. (JP 3-02)

assessment — 1. A continuous process that measures the overall effectiveness of employing joint force capabilities during military operations. 2. Determination of the progress toward accomplishing a task, creating a condition, or achieving an objective. 3. Analysis of the security, effectiveness, and potential of an existing or planned intelligence activity. 4. Judgment of the motives, qualifications, and characteristics of present or prospective employees or "agents." (JP 3-0)

assessment agent — The organization responsible for conducting an assessment of an approved joint publication. Also called **AA.** (CJCSM 5120.01)

asset validation — In intelligence use, the process used to determine the asset authenticity, reliability, utility, suitability, and degree of control the case officer or others have. (JP 2-01.2)

asset visibility — Provides users with information on the location, movement, status, and identity of units, personnel, equipment, and supplies, which facilitates the capability to act upon that information to improve overall performance of the Department of Defense's logistics practices. Also called **AV.** (JP 3-35)

assign — 1. To place units or personnel in an organization where such placement is relatively permanent, and/or where such organization controls and administers the units or personnel for the primary function, or greater portion of the functions, of the unit or personnel. 2. To detail individuals to specific duties or functions where such duties or functions are primary and/or relatively permanent. See also **attach.** (JP 3-0)

assumption — A supposition on the current situation or a presupposition on the future course of events, either or both assumed to be true in the absence of positive proof, necessary to enable the commander in the process of planning to complete an estimate of the situation and make a decision on the course of action. (JP 5-0)

asymmetric — In military operations the application of dissimilar strategies, tactics, capabilities, and methods to circumvent or negate an opponent's strengths while exploiting his weaknesses. (JP 3-15.1)

atmospheric environment — The envelope of air surrounding the Earth, including its interfaces and interactions with the Earth's solid or liquid surface. (JP 3-59)

attach — 1. The placement of units or personnel in an organization where such placement is relatively temporary. 2. The detailing of individuals to specific functions where such functions are secondary or relatively temporary. See also **assign.** (JP 3-0)

attack assessment — An evaluation of information to determine the potential or actual nature and objectives of an attack for the purpose of providing information for timely decisions. See also **damage estimation.** (JP 3-14)

attack group — A subordinate task organization of the Navy forces of an amphibious task force composed of amphibious warfare ships and supporting naval units designated to transport, protect, land, and initially support a landing group. (JP 3-02)

attack heading — 1. The interceptor heading during the attack phase that will achieve the desired track-crossing angle. 2. The assigned magnetic compass heading to be flown by aircraft during the delivery phase of an air strike. (JP 3-09.3)

attack position — The last position occupied by the assault echelon before crossing the line of departure. (JP 3-09.3)

attack the network operations — Lethal and nonlethal actions and operations against networks conducted continuously and simultaneously at multiple levels (tactical, operational, and strategic) that capitalize on or create key vulnerabilities and disrupt activities to eliminate the enemy's ability to function in order to enable success of the operation or campaign. Also called **AtN operations.** (JP 3-15.1)

audience — In public affairs, a broadly-defined group that contains stakeholders and/or publics relevant to military operations. (JP 3-61)

augmentation forces — Forces to be transferred from a supporting combatant commander to the combatant command (command authority) or operational control of a supported combatant commander during the execution of an operation order approved by the President and Secretary of Defense. (JP 5-0)

authentication — 1. A security measure designed to protect a communications system against acceptance of a fraudulent transmission or simulation by establishing the validity of a transmission, message, or originator. 2. A means of identifying individuals and verifying their eligibility to receive specific categories of information. 3. Evidence by proper signature or seal that a document is genuine and official. 4. In personnel recovery missions, the process whereby the identity of an isolated person is confirmed. See also **evader; evasion; recovery operations; security.** (JP 3-50)

authorization data — Department of Defense military and civilian manpower and equipment resources authorized by law. (DODI 8260.03)

authorization inventory — The set of manpower and equipment authorizations associated with one or more organization. (DODI 8260.03)

authorized departure — A procedure, short of ordered departure, by which mission employees or dependents or both, are permitted to leave post in advance of normal rotation when the national interests or imminent threat to life require it. (JP 3-68)

Automated Repatriation Reporting System — A Defense Manpower Data Center system used to track the status of noncombatant evacuees after they have arrived in an initial safe haven in the United States. (JP 3-68)

automatic identification technology — A suite of technologies enabling the automatic capture of data, thereby enhancing the ability to identify, track, document, and control assets (e.g., materiel), deploying and redeploying forces, equipment, personnel, and sustainment cargo. Also called **AIT.** (JP 4-09)

autonomous operation — In air defense, the mode of operation assumed by a unit after it has lost all communications with higher echelons forcing the unit commander to assume full responsibility for control of weapons and engagement of hostile targets. (JP 3-01)

available-to-load date — A date specified for each unit in a time-phased force and deployment data indicating when that unit will be ready to load at the point of embarkation. Also called **ALD.** (JP 5-0)

avenue of approach — An air or ground route of an attacking force of a given size leading to its objective or to key terrain in its path. Also called **AA**. (JP 2-01.3)

aviation medicine — The special field of medicine which is related to the biological and psychological problems of flight. (JP 4-02)

axis of advance — A line of advance assigned for purposes of control; often a road or a group of roads, or a designated series of locations, extending in the direction of the enemy. (JP 3-03)

Intentionally Blank

B

backfill — Reserve Component units and individuals recalled to replace deploying active units and/or individuals in the continental United States and outside the continental United States. See also **Reserve Component.** (JP 4-05)

bale cubic capacity — The space available for cargo measured in cubic feet to the inside of the cargo battens, on the frames, and to the underside of the beams. (JP 4-01.2)

ballistic missile — Any missile which does not rely upon aerodynamic surfaces to produce lift and consequently follows a ballistic trajectory when thrust is terminated. See also **guided missile.** (JP 3-01)

barrier — A coordinated series of natural or man-made obstacles designed or employed to channel, direct, restrict, delay, or stop the movement of an opposing force and to impose additional losses in personnel, time, and equipment on the opposing force. (JP 3-15)

barrier combat air patrol — One or more divisions or elements of fighter aircraft employed between a force and an objective area as a barrier across the probable direction of enemy attack. See also **combat air patrol.** (JP 3-01)

barrier, obstacle, and mine warfare plan — A comprehensive, coordinated plan that includes responsibilities; general location of unspecified and specific barriers, obstacles, and minefields; special instructions; limitations; coordination; and completion times; and may designate locations of obstacle zones or belts. (JP 3-15)

base — 1. A locality from which operations are projected or supported. 2. An area or locality containing installations which provide logistic or other support. 3. Home airfield or home carrier. See also **facility.** (JP 4-0)

base boundary — A line that delineates the surface area of a base for the purpose of facilitating coordination and deconfliction of operations between adjacent units, formations, or areas. (JP 3-10)

base cluster — In base defense operations, a collection of bases, geographically grouped for mutual protection and ease of command and control. (JP 3-10)

base cluster commander — In base defense operations, a senior base commander designated by the joint force commander responsible for coordinating the defense of bases within the base cluster and for integrating defense plans of bases into a base cluster defense plan. (JP 3-10)

base cluster operations center — A command and control facility that serves as the base cluster commander's focal point for defense and security of the base cluster. Also called **BCOC.** (JP 3-10)

base defense — The local military measures, both normal and emergency, required to nullify or reduce the effectiveness of enemy attacks on, or sabotage of, a base, to ensure that the maximum capacity of its facilities is available to United States forces. (JP 3-10)

base defense operations center — A command and control facility established by the base commander to serve as the focal point for base security and defense. Also called **BDOC.** (JP 3-10)

base defense zone — An air defense zone established around an air base and limited to the engagement envelope of short-range air defense weapons systems defending that base. Also called **BDZ**. (JP 3-52)

base development — The acquisition, development, expansion, improvement, construction and/or replacement of the facilities and resources of a location to support forces. (JP 3-34)

baseline costs — The continuing annual costs of military operations funded by the operations and maintenance and military personnel appropriations. (JP 1-06)

base operating support — Directly assisting, maintaining, supplying, and distributing support of forces at the operating location. Also called **BOS**. (JP 4-0)

base operating support-integrator — The designated Service component or joint task force commander assigned to synchronize all sustainment functions for a contingency base. Also called **BOS-I**. (JP 4-0)

base plan — A type of operation plan that describes the concept of operations, major forces, sustainment concept, and anticipated timelines for completing the mission without annexes or time-phased force and deployment data. Also called **BPLAN.** (JP 5-0)

base support installation — A Department of Defense Service or agency installation within the United States and its territories tasked to serve as a base for military forces engaged in either homeland defense or defense support of civil authorities. Also called **BSI.** (JP 3-28)

basic encyclopedia — A compilation of identified installations and physical areas of potential significance as objectives for attack. Also called **BE.** (JP 2-01)

basic load — The quantity of supplies required to be on hand within, and which can be moved by, a unit or formation, expressed according to the wartime organization of the unit or formation and maintained at the prescribed levels. (JP 4-09)

battalion landing team — In an amphibious operation, an infantry battalion normally reinforced by necessary combat and service elements; the basic unit for planning an assault landing. Also called **BLT.** (JP 3-02)

battle damage assessment — The estimate of damage composed of physical and functional damage assessment, as well as target system assessment, resulting from the application of lethal or nonlethal military force. Also called **BDA.** See also **combat assessment.** (JP 3-0)

battle damage repair — Essential repair, which may be improvised, carried out rapidly in a battle environment in order to return damaged or disabled equipment to temporary service. Also called **BDR.** (JP 4-09)

battlefield coordination detachment — An Army liaison located in the air operations center that provides selected operational functions between the Army forces and the air component commander. Also called **BCD.** See also **air operations center; liaison.** (JP 3-03)

battle injury — Damage or harm sustained by personnel during or as a result of battle conditions. Also called **BI.** (JP 4-02)

battle management — The management of activities within the operational environment based on the commands, direction, and guidance given by appropriate authority. Also called **BM.** (JP 3-01)

beach — 1. The area extending from the shoreline inland to a marked change in physiographic form or material, or to the line of permanent vegetation (coastline). 2. In amphibious operations, that portion of the shoreline designated for landing of a tactical organization. (JP 3-02)

beachhead — A designated area on a hostile or potentially hostile shore that, when seized and held, ensures the continuous landing of troops and materiel, and provides maneuver space requisite for subsequent projected operations ashore. (JP 3-02)

beachmaster unit — A commissioned naval unit of the naval beach group designed to provide to the shore party a Navy component known as a beach party, which is capable of supporting the amphibious landing of one division (reinforced). Also called **BMU.** See also **beach party; naval beach group; shore party.** (JP 4-01.6)

beach party — The Navy component of the landing force support party under the tactical control of the landing force support party commander. See also **beachmaster unit; shore party.** (JP 3-02)

beach support area — In amphibious operations, the area to the rear of a landing force or elements thereof, that contains the facilities for the unloading of troops and materiel and the support of the forces ashore. Also called **BSA.** (JP 3-02)

begin morning civil twilight — The period of time at which the sun is halfway between beginning morning and nautical twilight and sunrise, when there is enough light to see objects clearly with the unaided eye. Also called **BMCT.** (JP 2-01.3)

begin morning nautical twilight — The start of that period where, in good conditions and in the absence of other illumination, the sun is 12 degrees below the eastern horizon and enough light is available to identify the general outlines of ground objects and conduct limited military operations. Also called **BMNT**. (JP 3-09.3)

believed-to-be — In mortuary affairs, the status of any human remains until a positive identification has been determined. Used interchangeably with tentative identification. Also called **BTB.** (JP 4-06)

berm — The nearly horizontal portion of a beach or backshore having an abrupt fall and either formed by deposition of material by wave action at the limit of ordinary high tide or constructed to protect materials handling equipment during air cushion vehicle operations. (JP 4-01.6)

bill — A ship's publication listing operational or administrative procedures. (JP 3-04)

biological agent — A microorganism (or a toxin derived from it) that causes disease in personnel, plants, or animals or causes the deterioration of materiel. See also **chemical agent.** (JP 3-11)

biological hazard — An organism, or substance derived from an organism, that poses a threat to human or animal health. (JP 3-11)

biometrics — The process of recognizing an individual based on measurable anatomical, physiological, and behavioral characteristics. (JP 2-0)

biometrics-enabled intelligence — The intelligence derived from the processing of biologic identity data and other all-source for information concerning persons of interest. Also called **BEI.** (JP 2-0)

blister agent — A chemical agent that injures the eyes and lungs, and burns or blisters the skin. Also called **vesicant agent.** (JP 3-11)

blood agent — A chemical compound, including the cyanide group, that affects bodily functions by preventing the normal utilization of oxygen by body tissues. (JP 3-11)

blood chit — A small sheet of material depicting an American flag and a statement in several languages to the effect that anyone assisting the bearer to safety will be rewarded. See also **evasion aid.** (JP 3-50)

Blue Bark — US military personnel, US citizen civilian employees of the Department of Defense, and the dependents of both categories who travel in connection with the death of an immediate family member. It also applies to designated escorts for dependents of deceased military members. Furthermore, the term is used to designate the personal property shipment of a deceased member. (JP 4-06)

boat group — The basic organization of landing craft. (JP 3-02)

boat lane — A lane for amphibious assault landing craft, which extends from the line of departure to the beach. (JP 3-02)

boat space — The space and weight factor used in planning for one person with individual equipment to determine overall ship-to-shore movement requirements for boats, landing craft, and amphibious vehicles. (JP 3-02.1)

bona fides — 1. In personnel recovery, the use of verbal or visual communication by individuals who are unknown to one another, to establish their authenticity, sincerity, honesty, and truthfulness. See also **evasion; recovery; recovery operations.** (JP 3-50) 2. The lack of fraud or deceit: a determination that a person is who he/she says he/she is. (JP 2-01.2)

boost phase — That portion of the flight of a ballistic missile or space vehicle during which the booster and sustainer engines operate. See also midcourse phase; terminal phase. (JP 3-01)

bottom mine — A mine with negative buoyancy which remains on the seabed. See also **mine.** (JP 3-15)

boundary — A line that delineates surface areas for the purpose of facilitating coordination and deconfliction of operations between adjacent units, formations, or areas. (JP 3-0)

branch — 1. A subdivision of any organization. 2. A geographically separate unit of an activity, which performs all or part of the primary functions of the parent activity on a smaller scale. 3. An arm or service of the Army. 4. The contingency options built into the base plan used for changing the mission, orientation, or direction of movement of a force to aid success of the operation based on anticipated events, opportunities, or disruptions caused by enemy actions and reactions. See also **sequel.** (JP 5-0)

breakbulk ship — A ship with conventional holds for stowage of breakbulk cargo and a limited number of containers, below or above deck, and equipped with cargo-handling gear. (JP 4-09)

brevity code — A code word, which provides no security, that serves the sole purpose of shortening of messages rather than the concealment of their content. (JP 3-09.3)

brigade combat team — A combined arms team that forms the basic building block of the Army's tactical formations. Also called **BCT.** (JP 3-31)

broken stowage — The space lost in the holds of a vessel because of the contour of the ship, dunnage, ladders, stanchions, and the shape of the cargo. (JP 3-02.1)

broken stowage factor — A factor applied to the available space for embarkation due to the loss between boxes, between vehicles, around stanchions, and over cargo, that will vary, depending on the type and size of vehicles, type and size of general cargo, training and experience of loading personnel, type of loading, method of stowage, and configuration of compartments. (JP 3-02.1)

buddy-aid — Acute medical care (first aid) provided by a non-medical Service member to another person. (JP 4-02)

buffer zone — 1. A defined area controlled by a peace operations force from which disputing or belligerent forces have been excluded. Also called **area of separation** in some United Nations operations. Also called **BZ.** See also **line of demarcation; peace operations.** (JP 3-07.3) 2. A designated area used for safety in military operations. (JP 3-01)

building system — A structure assembled from manufactured components designed to provide a specific building configuration. (JP 3-34)

bulk cargo — That which is generally shipped in volume where the transportation conveyance is the only external container; such as liquids, ore, or grain. (JP 4-01.5)

bulk petroleum product — A liquid petroleum product transported by various means and stored in tanks or containers having an individual fill capacity greater than 208 liters. (JP 4-03)

bulk storage — 1. Storage in a warehouse of supplies and equipment in large quantities, usually in original containers, as distinguished from bin storage. 2. Storage of liquids, such as petroleum products in tanks, as distinguished from drum or packaged storage. (JP 4-03)

C

cache — A source of subsistence and supplies, typically containing items such as food, water, medical items, and/or communications equipment, packaged to prevent damage from exposure and hidden in isolated locations by such methods as burial, concealment, and/or submersion, to support isolated personnel. See also **evader; evasion; recovery; recovery operations.** (JP 3-50)

call sign — Any combination of characters or pronounceable words, which identifies a communication facility, a command, an authority, an activity, or a unit; used primarily for establishing and maintaining communications. Also called **CS.** (JP 3-50)

campaign — A series of related major operations aimed at achieving strategic and operational objectives within a given time and space. See also **campaign plan.** (JP 5-0)

campaign plan — A joint operation plan for a series of related major operations aimed at achieving strategic or operational objectives within a given time and space. See also **campaign; campaign planning.** (JP 5-0)

campaign planning — The process whereby combatant commanders and subordinate joint force commanders translate national or theater strategy into operational concepts through the development of an operation plan for a campaign. See also **campaign; campaign plan.** (JP 5-0)

canalize — To restrict operations to a narrow zone by use of existing or reinforcing obstacles or by fire or bombing. (JP 3-15)

candidate target list — A list of objects or entities submitted by component commanders, appropriate agencies, or the joint force commander's staff for further development and inclusion on the joint target list and/or restricted target list, or moved to the no-strike list. Also called **CTL**. See also joint integrated prioritized target list; target, target nomination list. (JP 3-60)

capstone publication — The top joint doctrine publication in the hierarchy of joint publications that links joint doctrine to national strategy and the contributions of other government departments and agencies, multinational partners, and reinforces policy for command and control. See also **joint publication; keystone publications.** (CJCSM 5120.01)

cargo increment number — A seven-character alphanumeric field that uniquely describes a non-unit-cargo entry (line) in the Joint Operation Planning and Execution System time-phased force and deployment data. (JP 3-35)

carrier air wing — Two or more aircraft squadrons formed under one commander for administrative and tactical control of operations from a carrier. Also called **CVW**. (JP 3-32)

carrier control zone — The airspace within a circular limit defined by 5 miles horizontal radius from the carrier, extending upward from the surface to and including 2,500 feet unless otherwise designated for special operations, and is under the cognizance of the air officer during visual meteorological conditions. (JP 3-52)

carrier strike group — A standing naval task group consisting of a carrier, embarked air wing, surface combatants, and submarines as assigned in direct support, operating in mutual support with the task of destroying hostile submarine, surface, and air forces within the group's assigned operational area and striking at targets along hostile shore lines or projecting power inland. Also called **CSG.** (JP 3-32)

cartridge-actuated device — Small explosive devices used to eject stores from launched devices, actuate other explosive systems, or provide initiation for aircrew escape devices. Also called **CAD.** (JP 3-04)

case officer — A professional employee of an intelligence or counterintelligence organization, who is responsible for providing directions for an agent operation and/or handling intelligence assets. (JP 2-01.2)

casualty — Any person who is lost to the organization by having been declared dead, duty status – whereabouts unknown, missing, ill, or injured. See also **hostile casualty.** (JP 4-02)

casualty evacuation — The unregulated movement of casualties that can include movement both to and between medical treatment facilities. Also called **CASEVAC.** See also **casualty; evacuation; medical treatment facility.** (JP 4-02)

casualty rate — The number of casualties per 1,000 population at risk. (DODI 8620.04)

casualty receiving and treatment ship — In amphibious operations, a ship designated to receive, provide treatment for, and transfer casualties. Also called **CRTS**. (JP 3-02)

catastrophic event — Any natural or man-made incident, including terrorism, which results in extraordinary levels of mass casualties, damage, or disruption severely affecting the population, infrastructure, environment, economy, national morale, and/or government functions. (JP 3-28)

causeway — A craft similar in design to a barge, but longer and narrower, designed to assist in the discharge and transport of cargo from vessels. (JP 4-01.6)

causeway launching area — An area located near the line of departure but clear of the approach lanes to an area located in the inner transport area. (JP 3-02)

C-day — The unnamed day on which a deployment operation commences or is to commence. (JP 5-0)

cell — A subordinate organization formed around a specific process, capability, or activity within a designated larger organization of a joint force commander's headquarters. (JP 3-33)

center — An enduring functional organization, with a supporting staff, designed to perform a joint function within a joint force commander's headquarters. (JP 3-33)

center of gravity — The source of power that provides moral or physical strength, freedom of action, or will to act. Also called **COG.** See also **decisive point.** (JP 5-0)

centigray — A unit of absorbed dose of radiation (one centigray equals one rad). (JP 3-11)

central control officer — The officer, embarked in the central control ship, designated by the amphibious task force commander for the overall coordination of the waterborne ship-to-shore movement. Also called **CCO.** (JP 3-02)

centralized control — 1. In air defense, the control mode whereby a higher echelon makes direct target assignments to fire units. (JP 3-01) 2. In joint air operations, placing within one commander the responsibility and authority for planning, directing, and coordinating a military operation or group/category of operations. See also **decentralized control.** (JP 3-30)

chaff — Radar confusion reflectors, consisting of thin, narrow metallic strips of various lengths and frequency responses, which are used to reflect echoes for confusion purposes. (JP 3-13.1)

chain of command — The succession of commanding officers from a superior to a subordinate through which command is exercised. Also called **command channel**. (JP 1)

Chairman of the Joint Chiefs of Staff instruction — A document for all types of correspondence containing Chairman of the Joint Chiefs of Staff policy and guidance that does not involve the employment of forces, which is of indefinite duration and is applicable to external agencies, or both the Joint Staff and external agencies. Also called **CJCSI.** See also **Chairman of the Joint Chiefs of Staff manual.** (CJCSM 5120.01)

Chairman of the Joint Chiefs of Staff manual — A document containing detailed procedures for performing specific tasks that do not involve the employment of forces, which is of indefinite duration and is applicable to external agencies or both the Joint Staff and external agencies. Also called **CJCSM.** See also **Chairman of the Joint Chiefs of Staff instruction.** (CJCSM 5120.01)

chalk number — The number given to a complete load and to the transporting carrier. (JP 3-17)

change detection — An image enhancement technique that compares two images of the same area from different time periods and eliminates identical picture elements in order to leave the signatures that have undergone change. (JP 2-03)

channel airlift — Airlift provided for movement of sustainment cargo, scheduled either regularly or depending upon volume of workload, between designated ports of embarkation and ports of debarkation over validated contingency or distribution routes. (JP 3-17)

chemical agent — A chemical substance that is intended for use in military operations to kill, seriously injure, or incapacitate mainly through its physiological effects. See also **chemical warfare; riot control agent.** (JP 3-11)

chemical, biological, radiological, and nuclear consequence management — Actions taken to plan, prepare, respond to, and recover from chemical, biological, radiological, and nuclear incidents. Also called **CBRN CM**. (JP 3-41)

chemical, biological, radiological, and nuclear defense — Measures taken to minimize or negate the vulnerabilities to, and/or effects of, a chemical, biological, radiological, or nuclear hazard or incident. Also called **CBRN defense.** (JP 3-11)

chemical, biological, radiological, and nuclear environment — An operational environment that includes chemical, biological, radiological, and nuclear threats and hazards and their potential resulting effects. Also called **CBRN environment.** (JP 3-11)

chemical, biological, radiological, and nuclear hazard — Chemical, biological, radiological, and nuclear elements that could create adverse effects due to an accidental or deliberate release and dissemination. Also called **CBRN hazard.** (JP 3-11)

chemical, biological, radiological, or nuclear incident — Any occurrence, resulting from the use of chemical, biological, radiological and nuclear weapons and devices; the emergence of secondary hazards arising from counterforce targeting; or the release of toxic industrial materials into the environment, involving the emergence of chemical, biological, radiological and nuclear hazards. (JP 3-11)

chemical, biological, radiological, or nuclear weapon — A fully engineered assembly designed for employment to cause the release of a chemical or biological agent or radiological material onto a chosen target or to generate a nuclear detonation. Also called **CBRN weapon.** (JP 3-11)

chemical hazard — Any chemical manufactured, used, transported, or stored that can cause death or other harm through toxic properties of those materials, including chemical agents and chemical weapons prohibited under the Chemical Weapons Convention as well as toxic industrial chemicals. (JP 3-11)

chemical warfare — All aspects of military operations involving the employment of lethal and incapacitating munitions/agents and the warning and protective measures associated with such offensive operations. Also called **CW.** See also **chemical agent; chemical weapon; riot control agent.** (JP 3-11)

chemical weapon — Together or separately, (a) a toxic chemical and its precursors, except when intended for a purpose not prohibited under the Chemical Weapons Convention; (b) a munition or device, specifically designed to cause death or other harm through toxic properties of those chemicals specified in (a), above, which would be released as a result of the employment of such munition or device; (c) any equipment specifically designed for use directly in connection with the employment of munitions or devices specified in (b), above. See also **chemical agent; chemical warfare; riot control agent.** (JP 3-11)

chief of fires — The senior organic fires Army staff officer at division and higher headquarters level who advises the commander on the best use of available fire support resources, provides input to necessary orders, and develops and implements the fire support plan. Also called **COF.** (JP 3-09)

chief of mission — The principal officer (the ambassador) in charge of a diplomatic facility of the United States, including any individual assigned to be temporarily in charge of such a facility. The chief of mission is the personal representative of the President to the country of accreditation. The chief of mission is responsible for the direction, coordination, and supervision of all US Government executive branch employees in that country (except those under the command of a US area military commander). The security of the diplomatic post is the chief of mission's direct responsibility. Also called **COM.** (JP 3-08)

chief of staff — The senior or principal member or head of a staff who acts as the controlling member of a staff for purposes of the coordination of its work or to exercise command in another's name. Also called **COS.** (JP 3-33)

chief of station — The senior United States intelligence officer in a foreign country and the direct representative of the Director National Intelligence, to whom the officer reports through the Director Central Intelligence Agency. Usually the senior representative of the Central Intelligence Agency assigned to a US mission. Also called **COS**. (JP 2-01.2)

civil administration — An administration established by a foreign government in (1) friendly territory, under an agreement with the government of the area concerned, to exercise certain authority normally the function of the local government; or (2) hostile territory, occupied by United States forces, where a foreign government exercises executive, legislative, and judicial authority until an indigenous civil government can be established. Also called **CA.** (JP 3-05)

civil affairs — Designated Active and Reserve Component forces and units organized, trained, and equipped specifically to conduct civil affairs operations and to support civil-military operations. Also called **CA.** See also **civil-military operations.** (JP 3-57)

civil affairs operations — Actions planned, executed, and assessed by civil affairs forces that enhance awareness of and manage the interaction with the civil component of the operational environment; identify and mitigate underlying causes of instability within civil society; or involve the application of functional specialty skills normally the responsibility of civil government. Also called **CAO.** (JP 3-57)

civil augmentation program — Standing, long-term external support contacts designed to augment Service logistic capabilities with contracted support in both preplanned and short notice contingencies. Also called **CAP.** See also **contingency; contingency contract; external support contract.** (JP 4-10)

civil authorities — Those elected and appointed officers and employees who constitute the government of the United States, the governments of the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, United States territories, and political subdivisions thereof. (JP 3-28)

civil authority information support — The use of military information support operations capabilities to conduct public information dissemination activities to support national security or disaster relief operations within the United States and its territories in support of a lead federal agency. Also called **CAIS.** (JP 3-13.2)

civil emergency — Any occasion or instance for which, in the determination of the President, federal assistance is needed to supplement state and local efforts and capabilities to save lives and to protect property and public health and safety, or to lessen or avert the threat of a catastrophe in any part of the United States. (JP 3-28)

civilian internee — A civilian who is interned during armed conflict, occupation, or other military operation for security reasons, for protection, or because he or she committed an offense against the detaining power. Also called **CI.** (DODD 2310.01E)

civil information — Relevant data relating to the civil areas, structures, capabilities, organizations, people, and events of the civil component of the operational environment used to support the situational awareness of the supported commander. (JP 3-57)

civil information management — Process whereby data relating to the civil component of the operational environment is gathered, collated, processed, analyzed, produced into information products, and disseminated. Also called **CIM.** (JP 3-57)

civil-military medicine — A discipline within operational medicine comprising public health and medical issues that involve a civil-military interface (foreign or domestic), including military medical support to civil authorities (domestic), medical elements of cooperation activities, and medical civil-military operations. (JP 4-02)

civil-military operations — Activities of a commander performed by designated civil affairs or other military forces that establish, maintain, influence, or exploit relations between

military forces, indigenous populations, and institutions, by directly supporting the attainment of objectives relating to the reestablishment or maintenance of stability within a region or host nation. Also called **CMO.** See also **civil affairs; operation.** (JP 3-57)

civil-military operations center — An organization, normally comprised of civil affairs, established to plan and facilitate coordination of activities of the Armed Forces of the United States within indigenous populations and institutions, the private sector, intergovernmental organizations, nongovernmental organizations, multinational forces, and other governmental agencies in support of the joint force commander. Also called **CMOC.** See also **civil-military operations; operation.** (JP 3-57)

civil-military team — A temporary organization of civilian and military personnel task-organized to provide an optimal mix of capabilities and expertise to accomplish specific operational and planning tasks. (JP 3-57)

civil reconnaissance — A targeted, planned, and coordinated observation and evaluation of specific civil aspects of the environment such as areas, structures, capabilities, organizations, people, or events. Also called **CR.** (JP 3-57)

Civil Reserve Air Fleet — A program in which the Department of Defense contracts for the services of specific aircraft, owned by a United States entity or citizen, during national emergencies and defense-oriented situations when expanded civil augmentation of military airlift activity is required. Also called **CRAF.** See also **reserve.** (JP 3-17)

civil search and rescue — Search and/or rescue operations and associated civilian services provided to assist persons in potential or actual distress and protect property in a nonhostile environment. Also called **civil SAR.** (JP 3-50)

clandestine — Any activity or operation sponsored or conducted by governmental departments or agencies with the intent to assure secrecy and concealment. (JP 2-01.2)

clandestine intelligence collection — The acquisition of protected intelligence information in a way designed to conceal the nature of the operation and protect the source. (JP 2-01.2)

clandestine operation — An operation sponsored or conducted by governmental departments or agencies in such a way as to assure secrecy or concealment. See also **covert operation; overt operation.** (JP 3-05)

classes of supply — The ten categories into which supplies are grouped in order to facilitate supply management and planning. I. Rations and gratuitous issue of health, morale, and welfare items. II. Clothing, individual equipment, tentage, tool sets, and administrative and housekeeping supplies and equipment. III. Petroleum, oils, and lubricants. IV. Construction materials. V. Ammunition. VI. Personal demand items. VII. Major end items, including tanks, helicopters, and radios. VIII. Medical. IX. Repair parts and components for equipment maintenance. X. Nonstandard items to support nonmilitary

programs such as agriculture and economic development. See also **petroleum, oils, and lubricants.** (JP 4-09)

classification — The determination that official information requires, in the interests of national security, a specific degree of protection against unauthorized disclosure, coupled with a designation signifying that such a determination has been made. See also **security classification.** (JP 2-01.2)

classified information — Official information that has been determined to require, in the interests of national security, protection against unauthorized disclosure and which has been so designated. (JP 2-01.2)

clearance capacity — An estimate expressed in agreed upon units of cargo measurement per day of the cargo or people that may be transported inland from a beach or port over the available means of inland communication, including roads, railroads, airlift, and inland waterways. See also **throughput capacity.** (JP 4-01.5)

clearance decontamination — The final level of decontamination that provides the decontamination of equipment and personnel to a level that allows unrestricted transportation, maintenance, employment, and disposal. (JP 3-11)

clearing operation — An operation designed to clear or neutralize all mines and obstacles from a route or area. (JP 3-15)

climate change — Variations in average weather conditions that persist over multiple decades or longer that encompass increases and decreases in temperature, shifts in precipitation, and changing risk of certain types of severe weather events. (DODD 4715.21)

close air support — Air action by fixed- and rotary-wing aircraft against hostile targets that are in close proximity to friendly forces and that require detailed integration of each air mission with the fire and movement of those forces. Also called **CAS.** See also **air interdiction.** (JP 3-0)

close support — The action of the supporting force against targets or objectives that are sufficiently near the supported force as to require detailed integration or coordination of the supporting action. See also **direct support; general support; mutual support; support.** (JP 3-31)

close support area — Those parts of the ocean operating areas nearest to, but not necessarily in, the objective area. (JP 3-02)

closure — In transportation, the process of a unit's arriving at a specified location. (JP 4-01.5)

coalition — An arrangement between two or more nations for common action. See also **alliance; multinational.** (JP 5-0)

coastal sea control — The employment of forces to ensure the unimpeded use of an offshore coastal area by friendly forces and, as appropriate, to deny the use of the area to enemy forces. (JP 3-10)

code word — 1. A word that has been assigned a classification and a classified meaning to safeguard intentions and information regarding a classified plan or operation. 2. A cryptonym used to identify sensitive intelligence data. (JP 3-50)

collateral damage — Unintentional or incidental injury or damage to persons or objects that would not be lawful military targets in the circumstances ruling at the time. (JP 3-60)

collection — In intelligence usage, the acquisition of information and the provision of this information to processing elements. See also **intelligence process.** (JP 2-01)

collection agency — Any individual, organization, or unit that has access to sources of information and the capability of collecting information from them. See also **agency.** (JP 2-01)

collection asset — A collection system, platform, or capability that is supporting, assigned, or attached to a particular commander. See also **collection.** (JP 2-01)

collection management — In intelligence usage, the process of converting intelligence requirements into collection requirements, establishing priorities, tasking or coordinating with appropriate collection sources or agencies, monitoring results, and retasking, as required. See also **collection; collection requirement; collection requirements management; intelligence; intelligence process.** (JP 2-0)

collection management authority — Within the Department of Defense, collection management authority constitutes the authority to establish, prioritize, and validate theater collection requirements, establish sensor tasking guidance, and develop theater-wide collection policies. Also called **CMA.** See also **collection manager; collection plan; collection requirement.** (JP 2-01.2)

collection manager — An individual with responsibility for the timely and efficient tasking of organic collection resources and the development of requirements for theater and national assets that could satisfy specific information needs in support of the mission. Also called **CM.** See also **collection; collection management authority.** (JP 2-01)

collection operations management — The authoritative direction, scheduling, and control of specific collection operations and associated processing, exploitation, and reporting resources. Also called **COM.** See also **collection management; collection requirements management.** (JP 2-0)

collection plan — A systematic scheme to optimize the employment of all available collection capabilities and associated processing, exploitation, and dissemination resources to satisfy specific information requirements. See also **information requirements; intelligence process.** (JP 2-0)

collection planning — A continuous process that coordinates and integrates the efforts of all collection units and agencies. See also **collection.** (JP 2-0)

collection point — A point designated for the assembly of personnel casualties, stragglers, disabled materiel, salvage, etc., for further movement to collecting stations or rear installations. Also called **CP.** (JP 4-06)

collection posture — The current status of collection assets and resources to satisfy identified information requirements. (JP 2-0)

collection requirement — A valid need to close a specific gap in intelligence holdings in direct response to a request for information. (JP 2-0)

collection requirements management — The authoritative development and control of collection, processing, exploitation, and/or reporting requirements that normally result in either the direct tasking of requirements to units over which the commander has authority, or the generation of tasking requests to collection management authorities at a higher, lower, or lateral echelon to accomplish the collection mission. Also called **CRM.** See also **collection; collection management; collection operations management.** (JP 2-0)

collection resource — A collection system, platform, or capability that is not assigned or attached to a specific unit or echelon which must be requested and coordinated through the chain of command. See also **collection management.** (JP 2-01)

collection strategy — An analytical approach used by collection managers to determine which intelligence disciplines can be applied to satisfy information requirements. (JP 2-0)

collective protection — The protection provided to a group of individuals that permits relaxation of individual chemical, biological, radiological, and nuclear protection. Also called **COLPRO.** (JP 3-11)

colored beach — That portion of usable coastline sufficient for the assault landing of a regimental landing team or similar sized unit. See also **numbered beach.** (JP 3-02)

combat air patrol — An aircraft patrol provided over an objective area, the force protected, the critical area of a combat zone, or in an air defense area, for the purpose of intercepting and destroying hostile aircraft before they reach their targets. Also called **CAP.** See also **airborne alert; barrier combat air patrol; rescue combat air patrol.** (JP 3-01)

combat and operational stress — The expected and predictable emotional, intellectual, physical, and/or behavioral reactions of an individual who has been exposed to stressful events in war or stability operations. (JP 4-02)

combat and operational stress control — Programs developed and actions taken by military leadership to prevent, identify, and manage adverse combat and operational stress reactions in units; optimize mission performance; conserve fighting strength; prevent or minimize adverse effects of combat and operational stress on members' physical, psychological, intellectual and social health; and to return the unit or Service member to duty expeditiously. (JP 4-02)

combatant command — A unified or specified command with a broad continuing mission under a single commander established and so designated by the President, through the Secretary of Defense and with the advice and assistance of the Chairman of the Joint Chiefs of Staff. Also called **CCMD**. See also **specified combatant command; unified command.** (JP 1)

combatant command chaplain — The senior chaplain assigned to the staff of, or designated by, the combatant commander to provide advice on religion, ethical, and moral issues, and morale of assigned personnel and to coordinate religious ministries within the combatant commander's area of responsibility. See also **command chaplain; religious support; religious support team.** (JP 1-05)

combatant command (command authority) — Nontransferable command authority, which cannot be delegated, of a combatant commander to perform those functions of command over assigned forces involving organizing and employing commands and forces; assigning tasks; designating objectives; and giving authoritative direction over all aspects of military operations, joint training, and logistics necessary to accomplish the missions assigned to the command. Also called **COCOM.** See also **combatant command; combatant commander; operational control; tactical control.** (JP 1)

combatant commander — A commander of one of the unified or specified combatant commands established by the President. Also called **CCDR.** See also **combatant command; specified combatant command; unified combatant command.** (JP 3-0)

combatant commander logistic procurement support board — A combatant commander-level joint board established to ensure that contracting support and other sources of support are properly synchronized across the entire area of responsibility. Also called **CLPSB.** See also **joint requirements review board; joint contracting support board.** (JP 4-10)

combatant command support agent — The Secretary of a Military Department to whom the Secretary of Defense or the Deputy Secretary of Defense has assigned administrative and logistical support of the headquarters of a combatant command, United States Element, North American Aerospace Defense Command, or subordinate unified command. The nature and scope of the combatant command support agent

responsibilities, functions, and authorities shall be prescribed at the time of assignment or in keeping with existing agreements and practices, and they shall remain in effect until the Secretary of Defense or the Deputy Secretary of Defense revokes, supersedes, or modifies them. Also called **CCSA**. (DODD 5100.03)

combat assessment — The determination of the overall effectiveness of force employment during military operations. Combat assessment is composed of three major components: (a) battle damage assessment; (b) munitions effectiveness assessment; and (c) reattack recommendation. Also called **CA.** See also **battle damage assessment; munitions effectiveness assessment; reattack recommendation.** (JP 3-60)

combat camera — Specially-trained expeditionary forces from Service-designated units capable of providing high-quality directed visual information during military operations. Also called **COMCAM.** See also **visual information.** (JP 3-61)

combat cargo officer — A Marine Corps embarkation/mobility officer permanently assigned to amphibious warfare ships or naval staffs, as an adviser to and representative of the naval commander in matters pertaining to embarkation and debarkation of troops, their supplies, and equipment. Also called **CCO.** See also **embarkation officer.** (JP 3-02.1)

combat chart — A special naval chart, at a scale of 1:50,000, designed for naval surface fire support and close air support during coastal or amphibious operations and showing detailed hydrography and topography in the coastal belt. (JP 2-03)

combat control team — A task-organized team of special operations forces who are certified air traffic controllers that are trained and equipped to deploy into hostile environments to establish and control assault zones and airfields. Also called **CCT.** (JP 3-17)

combat engineering — Engineering capabilities and activities that directly support the maneuver of land combat forces that require close and integrated support. (JP 3-34)

combat identification — The process of attaining an accurate characterization of detected objects in the operational environment sufficient to support an engagement decision. Also called **CID.** (JP 3-09)

combat information — Unevaluated data, gathered by or provided directly to the tactical commander which, due to its highly perishable nature or the criticality of the situation, cannot be processed into tactical intelligence in time to satisfy the user's tactical intelligence requirements. (JP 2-01)

combat information center — The agency in a ship or aircraft manned and equipped to collect, display, evaluate, and disseminate tactical information for the use of the embarked flag officer, commanding officer, and certain control agencies. Also called **CIC.** (JP 3-04)

combating terrorism — Actions, including antiterrorism and counterterrorism, taken to oppose terrorism throughout the entire threat spectrum. Also called **CbT.** See also **antiterrorism; counterterrorism.** (JP 3-26)

combat loading — The arrangement of personnel and the stowage of equipment and supplies in a manner designed to conform to the anticipated tactical operation of the organization embarked. (JP 3-02)

combat organizational loading — A method of loading by which a unit with its equipment and initial supplies is loaded into a single ship, together with other units, in such a manner as to be available for unloading in a predetermined order. (JP 3-02.1)

combat power — The total means of destructive and/or disruptive force which a military unit/formation can apply against the opponent at a given time. (JP 3-0)

combat readiness — Synonymous with operational readiness, with respect to missions or functions performed in combat. (JP 1-0)

combat search and rescue — The tactics, techniques, and procedures performed by forces to effect the recovery of isolated personnel during combat. Also called **CSAR.** See also **search and rescue.** (JP 3-50)

combat service support — The essential capabilities, functions, activities, and tasks necessary to sustain all elements of all operating forces in theater at all levels of war. Also called **CSS.** See also **combat support.** (JP 4-0)

combat service support area — An area ashore that is organized to contain the necessary supplies, equipment, installations, and elements to provide the landing force with combat service support throughout the operation. Also called **CSSA.** (JP 3-02)

combat spread loading — A method of combat loading by which some of the troops, equipment, and initial supplies of a unit are loaded in one ship and the remainder are loaded in one or more others. (JP 3-02.1)

combat support — Fire support and operational assistance provided to combat elements. Also called **CS.** See also **combat service support.** (JP 4-0)

combat support agency — A Department of Defense agency so designated by Congress or the Secretary of Defense that supports military combat operations. Also called **CSA.** (JP 5-0)

combat surveillance — A continuous, all-weather, day-and-night, systematic watch over the battle area in order to provide timely information for tactical combat operations. (JP 3-01)

combat unit loading — A method of loading by which all or a part of a combat unit, such as an assault battalion landing team, is completely loaded in a single ship, with essential combat equipment and supplies, in such a manner as to be immediately available to support the tactical plan upon debarkation, and to provide a maximum of flexibility to meet possible changes in the tactical plan. (JP 3-02.1)

combined — A term identifying two or more forces or agencies of two or more allies operating together. See also **joint.** (JP 3-16)

combined arms team — The full integration and application of two or more arms or elements of one Service into an operation. (JP 3-18)

command — 1. The authority that a commander in the armed forces lawfully exercises over subordinates by virtue of rank or assignment. 2. An order given by a commander; that is, the will of the commander expressed for the purpose of bringing about a particular action. 3. A unit or units, an organization, or an area under the command of one individual. Also called **CMD.** See also **area command; combatant command; combatant command (command authority).** (JP 1)

command and control — The exercise of authority and direction by a properly designated commander over assigned and attached forces in the accomplishment of the mission. Also called **C2.** (JP 1)

command and control system — The facilities, equipment, communications, procedures, and personnel essential for a commander to plan, direct, and control operations of assigned and attached forces pursuant to the missions assigned. (JP 6-0)

command chaplain — The senior chaplain assigned to or designated by a commander of a staff, command, or unit. See also **combatant command chaplain; religious support.** (JP 1-05)

commander, amphibious task force — The Navy officer designated in the initiating directive as the commander of the amphibious task force. Also called **CATF.** See also **amphibious operation; amphibious task force; commander, landing force.** (JP 3-02)

commander, landing force — The officer designated in the initiating directive as the commander of the landing force for an amphibious operation. Also called **CLF.** See also **amphibious operation; commander, amphibious task force; landing force.** (JP 3-02)

commander's communication synchronization — A process to coordinate and synchronize narratives, themes, messages, images, operations, and actions to ensure their integrity and consistency to the lowest tactical level across all relevant communication activities. Also called **CCS.** (JP 3-61)

commander's critical information requirement — An information requirement identified by the commander as being critical to facilitating timely decision making. Also called **CCIR.** See also **information requirements; intelligence; priority intelligence requirement.** (JP 3-0)

commander's estimate — A developed course of action designed to provide the Secretary of Defense with military options to meet a potential contingency. (JP 5-0)

commander's intent — A clear and concise expression of the purpose of the operation and the desired military end state that supports mission command, provides focus to the staff, and helps subordinate and supporting commanders act to achieve the commander's desired results without further orders, even when the operation does not unfold as planned. See also **assessment; end state.** (JP 3-0)

commander's required delivery date — The original date relative to C-day, specified by the combatant commander for arrival of forces or cargo at the destination; shown in the time-phased force and deployment data to assess the impact of later arrival. (JP 5-0)

command information — Communication by a military organization directed to the internal audience that creates an awareness of the organization's goals, informs them of significant developments affecting them and the organization, increases their effectiveness as ambassadors of the organization, and keeps them informed about what is going on in the organization. Also called **internal information.** See also **command; public affairs.** (JP 3-61)

commanding officer of troops — On a ship that has embarked units, a designated officer (usually the senior embarking unit commander) who is responsible for the administration, discipline, and training of all embarked units. Also called **COT.** (JP 3-02)

command net — A communications network that connects an echelon of command with some or all of its subordinate echelons for the purpose of command and control. (JP 3-09.3)

command post exercise — An exercise in which the forces are simulated, involving the commander, the staff, and communications within and between headquarters. Also called **CPX.** See also **exercise; maneuver.** (JP 3-0)

command relationships — The interrelated responsibilities between commanders, as well as the operational authority exercised by commanders in the chain of command; defined further as combatant command (command authority), operational control, tactical control, or support. See also **chain of command; combatant command (command authority); command; operational control; support; tactical control.** (JP 1)

command-sponsored dependent — A dependent entitled to travel to overseas commands at government expense and endorsed by the appropriate military commander to be present in a dependent's status. (JP 3-68)

command structure — The organizational hierarchy through which administrative leadership or operational authority is exercised. (DODI 8260.03)

commercial items — Articles of supply readily available from established commercial distribution sources which the Department of Defense or inventory managers in the Military Services have designated to be obtained directly or indirectly from such sources. (JP 4-06)

commercial vehicle — A vehicle that has evolved in the commercial market to meet civilian requirements and which is selected from existing production lines for military use. (JP 4-06)

commit — The process of assigning one or more aircraft or surface-to-air missile units to prepare to engage an entity, prior to authorizing such engagement. (JP 3-01)

commodity loading —A method of loading in which various types of cargoes are loaded together, such as ammunition, rations, or boxed vehicles, in order that each commodity can be discharged without disturbing the others. See also **combat loading.** (JP 3-02.1)

commonality — A quality that applies to materiel or systems: a. possessing like and interchangeable characteristics enabling each to be utilized, or operated and maintained, by personnel trained on the others without additional specialized training; b. having interchangeable repair parts and/or components; and c. applying to consumable items interchangeably equivalent without adjustment. (JP 6-0)

common item — 1. Any item of materiel that is required for use by more than one activity. 2. A term loosely used to denote any consumable item except repair parts or other technical items. 3. Any item of materiel that is procured for, owned by (Service stock), or used by any Military Department of the Department of Defense and is also required to be furnished to a recipient country under the grant-aid Military Assistance Program. 4. Readily available commercial items. 5. Items used by two or more Military Services of similar manufacture or fabrication that may vary between the Services as to color or shape (as vehicles or clothing). 6. Any part or component that is required in the assembly of two or more complete end-items. (JP 4-01.5)

common operating environment — Automation services that support the development of the common reusable software modules that enable interoperability across multiple combat support applications. Also called **COE.** (JP 4-01.2)

common operational picture — A single identical display of relevant information shared by more than one command that facilitates collaborative planning and assists all echelons to achieve situational awareness. Also called **COP.** (JP 3-0)

common servicing — Functions performed by one Service in support of another for which reimbursement is not required. (JP 3-34)

common tactical picture — An accurate and complete display of relevant tactical data that integrates tactical information from the multi-tactical data link network, ground network, intelligence network, and sensor networks. Also called **CTP.** (JP 3-01)

common use — Services, materiel, or facilities provided by a Department of Defense agency or a Military Department on a common basis for two or more Department of Defense agencies, elements, or other organizations as directed. (JP 4-01.5)

common-use container — Any Department of Defense-owned, -leased, or -controlled 20- or 40-foot International Organization for Standardization container managed by United States Transportation Command as an element of the Department of Defense common-use container system. See also **component-owned container; Service-unique container.** (JP 4-09)

common-user airlift service — The airlift service provided on a common basis for all Department of Defense agencies and, as authorized, for other agencies of the United States Government. (JP 3-17)

common-user item — An item of an interchangeable nature that is in common use by two or more nations or Services of a nation. (JP 4-0)

common-user land transportation — Point-to-point land transportation service operated by a single Service for common use by two or more Services. Also called **CULT**. (JP 4-01.5)

common-user logistics — Materiel or service support shared with or provided by two or more Services, Department of Defense agencies, or multinational partners to another Service, Department of Defense agency, non-Department of Defense agency, and/or multinational partner in an operation. Also called **CUL.** See also **common use.** (JP 4-09)

common-user network — A system of circuits or channels allocated to furnish communication paths between switching centers to provide communication service on a common basis to all connected stations or subscribers. (JP 3-33)

common-user ocean terminal — A military installation, part of a military installation, or a commercial facility operated under contract or arrangement by the Military Surface Deployment and Distribution Command that regularly provides for two or more Services terminal functions of receipt, transit storage or staging, processing, and loading and unloading of passengers or cargo aboard ships. (JP 4-01.2)

common-user sealift — The sealift services provided by the Military Sealift Command on a common basis for all Department of Defense agencies and, as authorized, for other departments and agencies of the United States Government. See also **Military Sealift Command; transportation component command.** (JP 4-01.2)

common-user transportation — Transportation and transportation services provided on a common basis for two or more Department of Defense agencies and, as authorized, non-Department of Defense agencies. See also **common use.** (JP 4-01.2)

communications intelligence — Technical information and intelligence derived from foreign communications by other than the intended recipients. Also called **COMINT.** (JP 2-0)

communications network — An organization of stations capable of intercommunications, but not necessarily on the same channel. Also called **COMNET**. (JP 6-0)

communications security — The protection resulting from all measures designed to deny unauthorized persons information of value that might be derived from the possession and study of telecommunications, or to mislead unauthorized persons in their interpretation of the results of such possession and study. Also called **COMSEC.** (JP 6-0)

communications security material — All documents, devices, equipment, apparatus, and cryptomaterial used in establishing or maintaining secure communications. (JP 4-01.6)

community engagement — Public affairs activities that support the relationship between military and civilian communities. (JP 3-61)

completeness — The joint operation plan review criterion for assessing whether operation plans incorporate major operations and tasks to be accomplished and to what degree they include forces required, deployment concept, employment concept, sustainment concept, time estimates for achieving objectives, description of the end state, mission success criteria, and mission termination criteria. (JP 5-0)

complex catastrophe — Any natural or man-made incident, including cyberspace attack, power grid failure, and terrorism, which results in cascading failures of multiple, interdependent, critical, life-sustaining infrastructure sectors and caused extraordinary levels of mass casualties, damage, or disruption severely affecting the population, environment, economy, public health, national morale, response efforts, and/or government functions. (DepSecDef Memo OSD001185-13)

component — 1. One of the subordinate organizations that constitute a joint force. (JP 1) 2. In logistics, a part or combination of parts having a specific function, which can be installed or replaced only as an entity. Also called **COMP.** See also **functional component command; Service component command.** (JP 4-0)

component-owned container — A 20- or 40-foot International Organization for Standardization container procured and owned by a single Department of Defense component. Also called **Service-unique container.** See also **common-use container.** (JP 4-09)

composite warfare commander — An officer to whom the officer in tactical command of a naval task organization may delegate authority to conduct some or all of the offensive and defensive functions of the force. Also called **CWC**. (JP 3-32)

compromise — The known or suspected exposure of clandestine personnel, installations, or other assets or of classified information or material, to an unauthorized person. (JP 2-01.2)

compromised — A term applied to classified matter, knowledge of which has, in whole or in part, passed to an unauthorized person or persons, or which has been subject to risk of such passing. (JP 2-01.2)

concept of intelligence operations — Within the Department of Defense, a verbal or graphic statement, in broad outline, of an intelligence directorate's assumptions or intent in regard to intelligence support of an operation or series of operations. See also **concept of operations.** (JP 2-0)

concept of logistic support — A verbal or graphic statement, in a broad outline, of how a commander intends to support and integrate with a concept of operations in an operation or campaign. Also called **COLS**. (JP 4-0)

concept of operations — A verbal or graphic statement that clearly and concisely expresses what the joint force commander intends to accomplish and how it will be done using available resources. Also called **CONOPS.** (JP 5-0)

concept plan — In the context of joint operation planning level 3 planning detail, an operation plan in an abbreviated format that may require considerable expansion or alteration to convert it into a complete operation plan or operation order. Also called **CONPLAN.** See also **operation plan.** (JP 5-0)

condition — 1. Those variables of an operational environment or situation in which a unit, system, or individual is expected to operate and may affect performance. 2. A physical or behavioral state of a system that is required for the achievement of an objective. See also **joint mission-essential tasks.** (JP 3-0)

conduits — Within military deception, conduits are information or intelligence gateways to the deception target. Examples of conduits include: foreign intelligence and security services, intelligence collection platforms, open-source intelligence, news media—foreign and domestic. (JP 3-13.4)

confidential — Security classification that shall be applied to information, the unauthorized disclosure of which reasonably could be expected to cause damage to the national security that the original classification authority is able to identify or describe. (EO 13526)

configuration management — A discipline applying technical and administrative direction and surveillance to: (1) identify and document the functional and physical characteristics of a configuration item; (2) control changes to those characteristics; and (3) record and report changes to processing and implementation status. Also called **CM**. (JP 6-0)

conflict prevention — A peace operation employing complementary diplomatic, civil, and, when necessary, military means, to monitor and identify the causes of conflict, and take timely action to prevent the occurrence, escalation, or resumption of hostilities. (JP 3-07.3)

constellation — A system consisting of a number of like satellites acting in concert to perform a specific mission. See also **Global Positioning System.** (JP 3-14)

constraint — In the context of joint operation planning, a requirement placed on the command by a higher command that dictates an action, thus restricting freedom of action. See also **operational limitation; restraint.** (JP 5-0)

consumer — Person or agency that uses information or intelligence produced by either its own staff or other agencies. (JP 2-01)

consumption rate — The average quantity of an item consumed or expended during a given time interval, expressed in quantities by the most appropriate unit of measurement per applicable stated basis. (JP 4-05)

contact mine — A mine detonated by physical contact. See also **mine**. (JP 3-15)

contact point — 1. In land warfare, a point on the terrain, easily identifiable, where two or more units are required to make contact. (JP 3-50) 2. In air operations, the position at which a mission leader makes radio contact with an air control agency. (JP 3-09.3) 3. In personnel recovery, a location where isolated personnel can establish contact with recovery forces. Also called **CP.** See also **control point.** (JP 3-50)

contact procedure — Predesignated actions taken by isolated personnel and recovery forces that permit link-up between the two parties in hostile territory. See also **evader.** (JP 3-50)

container — An article of transport equipment that meets American National Standards Institute/International Organization for Standardization standards that is designed to facilitate and optimize the carriage of goods by one or more modes of transportation without intermediate handling of the contents. (JP 4-01)

container control officer — A designated official (E6 or above or civilian equivalent) within a command, installation, or activity who is responsible for control, reporting, use, and maintenance of all Department of Defense-owned and controlled intermodal containers and equipment from time received until dispatched. Also called **CCO**. (JP 4-09)

container-handling equipment — Items of materials-handling equipment required to specifically receive, maneuver, and dispatch International Organization for Standardization containers. Also called **CHE.** (JP 4-09)

container management — Planning, organizing, directing, and executing functions and responsibilities required to provide effective use of Department of Defense and Military Department owned, leased, or controlled International Organization for Standardization containers. (JP 4-09)

containership — A ship, usually non-self-sustaining, specially constructed and equipped to carry only containers without associated equipment, in all available cargo spaces, either below or above deck. (JP 4-09)

contaminated remains — Remains of personnel which have absorbed or upon which have been deposited radioactive material, or biological or chemical agents. See also **mortuary affairs.** (JP 4-06)

contamination — 1. The deposit, absorption, or adsorption of radioactive material, or of biological or chemical agents on or by structures, areas, personnel, or objects. Also called **fallout radiation**. 2. Food and/or water made unfit for consumption by humans or animals because of the presence of environmental chemicals, radioactive elements, bacteria or organisms, the byproduct of the growth of bacteria or organisms, the decomposing material or waste in the food or water. (JP 3-11)

contamination avoidance — Individual and/or unit measures taken to reduce the effects of chemical, biological, radiological, and nuclear hazards. (JP 3-11)

contamination control — A combination of preparatory and responsive measures designed to limit the vulnerability of forces to chemical, biological, radiological, nuclear, and toxic industrial hazards and to avoid, contain, control exposure to, and, where possible, neutralize them. See also **biological agent; chemical agent; contamination.** (JP 3-11)

contamination mitigation — The planning and actions taken to prepare for, respond to, and recover from contamination associated with all chemical, biological, radiological, and nuclear threats and hazards in order to continue military operations. (JP 3-11)

contiguous zone — 1. A maritime zone adjacent to the territorial sea that may not extend beyond 24 nautical miles from the baselines from which the breadth of the territorial sea is measured. 2. The zone of the ocean extending 3-12 nautical miles from the United States coastline. (JP 3-32)

continental United States — United States territory, including the adjacent territorial waters, located within North America between Canada and Mexico. Also called **CONUS.** (JP 1)

contingency — A situation requiring military operations in response to natural disasters, terrorists, subversives, or as otherwise directed by appropriate authority to protect US interests. See also **contingency contracting.** (JP 5-0)

contingency basing — The life-cycle process of planning, designing, constructing, operating, managing, and transitioning or closing a non-enduring location supporting a combatant commander's requirements. (DODD 3000.10).

contingency contract — A legally binding agreement for supplies, services, and construction let by government contracting officers in the operational area as well as other contracts that have a prescribed area of performance within a designated operational area. See also **external support contract; systems support contract; theater support contract.** (JP 4-10)

contingency contracting — The process of obtaining goods, services, and construction via contracting means in support of contingency operations. See also contingency; contingency contract. (JP 4-10)

contingency engineering management organization — An organization formed by the combatant commander, or subordinate commander to augment their staffs with additional Service engineering expertise for planning and construction management. See also **combat engineering; contingency; crisis action planning; geospatial engineering.** (JP 3-34)

contingency location — A non-enduring location outside of the United States that supports and sustains operations during named and unnamed contingencies or other operations as directed by appropriate authority and is categorized by mission life-cycle requirements as initial, temporary, or semi-permanent. (DODD 3000.10)

contingency operation — A military operation that is either designated by the Secretary of Defense as a contingency operation or becomes a contingency operation as a matter of law (Title 10, United States Code, Section 101[a][13]). See also **contingency; operation.** (JP 1)

contingency plan — A plan for major contingencies that can reasonably be anticipated in the principal geographic subareas of the command. (JP 5-0)

Contingency Planning Guidance — Secretary of Defense written guidance, approved by the President, for the Chairman of the Joint Chiefs of Staff, which focuses the guidance given in the national security strategy and Defense Planning Guidance, and is the principal source document for the Joint Strategic Capabilities Plan. Also called **CPG.** (JP 1)

contingency response program — Fast reaction transportation procedures intended to provide for priority use of land transportation assets by Department of Defense when required. Also called **CORE.** (JP 4-01)

contingency ZIP Code — A ZIP Code consisting of a five-digit base with a four-digit add-on to assist in routing and sorting assigned by Military Postal Service Agency to a contingency post office for the tactical use of the Armed Forces on a temporary basis. (JP 1-0)

continuity of operations — The degree or state of being continuous in the conduct of functions, tasks, or duties necessary to accomplish a military action or mission in carrying out the national military strategy. Also called **COOP.** (JP 3-0)

contract administration — A subset of contracting that includes efforts to ensure that supplies, services, and construction are delivered in accordance with the terms and conditions of the contract. (JP 4-10)

contracting officer — A Service member or Department of Defense civilian with the legal authority to enter into, administer, modify, and/or terminate contracts. (JP 4-10)

contracting officer representative — A Service member or Department of Defense civilian or a foreign government civilian or military member appointed in writing and trained by a contracting officer, responsible for monitoring contract performance and performing other duties specified by their appointment letter. Also called **COR.** (JP 4-10)

contractor management — The oversight and integration of contractor personnel and associated equipment providing support to the joint force in a designated operational area. (JP 4-10)

contractors authorized to accompany the force — Contingency contractor employees and all tiers of subcontractor employees who are authorized to accompany the force in applicable contingency operations and have afforded such status through the issuance of a letter of authorization. Also called **CAAF.** (JP 4-10)

contract statement of requirement — A document that provides a summary of anticipated contracted supply or service requirements by phase of operation and location. Also called **CSOR.** (JP 4-10)

control — 1. Authority that may be less than full command exercised by a commander over part of the activities of subordinate or other organizations. (JP 1) 2. In mapping, charting, and photogrammetry, a collective term for a system of marks or objects on the Earth or on a map or a photograph, whose positions or elevations (or both) have been or will be determined. (JP 2-03) 3. Physical or psychological pressures exerted with the intent to assure that an agent or group will respond as directed. (JP 3-0) 4. An indicator governing the distribution and use of documents, information, or material. Such indicators are the

subject of intelligence community agreement and are specifically defined in appropriate regulations. See also **administrative control; operational control; tactical control.** (JP 2-01)

control area — A controlled airspace extending upwards from a specified limit above the Earth. See also **control zone.** (JP 3-04)

control group — Personnel, ships, and craft designated to control the waterborne ship-to-shore movement. (JP 3-02)

controlled information — 1. Information conveyed to an adversary in a deception operation to evoke desired appreciations. 2. Information and indicators deliberately conveyed or denied to foreign targets to evoke invalid official estimates that result in foreign official actions advantageous to US interests and objectives. (JP 2-01.2)

controlled source — In counterintelligence use, a person employed by or under the control of an intelligence activity and responding to intelligence tasking. (JP 2-01.2)

controlled substance — A drug or other substance, or immediate precursor included in Schedule I, II, III, IV, or V of the Controlled Substances Act. (JP 3-07.4)

controlled technical services — The controlled use of technology to enhance counterintelligence and human intelligence activities. Also called **CTS**. (JP 2-01.2)

control point — 1. A position along a route of march at which men are stationed to give information and instructions for the regulation of supply or traffic. 2. A position marked by coordinates (latitude, longitude), a buoy, boat, aircraft, electronic device, conspicuous terrain feature, or other identifiable object which is given a name or number and used as an aid to navigation or control of ships, boats, or aircraft. 3. In marking mosaics, a point located by ground survey with which a corresponding point on a photograph is matched as a check. (JP 3-09.3)

control zone — A controlled airspace extending upwards from the surface of the Earth to a specified upper limit. See also **control area.** (JP 3-52)

conventional forces — 1. Those forces capable of conducting operations using nonnuclear weapons. 2. Those forces other than designated special operations forces. Also called **CF.** (JP 3-05)

conventional mines — Land mines, other than nuclear or chemical, that are not designed to self-destruct; are designed to be emplaced by hand or mechanical means; and can be buried or surface emplaced. See also **mine.** (JP 3-15)

convoy — 1. A number of merchant ships and/or naval auxiliaries usually escorted by warships and/or aircraft — or a single merchant ship or naval auxiliary under surface escort — assembled and organized for the purpose of passage together. 2. A group of

vehicles organized for the purpose of control and orderly movement with or without escort protection that moves over the same route at the same time and under one commander. (JP 3-02.1)

convoy escort — 1. A naval ship(s) or aircraft in company with a convoy and responsible for its protection. 2. An escort to protect a convoy of vehicles from being scattered, destroyed, or captured. See also **escort.** (JP 4-01.5)

cooperative security location — A facility located outside the United States and US territories with little or no permanent US presence, maintained with periodic Service, contractor, or host-nation support. Cooperative security locations provide contingency access, logistic support, and rotational use by operating forces and are a focal point for security cooperation activities. Also called **CSL.** See also **forward operating site; main operating base.** (CJCS CM-0007-05)

coordinated fire line — A line beyond which conventional surface-to-surface direct fire and indirect fire support means may fire at any time within the boundaries of the establishing headquarters without additional coordination. Also called **CFL.** See also **fire support.** (JP 3-09)

coordinating agency — An agency that supports the incident management mission by providing the leadership, staff, expertise, and authorities to implement critical and specific aspects of the response. (JP 3-28)

coordinating altitude — An airspace coordinating measure that uses altitude to separate users and as the transition between different airspace control elements. Also called **CA**. (JP 3-52)

coordinating authority — A commander or individual who has the authority to require consultation between the specific functions or activities involving forces of two or more Services, joint force components, or forces of the same Service or agencies, but does not have the authority to compel agreement. (JP 1)

coordinating review authority — An agency appointed by a Service or combatant command to coordinate with and assist the lead agent, primary review authority, Joint Staff doctrine sponsor, and assessment agent in joint doctrine development and maintenance. Also called **CRA.** See also **joint doctrine; joint publication; lead agent; primary review authority.** (CJCSM 5120.01)

coordination level — A procedural method to separate fixed- and rotary-wing aircraft by determining an altitude below which fixed-wing aircraft normally will not fly. Also called **CL**. (JP 3-52)

cost-type contract — A contract that provides for payment to the contractor of allowable cost, to the extent prescribed in the contract, incurred in performance of the contract. (JP 4-10)

counterair — A mission that integrates offensive and defensive operations to attain and maintain a desired degree of air superiority and protection by neutralizing or destroying enemy aircraft and missiles, both before and after launch. See also **air superiority; mission; offensive counterair.** (JP 3-01)

counterdeception — Efforts to negate, neutralize, diminish the effects of, or gain advantage from a foreign deception operation. Counterdeception does not include the intelligence function of identifying foreign deception operations. (JP 3-13.4)

counterdrug — Those active measures taken to detect, monitor, and counter the production, trafficking, and use of illegal drugs. Also called **CD**. (JP 3-07.4)

counterdrug activities — Those measures taken to detect, interdict, disrupt, or curtail any activity that is reasonably related to illicit drug trafficking. (JP 3-07.4)

counterdrug operational support — Support to host nations and drug law enforcement agencies involving military personnel and their associated equipment, provided by the geographic combatant commanders from forces assigned to them or made available to them by the Services for this purpose. See also **counterdrug operations.** (JP 3-07.4)

counterdrug operations — Civil or military actions taken to reduce or eliminate illicit drug trafficking. See also **counterdrug; counterdrug operational support.** (JP 3-07.4)

counterespionage — That aspect of counterintelligence designed to detect, destroy, neutralize, exploit, or prevent espionage activities through identification, penetration, manipulation, deception, and repression of individuals, groups, or organizations conducting or suspected of conducting espionage activities. (JP 2-01.2)

counterfire — Fire intended to destroy or neutralize enemy weapons. (JP 3-09)

counterforce — The employment of strategic air and missile forces in an effort to destroy, or render impotent, selected military capabilities of an enemy force under any of the circumstances by which hostilities may be initiated.

counterguerrilla operations — Operations and activities conducted by armed forces, paramilitary forces, or nonmilitary agencies against guerrillas. (JP 3-24)

counter-improvised explosive device operations — The organization, integration, and synchronization of capabilities that enable offensive, defensive, stability, and support operations across all phases of operations or campaigns in order to defeat improvised explosive devices as operational and strategic weapons of influence. Also called **C-IED operations.** (JP 3-15.1)

countering weapons of mass destruction — Efforts against actors of concern to curtail the conceptualization, development, possession, proliferation, use, and effects of weapons of

mass destruction, related expertise, materials, technologies, and means of delivery. Also called **CWMD**. (JP 3-40)

counterinsurgency — Comprehensive civilian and military efforts designed to simultaneously defeat and contain insurgency and address its root causes. Also called **COIN.** (JP 3-24)

counterintelligence — Information gathered and activities conducted to identify, deceive, exploit, disrupt, or protect against espionage, other intelligence activities, sabotage, or assassinations conducted for or on behalf of foreign powers, organizations or persons or their agents, or international terrorist organizations or activities. Also called **CI**. See also **counterespionage; security.** (JP 2-01.2)

counterintelligence activities — One or more of the five functions of counterintelligence: operations, investigations, collection, analysis and production, and functional services. See also **analysis and production; collection; counterintelligence; operation.** (JP 2-01.2)

counterintelligence collection — The systematic acquisition of information (through investigations, operations, or liaison) concerning espionage, sabotage, terrorism, other intelligence activities or assassinations conducted by or on behalf of foreign governments or elements thereof, foreign organizations, or foreign persons that are directed against or threaten Department of Defense interests. See also **counterintelligence.** (JP 2-01.2)

counterintelligence insider threat — A person who uses their authorized access to Department of Defense facilities, systems, equipment, information or infrastructure to damage, disrupt operations, commit espionage on behalf of a foreign intelligence entity or support international terrorist organizations. (JP 2-01.2)

counterintelligence investigation — An official, systematic search for facts to determine whether a person(s) is engaged in activities that may be injurious to US national security or advantageous to a foreign power. See also **counterintelligence.** (JP 2-01.2)

counterintelligence operational tasking authority — The levying of counterintelligence requirements specific to joint military activities and operations. Counterintelligence operational tasking authority is exercised through supporting components. Also called **CIOTA.** See also **counterintelligence.** (JP 2-01.2)

counterintelligence operations — Proactive activities designed to identify, exploit, neutralize, or deter foreign intelligence collection and terrorist activities directed against the United States. See also **counterintelligence; operation.** (JP 2-01.2)

counterintelligence production — The process of analyzing all-source information concerning espionage or other multidiscipline intelligence collection threats, sabotage, terrorism, and other related threats to US military commanders, the Department of Defense, and the US Intelligence Community and developing it into a final product that

is disseminated. Counterintelligence production is used in formulating security policy, plans, and operations. See also **counterintelligence.** (JP 2-01.2)

counterintelligence support — Conducting counterintelligence activities to protect against espionage and other foreign intelligence activities, sabotage, international terrorist activities, or assassinations conducted for or on behalf of foreign powers, organizations, or persons. See also **counterintelligence.** (JP 2-01.2)

countermeasures — That form of military science that, by the employment of devices and/or techniques, has as its objective the impairment of the operational effectiveness of enemy activity. See also **electronic warfare.** (JP 3-13.1)

countermobility operations — The construction of obstacles and emplacement of minefields to delay, disrupt, and destroy the enemy by reinforcement of the terrain. See also **minefield; operation; target acquisition.** (JP 3-34)

counterproliferation — Those actions taken to reduce the risks posed by extant weapons of mass destruction to the United States, allies, and partners. Also called **CP.** See also **nonproliferation.** (JP 3-40)

countersurveillance — All measures, active or passive, taken to counteract hostile surveillance. See also **surveillance**. (JP 3-07.2)

counterterrorism — Activities and operations taken to neutralize terrorists and their organizations and networks in order to render them incapable of using violence to instill fear and coerce governments or societies to achieve their goals. Also called **CT.** See also **antiterrorism; combating terrorism; terrorism.** (JP 3-26)

counter threat finance — Activities conducted to deny, disrupt, destroy, or defeat the generation, storage, movement, and use of assets to fund activities that support an adversary's ability to negatively affect United States interests. Also called **CTF.** (JP 3-05)

country team — The senior, in-country, United States coordinating and supervising body, headed by the chief of the United States diplomatic mission, and composed of the senior member of each represented United States department or agency, as desired by the chief of the United States diplomatic mission. Also called **CT.** (JP 3-07.4)

coup de main — An offensive operation that capitalizes on surprise and simultaneous execution of supporting operations to achieve success in one swift stroke. (JP 3-0)

courier — A messenger (usually a commissioned or warrant officer) responsible for the secure physical transmission and delivery of documents and material. (JP 2-01)

course of action — 1. Any sequence of activities that an individual or unit may follow. 2. A scheme developed to accomplish a mission. 3. A product of the course-of-action development step of the joint operation planning process. Also called **COA.** (JP 5-0)

cover — In intelligence usage, those measures necessary to give protection to a person, plan, operation, formation, or installation from the enemy intelligence effort and leakage of information. (JP 2-01.2)

covering fire — 1. Fire used to protect troops when they are within range of enemy small arms. 2. In amphibious usage, fire delivered prior to the landing to cover preparatory operations such as underwater demolition or mine countermeasures. (JP 3-02)

covering force — 1. A force operating apart from the main force for the purpose of intercepting, engaging, delaying, disorganizing, and deceiving the enemy before the enemy can attack the force covered. 2. Any body or detachment of troops which provides security for a larger force by observation, reconnaissance, attack, or defense, or by any combination of these methods. (JP 3-18)

covert operation — An operation that is so planned and executed as to conceal the identity of or permit plausible denial by the sponsor. See also **clandestine operation; overt operation.** (JP 3-05)

crisis — An incident or situation involving a threat to the United States, its citizens, military forces, or vital interests that develops rapidly and creates a condition of such diplomatic, economic, or military importance that commitment of military forces and resources is contemplated to achieve national objectives. (JP 3-0)

crisis action planning — The Adaptive Planning and Execution system process involving the time-sensitive development of joint operation plans and operation orders for the deployment, employment, and sustainment of assigned and allocated forces and resources in response to an imminent crisis. Also called **CAP.** See also **joint operation planning; Joint Operation Planning and Execution System.** (JP 5-0)

crisis management — Measures, normally executed under federal law, to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or an act of terrorism. Also called **CrM.** (JP 3-28)

critical asset — A specific entity that is of such extraordinary importance that its incapacitation or destruction would have a very serious, debilitating effect on the ability of a nation to continue to function effectively. (JP 3-07.2)

critical asset list — A prioritized list of assets or areas, normally identified by phase of the operation and approved by the joint force commander, that should be defended against air and missile threats. Also called **CAL.** (JP 3-01)

critical capability — A means that is considered a crucial enabler for a center of gravity to function as such and is essential to the accomplishment of the specified or assumed objective(s). (JP 5-0)

critical element — 1. An element of an entity or object that enables it to perform its primary function. 2. An element of a target, which if effectively engaged, will serve to support the achievement of an operational objective and/or mission task. Also called **CE.** (JP 3-60)

critical information — Specific facts about friendly intentions, capabilities, and activities needed by adversaries for them to plan and act effectively so as to guarantee failure or unacceptable consequences for friendly mission accomplishment. Also called **CRITIC**. (JP 2-0)

critical infrastructure and key resources — The infrastructure and assets vital to a nation's security, governance, public health and safety, economy, and public confidence. Also called **CI/KR.** (JP 3-27)

critical infrastructure protection — Actions taken to prevent, remediate, or mitigate the risks resulting from vulnerabilities of critical infrastructure assets. Also called **CIP.** See also **defense critical infrastructure.** (JP 3-28)

critical intelligence — Intelligence that is crucial and requires the immediate attention of the commander. (JP 2-0)

critical item list — A prioritized list identifying supply items and weapon systems that assist Service and Defense Logistics Agency selection of supply items and systems for production surge planning, or in operational situations, used by the combatant commander and/or subordinate joint force commander to cross-level critical supply items between Service components. Also called **CIL.** (JP 4-05)

criticality assessment — An assessment that identifies key assets and infrastructure that support Department of Defense missions, units, or activities and are deemed mission critical by military commanders or civilian agency managers. Also called **CA**. (JP 3-07.2)

critical joint duty assignment billet — A joint duty assignment position for which, considering the duties and responsibilities of the position, it is highly important that the assigned officer be particularly trained in, and oriented toward, joint matters. (JP 1-0)

critical occupational specialty — A military occupational specialty selected from among the combat arms in the Army or equivalent military specialties in the Navy, Air Force, or Marine Corps. Equivalent military specialties are those engaged in operational art in order to attain strategic goals in an operational area through the design, organization, and conduct of campaigns and major operations. Critical occupational specialties are designated by the Secretary of Defense. Also called **COS.**

critical requirement — An essential condition, resource, and means for a critical capability to be fully operational. (JP 5-0)

critical vulnerability — An aspect of a critical requirement which is deficient or vulnerable to direct or indirect attack that will create decisive or significant effects. (JP 5-0)

cross-leveling —At the theater strategic and operational levels, it is the process of diverting en route or in-theater materiel from one military element to meet the higher priority of another within the combatant commander's directive authority for logistics. (JP 4-0)

cross-loading — The distribution of leaders, key weapons, personnel, and key equipment among the aircraft, vessels, or vehicles of a formation to aid rapid assembly of units at the drop zone or landing zone or preclude the total loss of command and control or unit effectiveness if an aircraft, vessel, or vehicle is lost. (JP 3-17)

cross-servicing — A subset of common-user logistics in which a function is performed by one Military Service in support of another Service and for which reimbursement is required from the Service receiving support. See also **acquisition and cross-servicing agreement; common-user logistics.** (JP 4-08)

cruise missile — Guided missile, the major portion of whose flight path to its target is conducted at approximately constant velocity; depends on the dynamic reaction of air for lift and upon propulsion forces to balance drag. (JP 3-01)

culminating point — The point at which a force no longer has the capability to continue its form of operations, offense or defense. (JP 5-0)

current force — The actual force structure and/or manning available to meet present contingencies. See also **force.** (JP 5-0)

custody — 1. The responsibility for the control of, transfer and movement of, access to, and maintenance of accountability for weapons and components. 2. Temporary restraint of a person. 3. The detention of a person by lawful authority or process. (JP 3-63)

customer direct — A materiel acquisition and distribution method that requires vendor delivery directly to the customer. Also called **CD.** (JP 4-09)

customer wait time — The total elapsed time between issuance of a customer order and satisfaction of that order. Also called **CWT.** (JP 4-09)

cybersecurity — Prevention of damage to, protection of, and restoration of computers, electronic communications systems, electronic communications services, wire communication, and electronic communication, including information contained therein, to ensure its availability, integrity, authentication, confidentiality, and nonrepudiation. (DODI 8500.01)

cyberspace — A global domain within the information environment consisting of the interdependent network of information technology infrastructures and resident data, including the Internet, telecommunications networks, computer systems, and embedded processors and controllers. (JP 3-12)

cyberspace operations — The employment of cyberspace capabilities where the primary purpose is to achieve objectives in or through cyberspace. (JP 3-0)

cyberspace superiority — The degree of dominance in cyberspace by one force that permits the secure, reliable conduct of operations by that force, and its related land, air, maritime, and space forces at a given time and place without prohibitive interference by an adversary. (JP 3-12)

D

damage assessment — 1. The determination of the effect of attacks on targets. 2. A determination of the effect of a compromise of classified information on national security. (JP 3-60)

damage criteria — The critical levels of various weapons effects required to create specified levels of damage. (JP 3-60)

damage estimation — A preliminary appraisal of the potential effects of an attack. See also **attack assessment.** (JP 3-60)

danger close — In close air support, artillery, mortar, and naval gunfire support fires, the term included in the method of engagement segment of a call for fire that indicates that friendly forces are within close proximity of the target. See also **final protective fire.** (JP 3-09.3)

dangerous cargo — Cargo that is subject to special regulations for its transport because of its dangerous properties. (JP 4-01.5)

data element — 1. A basic unit of information built on standard structures having a unique meaning and distinct units or values. 2. In electronic recordkeeping, a combination of characters or bytes referring to one separate item of information, such as name, address, or age. (JP 1-0)

date-time group — The date and time, expressed as six digits followed by the time zone suffix at which the message was prepared for transmission (first pair of digits denotes the date, second pair the hours, third pair the minutes, followed by a three-letter month abbreviation and two-digit year abbreviation.). Also called **DTG.** (JP 5-0)

datum (geodetic) — 1. A reference surface consisting of five quantities: the latitude and longitude of an initial point, the azimuth of a line from that point, and the parameters of the reference ellipsoid. 2. The mathematical model of the earth used to calculate the coordinates on any map. Different nations use different datum for printing coordinates on their maps. (JP 2-03)

D-day — The unnamed day on which a particular operation commences or is to commence. (JP 3-02)

de-arming — An operation in which a weapon is changed from a state of readiness for initiation to a safe condition. Also called **safing.** (JP 3-04)

debarkation — The unloading of troops, equipment, or supplies from a ship or aircraft. (JP 3-02.1)

debarkation schedule —A schedule that provides for the timely and orderly debarkation of troops and equipment and emergency supplies for the waterborne ship-to-shore movement. (JP 3-02.1)

decedent effects — Personal effects found on human remains. Also called **DE.** (JP 4-06)

decentralized control — In air defense, the normal mode whereby a higher echelon monitors unit actions, making direct target assignments to units only when necessary to ensure proper fire distribution or to prevent engagement of friendly aircraft. See also **centralized control.** (JP 3-01)

decentralized execution — Delegation of execution authority to subordinate commanders. (JP 3-30)

deception action — A collection of related deception events that form a major component of a deception operation. (JP 3-13.4)

deception concept — The deception course of action forwarded to the Chairman of the Joint Chiefs of Staff for review as part of the combatant commander's strategic concept. (JP 3-13.4)

deception event — A deception means executed at a specific time and location in support of a deception operation. (JP 3-13.4)

deception means — Methods, resources, and techniques that can be used to convey information to the deception target. There are three categories of deception means: a. **physical means.** Activities and resources used to convey or deny selected information to a foreign power. b. **technical means.** Military material resources and their associated operating techniques used to convey or deny selected information to a foreign power. c. **administrative means.** Resources, methods, and techniques to convey or deny oral, pictorial, documentary, or other physical evidence to a foreign power. (JP 3-13.4)

deception objective — The desired result of a deception operation expressed in terms of what the adversary is to do or not to do at the critical time and/or location. (JP 3-13.4)

deception story — A scenario that outlines the friendly actions that will be portrayed to cause the deception target to adopt the desired perception. (JP 3-13.4)

deception target — The adversary decision maker with the authority to make the decision that will achieve the deception objective. (JP 3-13.4)

decision — In an estimate of the situation, a clear and concise statement of the line of action intended to be followed by the commander as the one most favorable to the successful accomplishment of the assigned mission. (JP 5-0)

decision point — A point in space and time when the commander or staff anticipates making a key decision concerning a specific course of action. See also **course of action; decision support template; target area of interest.** (JP 5-0)

decision support template — A combined intelligence and operations graphic based on the results of wargaming that depicts decision points, timelines associated with movement of forces and the flow of the operation, and other key items of information required to execute a specific friendly course of action. Also called **DST**. See also **course of action; decision point.** (JP 2-01.3)

decisive point — A geographic place, specific key event, critical factor, or function that, when acted upon, allows commanders to gain a marked advantage over an adversary or contribute materially to achieving success. See also **center of gravity.** (JP 5-0)

deck status light — A three-colored light (red, amber, green) controlled from the primary flight control. Navy — The light displays the status of the ship to support flight operations. United States Coast Guard — The light displays clearance for a helicopter to conduct a given evolution. (JP 3-04)

decompression — In personnel recovery, the process of normalizing psychological and behavioral reactions that recovered isolated personnel experienced or are currently experiencing as a result of their isolation and recovery. (JP 3-50)

decontamination — The process of making any person, object, or area safe by absorbing, destroying, neutralizing, making harmless, or removing chemical or biological agents, or by removing radioactive material clinging to or around it. (JP 3-11)

decoy — An imitation in any sense of a person, object, or phenomenon which is intended to deceive enemy surveillance devices or mislead enemy evaluation. Also called **dummy.** (JP 3-13.4)

defended asset list —A listing of those assets from the critical asset list prioritized by the joint force commander to be defended with the resources available. Also called **DAL.** (JP 3-01)

defense coordinating element — A staff and military liaison officers who assist the defense coordinating officer in facilitating coordination and support to activated emergency support functions. Also called **DCE.** (JP 3-28)

defense coordinating officer — Department of Defense single point of contact for domestic emergencies who is assigned to a joint field office to process requirements for military support, forward mission assignments through proper channels to the appropriate military organizations, and assign military liaisons, as appropriate, to activated emergency support functions. Also called **DCO.** (JP 3-28)

defense critical infrastructure — Department of Defense and non-Department of Defense networked assets and facilities essential to project, support, and sustain military forces and operations worldwide. Also called **DCI.** (JP 3-27)

defense human intelligence executor — The senior Department of Defense intelligence official as designated by the head of each of the Department of Defense components who are authorized to conduct human intelligence and related intelligence activities. Also called **DHE**. (JP 2-01.2)

defense industrial base — The Department of Defense, government, and private sector worldwide industrial complex with capabilities to perform research and development, design, produce, and maintain military weapon systems, subsystems, components, or parts to meet military requirements. Also called **DIB**. (JP 3-27)

Defense Information Systems Network — The integrated network, centrally managed and configured by the Defense Information Systems Agency to provide dedicated point-to-point, switched voice and data, imagery, and video teleconferencing services for all Department of Defense activities. Also called **DISN.** (JP 6-0)

Defense Satellite Communications System — Geosynchronous military communications satellites that provide high data rate communications for military forces, diplomatic corps, and the White House. Also called **DSCS.** (JP 3-14)

defense sexual assault incident database — A Department of Defense database that captures and serves as the reporting source for all sexual assault data collected by the Services. Also called **DSAID.** (JP 1-0)

defense support of civil authorities — Support provided by US Federal military forces, Department of Defense civilians, Department of Defense contract personnel, Department of Defense component assets, and National Guard forces (when the Secretary of Defense, in coordination with the governors of the affected states, elects and requests to use those forces in Title 32, United States Code, status) in response to requests for assistance from civil authorities for domestic emergencies, law enforcement support, and other domestic activities, or from qualifying entities for special events. Also called **DSCA**. Also known as **civil support**. (DODD 3025.18)

Defense Support Program — Satellites that provide early warning of missile launches. Also called **DSP.** (JP 3-14)

Defense Switched Network — The component of the Defense Communications System that handles Department of Defense voice, data, and video communications. Also called **DSN.** (JP 6-0)

Defense Transportation System — That portion of the worldwide transportation infrastructure that supports Department of Defense transportation needs in peace and

war. Also called **DTS.** See also **common-user transportation; transportation system.** (JP 4-01)

defensive counterair — All defensive measures designed to neutralize or destroy enemy forces attempting to penetrate or attack through friendly airspace. Also called **DCA.** See also **counterair; offensive counterair.** (JP 3-01)

defensive cyberspace operation response action — Deliberate, authorized defensive measures or activities taken outside of the defended network to protect and defend Department of Defense cyberspace capabilities or other designated systems. Also called **DCO-RA.** (JP 3-12)

defensive cyberspace operations — Passive and active cyberspace operations intended to preserve the ability to utilize friendly cyberspace capabilities and protect data, networks, net-centric capabilities, and other designated systems. Also called **DCO.** (JP 3-12)

defensive minefield — 1. In naval mine warfare, a minefield laid in international waters or international straits with the declared intention of controlling shipping in defense of sea communications. 2. In land mine warfare, a minefield laid in accordance with an established plan to prevent a penetration between positions and to strengthen the defense of the positions themselves. See also **minefield.** (JP 3-15)

defensive space control — Operations conducted to preserve the ability to exploit space capabilities via active and passive actions, while protecting friendly space capabilities from attack, interference, or unintentional hazards. (JP 3-14)

defilade — 1. Protection from hostile observation and fire provided by an obstacle such as a hill, ridge, or bank. 2. A vertical distance by which a position is concealed from enemy observation. 3. To shield from enemy fire or observation by using natural or artificial obstacles. (JP 3-09)

definitive care — Care rendered to conclusively manage a patient's condition, such as full range of preventive, curative acute, convalescent, restorative, and rehabilitative medical care. (JP 4-02)

degaussing — The process whereby a ship's magnetic field is reduced by the use of electromagnetic coils, permanent magnets, or other means. (JP 3-15)

delayed entry program — A program under which an individual may enlist in a Reserve Component of a military service and specify a future reporting date for entry on active duty that would coincide with availability of training spaces and with personal plans such as high school graduation. Also called **DEP.** See also **active duty.** (JP 4-05)

delaying operation — An operation in which a force under pressure trades space for time by slowing down the enemy's momentum and inflicting maximum damage on the enemy without, in principle, becoming decisively engaged. (JP 3-04)

delegation of authority — The action by which a commander assigns part of his or her authority, commensurate with the assigned task, to a subordinate commander. (JP 1)

deliberate planning — 1. The Adaptive Planning and Execution system process involving the development of joint operation plans for contingencies identified in joint strategic planning documents. 2. A planning process for the deployment and employment of apportioned forces and resources that occurs in response to a hypothetical situation. (JP 5-0)

demilitarized zone — A defined area in which the stationing or concentrating of military forces, or the retention or establishment of military installations of any description, is prohibited. (JP 3-07.3)

demobilization — 1. The process of transitioning a conflict or wartime military establishment and defense-based civilian economy to a peacetime configuration while maintaining national security and economic vitality. 2. The process necessary to release from active duty, or federal service, units and Reserve Component members who were ordered to active duty, or called to federal service. See also **mobilization**. (JP 4-05)

demonstration — 1. An attack or show of force on a front where a decision is not sought, made with the aim of deceiving the enemy. See also **amphibious demonstration; diversion.** 2. In military deception, a show of force in an area where a decision is not sought that is made to deceive an adversary. It is similar to a feint but no actual contact with the adversary is intended. (JP 3-13.4)

denial measure — An action to hinder or deny the enemy the use of territory, personnel, or facilities to include destruction, removal, contamination, or erection of obstructions. (JP 3-15)

denied area — An area under enemy or unfriendly control in which friendly forces cannot expect to operate successfully within existing operational constraints and force capabilities. (JP 3-05)

Department of Defense civilian — A Federal civilian employee of the Department of Defense directly hired and paid from appropriated or nonappropriated funds, under permanent or temporary appointment. (JP 1-0)

Department of Defense components — The Office of the Secretary of Defense, the Military Departments, the Chairman of the Joint Chiefs of Staff and the Joint Staff, the combatant commands, the Office of the Inspector General of the Department of Defense, the Department of Defense agencies, Department of Defense field activities, and all other organizational entities in the Department of Defense. (JP 1)

Department of Defense construction agent — United States Army Corps of Engineers, Naval Facilities Engineering Command, or other such approved Department of Defense activity, that is assigned design or execution responsibilities associated with military

construction programs, facilities support, or civil engineering support to the combatant commanders in contingency operations. See also **contingency operation.** (JP 3-34)

Department of Defense container system — All Department of Defense owned, leased, and controlled 20- or 40-foot intermodal International Organization for Standardization containers and flatracks, supporting equipment such as generator sets and chassis, container handling equipment, information systems, the 463L system, and other infrastructure that supports Department of Defense transportation and logistic operations, including commercially provided transportation services. See also **container-handling equipment.** (JP 4-09)

Department of Defense information network — The set of information capabilities, and associated processes for collecting, processing, storing, disseminating, and managing information on-demand to warfighters, policy makers, and support personnel, whether interconnected or stand-alone, including owned and leased communications and computing systems and services, software (including applications), data, security services, other associated services, and national security systems. Also called **DODIN.** (JP 6-0)

Department of Defense information network operations — Operations to design, build, configure, secure, operate, maintain, and sustain Department of Defense networks to create and preserve information assurance on the Department of Defense information networks. (JP 3-12)

Department of Defense Intelligence Information System — The combination of Department of Defense personnel, procedures, equipment, computer programs, and supporting communications that support the timely and comprehensive preparation and presentation of intelligence and information to military commanders and national-level decision makers. Also called **DODIIS.** (JP 2-0)

Department of Defense support to counterdrug operations — Support provided by the Department of Defense to law enforcement agencies to detect, monitor, and counter the production, trafficking, and use of illegal drugs. See also **counterdrug operations.** (JP 3-07.4)

Department of the Air Force — The executive part of the Department of the Air Force at the seat of government and all field headquarters, forces, Reserve Component, installations, activities, and functions under the control or supervision of the Secretary of the Air Force. Also called **DAF.** See also **Military Department.** (JP 1)

Department of the Army — The executive part of the Department of the Army at the seat of government and all field headquarters, forces, Reserve Component, installations, activities, and functions under the control or supervision of the Secretary of the Army. Also called **DA.** See also **Military Department.** (JP 1)

Department of the Navy — The executive part of the Department of the Navy at the seat of government; the headquarters, United States Marine Corps; the entire operating forces

of the United States Navy and of the United States Marine Corps, including the Reserve Component of such forces; all field activities, headquarters, forces, bases, installations, activities, and functions under the control or supervision of the Secretary of the Navy; and the United States Coast Guard when operating as a part of the Navy pursuant to law. Also called **DON.** See also **Military Department.** (JP 1)

departure airfield — An airfield on which troops and/or materiel are enplaned for flight. See also **airfield.** (JP 3-17)

departure point — A navigational check point used by aircraft as a marker for setting course. (JP 3-17)

dependents — An employee's spouse; children who are unmarried and under age 21 years or who, regardless of age, are physically or mentally incapable of self-support; dependent parents, including step and legally adoptive parents of the employee's spouse; and dependent brothers and sisters, including step and legally adoptive brothers and sisters of the employee's spouse who are unmarried and under 21 years of age or who, regardless of age, are physically or mentally incapable of self-support. (JP 3-68)

deployment — The rotation of forces into and out of an operational area. See also **deployment order; deployment planning; prepare to deploy order.** (JP 3-35)

deployment health surveillance — The regular or repeated collection, analysis, archiving, interpretation, and distribution of health-related data used for monitoring the health of a population or of individuals, and for intervening in a timely manner to prevent, treat, or control the occurrence of disease or injury, which includes occupational and environmental health surveillance and medical surveillance subcomponents. (JP 4-02)

deployment order — A planning directive from the Secretary of Defense, issued by the Chairman of the Joint Chiefs of Staff, that authorizes and directs the transfer of forces between combatant commands by reassignment or attachment. Also called **DEPORD.** See also **deployment; deployment planning; prepare to deploy order.** (JP 5-0)

deployment planning — Operational planning directed toward the movement of forces and sustainment resources from their original locations to a specific operational area for conducting the joint operations contemplated in a given plan. See also **deployment; deployment order; prepare to deploy order.** (JP 5-0)

depot — 1. **supply** — An activity for the receipt, classification, storage, accounting, issue, maintenance, procurement, manufacture, assembly, research, salvage, or disposal of material. 2. **personnel** — An activity for the reception, processing, training, assignment, and forwarding of personnel replacements. (JP 4-0)

design basis threat — The threat against which buildings and other structures must be protected and upon which the protective system's design is based. Also called **DBT.** (JP 3-07.2)

desired perception — In military deception, what the deception target must believe for it to make the decision that will achieve the deception objective. (JP 3-13.4)

desired point of impact — A precise point, associated with a target and assigned as the impact point for a single unitary weapon to create a desired effect. Also called **DPI.** See also **aimpoint.** (JP 3-60)

detainee — Any person captured, detained, or otherwise under the control of Department of Defense personnel. (JP 3-63)

detainee collection point — A facility or other location where detainees are assembled for subsequent movement to a detainee holding area. Also called **DCP**. (JP 3-63)

detainee holding area — A facility or other location where detainees are administratively processed and provided custodial care pending disposition and subsequent release, transfer, or movement to a theater detention facility. Also called **DHA**. (JP 3-63)

detainee operations — A broad term that encompasses the capture, initial detention and screening, transportation, treatment and protection, housing, transfer, and release of the wide range of persons who could be categorized as detainees. (JP 3-63)

detection — 1. In tactical operations, the perception of an object of possible military interest but unconfirmed by recognition. 2. In surveillance, the determination and transmission by a surveillance system that an event has occurred. 3. In arms control, the first step in the process of ascertaining the occurrence of a violation of an arms control agreement. 4. In chemical, biological, radiological, and nuclear environments, the act of locating chemical, biological, radiological, and nuclear hazards by use of chemical, biological, radiological, and nuclear detectors or monitoring and/or survey teams. See also **hazard**. (JP 3-11)

deterrence — The prevention of action by the existence of a credible threat of unacceptable counteraction and/or belief that the cost of action outweighs the perceived benefits. (JP 3-0)

deterrent options — A course of action, developed on the best economic, diplomatic, and military judgment, designed to dissuade an adversary from a current course of action or contemplated operations. (JP 5-0)

development assistance. Programs, projects, and activities carried out by the United States Agency for International Development that improve the lives of the citizens of developing countries while furthering United States foreign policy interests in expanding democracy and promoting free market economic growth. (JP 3-08)

direct action — Short-duration strikes and other small-scale offensive actions conducted as a special operation in hostile, denied, or diplomatically sensitive environments and which

employ specialized military capabilities to seize, destroy, capture, exploit, recover, or damage designated targets. Also called **DA.** See also **special operations; special operations forces.** (JP 3-05)

direct air support center — The principal air control agency of the United States Marine Corps air command and control system responsible for the direction and control of air operations directly supporting the ground combat element. Also called **DASC.** See also **Marine air command and control system; tactical air operations center.** (JP 3-09.3)

direct air support center (airborne) — An airborne aircraft equipped with the necessary staff personnel, communications, and operations facilities to function as a direct air support center. Also called **DASC(A).** See also **direct air support center.** (JP 3-09.3)

directed energy — An umbrella term covering technologies that relate to the production of a beam of concentrated electromagnetic energy or atomic or subatomic particles. Also called **DE.** See also **directed-energy device; directed-energy weapon.** (JP 3-13.1)

directed-energy device — A system using directed energy primarily for a purpose other than as a weapon. See also **directed energy; directed-energy weapon.** (JP 3-13.1)

directed-energy warfare — Military action involving the use of directed-energy weapons, devices, and countermeasures. Also called **DEW.** See also **directed energy; directed-energy device; directed-energy weapon; electromagnetic spectrum; electronic warfare.** (JP 3-13.1)

directed-energy weapon — A weapon or system that uses directed energy to incapacitate, damage, or destroy enemy equipment, facilities, and/or personnel. See also **directed energy; directed-energy device.** (JP 3-13.1)

direct fire — Fire delivered on a target using the target itself as a point of aim for either the weapon or the director. (JP 3-09.3)

direction finding — A procedure for obtaining bearings of radio frequency emitters by using a highly directional antenna and a display unit on an intercept receiver or ancillary equipment. Also called **DF**. (JP 3-13.1)

directive authority for logistics — Combatant commander authority to issue directives to subordinate commanders to ensure the effective execution of approved operation plans, optimize the use or reallocation of available resources, and prevent or eliminate redundant facilities and/or overlapping functions among the Service component commands. Also called **DAFL.** See also **combatant command (command authority); logistics.** (JP 1)

direct liaison authorized — That authority granted by a commander (any level) to a subordinate to directly consult or coordinate an action with a command or agency within or outside of the granting command. Also called **DIRLAUTH.** (JP 1)

director of mobility forces — The designated agent for all air mobility issues in the area of responsibility or joint operations area, exercising coordinating authority between the air operations center (or appropriate theater command and control node), the 618 Air Operations Center (Tanker Airlift Control Center), and the joint deployment and distribution operation center or joint movement center, in order to expedite the resolution of air mobility issues. Also called **DIRMOBFOR.** See also **air operations center; coordinating authority.** (JP 3-17)

direct support — A mission requiring a force to support another specific force and authorizing it to answer directly to the supported force's request for assistance. Also called **DS.** See also **close support; general support; mission; mutual support; support.** (JP 3-09.3)

disarmament — The reduction of a military establishment to some level set by international agreement. See also **arms control agreement.** (JP 3-0)

disaster assistance response team — A team of specialists, trained in a variety of disaster relief skills, rapidly deployed to assist US embassies and United States Agency for International Development missions with the management of US Government response to disasters. Also called **DART.** See also **foreign disaster; foreign disaster relief.** (JP 3-08)

disease and nonbattle injury — All illnesses and injuries not resulting from enemy or terrorist action or caused by conflict. Also called **DNBI.** (JP 4-02)

disengagement — The act of geographically separating the forces of disputing parties. (JP 3-07.3)

dislocated civilian — A broad term primarily used by the Department of Defense that includes a displaced person, an evacuee, an internally displaced person, a migrant, a refugee, or a stateless person. Also called **DC.** See also **displaced person; evacuee; internally displaced person; migrant; refugee; stateless person.** (JP 3-29)

dispersal — Relocation of forces for the purpose of increasing survivability. (JP 3-01)

dispersal airfield — An airfield, military or civil, to which aircraft might move before H-hour on either a temporary duty or permanent change of station basis and be able to conduct operations. See also **airfield.** (JP 3-01)

dispersion — 1. The spreading or separating of troops, materiel, establishments, or activities, which are usually concentrated in limited areas to reduce vulnerability. (JP 5-0) 2. In chemical and biological operations, the dissemination of agents in liquid or aerosol form. (JP 3-41) 3. In airdrop operations, the scatter of personnel and/or cargo on the drop zone. (JP 3-17) 4. In naval control of shipping, the reberthing of a ship in the periphery of the port area or in the vicinity of the port for its own protection in order to minimize the risk of damage from attack. (JP 4-01.2)

displaced person — A broad term used to refer to internally and externally displaced persons collectively. See also **evacuee; refugee.** (JP 3-29)

display — In military deception, a static portrayal of an activity, force, or equipment intended to deceive the adversary's visual observation. (JP 3-13.4)

dissemination and integration — In intelligence usage, the delivery of intelligence to users in a suitable form and the application of the intelligence to appropriate missions, tasks, and functions. See also **intelligence process.** (JP 2-01)

distant retirement area — In amphibious operations, the sea area located to seaward of the landing area to which assault ships may retire and operate in the event of adverse weather or to prevent concentration of ships in the landing area. See also **amphibious operation; landing area.** (JP 3-02)

distressed person — An individual who requires search and rescue assistance to remove he or she from life-threatening or isolating circumstances in a permissive environment. (JP 3-50)

distribution — 1. The arrangement of troops for any purpose, such as a battle, march, or maneuver. 2. A planned pattern of projectiles about a point. 3. A planned spread of fire to cover a desired frontage or depth. 4. An official delivery of anything, such as orders or supplies. 5. The operational process of synchronizing all elements of the logistic system to deliver the "right things" to the "right place" at the "right time" to support the geographic combatant commander. 6. The process of assigning military personnel to activities, units, or billets. (JP 4-0)

distribution manager — The executive agent for managing distribution with the combatant commander's area of responsibility. See also **area of responsibility; distribution.** (JP 4-09)

distribution pipeline — Continuum or channel through which the Department of Defense conducts distribution operations, representing the end-to-end flow of resources from supplier to consumer and, in some cases, back to the supplier in retrograde activities. See also **distribution.** (JP 4-09)

distribution plan — A reporting system comprising reports, updates, and information systems feeds that articulate the requirements of the theater distribution system to the strategic and operational resources assigned responsibility for support to the theater. See also **distribution; distribution system; theater distribution; theater distribution system.** (JP 4-09)

distribution point — A point at which supplies and/or ammunition, obtained from supporting supply points by a division or other unit, are broken down for distribution to subordinate units. (JP 4-09)

distribution system — That complex of facilities, installations, methods, and procedures designed to receive, store, maintain, distribute, and control the flow of military materiel between the point of receipt into the military system and the point of issue to using activities and units. (JP 4-09)

diversion — 1. The act of drawing the attention and forces of an enemy from the point of the principal operation; an attack, alarm, or feint that diverts attention. 2. A change made in a prescribed route for operational or tactical reasons that does not constitute a change of destination. 3. A rerouting of cargo or passengers to a new transshipment point or destination or on a different mode of transportation prior to arrival at ultimate destination. 4. In naval mine warfare, a route or channel bypassing a dangerous area by connecting one channel to another or it may branch from a channel and rejoin it on the other side of the danger. See also **demonstration.** (JP 3-03)

doctrine — Fundamental principles by which the military forces or elements thereof guide their actions in support of national objectives. It is authoritative but requires judgment in application. See also **multinational doctrine; joint doctrine**. (CJCSI 5120.02)

domestic emergencies — Civil defense emergencies, civil disturbances, major disasters, or natural disasters affecting the public welfare and occurring within the United States and its territories. See also **natural disaster.** (JP 3-27)

domestic intelligence — Intelligence relating to activities or conditions within the United States that threaten internal security and that might require the employment of troops; and intelligence relating to activities of individuals or agencies potentially or actually dangerous to the security of the Department of Defense. (JP 3-08)

dominant user — The Service or multinational partner who is the principal consumer of a particular common-user logistic supply or service within a joint or multinational operation and will normally act as the lead Service to provide this particular common-user logistic supply or service to other Service components, multinational partners, other governmental agencies, or nongovernmental agencies as directed by the combatant commander. See also **common-user logistics; lead Service or agency for common-user logistics.** (JP 4-0)

double agent — Agent in contact with two opposing intelligence services, only one of which is aware of the double contact or quasi-intelligence services. Also called **DA**. (JP 2-01.2)

double container — A 9.8125 feet by 8 feet by 8 feet (2991 millimeters by 2438 millimeters by 2438 millimeters) reusable International Standards Organization compliant double container, with double doors at both ends, used for the storage, transportation, and distribution of dry cargo. Also called **BICON.** (JP 4-09)

downgrade — To determine that classified information requires, in the interests of national security, a lower degree of protection against unauthorized disclosure than currently

provided, coupled with a changing of the classification designation to reflect such a lower degree. (JP 3-08)

downloading — An operation that removes airborne weapons or stores from an aircraft. (JP 3-04)

drop altitude — The altitude above mean sea level at which airdrop is executed. (JP 3-17)

drop zone — A specific area upon which airborne troops, equipment, or supplies are airdropped. Also called **DZ.** (JP 3-17)

drug interdiction — A continuum of events focused on interrupting illegal drugs smuggled by air, sea, or land. See also **counterdrug operations.** (JP 3-07.4)

dual-capable aircraft — Allied and US fighter aircraft tasked and configured to perform either conventional or theater nuclear missions. Also called **DCA.**

dual-role tanker — An aircraft that can carry support personnel, supplies, and equipment for the deploying force while escorting and/or refueling combat aircraft to the area of responsibility. See also **air refueling.** (JP 3-17)

dummy — See **decoy**. (JP 3-13.4)

dwell time — 1. The length of time a target is expected to remain in one location. (JP 3-60) 2. The period of time between the release from involuntary active and the reporting date for a subsequent tour of active duty pursuant to Title 10, United States Code, Section 12302. Such time includes any voluntary active duty performed between two periods of involuntary active duty pursuant to Title 10, United States Code, Section 12302. (DODD 1235.10)

dynamic targeting — Targeting that prosecutes targets identified too late, or not selected for action in time to be included in deliberate targeting. (JP 3-60)

dynamic threat assessment — An intelligence assessment developed by the Defense Intelligence Agency that details the threat, capabilities, and intentions of adversaries in each of the priority plans in the Joint Strategic Capabilities Plan. Also called **DTA.** (JP 2-0)

E

earliest arrival date — A day, relative to C-day, that is specified as the earliest date when a unit, a resupply shipment, or replacement personnel can be accepted at a port of debarkation during a deployment. Also called **EAD.** See also **latest arrival date**. (JP 5-0)

early warning — Early notification of the launch or approach of unknown weapons or weapons carriers. Also called **EW.** See also **attack assessment.** (JP 3-01)

economy of force — The judicious employment and distribution of forces so as to expend the minimum essential combat power on secondary efforts in order to allocate the maximum possible combat power on primary efforts. (JP 3-0)

E-day — The day landing force personnel, supplies, and equipment begin to embark aboard amphibious warfare or commercial ships. (JP 3-02.1)

effect — 1. The physical or behavioral state of a system that results from an action, a set of actions, or another effect. 2. The result, outcome, or consequence of an action. 3. A change to a condition, behavior, or degree of freedom. (JP 3-0)

effective United States-controlled ships — United States-owned foreign flag ships that can be tasked by the Maritime Administration to support Department of Defense requirements when necessary. Also called **EUSCS.** (JP 4-01.2)

electro-explosive device — An explosive or pyrotechnic component that initiates an explosive, burning, electrical, or mechanical train and is activated by the application of electrical energy. Also called **EED.** (JP 3-04)

electromagnetic battle management — The dynamic monitoring, assessing, planning, and directing of joint electromagnetic spectrum operations in support of the commander's scheme of maneuver. Also called **EMBM.** (JP 3-13.1)

electromagnetic compatibility — The ability of systems, equipment, and devices that use the electromagnetic spectrum to operate in their intended environments without causing or suffering unacceptable or unintentional degradation because of electromagnetic radiation or response. Also called **EMC.** See also **electromagnetic spectrum; electromagnetic spectrum management; electronic warfare.** (JP 3-13.1)

electromagnetic environment — The resulting product of the power and time distribution, in various frequency ranges, of the radiated or conducted electromagnetic emission levels encountered by a military force, system, or platform when performing its assigned mission in its intended operational environment. Also called **EME.** (JP 3-13.1)

electromagnetic environmental effects — The impact of the electromagnetic environment upon the operational capability of military forces, equipment, systems, and platforms. Also called **E3.** (JP 3-13.1)

electromagnetic hardening — Action taken to protect personnel, facilities, and/or equipment by blanking, filtering, attenuating, grounding, bonding, and/or shielding against undesirable effects of electromagnetic energy. See also **electronic warfare.** (JP 3-13.1)

electromagnetic interference — Any electromagnetic disturbance, induced intentionally or unintentionally, that interrupts, obstructs, or otherwise degrades or limits the effective performance of electronics and electrical equipment. Also called **EMI.** (JP 3-13.1)

electromagnetic intrusion — The intentional insertion of electromagnetic energy into transmission paths in any manner, with the objective of deceiving operators or of causing confusion. See also **electronic warfare.** (JP 3-13.1)

electromagnetic jamming — The deliberate radiation, reradiation, or reflection of electromagnetic energy for the purpose of preventing or reducing an enemy's effective use of the electromagnetic spectrum, and with the intent of degrading or neutralizing the enemy's combat capability. See also **electromagnetic spectrum; electromagnetic spectrum management; electronic warfare.** (JP 3-13.1)

electromagnetic operational environment — The background electromagnetic environment and the friendly, neutral, and adversarial electromagnetic order of battle within the electromagnetic area of influence associated with a given operational area. Also called **EMOE**. (JP 6-01)

electromagnetic pulse — The electromagnetic radiation from a strong electronic pulse, most commonly caused by a nuclear explosion that may couple with electrical or electronic systems to produce damaging current and voltage surges. Also called **EMP.** See also **electromagnetic radiation.** (JP 3-13.1)

electromagnetic radiation — Radiation made up of oscillating electric and magnetic fields and propagated with the speed of light. (JP 6-01)

electromagnetic radiation hazards —Transmitter or antenna installation that generates or increases electromagnetic radiation in the vicinity of ordnance, personnel, or fueling operations in excess of established safe levels. Also called **EMR hazards or RADHAZ.** (JP 3-13.1)

electromagnetic spectrum — The range of frequencies of electromagnetic radiation from zero to infinity. It is divided into 26 alphabetically designated bands. See also **electronic warfare.** (JP 3-13.1)

electromagnetic spectrum control — The coordinated execution of joint electromagnetic spectrum operations with other lethal and nonlethal operations that enable freedom of action in the electromagnetic operational environment. Also called **EMSC.** (JP 3-13.1)

electromagnetic spectrum management — Planning, coordinating, and managing use of the electromagnetic spectrum through operational, engineering, and administrative procedures. See also **electromagnetic spectrum.** (JP 6-01)

electromagnetic vulnerability — The characteristics of a system that cause it to suffer a definite degradation (incapability to perform the designated mission) as a result of having been subjected to a certain level of electromagnetic environmental effects. Also called **EMV.** (JP 3-13.1)

electronic attack — Division of electronic warfare involving the use of electromagnetic energy, directed energy, or antiradiation weapons to attack personnel, facilities, or equipment with the intent of degrading, neutralizing, or destroying enemy combat capability and is considered a form of fires. Also called **EA.** See also **electronic protection; electronic warfare; electronic warfare support.** (JP 3-13.1)

electronic intelligence — Technical and geolocation intelligence derived from foreign noncommunications electromagnetic radiations emanating from other than nuclear detonations or radioactive sources. Also called **ELINT.** See also **electronic warfare; foreign instrumentation signals intelligence; intelligence; signals intelligence.** (JP 3-13.1)

electronic masking —The controlled radiation of electromagnetic energy on friendly frequencies in a manner to protect the emissions of friendly communications and electronic systems against enemy electronic warfare support measures/signals intelligence without significantly degrading the operation of friendly systems. (JP 3-13.1)

electronic probing — Intentional radiation designed to be introduced into the devices or systems of potential enemies for the purpose of learning the functions and operational capabilities of the devices or systems. (JP 3-13.1)

electronic protection — Division of electronic warfare involving actions taken to protect personnel, facilities, and equipment from any effects of friendly or enemy use of the electromagnetic spectrum that degrade, neutralize, or destroy friendly combat capability. Also called **EP.** See also **electronic attack, electronic warfare; electronic warfare support.** (JP 3-13.1)

electronic reconnaissance — The detection, location, identification, and evaluation of foreign electromagnetic radiations. See also **electromagnetic radiation; reconnaissance.** (JP 3-13.1)

electronics security — The protection resulting from all measures designed to deny unauthorized persons information of value that might be derived from their interception and study of noncommunications electromagnetic radiations, e.g., radar. (JP 3-13.1)

electronic warfare — Military action involving the use of electromagnetic and directed energy to control the electromagnetic spectrum or to attack the enemy. Also called **EW.** See also **directed energy; electromagnetic spectrum; electronic attack; electronic protection; electronic warfare support.** (JP 3-13.1)

electronic warfare frequency deconfliction — Actions taken to integrate those frequencies used by electronic warfare systems into the overall frequency deconfliction process. See also **electronic warfare.** (JP 3-13.1)

electronic warfare reprogramming — The deliberate alteration or modification of electronic warfare or target sensing systems, or the tactics and procedures that employ them, in response to validated changes in equipment, tactics, or the electromagnetic environment. See also **electronic warfare.** (JP 3-13.1)

electronic warfare support — Division of electronic warfare involving actions tasked by, or under direct control of, an operational commander to search for, intercept, identify, and locate or localize sources of intentional and unintentional radiated electromagnetic energy for the purpose of immediate threat recognition, targeting, planning and conduct of future operations. Also called **ES.** See also **electronic attack; electronic protection; electronic warfare.** (JP 3-13.1)

electro-optical-infrared countermeasure — A device or technique employing electro-optical-infrared materials or technology that is intended to impair the effectiveness of enemy activity, particularly with respect to precision guided weapons and sensor systems. Also called **EO-IR CM.** (JP 3-13.1)

element — An organization formed around a specific function within a designated directorate of a joint force commander's headquarters. (JP 3-33)

elevated causeway system — An elevated causeway pier that provides a means of delivering containers, certain vehicles, and bulk cargo ashore without the lighterage contending with the surf zone. Also called **ELCAS**. See also **causeway.** (JP 4-01.6)

elicitation — In intelligence usage, the acquisition of information from a person or group in a manner that does not disclose the intent of the interview or conversation. (JP 2-0)

embarkation — The process of putting personnel and/or vehicles and their associated stores and equipment into ships and/or aircraft. (JP 3-02.1)

embarkation and tonnage table — A consolidated table showing personnel and cargo, by troop or naval units, loaded aboard a combat-loaded ship. (JP 3-02.1)

embarkation area — An area ashore, including a group of embarkation points, in which final preparations for embarkation are completed and through which assigned personnel and loads for craft and ships are called forward to embark. See also **mounting area.** (JP 3-02.1)

embarkation element — A temporary administrative formation of personnel with supplies and equipment embarking or to be embarked (combat loaded) aboard the ships of one transport element. (JP 3-02.1)

embarkation group — A temporary administrative formation of personnel with supplies and equipment embarking or to be embarked (combat loaded) aboard the ships of one transport element group. (JP 3-02.1)

embarkation officer — An officer on the staff of units of the landing force who advises the commander thereof on matters pertaining to embarkation planning and loading ships. See also **combat cargo officer.** (JP 3-02.1)

embarkation order — An order specifying dates, times, routes, loading diagrams, and methods of movement to shipside or aircraft for troops and their equipment. (JP 3-02.1)

embarkation organization — A temporary administrative formation of personnel with supplies and equipment embarking or to be embarked aboard ships. See also **embarkation team**. (JP 3-02.1)

embarkation phase — In amphibious operations, the phase that encompasses the orderly assembly of personnel and materiel and their subsequent loading aboard ships and/or aircraft in a sequence designed to meet the requirements of the landing force concept of operations ashore. (JP 3-02.1)

embarkation plans — The plans prepared by the landing force and appropriate subordinate commanders containing instructions and information concerning the organization for embarkation, assignment to shipping, supplies and equipment to be embarked, location and assignment of embarkation areas, control and communication arrangements, movement schedules and embarkation sequence, and additional pertinent instructions relating to the embarkation of the landing force. (JP 3-02)

embarkation team — A temporary administrative formation of all personnel with supplies and equipment embarking or to be embarked (combat loaded) aboard one ship. See also **embarkation organization**. (JP 3-02.1)

embarkation unit — A temporary administrative formation of personnel with supplies and equipment embarking or to be embarked (combat loaded) aboard the ships of one transport unit, which is dissolved upon completion of the embarkation. (JP 3-02.1)

emergency action committee — An organization established at a foreign service post by the chief of mission or principal officer for the purpose of directing and coordinating the post's response to contingencies. Also called **EAC.** (JP 3-68)

emergency authority — A Federal military commander's authority, in extraordinary emergency circumstances where prior authorization by the President is impossible and duly constituted local authorities are unable to control the situation, to engage temporarily in activities that are necessary to quell large-scale, unexpected civil disturbances because (1) such activities are necessary to prevent significant loss of life or wanton destruction of property and are necessary to restore governmental function and public order or (2) duly constituted Federal, state, or local authorities are unable or decline to provide adequate protection for Federal property or Federal governmental functions. (DODD 3025.18)

emergency-essential employee — A Department of Defense civilian employee whose assigned duties and responsibilities must be accomplished following the evacuation of non-essential personnel (including dependents) during a declared emergency or outbreak of war. See also **evacuation.** (JP 1-0)

emergency locator beacon — A generic term for all radio beacons used for emergency locating purposes. See also **personal locator beacon.** (JP 3-50)

emergency operations center — A temporary or permanent facility where the coordination of information and resources to support domestic incident management activities normally takes place. Also called **EOC.** (JP 3-41)

emergency preparedness — Measures taken in advance of an emergency to reduce the loss of life and property and to protect a nation's institutions from all types of hazards through a comprehensive emergency management program of preparedness, mitigation, response, and recovery. Also called **EP.** (JP 3-28)

emergency preparedness liaison officer — A senior reserve officer who represents their Service at the appropriate joint field office conducting planning and coordination responsibilities in support of civil authorities. Also called **EPLO.** (JP 3-28)

emergency repair — The least amount of immediate repair to damaged facilities necessary for the facilities to support the mission. See also **facility substitutes.** (JP 3-34)

emergency support functions — A grouping of government and certain private-sector capabilities into an organizational structure to provide the support, resources, program implementation, and services that are most likely to be needed to save lives, protect property and the environment, restore essential services and critical infrastructure, and help victims and communities return to normal, when feasible, following domestic incidents. Also called **ESFs.** (JP 3-28)

emission control — The selective and controlled use of electromagnetic, acoustic, or other emitters to optimize command and control capabilities while minimizing, for operations security: a. detection by enemy sensors; b. mutual interference among friendly systems; and/or c. enemy interference with the ability to execute a military deception plan. Also called **EMCON.** See also **electronic warfare.** (JP 3-13.1)

emission security — The component of communications security that results from all measures taken to deny unauthorized persons information of value that might be derived from intercept and analysis of compromising emanations from crypto-equipment and telecommunications systems. See also **communications security.** (JP 6-0)

employment — The strategic, operational, or tactical use of forces. (JP 5-0)

end evening civil twilight — The point in time when the sun has dropped 6 degrees beneath the western horizon, and is the instant at which there is no longer sufficient light to see objects with the unaided eye. Also called **EECT.** (JP 2-01.3)

end item — A final combination of end products, component parts, and/or materials that is ready for its intended use. (JP 4-02)

end of evening nautical twilight — The point in time when the sun has dropped 12 degrees below the western horizon, and is the instant of last available daylight for the visual control of limited military operations. Also called **EENT**. (JP 2-01.3)

end state — The set of required conditions that defines achievement of the commander's objectives. (JP 3-0)

end-to-end — A term that describes joint distribution operations boundaries, which begin at the point of origin and terminate at the geographic combatant commander's designated point of need within a desired operational area, including the return of forces and materiel. (JP 4-09)

enemy combatant — In general, a person engaged in hostilities against the United States or its coalition partners during an armed conflict. Also called **EC.** (DODD 2310.01E)

engage — 1. In air defense, a fire control order used to direct or authorize units and/or weapon systems to fire on a designated target. See also **cease engagement; hold fire.** (JP 3-01) 2. To bring the enemy under fire. (JP 3-09.3)

engagement — 1. In air defense, an attack with guns or air-to-air missiles by an interceptor aircraft, or the launch of an air defense missile by air defense artillery and the missile's subsequent travel to intercept. (JP 3-01) 2. A tactical conflict, usually between opposing lower echelons maneuver forces. See also **battle; campaign.** (JP 3-0)

engagement authority — An authority vested with a joint force commander that may be delegated to a subordinate commander, that permits an engagement decision. (JP 3-01)

engineer support plan — An appendix to the logistics annex or separate annex of an operation plan that identifies the minimum essential engineering services and construction requirements required to support the commitment of military forces. Also called **ESP.** See also **operation plan.** (JP 3-34)

en route care — Continuation of the provision of care during movement (evacuation) between the health service support capabilities in the roles of care, without clinically compromising the patient's condition. See also **evacuation.** (JP 4-02)

enterprise force structure — The digitized hierarchical representation of Department of Defense organizations, documented in accordance with the standardized precepts of the Organizational and Force Structure Construct, generated and shared from .org servers for Department of Defense-wide integration and use. (DODI 8260.03)

entity — Within the context of targeting, a term used to describe facilities, organizations, individuals, equipment, or virtual (nontangible) things. (JP 3-60)

environmental baseline survey — A multi-disciplinary site survey conducted prior to or in the initial stage of an operational deployment. Also called **EBS.** See also **general engineering.** (JP 3-34)

environmental considerations — The spectrum of environmental media, resources, or programs that may affect the planning and execution of military operations. (JP 3-34)

equipment — In logistics, all nonexpendable items needed to outfit or equip an individual or organization. See also **component; supplies.** (JP 4-0)

escapee — Any person who has been physically captured by the enemy and succeeds in getting free. (JP 3-50)

escort — A member of the Armed Forces assigned to accompany, assist, or guide an individual or group, e.g., an escort officer. (JP 4-06)

espionage — The act of obtaining, delivering, transmitting, communicating, or receiving information about the national defense with an intent, or reason to believe, that the information may be used to the injury of the United States or to the advantage of any foreign nation. Espionage is a violation of Title 18 United States Code, Sections 792-798 and Article 106, *Uniform Code of Military Justice*. See also **counterintelligence.** (JP 2-01.2)

essential care — Medical treatment provided to manage the casualty throughout the roles of care, which includes all care and treatment to either return the patient to duty (within the theater evacuation policy), or begin initial treatment required for optimization of outcome, and/or stabilization to ensure the patient can tolerate evacuation. See also **en route care; first responder; forward resuscitative care; theater.** (JP 4-02)

essential elements of friendly information — Key questions likely to be asked by adversary officials and intelligence systems about specific friendly intentions, capabilities, and activities, so they can obtain answers critical to their operational effectiveness. Also called **EEFI.** (JP 2-01)

essential elements of information — The most critical information requirements regarding the adversary and the environment needed by the commander by a particular time to relate with other available information and intelligence in order to assist in reaching a logical decision. Also called **EEIs.** (JP 2-0)

essential task — A specified or implied task that an organization must perform to accomplish the mission that is typically included in the mission statement. See also **implied task; specified task.** (JP 5-0)

establishing directive — An order issued to specify the purpose of the support relationship. (JP 3-02)

estimate — 1. An analysis of a foreign situation, development, or trend that identifies its major elements, interprets the significance, and appraises the future possibilities and the prospective results of the various actions that might be taken. 2. An appraisal of the capabilities, vulnerabilities, and potential courses of action of a foreign nation or combination of nations in consequence of a specific national plan, policy, decision, or contemplated course of action. 3. An analysis of an actual or contemplated clandestine operation in relation to the situation in which it is or would be conducted in order to identify and appraise such factors as available as well as needed assets and potential obstacles, accomplishments, and consequences. See also **intelligence estimate.** (JP 2-01)

estimative intelligence — Intelligence that identifies, describes, and forecasts adversary capabilities and the implications for planning and executing military operations. (JP 2-0)

evacuation — 1. Removal of a patient by any of a variety of transport means from a theater of military operation, or between health services capabilities, for the purpose of preventing further illness or injury, providing additional care, or providing disposition of patients from the military health care system. (JP 4-02) 2. The clearance of personnel, animals, or materiel from a given locality. (JP 3-68) 3. The controlled process of collecting, classifying, and shipping unserviceable or abandoned materiel, United States or foreign, to appropriate reclamation, maintenance, technical intelligence, or disposal facilities. (JP 4-09) 4. The ordered or authorized departure of noncombatant evacuees from a specific area to another in the same or different countries by Department of State, Department of Defense, or appropriate military commander. See also **evacuee; noncombatant evacuation operation.** (JP 3-68)

evacuee — A civilian removed from a place of residence by military direction for reasons of personal security or the requirements of the military situation. See also **displaced person; refugee.** (JP 3-57)

evader — Any person isolated in hostile or unfriendly territory who eludes capture. (JP 3-50)

evaluation — In intelligence usage, appraisal of an item of information in terms of credibility, reliability, pertinence, and accuracy. (JP 2-01)

evaluation agent — The command or agency designated in the evaluation directive to be responsible for the planning, coordination, and conduct of the required evaluation of a joint test publication. Also called **EA.** See also **joint doctrine; joint test publication.** (CJCSM 5120.01)

evaluation and feedback — In intelligence usage, continuous assessment of intelligence operations throughout the intelligence process to ensure that the commander's intelligence requirements are being met. See **intelligence process.** (JP 2-01)

evasion — The process whereby isolated personnel avoid capture with the goal of successfully returning to areas under friendly control. (JP 3-50)

evasion aid — In personnel recovery, any piece of information or equipment designed to assist an individual in avoiding capture. See also **blood chit; evasion; evasion chart; pointee-talkee; recovery; recovery operations.** (JP 3-50)

evasion chart — A special map or chart designed as an evasion aid. Also called **EVC.** See also **evasion; evasion aid.** (JP 3-50)

evasion plan of action — A course of action, developed prior to executing a combat mission, that is intended to improve a potential isolated person's chances of successful evasion and recovery by providing the recovery forces with an additional source of information that can increase the predictability of the evader's action and movement. Also called **EPA.** See also **course of action; evader; evasion.** (JP 3-50)

event matrix — A cross-referenced description of the indicators and activity expected to occur in each named area of interest. See also **activity; area of interest; indicator.** (JP 2-01.3)

event template — A guide for collection planning that depicts the named areas of interest where activity, or its lack of activity, will indicate which course of action the adversary has adopted. See also **activity; area of interest; collection planning; course of action.** (JP 2-01.3)

exclusion zone — A zone established by a sanctioning body to prohibit specific activities in a specific geographic area in order to persuade nations or groups to modify their behavior

to meet the desires of the sanctioning body or face continued imposition of sanctions, or use or threat of force. (JP 3-0)

exclusive economic zone — A maritime zone adjacent to the territorial sea that may not extend beyond 200 nautical miles from the baselines from which the breadth of the territorial sea is measured. Also called **EEZ**. (JP 3-15)

execute order — 1. An order issued by the Chairman of the Joint Chiefs of Staff, at the direction of the Secretary of Defense, to implement a decision by the President to initiate military operations. 2. An order to initiate military operations as directed. Also called **EXORD.** (JP 5-0)

execution planning — The Adaptive Planning and Execution system translation of an approved course of action into an executable plan of action through the preparation of a complete operation plan or operation order. Also called **EP.** See also **Joint Operation Planning and Execution System.** (JP 5-0)

executive agent — A term used to indicate a delegation of authority by the Secretary of Defense or Deputy Secretary of Defense to a subordinate to act on behalf of the Secretary of Defense. Also called **EA.** (JP 1)

exercise — A military maneuver or simulated wartime operation involving planning, preparation, and execution that is carried out for the purpose of training and evaluation. See also **command post exercise; maneuver.** (JP 3-34)

exfiltration — The removal of personnel or units from areas under enemy control by stealth, deception, surprise, or clandestine means. See also **special operations; unconventional warfare.** (JP 3-50)

expeditionary force — An armed force organized to accomplish a specific objective in a foreign country. (JP 3-0)

expendable supplies — Supplies that are consumed in use, such as ammunition, paint, fuel, cleaning and preserving materials, surgical dressings, drugs, medicines, etc., or that lose their identity, such as spare parts, etc., and may be dropped from stock record accounts when it is issued or used. (JP 4-02)

exploitation — 1. Taking full advantage of success in military operations, following up initial gains, and making permanent the temporary effects already created. 2. Taking full advantage of any information that has come to hand for tactical, operational, or strategic purposes. 3. An offensive operation that usually follows a successful attack and is designed to disorganize the enemy in depth. See also **attack.** (JP 2-01.3)

explosive cargo — Cargo such as artillery ammunition, bombs, depth charges, demolition material, rockets, and missiles. (JP 4-01.5)

explosive hazard — Any hazard containing an explosive component to include unexploded explosive ordnance (including land mines), booby traps (some booby traps are nonexplosive), improvised explosive devices (which are an improvised type of booby trap), captured enemy ammunition, and bulk explosives. Also called **EH.** (JP 3-15)

explosive hazard incident — The suspected or detected presence of unexploded or damaged explosive ordnance that constitutes a hazard to operations, installations, personnel, or material. Not included in this definition are the accidental arming or other conditions that develop during the manufacture of high explosive material, technical service assembly operations, or the laying of mines and demolition charges. (JP 3-15.1)

explosive ordnance — All munitions containing explosives, nuclear fission or fusion materials, and biological and chemical agents. (JP 3-34)

explosive ordnance disposal — The detection, identification, on-site evaluation, rendering safe, recovery, and final disposal of unexploded explosive ordnance. Also called **EOD.** (JP 3-34)

explosive ordnance disposal unit — Personnel with special training and equipment who render explosive ordnance safe, make intelligence reports on such ordnance, and supervise the safe removal thereof. (JP 3-34)

exposure dose — The amount of radiation, as measured in roentgen, at a given point in relation to its ability to produce ionization. (JP 3-41)

external audience — In public affairs, all people who are not United States military members, Department of Defense civilian employees, and their immediate families. See also **internal audience; public.** (JP 3-61)

external support contract — Contract awarded by contracting organizations whose contracting authority does not derive directly from the theater support contracting head(s) of contracting activity or from systems support contracting authorities. See also **systems support contract; theater support contract.** (JP 4-10)

F

fabricator — An individual or group who, usually without genuine resources, invents or inflates information for personal or political gain or political purposes. (JP 2-01.2)

facility — A real property entity consisting of one or more of the following: a building, a structure, a utility system, pavement, and underlying land. (JP 3-34)

facility substitutes — Items such as tents and prepackaged structures requisitioned through the supply system that may be used to substitute for constructed facilities. (JP 3-34)

family readiness — The state of being prepared to effectively navigate the challenges of daily living experienced in the unique context of military service, to include: mobility and financial readiness, mobilization and deployment readiness, and personal and family life readiness. (DODI 1342.22)

feasibility — The joint operation plan review criterion for assessing whether the assigned mission can be accomplished using available resources within the time contemplated by the plan. See also **acceptability; adequacy.** (JP 5-0)

feasibility assessment — A basic target analysis that provides an initial determination of the viability of a proposed target for special operations forces employment. Also called **FA.** (JP 3-05)

federal service — A term applied to National Guard members and units when called to active duty to serve the United States Government under Article I, Section 8 and Article II, Section 2 of the Constitution and Title 10, United States Code, Sections 12401 to 12408. See also **active duty; Reserve Component.** (JP 4-05)

feint — In military deception, an offensive action involving contact with the adversary conducted for the purpose of deceiving the adversary as to the location and/or time of the actual main offensive action. (JP 3-13.4)

field artillery — Equipment, supplies, ammunition, and personnel involved in the use of cannon, rocket, or surface-to-surface missile launchers. Also called **FA.** (JP 3-09)

fighter engagement zone — In air defense, that airspace of defined dimensions within which the responsibility for engagement of air threats normally rests with fighter aircraft. Also called **FEZ.** (JP 3-01)

fighter escort — An offensive counterair operation providing dedicated protection sorties by air-to-air capable fighters in support of other offensive air and air support missions over enemy territory, or in a defensive counterair role to protect high value airborne assets. (JP 3-01)

fighter sweep — An offensive mission by fighter aircraft to seek out and destroy enemy aircraft or targets of opportunity in a designated area. (JP 3-01)

final governing standards — A comprehensive set of country-specific substantive environmental provisions, typically technical limitations on effluent, discharges, etc., or a specific management practice. Also called **FGSs.** (JP 3-34)

final protective fire — An immediately available prearranged barrier of fire designed to impede enemy movement across defensive lines or areas. Also called **FPF**. (JP 3-09.3)

finance support — A financial management function to provide financial advice and recommendations, pay support, disbursing support, establishment of local depository accounts, essential accounting support, and support of the procurement process. See also **financial management.** (JP 1-06)

financial management — The combination of the two core functions of resource management and finance support. Also called **FM.** See also **finance support; resource management.** (JP 1-06)

fire direction center — That element of a command post, consisting of gunnery and communications personnel and equipment, by means of which the commander exercises fire direction and/or fire control. Also called **FDC**. (JP 3-09.3)

fires — The use of weapon systems or other actions to create specific lethal or nonlethal effects on a target. (JP 3-09)

fire support — Fires that directly support land, maritime, amphibious, and special operations forces to engage enemy forces, combat formations, and facilities in pursuit of tactical and operational objectives. See also **fires.** (JP 3-09)

fire support area — An appropriate maneuver area assigned to fire support ships by the naval force commander from which they can deliver gunfire support to an amphibious operation. Also called **FSA.** See also **amphibious operation; fire support.** (JP 3-09)

fire support coordination — The planning and executing of fire so that targets are adequately covered by a suitable weapon or group of weapons. (JP 3-09)

fire support coordination center — A single location in which are centralized communications facilities and personnel incident to the coordination of all forms of fire support for Marine forces. Also called **FSCC.** See also **fire support; fire support coordination; support; supporting arms coordination center.** (JP 3-09)

fire support coordination line — A fire support coordination measure established by the land or amphibious force commander to support common objectives within an area of operation; beyond which all fires must be coordinated with affected commanders prior

to engagement, and short of the line, all fires must be coordinated with the establishing commander prior to engagement. Also called **FSCL.** See also **fires; fire support.** (JP 3-09)

fire support coordination measure — A measure employed by commanders to facilitate the rapid engagement of targets and simultaneously provide safeguards for friendly forces. Also called **FSCM.** See also **fire support coordination.** (JP 3-0)

fire support coordinator — 1. The officer in charge of the fire support coordination center. Also called **FSC.** 2. The brigade combat team's organic fires battalion commander; if a fires brigade is designated as the division force field artillery headquarters, the fires brigade commander is the division's fire support coordinator and is assisted by the chief of fires who then serves as the deputy fire support coordinator during the period the force field artillery headquarters is in effect. Also called **FSCOORD.** (JP 3-09)

fire support element — That section of the tactical operations center at every echelon above company responsible for targeting coordination and for integrating fires under the control or in support of the force. Also called **FSE.** Also called **fire cell (FC) within the United States Army.** See also **fire support; force; support.** (JP 3-09)

fire support officer — The field artillery officer from the operational to tactical level responsible for advising the supported commander or assisting the senior fires officer of the organization on fires functions and fire support. Also called **FSO.** See also **field artillery; fire support; support.** (JP 3-09)

fire support station — An exact location at sea within a fire support area from which a fire support ship delivers fire. Also called **FSS.** (JP 3-02)

fire support team — A field artillery team provided for each maneuver company/troop and selected units to plan and coordinate all supporting fires available to the unit, including mortars, field artillery, naval surface fire support, and close air support integration. Also called **FIST.** See also **close air support; field artillery; fire support; support.** (JP 3-09.3)

first responder — A primary health care provider who provides immediate clinical care and stabilization in preparation for evacuation to the next health service support capability in the roles of care, and treats Service members for common acute minor illnesses. See also **essential care; evacuation.** (JP 4-02)

first responder care — The health care capability that provides immediate clinical care and stabilization to the patient in preparation for evacuation to the next health service support capability in the continuum of care. (JP 4-02)

fixed port — Terminals with an improved network of cargo-handling facilities designed for the transfer of freight. See also **maritime terminal.** (JP 4-01.5)

fixed price contract — A type of contract that generally provides for a firm price or, under appropriate circumstances, may provide for an adjustable price for the supplies or services being procured. (JP 4-10)

flame field expedients — Simple, handmade devices used to produce flame or illumination. Also called **FFE.** (JP 3-15)

flash burn — A burn caused by excessive exposure (of bare skin) to thermal radiation. (JP 3-41)

flatrack — Portable, open-topped, open-sided units that fit into existing below-deck container cell guides and provide a capability for container ships to carry oversized cargo and wheeled and tracked vehicles. (JP 4-09)

fleet — An organization of ships, aircraft, Marine forces, and shore-based fleet activities all under a commander who may exercise operational as well as administrative control. See also **numbered fleet.** (JP 3-02.1)

Fleet Marine Force — A balanced force of combined arms comprising land, air, and service elements of the United States Marine Corps, which is an integral part of a United States fleet and has the status of a type command. Also called **FMF.** (JP 4-02)

flexible deterrent option — A planning construct intended to facilitate early decision making by developing a wide range of interrelated responses that begin with deterrent-oriented actions carefully tailored to produce a desired effect. Also called **FDO.** See also **deterrent options.** (JP 5-0)

flexible response — The capability of military forces for effective reaction to any enemy threat or attack with actions appropriate and adaptable to the circumstances existing. (JP 5-0)

flight — 1. In Navy and Marine Corps usage, a specified group of aircraft usually engaged in a common mission. 2. The basic tactical unit in the Air Force, consisting of four or more aircraft in two or more elements. 3. A single aircraft airborne on a nonoperational mission. (JP 3-30)

flight deck — 1. In certain airplanes, an elevated compartment occupied by the crew for operating the airplane in flight. 2. The upper deck of an aircraft carrier that serves as a runway. The deck of an air-capable ship, amphibious aviation assault ship, or aircraft carrier used to launch and recover aircraft. (JP 3-04)

flight deck officer — Officer responsible for the safe movement of aircraft on or about the flight deck of an aviation-capable ship. Also called **FDO.** (JP 3-04)

flight quarters — A ship configuration that assigns and stations personnel at critical positions to conduct safe flight operations. (JP 3-04)

floating craft company — A company-sized unit made up of various watercraft teams such as tugs, barges, and barge cranes. (JP 4-01.6)

floating dump — Emergency supplies preloaded in landing craft, amphibious vehicles, or in landing ships that are located in the vicinity of the appropriate control officer, who directs their landing as requested by the troop commander concerned. (JP 3-02)

fly-in echelon — Airlifted forces and equipment to include flight ferry aircraft and aviation support equipment needed to support operations; typically associated with the use of pre-positioned assets. Also called **FIE**. (JP 3-02.1)

follow-up — In amphibious operations, the reinforcements and stores carried on ships and aircraft (not originally part of the amphibious force) that are off-loaded after the assault and assault follow-on echelons have been landed. See also **amphibious operation; assault; assault follow-on echelon.** (JP 3-02)

follow-up shipping — Ships not originally a part of the amphibious task force but which deliver troops and supplies to the objective area after the action phase has begun. (JP 3-02)

footprint — 1. The area on the surface of the earth within a satellite's transmitter or sensor field of view. 2. The amount of personnel, spares, resources, and capabilities physically present and occupying space at a deployed location. (JP 4-01.5)

force — 1. An aggregation of military personnel, weapon systems, equipment, and necessary support, or combination thereof. 2. A major subdivision of a fleet. (JP 1)

force/activity designator — Number used in conjunction with urgency of need designators to establish a matrix of priorities used for supply requisitions. Also called **F/AD.** See also **force.** (JP 4-09)

force beddown — The provision of expedient facilities for troop support to provide a platform for the projection of force. See also **facility substitutes.** (JP 3-34)

force closure — The point in time when a supported joint force commander determines that sufficient personnel and equipment resources are in the assigned operational area to carry out assigned tasks. See also **closure; force.** (JP 3-35)

force health protection — Measures to promote, improve, or conserve the behavioral and physical well-being of Service members to enable a healthy and fit force, prevent injury and illness, and protect the force from health hazards. Also called **FHP.** See also **force; protection.** (JP 4-02)

force management — An organizing construct of processes, policies, organizational information, and tools that informs senior leader decision making on the global joint sourcing of the defense strategy. (DODI 8260.03)

force module — A grouping of combat, combat support, and combat service support forces, with their accompanying supplies and the required nonunit resupply and personnel necessary to sustain forces for a minimum of 30 days. Also called **FM.** (JP 4-01.5)

force planning — 1. Planning associated with the creation and maintenance of military capabilities by the Military Departments, Services, and US Special Operations Command. 2. In the Joint Operation Planning and Execution System, the planning conducted by the supported combatant command and its components to determine required force capabilities to accomplish an assigned mission. (JP 5-0)

force projection — The ability to project the military instrument of national power from the United States or another theater, in response to requirements for military operations. See also **force.** (JP 3-0)

force protection — Preventive measures taken to mitigate hostile actions against Department of Defense personnel (to include family members), resources, facilities, and critical information. Also called **FP.** See also **force; force protection condition; protection.** (JP 3-0)

force protection condition — A Chairman of the Joint Chiefs of Staff-approved standard for identification of and recommended responses to terrorist threats against United States personnel and facilities. Also called **FPCON.** See also **antiterrorism; force protection.** (JP 3-07.2)

force protection detachment — A counterintelligence element that provides counterintelligence support to transiting and assigned ships, personnel, and aircraft in regions of elevated threat. Also called **FPD**. (JP 2-01.2)

force protection working group — Cross-functional working group whose purpose is to conduct risk assessment and risk management and to recommend mitigating measures to the commander. Also called **FPWG.** (JP 3-10)

force requirement number — An alphanumeric code used to uniquely identify force entries in a given operation plan time-phased force and deployment data. Also called **FRN.** (JP 3-35)

force sequencing — The phased introduction of forces into and out of the operational area. (JP 3-68)

force sourcing — The identification of the actual units, their origins, ports of embarkation, and movement characteristics to satisfy the time-phased force requirements of a supported commander. (JP 5-0)

force structure — The composition of Department of Defense organizations, both military and civilian, that comprise and support United States defense forces as specified by the National Defense Authorization Acts of current and applicable previous years, and defines the organizational hierarchy through which leadership authorities are exercised. (DODI 8260.03)

force tracking — The process of gathering and maintaining information on the location, status, and predicted movement of each element of a unit including the unit's command element, personnel, and unit-related supplies and equipment while in transit to the specified operational area. (JP 3-35)

force visibility — The current and accurate status of forces; their current mission; future missions; location; mission priority; and readiness status. (JP 3-35)

forcible entry — Seizing and holding of a military lodgment in the face of armed opposition. See also **lodgment.** (JP 3-18)

foreign assistance — Assistance to foreign nations ranging from the sale of military equipment to donations of food and medical supplies to aid survivors of natural and man-made disasters; that may be provided through development assistance, humanitarian assistance, and security assistance. See also **domestic emergencies; foreign disaster; foreign humanitarian assistance; security assistance.** (JP 3-29)

foreign consequence management — United States Government activity that assists friends and allies in responding to the effects from an intentional or accidental chemical, biological, radiological, or nuclear incident on foreign territory in order to maximize preservation of life. Also called **FCM.** (JP 3-41)

foreign disaster — A calamitous situation or event that occurs naturally or through human activities, which threatens or inflicts human suffering on a scale that may warrant emergency relief assistance from the United States Government or from foreign partners. See also **foreign disaster relief.** (JP 3-29)

foreign disaster relief — Assistance that can be used immediately to alleviate the suffering of foreign disaster victims that normally includes services and commodities as well as the rescue and evacuation of victims; the provision and transportation of food, water, clothing, medicines, beds, bedding, and temporary shelter; the furnishing of medical equipment, medical and technical personnel; and making repairs to essential services. Also called **FDR.** See also **foreign disaster.** (JP 3-29)

foreign humanitarian assistance — Department of Defense activities conducted outside the United States and its territories to directly relieve or reduce human suffering, disease, hunger, or privation. Also called **FHA.** See also **foreign assistance.** (JP 3-29)

foreign instrumentation signals intelligence — A subcategory of signals intelligence, consisting of technical information and intelligence derived from the intercept of foreign electromagnetic emissions associated with the testing and operational deployment of non-US aerospace, surface, and subsurface systems. Foreign instrumentation signals include but are not limited to telemetry, beaconry, electronic interrogators, and video data links. Also called **FISINT**. See also **signals intelligence.** (JP 2-01)

foreign intelligence — Information relating to capabilities, intentions, and activities of foreign governments or elements thereof, foreign organizations, or foreign persons, or international terrorist activities. Also called **FI**. See also **intelligence.** (JP 2-0)

foreign intelligence entity — Any known or suspected foreign organization, person, or group (public, private, or governmental) that conducts intelligence activities to acquire US information, block or impair US intelligence collection, influence US policy, or disrupts US systems and programs. The term includes foreign intelligence and security services and international terrorists. Also called **FIE**. (JP 2-01.2)

foreign internal defense — Participation by civilian and military agencies of a government in any of the action programs taken by another government or other designated organization to free and protect its society from subversion, lawlessness, insurgency, terrorism, and other threats to its security. Also called **FID.** (JP 3-22)

foreign military intelligence collection activities — Entails the overt debriefing, by trained human intelligence personnel, of all US persons employed by the Department of Defense who have access to information of potential national security value. Also called **FORMICA**. (JP 2-01.2)

foreign military sales — That portion of United States security assistance authorized by the Foreign Assistance Act of 1961, as amended, and the Arms Export Control Act of 1976, as amended. This assistance differs from the Military Assistance Program and the International Military Education and Training Program in that the recipient provides reimbursement for defense articles and services transferred. Also called **FMS.** (JP 4-08)

foreign national — Any person other than a US citizen, US permanent or temporary legal resident alien, or person in US custody. (JP 1-0)

foreign nation support — Civil and/or military assistance rendered to a nation when operating outside its national boundaries during military operations based on agreements mutually concluded between nations or on behalf of intergovernmental organizations. Also called **FNS.** See also **host-nation support.** (JP 1-06)

foreign object damage — Rags, pieces of paper, line, articles of clothing, nuts, bolts, or tools that, when misplaced or caught by air currents normally found around aircraft operations (jet blast, rotor or prop wash, engine intake), cause damage to aircraft systems or weapons or injury to personnel. Also called **FOD.** (JP 3-04)

foreign service national — Foreign nationals who provide clerical, administrative, technical, fiscal, and other support at foreign service posts abroad and are not citizens of the United States. Also called **FSN.** (JP 3-68)

forensic-enabled intelligence — The intelligence resulting from the integration of scientifically examined materials and other information to establish full characterization, attribution, and the linkage of events, locations, items, signatures, nefarious intent, and persons of interest. Also called **FEI.** (JP 2-0)

formerly restricted data — Information removed from the restricted data category upon a joint determination by the Department of Energy (or antecedent agencies) and Department of Defense that such information relates primarily to the military utilization of atomic weapons and that such information can be adequately safeguarded as classified defense information. (Section 142d, Atomic Energy Act of 1954, as amended.) (JP 2-01)

forward air controller — An officer (aviator/pilot) member of the tactical air control party who, from a forward ground or airborne position, controls aircraft in close air support of ground troops. Also called **FAC.** See also **close air support.** (JP 3-09.3)

forward air controller (airborne) — A specifically trained and qualified aviation officer, normally an airborne extension of the tactical air control party, who exercises control from the air of aircraft engaged in close air support of ground troops. Also called **FAC(A).** (JP 3-09.3)

forward area — An area in proximity to combat. (JP 4-02)

forward arming and refueling point — A temporary facility, organized, equipped, and deployed to provide fuel and ammunition necessary for the employment of aviation maneuver units in combat. Also called **FARP**. (JP 3-09.3)

forward aviation combat engineering — A mobility operation in which engineers perform tasks in support of forward aviation ground facilities. Also called **FACE.** See also **combat engineering; reconnaissance.** (JP 3-34)

forward edge of the battle area — The foremost limits of a series of areas in which ground combat units are deployed, excluding the areas in which the covering or screening forces are operating, designated to coordinate fire support, the positioning of forces, or the maneuver of units. Also called **FEBA.** (JP 3-09.3)

forward line of own troops — A line that indicates the most forward positions of friendly forces in any kind of military operation at a specific time. Also called **FLOT.** (JP 3-03)

forward-looking infrared — An airborne, electro-optical thermal imaging device that detects far-infrared energy, converts the energy into an electronic signal, and provides a visible image for day or night viewing. Also called **FLIR.** (JP 3-09.3)

forward observer — An observer operating with front line troops trained to adjust ground or naval gunfire and pass back battlefield information. Also called **FO.** See also **forward air controller; spotter.** (JP 3-09)

forward operating base — An airfield used to support tactical operations without establishing full support facilities. Also called **FOB.** (JP 3-09.3)

forward operating site — A scaleable location outside the United States and US territories intended for rotational use by operating forces. Such expandable "warm facilities" may be maintained with a limited US military support presence and possibly pre-positioned equipment. Forward operating sites support rotational rather than permanently stationed forces and are a focus for bilateral and regional training. Also called **FOS.** See also **cooperative security location; main operating base.** (CJCS CM-0007-05)

forward presence — Maintaining forward-deployed or stationed forces overseas to demonstrate national resolve, strengthen alliances, dissuade potential adversaries, and enhance the ability to respond quickly to contingencies. (JP 3-32)

forward resuscitative care — Care provided as close to the point of injury as possible based on current operational requirements to attain stabilization, achieve the most efficient use of life-and-limb saving medical treatment, and provide essential care so the patient can tolerate evacuation, which is known as Role 2 care in the North Atlantic Treaty Organization doctrine. Also called **FRC.** See **also essential care; evacuation; medical treatment facility.** (JP 4-02)

foundation geospatial-intelligence data — The base underlying data to provide context and a framework for display and visualization of the environment to support analysis operations and intelligence, which consists of: features; elevation; controlled imagery; geodetic sciences; geographic names and boundaries; aeronautical, maritime and human geography. (JP 2-03)

463L system — A material handling system that consists of military and civilian aircraft cargo restraint rail systems, aircraft pallets, nets, tie down, coupling devices, facilities, handling equipment, procedures, and other components designed to efficiently accomplish the air logistics and aerial delivery mission. (JP 4-09)

fragmentary order — An abbreviated form of an operation order issued as needed after an operation order to change or modify that order or to execute a branch or sequel to that order. Also called **FRAGORD.** (JP 5-0)

freedom of navigation operations — Operations conducted to demonstrate US navigation, overflight, and related interests on, or under, and over the seas. (JP 3-0)

free drop — The dropping of equipment or supplies from an aircraft without the use of parachutes. See also **airdrop; air movement; free fall; high velocity drop; low velocity drop.** (JP 3-17)

free fall — A parachute maneuver in which the parachute is manually activated at the discretion of the jumper or automatically at a preset altitude. See also **airdrop; air movement; free drop; high velocity drop; low velocity drop.** (JP 3-17)

free-fire area — A specific area into which any weapon system may fire without additional coordination with the establishing headquarters. Also called **FFA.** (JP 3-09)

free mail — Correspondence of a personal nature that weighs less than 11 ounces, to include audio and video recording tapes, from a member of the Armed Forces or designated civilian, mailed postage free from a Secretary of Defense approved free mail zone. (JP 1-0)

frequency deconfliction — A systematic management procedure to coordinate the use of the electromagnetic spectrum for operations, communications, and intelligence functions. Frequency deconfliction is one element of electromagnetic spectrum management. See also **electromagnetic spectrum; electromagnetic spectrum management; electronic warfare.** (JP 3-13.1)

friendly — A contact positively identified as friendly. (JP 3-01)

friendly force information requirement — Information the commander and staff need to understand the status of friendly force and supporting capabilities. Also called **FFIR.** (JP 3-0)

friendly force tracking — The process of fixing, observing, and reporting the location and movement of friendly forces. Also called **FFT**. (JP 3-09)

frustrated cargo — Any shipment of supplies and/or equipment which, while en route to destination, is stopped prior to receipt and for which further disposition instructions must be obtained. (JP 4-01.5)

full mobilization — Expansion of the active Armed Forces resulting from action by Congress and the President to mobilize for the duration of the emergency plus six months all Reserve Component units and individuals in the existing approved force structure, as well as all retired military personnel, and the resources needed for their support to meet the requirements of a war or other national emergency involving an external threat to the national security. (JP 4-05)

full-spectrum superiority — The cumulative effect of dominance in the air, land, maritime, and space domains and information environment (which includes cyberspace) that

permits the conduct of joint operations without effective opposition or prohibitive interference. (JP 3-0)

function — The broad, general, and enduring role for which an organization is designed, equipped, and trained. (JP 1)

functional component command — A command normally, but not necessarily, composed of forces of two or more Military Departments which may be established across the range of military operations to perform particular operational missions that may be of short duration or may extend over a period of time. See also **component; Service component command.** (JP 1)

functional damage assessment — The estimate of the effect of military force to degrade or destroy the functional or operational capability of the target to perform its intended mission and on the level of success in achieving operational objectives established against the target. See also **damage assessment; target.** (JP 3-60)

fusion — In intelligence usage, the process of managing information to conduct all-source analysis and derive a complete assessment of activity. (JP 2-0)

G

general agency agreement — A contract between the Maritime Administration and a steamship company which, as general agent, exercises administrative control over a government-owned ship for employment by the Military Sealift Command. Also called **GAA**. See also **Military Sealift Command.** (JP 3-02.1)

general cargo — Cargo that is suitable for loading in general, nonspecialized stowage areas or standard shipping containers; e.g., boxes, barrels, bales, crates, packages, bundles, and pallets. (JP 4-09)

general engineering — Those engineering capabilities and activities, other than combat engineering, that provide infrastructure and modify, maintain, or protect the physical environment. Also called **GE.** (JP 3-34)

general military intelligence — Intelligence concerning the military capabilities of foreign countries or organizations, or topics affecting potential United States or multinational military operations. Also called **GMI.** See also **intelligence.** (JP 2-0)

general support — 1. That support which is given to the supported force as a whole and not to any particular subdivision thereof. See also **close support; direct support; mutual support; support.** 2. A tactical artillery mission. Also called **GS.** See also **direct support; general support-reinforcing.** (JP 3-09.3)

general support-reinforcing — The artillery mission of supporting the force as a whole and of providing reinforcing fires for other artillery units. Also called **GSR.** (JP 3-09.3)

general unloading period — In amphibious operations, that part of the ship-to-shore movement in which unloading is primarily logistic in character, and emphasizes speed and volume of unloading operations. See also **initial unloading period.** (JP 3-02)

geographic coordinates — The quantities of latitude and longitude which define the position of a point on the surface of the Earth with respect to the reference spheroid. (JP 2-03)

geospatial engineering — Those engineering capabilities and activities that contribute to a clear understanding of the physical environment by providing geospatial information and services to commanders and staffs. See also **geospatial information and services.** (JP 3-34)

geospatial information — Information that identifies the geographic location and characteristics of natural or constructed features and boundaries on the Earth, including: statistical data and information derived from, among other things, remote sensing, mapping, and surveying technologies; and mapping, charting, geodetic data and related products. (JP 2-03)

geospatial information and services — The collection, information extraction, storage, dissemination, and exploitation of geodetic, geomagnetic, imagery, gravimetric, aeronautical, topographic, hydrographic, littoral, cultural, and toponymic data accurately referenced to a precise location on the Earth's surface. Also called **GI&S.** (JP 2-03)

geospatial intelligence — The exploitation and analysis of imagery and geospatial information to describe, assess, and visually depict physical features and geographically referenced activities on the Earth. Geospatial intelligence consists of imagery, imagery intelligence, and geospatial information. Also called **GEOINT.** (JP 2-03)

geospatial-intelligence base for contingency operations — A mobile visualization tool that provides access to geospatial data where networks or infrastructure have been damaged or do not exist. Also called **GIBCO.** (JP 3-68)

geospatial intelligence operations — The tasks, activities, and events to collect, manage, analyze, generate, visualize, and provide imagery, imagery intelligence, and geospatial information necessary to support national and defense missions and international arrangements. Also called **GEOINT operations**. (JP 2-03)

Global Air Transportation Execution System — The Air Mobility Command's aerial port operations and management information system designed to support automated cargo and passenger processing, the reporting of in-transit visibility data to the Global Transportation Network, and billing to Air Mobility Command's financial management directorate. Also called **GATES.** See also **Air Mobility Command.** (JP 3-17)

global ballistic missile defense. Defense against ballistic missile threats that cross one or more geographical combatant command boundaries and requires synchronization among the affected combatant commands. Also called **GBMD.** (JP 3-01)

Global Combat Support System-Joint — The primary information technology application used to provide automation support to the joint logistician. Also called **GCSS-J.** (JP 4-0)

Global Command and Control System — A deployable command and control system supporting forces for joint and multinational operations across the range of military operations with compatible, interoperable, and integrated communications systems. Also called **GCCS.** See also **command and control; command and control system.** (JP 6-0)

Global Decision Support System — The command and control system employed by mobility air forces that provides schedules, arrival and/or departure information, and status data to support in-transit visibility of mobility airlift and air refueling aircraft and aircrews. Also called **GDSS.** See also **Air Mobility Command; in-transit visibility.** (JP 3-17)

global distribution — The process that coordinates and synchronizes fulfillment of joint force requirements from point of origin to point of employment. See also **distribution.** (JP 4-09)

global distribution of materiel — The process of providing materiel from the source of supply to its point of consumption or use on a worldwide basis. See also **global distribution.** (JP 4-09)

global fleet station — A persistent sea base of operations from which to interact with partner nation military and civilian populations and the global maritime community. Also called **GFS.** (JP 3-32)

global force management — 1. A process that provides near-term sourcing solutions while providing the integrating mechanism between force apportionment, allocation, and assignment. Also call **GFM.** (JP 3-35) 2. A process to align assignment, allocation, and apportionment of forces to combatant commanders in support of the national defense strategy and joint force availability requirements. (DODI 8260.03)

global maritime partnership — An approach to cooperation among maritime nations with a shared stake in international commerce, safety, security, and freedom of the seas. Also called **GMP.** (JP 3-32)

Global Patient Movement Requirements Center — A joint activity reporting directly to the Commander, United States Transportation Command, which provides medical regulating and aeromedical evacuation scheduling for the continental United States and intertheater operations, provides support to the theater patient movement requirements centers, and coordinates with supporting resource providers to identify available assets and communicates transport to bed plans to the appropriate transportation agency for execution. Also called **GPMRC.** See also **medical treatment facility.** (JP 4-02)

Global Positioning System — A satellite-based radio navigation system operated by the Department of Defense to provide all military, civil, and commercial users with precise positioning, navigation, and timing. Also called **GPS.** (JP 3-14)

global transportation management — The integrated process of satisfying transportation requirements using the Defense Transportation System to meet national security objectives. Also called **GTM.** See also **Defense Transportation System.** (JP 4-01)

go/no-go — A critical point at which a decision to proceed or not must be made. (JP 3-02)

governance — The state's ability to serve the citizens through the rules, processes, and behavior by which interests are articulated, resources are managed, and power is exercised in a society, including the representative participatory decision-making processes typically guaranteed under inclusive, constitutional authority. (JP 3-24)

governing factors — In the context of joint operation planning, those aspects of the situation (or externally imposed factors) that the commander deems critical to the accomplishment of the mission. (JP 5-0)

grid coordinates — Coordinates of a grid coordinate system to which numbers and letters are assigned for use in designating a point on a gridded map, photograph, or chart. (JP 3-09)

ground alert — That status in which aircraft on the ground/deck are fully serviced and armed, with combat crews in readiness to take off within a specified period of time after receipt of a mission order. See also **airborne alert.** (JP 3-01)

ground-based interceptor — A fixed-based, surface-to-air missile for defense against long-range ballistic missiles using an exo-atmospheric hit-to-kill interception of the targeted reentry vehicle in the midcourse phase of flight. Also called **GBI.** (JP 3-01)

ground-based midcourse defense — A surface-to-air ballistic missile defense system for exo-atmospheric midcourse phase interception of long-range ballistic missiles using the ground-based interceptors. Also called **GMD.** (JP 3-01)

group — 1. A flexible administrative and tactical unit composed of either two or more battalions or two or more squadrons. 2. A number of ships and/or aircraft, normally a subdivision of a force, assigned for a specific purpose. 3. A long-standing functional organization that is formed to support a broad function within a joint force commander's headquarters. Also called **GP.** (JP 3-33)

guarded frequencies — A list of time-oriented, enemy frequencies that are currently being exploited for combat information and intelligence or jammed after the commander has weighed the potential operational gain against the loss of the technical information. See also **electronic warfare.** (JP 3-13.1)

guerrilla force — A group of irregular, predominantly indigenous personnel organized along military lines to conduct military and paramilitary operations in enemy-held, hostile, or denied territory. (JP 3-05)

guided missile — An unmanned vehicle moving above the surface of the Earth whose trajectory or flight path is capable of being altered by an external or internal mechanism. See also **ballistic missile.** (JP 3-01)

gun-target line — An imaginary straight line from gun to target. Also called **GTL.** (JP 3-09.3)

H

half-life — The time required for the activity of a given radioactive species to decrease to half of its initial value due to radioactive decay. (JP 3-11)

hasty breach — The creation of lanes through enemy minefields by expedient methods such as blasting with demolitions, pushing rollers or disabled vehicles through the minefields when the time factor does not permit detailed reconnaissance, deliberate breaching, or bypassing the obstacle. (JP 3-15)

hazard — A condition with the potential to cause injury, illness, or death of personnel; damage to or loss of equipment or property; or mission degradation. See also **injury; risk.** (JP 3-33)

hazardous cargo — Cargo that includes not only large bulk-type categories such as explosives, pyrotechnics, petroleum, oils, and lubricants, compressed gases, corrosives and batteries, but lesser quantity materials like super-tropical bleach (oxiderizer), pesticides, poisons, medicines, specialized medical chemicals and medical waste that can be loaded as cargo. (JP 3-02.1)

hazards of electromagnetic radiation to fuels — The potential hazard that is created when volatile combustibles, such as fuel, are exposed to electromagnetic fields of sufficient energy to cause ignition. Also called **HERF.** (JP 3-04)

hazards of electromagnetic radiation to ordnance — The danger of accidental actuation of electro-explosive devices or otherwise electrically activating ordnance because of radio frequency electromagnetic fields. Also called **HERO.** See also **electromagnetic radiation; HERO SAFE ordnance; HERO UNSAFE ordnance; ordnance.** (JP 3-04)

hazards of electromagnetic radiation to personnel — The potential hazard that exists when personnel are exposed to an electromagnetic field of sufficient intensity to heat the human body. Also called **HERP.** (JP 3-04)

head of contracting activity — The official who has overall responsibility for managing the contracting activity. Also called **HCA.** (JP 4-10)

head-up display — A display of flight, navigation, attack, or other information superimposed upon the pilot's forward field of view. Also called **HUD.** See also **flight.** (JP 3-09.3)

health care provider — Any member of the Armed Forces, civilian employee of the Department of Defense, or personal services contract employee under Title 10, United States Code, Section 1091 authorized by the Department of Defense to perform health care functions. Also called **DOD health care provider.** (JP 4-02)

health service support — All services performed, provided, or arranged to promote, improve, conserve, or restore the mental or physical well-being of personnel, which include, but are not limited to, the management of health services resources, such as manpower, monies, and facilities; preventive and curative health measures; evacuation of the wounded, injured, or sick; selection of the medically fit and disposition of the medically unfit; blood management; medical supply, equipment, and maintenance thereof; combat and operational stress control; and medical, dental, veterinary, laboratory, optometric, nutrition therapy, and medical intelligence services. Also called **HSS.** (JP 4-02)

health surveillance — The regular or repeated collection, analysis, and interpretation of health-related data and the dissemination of information to monitor the health of a population and to identify potential health risks, thereby enabling timely interventions to prevent, treat, reduce, or control disease and injury, which includes occupational and environmental health surveillance and medical surveillance subcomponents. (JP 4-02)

health threat — A composite of ongoing or potential enemy actions; adverse environmental, occupational, and geographic and meteorological conditions; endemic diseases; and employment of chemical, biological, radiological, and nuclear weapons (to include weapons of mass destruction) that have the potential to affect the short- or long-term health (including psychological impact) of personnel. (JP 4-02)

heavy-lift cargo — 1. Any single cargo lift, weighing over 5 long tons, and to be handled aboard ship. 2. In Marine Corps usage, individual units of cargo that exceed 800 pounds in weight or 100 cubic feet in volume. (JP 4-01.5)

heavy-lift ship — A ship specially designed and capable of loading and unloading heavy and bulky items and has booms of sufficient capacity to accommodate a single lift of 100 tons. (JP 4-01.2)

height of burst — The vertical distance from the Earth's surface or target to the point of burst. Also called **HOB.** (JP 3-41)

helicopter coordination section — The section within the Navy tactical air control center that coordinates rotary-wing air operations with the air traffic control center(s) in the amphibious force. Also called **HCS**. (JP 3-02)

HERO SAFE ordnance — Any ordnance item that is percussion initiated, sufficiently shielded or otherwise so protected that all electro-explosive devices contained by the item are immune to adverse effects (safety or reliability) when the item is employed in its expected radio frequency environments, provided that the general hazards of electromagnetic radiation to ordnance requirements defined in the hazards from electromagnetic radiation manual are observed. See also **electromagnetic radiation; hazards of electromagnetic radiation to ordnance; HERO SUSCEPTIBLE ordnance; HERO UNSAFE ordnance; ordnance.** (JP 3-04)

HERO SUSCEPTIBLE ordnance — Any ordnance item containing electro-explosive devices proven by test or analysis to be adversely affected by radio frequency energy to the point that the safety and/or reliability of the system is in jeopardy when the system is employed in its expected radio frequency environment. See also **electromagnetic radiation; hazards of electromagnetic radiation to ordnance; HERO SAFE ordnance; HERO UNSAFE ordnance; ordnance.** (JP 3-04)

HERO UNSAFE ordnance — Any ordnance item containing electro-explosive devices that has not been classified as HERO SAFE or HERO SUSCEPTIBLE ordnance as a result of a hazards of electromagnetic radiation to ordnance (HERO) analysis or test is considered HERO UNSAFE ordnance. Additionally, any ordnance item containing electro-explosive devices (including those previously classified as HERO SAFE or HERO SUSCEPTIBLE ordnance) that has its internal wiring exposed; when tests are being conducted on that item that result in additional electrical connections to the item; when electro-explosive devices having exposed wire leads are present and handled or loaded in any but the tested condition; when the item is being assembled or disassembled; or when such ordnance items are damaged causing exposure of internal wiring or components or destroying engineered HERO protective devices. See also **electromagnetic radiation; hazards of electromagnetic radiation to ordnance; HERO SAFE ordnance; HERO SUSCEPTIBLE ordnance; ordnance.** (JP 3-04)

H-hour — 1. The specific hour on D-day at which a particular operation commences. (JP 5-0) 2. In amphibious operations, the time the first landing craft or amphibious vehicle of the waterborne wave lands or is scheduled to land on the beach, and in some cases, the commencement of countermine breaching operations. (JP 3-02)

high altitude bombing — Horizontal bombing with the height of release over 15,000 feet. (JP 3-09.3)

high-altitude missile engagement zone — In air defense, that airspace of defined dimensions within which the responsibility for engagement of air threats normally rests with high-altitude surface-to-air missiles. Also called **HIMEZ.** (JP 3-01)

high-density airspace control zone — Airspace designated in an airspace control plan or airspace control order in which there is a concentrated employment of numerous and varied weapons and airspace users. Also called **HIDACZ.** (JP 3-52)

high-payoff target — A target whose loss to the enemy will significantly contribute to the success of the friendly course of action. Also called **HPT.** See also **high-value target; target.** (JP 3-60)

high-risk personnel — Personnel who, by their grade, assignment, symbolic value, or relative isolation, are likely to be attractive or accessible terrorist targets. Also called **HRP.** See also **antiterrorism.** (JP 3-07.2)

high value airborne asset protection — A defensive counterair mission using fighter escorts that defends airborne national assets which are so important that the loss of even one could seriously impact United States warfighting capabilities or provide the enemy with significant propaganda value. Also called **HVAA protection.** See also **defensive counterair.** (JP 3-01)

high-value target — A target the enemy commander requires for the successful completion of the mission. Also called **HVT.** See also **high-payoff target; target.** (JP 3-60)

high velocity drop — A drop procedure in which the drop velocity is greater than 30 feet per second and lower than free drop velocity. See also **airdrop.** (JP 3-17)

homeland — The physical region that includes the continental United States, Alaska, Hawaii, United States territories, and surrounding territorial waters and airspace. (JP 3-28)

homeland defense — The protection of United States sovereignty, territory, domestic population, and critical infrastructure against external threats and aggression or other threats as directed by the President. Also called **HD.** (JP 3-27)

homeland security — A concerted national effort to prevent terrorist attacks within the United States; reduce America's vulnerability to terrorism, major disasters, and other emergencies; and minimize the damage and recover from attacks, major disasters, and other emergencies that occur. Also called **HS.** (JP 3-27)

home station — The permanent location of active duty units and Reserve Component units. See also **active duty; Reserve Component.** (JP 4-05)

homing — The technique whereby a mobile station directs itself, or is directed, towards a source of primary or reflected energy, or to a specified point. (JP 3-50)

homing adaptor — A device, when used with an aircraft radio receiver, that produces aural and/or visual signals indicating the direction of a transmitting radio station with respect to the heading of the aircraft. (JP 3-50)

honey pot — A trap set to detect, deflect, or in some manner counteract attempts at unauthorized use of information systems. Generally it consists of a computer, data, or a network site that appears to be part of a network, but is actually isolated, (un)protected, and monitored, and which seems to contain information or a resource of value to attackers. (JP 3-13.4)

horizontal stowage — The lateral distribution of unit equipment or categories of supplies so that they can be unloaded simultaneously from two or more holds. (JP 3-02.1)

hostage rescue — A personnel recovery method used to recover isolated personnel who are specifically designated as hostages. Also called **HR.** (JP 3-50)

host country — A nation which permits, either by written agreement or official invitation, government representatives and/or agencies of another nation to operate, under specified conditions, within its borders. (JP 2-01.2)

hostile act — An attack or other use of force against the United States, United States forces, or other designated persons or property to preclude or impede the mission and/or duties of United States forces, including the recovery of United States personnel or vital United States Government property. (JP 3-28)

hostile casualty — A person who is the victim of a terrorist activity or who becomes a casualty "in action." "In action" characterizes the casualty as having been the direct result of hostile action, sustained in combat or relating thereto, or sustained going to or returning from a combat mission provided that the occurrence was directly related to hostile action. Included are persons killed or wounded mistakenly or accidentally by friendly fire directed at a hostile force or what is thought to be a hostile force. However, not to be considered as sustained in action and not to be interpreted as hostile casualties are injuries or death due to the elements, self-inflicted wounds, combat fatigue, and except in unusual cases, wounds or death inflicted by a friendly force while the individual is in an absent-without-leave, deserter, or dropped-from-rolls status or is voluntarily absent from a place of duty. See also **casualty.**

hostile intent — The threat of imminent use of force against the United States, United States forces, or other designated persons or property. (JP 3-01)

host nation — A nation which receives the forces and/or supplies of allied nations and/or NATO organizations to be located on, to operate in, or to transit through its territory. Also called **HN.** (JP 3-57)

host-nation support — Civil and/or military assistance rendered by a nation to foreign forces within its territory during peacetime, crises or emergencies, or war based on agreements mutually concluded between nations. Also called **HNS.** See also **host nation.** (JP 4-0)

hub — An organization that sorts and distributes inbound cargo from wholesale supply sources (airlifted, sealifted, and ground transportable) and/or from within the theater**.** See also **hub and spoke distribution; spoke.** (JP 4-09)

hub and spoke distribution — A physical distribution system, in which a major port serves as a central point from which cargo is moved to and from several radiating points to increase transportation efficiencies and in-transit visibility. See also **distribution; distribution system; hub; in-transit visibility; spoke.** (JP 4-09)

human factors — The physical, cultural, psychological, and behavioral attributes of an individual or group that influence perceptions, understanding, and interactions. (JP 2-0)

human intelligence — A category of intelligence derived from information collected and provided by human sources. Also called **HUMINT.** (JP 2-0)

humanitarian and civic assistance — Assistance to the local populace, specifically authorized by Title 10, United States Code, Section 401, and funded under separate authorities, provided by predominantly United States forces in conjunction with military operations. Also called **HCA.** See also **foreign humanitarian assistance.** (JP 3-29)

humanitarian assistance coordination center — A temporary center established by a geographic combatant commander to assist with interagency coordination and planning during the early planning and coordination stages of foreign humanitarian assistance operations. Also called **HACC.** See also **foreign humanitarian assistance; interagency coordination.** (JP 3-29)

humanitarian demining assistance — The activities related to the furnishing of education, training, and technical assistance with respect to the detection and clearance of land mines and other explosive remnants of war. (JP 3-29)

humanitarian mine action — Activities that strive to reduce the social, economic, and environmental impact of land mines, unexploded ordnance and small arms ammunition - also characterized as explosive remnants of war. (JP 3-15)

humanitarian operations center — An international and interagency body that coordinates the overall relief strategy and unity of effort among all participants in a large foreign humanitarian assistance operation. Also called **HOC.** See also **operation.** (JP 3-29)

hung ordnance — Those weapons or stores on an aircraft that the pilot has attempted to drop or fire but could not because of a malfunction of the weapon, rack or launcher, or aircraft release and control system. (JP 3-04)

hydrographic reconnaissance — Reconnaissance of an area of water to determine depths, beach gradients, the nature of the bottom, and the location of coral reefs, rocks, shoals, and man-made obstacles. (JP 3-02)

hygiene services — The provision of personal hygiene facilities and waste collection; and the cleaning, repair, replacement, and return of individual clothing and equipment items in a deployed environment. (JP 4-0)

hyperspectral imagery — Term used to describe the imagery derived from subdividing the electromagnetic spectrum into very narrow bandwidths allowing images useful in precise terrain or target analysis to be formed. Also called **HSI**. (JP 2-03)

I

identification — 1. The process of determining the friendly or hostile character of an unknown detected contact. 2. In arms control, the process of determining which nation is responsible for the detected violations of any arms control measure. 3. In ground combat operations, discrimination between recognizable objects as being friendly or enemy, or the name that belongs to the object as a member of a class. Also called **ID.** (JP 3-01)

identification, friend or foe — A device that emits a signal positively identifying it as a friendly. Also called **IFF.** See also **air defense.** (JP 3-52)

identification maneuver — A maneuver performed for identification purposes. (JP 3-52)

identity intelligence — The intelligence resulting from the processing of identity attributes concerning individuals, groups, networks, or populations of interest. Also called **I2.** (JP 2-0)

imagery — A likeness or presentation of any natural or man-made feature or related object or activity, and the positional data acquired at the same time the likeness or representation was acquired, including: products produced by space-based national intelligence reconnaissance systems; and likeness and presentations produced by satellites, airborne platforms, unmanned aerial vehicles, or other similar means (except that such term does not include handheld or clandestine photography taken by or on behalf of human intelligence collection organizations). (JP 2-03)

imagery exploitation — The cycle of processing, using, interpreting, mensuration and/or manipulating imagery, and any assembly or consolidation of the results for dissemination. (JP 2-03)

imagery intelligence — The technical, geographic, and intelligence information derived through the interpretation or analysis of imagery and collateral materials. Also called **IMINT.** See also **intelligence.** (JP 2-03)

immediate air support — Air support to meet specific requests which arise during the course of a battle and which by their nature cannot be planned in advance. (JP 3-09.3)

immediate decontamination — Decontamination carried out by individuals immediately upon becoming contaminated to save lives, minimize casualties, and limit the spread of contamination. Also called **emergency decontamination.** See also **contamination; decontamination.** (JP 3-11)

immediate response — Any form of immediate action taken in the United States and territories to save lives, prevent human suffering, or mitigate great property damage in response to a request for assistance from a civil authority, under imminently serious conditions when time does not permit approval from a higher authority. (JP 3-28)

immediate response authority — A Federal military commander's, Department of Defense component head's, and/or responsible Department of Defense civilian official's authority temporarily to employ resources under their control, subject to any supplemental direction provided by higher headquarters, and provide those resources to save lives, prevent human suffering, or mitigate great property damage in response to a request for assistance from a civil authority, under imminently serious conditions when time does not permit approval from a higher authority within the United States. Immediate response authority does not permit actions that would subject civilians to the use of military power that is regulatory, prescriptive, proscriptive, or compulsory. (DODD 3025.18)

implementation — Procedures governing the mobilization of the force and the deployment, employment, and sustainment of military operations in response to execution orders issued by the Secretary of Defense. Also called **IMP.** (JP 5-0)

implied task — In the context of joint operation planning, a task derived during mission analysis that an organization must perform or prepare to perform to accomplish a specified task or the mission, but which is not stated in the higher headquarters order. See also **essential task; specified task.** (JP 5-0)

imprest fund — A cash fund of a fixed amount established through an advance of funds, without appropriation change, to an authorized imprest fund cashier to effect immediate cash payments of relatively small amounts for authorized purchases of supplies and nonpersonal services. (JP 1-0)

improvised explosive device — A weapon that is fabricated or emplaced in an unconventional manner incorporating destructive, lethal, noxious, pyrotechnic, or incendiary chemicals designed to kill, destroy, incapacitate, harass, deny mobility, or distract. Also called **IED.** (JP 3-15.1)

inactive duty training — Authorized training performed by a member of a Reserve Component not on active duty or active duty for training and consisting of regularly scheduled unit training assemblies, additional training assemblies, periods of appropriate duty or equivalent training, and any special additional duties authorized for Reserve Component personnel by the Secretary concerned, and performed by them in connection with the prescribed activities of the organization in which they are assigned with or without pay. Also called **IDT.** See also **active duty for training.** (JP 1)

inactive status — Status of reserve members on an inactive status list of a Reserve Component or assigned to the Inactive Army National Guard. (JP 4-05)

incapacitating agent — A chemical agent, which produces temporary disabling conditions that can be physical or mental and persist for hours or days after exposure to the agent has ceased. (JP 3-11)

incident — An occurrence, caused by either human action or natural phenomena, that requires action to prevent or minimize loss of life, or damage, loss of, or other risks to property, information, and/or natural resources. See also **information operations**. (JP 3-28)

incident awareness and assessment — The Secretary of Defense approved use of Department of Defense intelligence, surveillance, reconnaissance, and other intelligence capabilities for domestic non-intelligence support for defense support of civil authorities. Also called **IAA.** (JP 3-28)

incident command system — A standardized on-scene emergency management construct designed to aid in the management of resources during incidents. Also called **ICS.** (JP 3-28)

incident management — A national comprehensive approach to preventing, preparing for, responding to, and recovering from terrorist attacks, major disasters, and other emergencies. (JP 3-28)

incremental costs — Costs additional to the Service appropriations that would not have been incurred absent support of the contingency operation. See also **financial management.** (JP 1-06)

indications — In intelligence usage, information in various degrees of evaluation, all of which bear on the intention of a potential enemy to adopt or reject a course of action. (JP 2-0)

indicator — 1. In intelligence usage, an item of information which reflects the intention or capability of an adversary to adopt or reject a course of action. (JP 2-0) 2. In operations security usage, data derived from friendly detectable actions and open-source information that an adversary can interpret and piece together to reach conclusions or estimates of friendly intentions, capabilities, or activities. (JP 3-13.3)

indigenous populations and institutions — The societal framework of an operational environment including citizens, legal and illegal immigrants, dislocated civilians, and governmental, tribal, ethnic, religious, commercial, and private organizations and entities. Also called **IPI.** (JP 3-57)

individual mobilization augmentee — An individual reservist attending drills who receives training and is preassigned to an Active Component organization, a Selective Service System, or a Federal Emergency Management Agency billet that must be filled on, or shortly after, mobilization. Also called **IMA.** (JP 4-05)

individual protective equipment — In chemical, biological, radiological, or nuclear operations, the personal clothing and equipment required to protect an individual from chemical, biological, and radiological hazards and some nuclear hazards. Also called **IPE.** (JP 3-11)

Individual Ready Reserve — A manpower pool consisting of individuals who have had some training or who have served previously in the Active Component or in the Selected Reserve, and may have some period of their military service obligation remaining. Also called **IRR.** See also **Selected Reserve.** (JP 4-05)

industrial mobilization — The transformation of industry from its peacetime activity to the industrial program necessary to support the national military objectives. See also **mobilization.** (JP 4-05)

industrial preparedness — The state of preparedness of industry to produce essential materiel to support the national military objectives. (JP 4-05)

industrial preparedness program — Plans, actions, or measures for the transformation of the industrial base, both government-owned and civilian-owned, from its peacetime activity to the emergency program necessary to support the national military objectives. Also called **IPP.** (JP 4-05)

inertial navigation system — A self-contained navigation system using inertial detectors, which automatically provides vehicle position, heading, and velocity. Also called **INS.** (JP 3-09)

influence mine — A mine actuated by the effect of a target on some physical condition in the vicinity of the mine or on radiations emanating from the mine. See also **mine.** (JP 3-15)

influence sweep — A sweep designed to produce an influence similar to that produced by a ship and thus actuate mines. (JP 3-15)

information assurance — Actions that protect and defend information systems by ensuring availability, integrity, authentication, confidentiality, and nonrepudiation. Also called **IA.** See also **information operations.** (JP 3-12)

information environment — The aggregate of individuals, organizations, and systems that collect, process, disseminate, or act on information. (JP 3-13)

information management — The function of managing an organization's information resources for the handling of data and information acquired by one or many different systems, individuals, and organizations in a way that optimizes access by all who have a share in that data or a right to that information. Also called **IM**. (JP 3-0)

information operations — The integrated employment, during military operations, of information-related capabilities in concert with other lines of operation to influence, disrupt, corrupt, or usurp the decision-making of adversaries and potential adversaries while protecting our own. Also called **IO.** See also **electronic warfare; military deception; operations security; military information support operations.** (JP 3-13)

information operations force — A force consisting of units, staff elements, individual military professionals in the Active and Reserve Components, and DOD civilian employees who conduct or directly support the integration of information-related capabilities against adversaries and potential adversaries during military operations as well as those who train these professionals. Also called **IO force**. (DODD 3600.01)

information operations intelligence integration — The integration of intelligence disciplines and analytic methods to characterize and forecast, identify vulnerabilities, determine effects, and assess the information environment. Also called **IOII**. (JP 3-13)

information-related capability — A tool, technique, or activity employed within a dimension of the information environment that can be used to create effects and operationally desirable conditions. Also called **IRC.** (JP 3-13)

information report — Report used to forward raw information collected to fulfill intelligence requirements. (JP 2-01)

information requirements — In intelligence usage, those items of information regarding the adversary and other relevant aspects of the operational environment that need to be collected and processed in order to meet the intelligence requirements of a commander. Also called **IR**. See also **priority intelligence requirement.** (JP 2-0)

information superiority — The operational advantage derived from the ability to collect, process, and disseminate an uninterrupted flow of information while exploiting or denying an adversary's ability to do the same. See also **information operations.** (JP 3-13)

infrared imagery — That imagery produced as a result of sensing electromagnetic radiations emitted or reflected from a given target surface in the infrared position of the electromagnetic spectrum (approximately 0.72 to 1,000 microns). (JP 2-03)

infrared pointer — A low power laser device operating in the near infrared light spectrum that is visible with light amplifying night vision devices. Also called **IR pointer.** (JP 3-09.3)

initial operational capability — The first attainment of the capability to employ effectively a weapon, item of equipment, or system of approved specific characteristics that is manned or operated by an adequately trained, equipped, and supported military unit or force. Also called **IOC.**

initial radiation — The radiation, essentially neutrons and gamma rays, resulting from a nuclear burst and emitted from the fireball within one minute after burst. See also **residual radiation.** (JP 3-11)

initial reception point — In personnel recovery, a secure area or facility under friendly control where initial reception of recovered isolated personnel can safely take place.

(JP 3-50)

initial response force — The first unit, usually military police, on the scene of a terrorist incident. See also **antiterrorism.** (JP 3-07.2)

initial unloading period — In amphibious operations, that part of the ship-to-shore movement in which unloading is primarily tactical in character and must be instantly responsive to landing force requirements. See also **general unloading period.** (JP 3-02)

initiating directive — An order to a subordinate commander to conduct military operations as directed. Also called **ID**. (JP 3-18)

injury — 1. A term comprising such conditions as fractures, wounds, sprains, strains, dislocations, concussions, and compressions. 2. Conditions resulting from extremes of temperature or prolonged exposure. 3. Acute poisonings (except those due to contaminated food) resulting from exposure to a toxic or poisonous substance. See also **casualty.** (JP 4-02)

inland petroleum distribution system — A multi-product system consisting of both commercially available and military standard petroleum equipment that can be assembled by military personnel and, when assembled into an integrated petroleum distribution system, provides the military with the capability required to support an operational force with bulk fuels. Also called **IPDS.** (JP 4-03)

inner transport area — In amphibious operations, an area as close to the landing beach as depth of water, navigational hazards, boat traffic, and enemy action permit, to which transports may move to expedite unloading. See also **outer transport area; transport area.** (JP 3-02)

instrument approach procedure — A series of predetermined maneuvers for the orderly transfer of an aircraft under instrument flight conditions from the beginning of the initial approach to a landing or to a point from which a landing may be made visually or the missed approach procedure is initiated. (JP 3-04)

instrument meteorological conditions — Meteorological conditions expressed in terms of visibility, distance from cloud, and ceiling; less than minimums specified for visual meteorological conditions. Also called **IMC.** See also **visual meteorological conditions.** (JP 3-04)

instruments of national power — All of the means available to the government in its pursuit of national objectives. They are expressed as diplomatic, economic, informational and military. (JP 1)

in support of — Assisting or protecting another formation, unit, or organization while remaining under original control. (JP 1)

insurgency — The organized use of subversion and violence to seize, nullify, or challenge political control of a region. Insurgency can also refer to the group itself. (JP 3-24)

integrated air and missile defense — The integration of capabilities and overlapping operations to defend the homeland and United States national interests, protect the joint force, and enable freedom of action by negating an adversary's ability to create adverse effects from their air and missile capabilities. Also called **IAMD.** (JP 3-01)

integrated consumable item support — A decision support system that takes time-phased force and deployment data and calculates the ability of the Defense Logistics Agency to support those plans. Also called **ICIS.** (JP 4-03)

Integrated Data Environment/Global Transportation Network Convergence — The in-transit visibility system of record providing expanded common integrated data and application services enabling a common logistics picture, distribution visibility, and materiel asset/in-transit visibility for distribution solutions. Also called **IGC**. (JP 4-09)

integrated financial operations — The integration, synchronization, prioritization, and targeting of fiscal resources and capabilities across United States departments and agencies, multinational partners, and nongovernmental organizations against an adversary and in support of the population. Also called **IFO**. (JP 1-06)

integrated logistic support — A composite of all the support considerations necessary to assure the effective and economical support of a system for its life cycle. Also called **ILS.** (JP 4-01.5)

integrated materiel management — The exercise of total Department of Defense-level management responsibility for a federal supply group or class, commodity, or item for a single agency, which normally includes computation of requirements, funding, budgeting, storing, issuing, cataloging, standardizing, and procuring functions. Also called **IMM.** (JP 4-09)

integrated priority list — A list of a combatant commander's highest priority requirements, prioritized across Service and functional lines, defining shortfalls in key programs that, in the judgment of the combatant commander, adversely affect the capability of the combatant commander's forces to accomplish their assigned mission. Also called **IPL**. (JP 1-04)

integrated staff — A staff in which one officer only is appointed to each post on the establishment of the headquarters, irrespective of nationality and Service. See also **multinational staff; joint staff.** (JP 3-16)

integration — 1. In force protection, the synchronized transfer of units into an operational commander's force prior to mission execution. 2. The arrangement of military forces and their actions to create a force that operates by engaging as a whole. 3. In photography, a

process by which the average radar picture seen on several scans of the time base may be obtained on a print, or the process by which several photographic images are combined into a single image. See also **force protection.** (JP 1)

intelligence — 1. The product resulting from the collection, processing, integration, evaluation, analysis, and interpretation of available information concerning foreign nations, hostile or potentially hostile forces or elements, or areas of actual or potential operations. 2. The activities that result in the product. 3. The organizations engaged in such activities. See also **acoustic intelligence; all-source intelligence; communications intelligence; critical intelligence; domestic intelligence; electronic intelligence; foreign intelligence; foreign instrumentation signals intelligence; general military intelligence; imagery intelligence; joint intelligence; measurement and signature intelligence; medical intelligence; national intelligence; open-source intelligence; operational intelligence; scientific and technical intelligence; strategic intelligence; tactical intelligence; target intelligence; technical intelligence; terrain intelligence.** (JP 2-0)

intelligence annex — A supporting document of an operation plan or order that provides detailed information on the enemy situation, assignment of intelligence tasks, and intelligence administrative procedures. (JP 2-01)

intelligence asset — Any resource utilized by an intelligence organization for an operational support role. (JP 2-0)

intelligence community — All departments or agencies of a government that are concerned with intelligence activity, either in an oversight, managerial, support, or participatory role. Also called **IC.** (JP 2-0)

intelligence database — The sum of holdings of intelligence data and finished intelligence products at a given organization. (JP 2-01)

intelligence discipline — A well-defined area of intelligence planning, collection, processing, exploitation, analysis, and reporting using a specific category of technical or human resources. See also **counterintelligence; human intelligence; imagery intelligence; intelligence; measurement and signature intelligence; open-source intelligence; signals intelligence; technical intelligence.** (JP 2-0)

intelligence estimate — The appraisal, expressed in writing or orally, of available intelligence relating to a specific situation or condition with a view to determining the courses of action open to the enemy or adversary and the order of probability of their adoption. (JP 2-0)

intelligence federation — A formal agreement in which a combatant command joint intelligence center receives preplanned intelligence support from other joint intelligence centers, Service intelligence organizations, reserve organizations, and national agencies during crisis or contingency operations. (JP 2-01)

intelligence information report — The primary vehicle used to provide human intelligence information to the consumer. It utilizes a message format structure that supports automated data entry into intelligence community databases. Also called **IIR.** (JP 2-01.2)

intelligence interrogation — The systematic process of using approved interrogation approaches to question a captured or detained person to obtain reliable information to satisfy intelligence requirements, consistent with applicable law. (JP 2-01.2)

intelligence mission management — A systematic process by a joint intelligence staff to proactively and continuously formulate and revise command intelligence requirements, and track the resulting information through the processing, exploitation, and dissemination process to satisfy user requirements. Also called **IMM.** (JP 2-01)

intelligence operations — The variety of intelligence and counterintelligence tasks that are carried out by various intelligence organizations and activities within the intelligence process. See also **analysis and production; collection; dissemination and integration; evaluation and feedback; planning and direction; processing and exploitation.** (JP 2-01)

intelligence planning — The intelligence component of the Adaptive Planning and Execution system, which coordinates and integrates all available Defense Intelligence Enterprise capabilities to meet combatant commander intelligence requirements. Also called **IP**. (JP 2-0)

intelligence preparation of the battlespace — The analytical methodologies employed by the Services or joint force component commands to reduce uncertainties concerning the enemy, environment, time, and terrain. Also called **IPB.** See also **joint intelligence preparation of the operational environment.** (JP 2-01.3)

intelligence process — The process by which information is converted into intelligence and made available to users, consisting of the six interrelated intelligence operations: planning and direction, collection, processing and exploitation, analysis and production, dissemination and integration, and evaluation and feedback. See also **analysis and production; collection; dissemination and integration; evaluation and feedback; intelligence; planning and direction; processing and exploitation.** (JP 2-01)

intelligence production — The integration, evaluation, analysis, and interpretation of information from single or multiple sources into finished intelligence for known or anticipated military and related national security consumer requirements. (JP 2-0)

intelligence-related activities — Those activities outside the consolidated defense intelligence program that: respond to operational commanders' tasking for time-sensitive information on foreign entities; respond to national intelligence community tasking of systems whose primary mission is support to operating forces; train personnel for

intelligence duties; provide an intelligence reserve; or are devoted to research and development of intelligence or related capabilities. (Specifically excluded are programs that are so closely integrated with a weapon system that their primary function is to provide immediate-use targeting data.) (JP 2-01)

intelligence report — A specific report of information, usually on a single item, made at any level of command in tactical operations and disseminated as rapidly as possible in keeping with the timeliness of the information. Also called **INTREP.** (JP 2-01)

intelligence reporting — The preparation and conveyance of information by any means. More commonly, the term is restricted to reports as they are prepared by the collector and as they are transmitted by the collector to the latter's headquarters and by this component of the intelligence structure to one or more intelligence-producing components. Thus, even in this limited sense, reporting embraces both collection and dissemination. The term is applied to normal and specialist intelligence reports. (JP 2-01.2)

intelligence requirement — 1. Any subject, general or specific, upon which there is a need for the collection of information, or the production of intelligence. 2. A requirement for intelligence to fill a gap in the command's knowledge or understanding of the operational environment or threat forces. Also called **IR**. See also **intelligence; priority intelligence requirement.** (JP 2-0)

intelligence source — The means or system that can be used to observe and record information relating to the condition, situation, or activities of a targeted location, organization, or individual. See also **intelligence; source.** (JP 2-0)

intelligence, surveillance, and reconnaissance — An activity that synchronizes and integrates the planning and operation of sensors, assets, and processing, exploitation, and dissemination systems in direct support of current and future operations. This is an integrated intelligence and operations function. Also called **ISR.** See also **intelligence; intelligence, surveillance, and reconnaissance visualization; reconnaissance; surveillance.** (JP 2-01)

intelligence, surveillance, and reconnaissance visualization — The capability to graphically display the current and future locations of intelligence, surveillance, and reconnaissance sensors, their projected platform tracks, vulnerability to threat capabilities and meteorological and oceanographic phenomena, fields of regard, tasked collection targets, and products to provide a basis for dynamic retasking and time-sensitive decision making. Also called **ISR visualization.** See also **intelligence; intelligence, surveillance, and reconnaissance; reconnaissance; surveillance.** (JP 2-01)

intelligence system — Any formal or informal system to manage data gathering, to obtain and process the data, to interpret the data, and to provide reasoned judgments to decision makers as a basis for action. (JP 2-01)

interagency — Of or pertaining to United States Government agencies and departments, including the Department of Defense. See also **interagency coordination**. (JP 3-08)

interagency coordination — Within the context of Department of Defense involvement, the coordination that occurs between elements of Department of Defense, and engaged US Government agencies and departments for the purpose of achieving an objective. (JP 3-0)

intercontinental ballistic missile — A land-based, long-range ballistic missile with a range capability greater than 3,000 nautical miles. Also called **ICBM.** (JP 3-01)

interdiction — 1. An action to divert, disrupt, delay, or destroy the enemy's military surface capability before it can be used effectively against friendly forces, or to otherwise achieve objectives. 2. In support of law enforcement, activities conducted to divert, disrupt, delay, intercept, board, detain, or destroy, under lawful authority, vessels, vehicles, aircraft, people, cargo, and money. See also **air interdiction.** (JP 3-03)

intergovernmental organization — An organization created by a formal agreement between two or more governments on a global, regional, or functional basis to protect and promote national interests shared by member states. Also called **IGO.** (JP 3-08)

intermediate-range ballistic missile — A land-based ballistic missile with a range capability from 1,500 to 3,000 nautical miles. Also called **IRBM.** (JP 3-01)

intermediate staging base — A tailorable, temporary location used for staging forces, sustainment and/or extraction into and out of an operational area. Also called **ISB.** See also **base; staging base.** (JP 3-35)

intermodal — Type of international freight system that permits transshipping among sea, highway, rail, and air modes of transportation through use of American National Standards Institute and International Organization for Standardization containers, line-haul assets, and handling equipment. (JP 4-09)

internal audience — In public affairs, United States military members and Department of Defense civilian employees and their immediate families. See also **external audience; public.** (JP 3-61)

internal defense and development — The full range of measures taken by a nation to promote its growth and to protect itself from subversion, lawlessness, insurgency, terrorism, and other threats to its security. Also called **IDAD.** See also **foreign internal defense.** (JP 3-22)

internally displaced person — Any person who has been forced or obliged to flee or to leave their home or places of habitual residence, in particular as a result of or in order to avoid the effects of armed conflict, situations of generalized violence, violations of human

rights or natural or human-made disasters, and who have not crossed an internationally recognized state border. Also called **IDP**. (JP 3-29)

internal security — The state of law and order prevailing within a nation. (JP 3-08)

International Convention for Safe Containers — A convention held in Geneva, Switzerland, on 2 Dec 1972, which resulted in setting standard safety requirements for containers moving in international transport. These requirements were ratified by the United States on 3 January 1978. Also called **CSC.** (JP 4-09)

international military education and training — Formal or informal instruction provided to foreign military students, units, and forces on a nonreimbursable (grant) basis by offices or employees of the United States, contract technicians, and contractors. Instruction may include correspondence courses; technical, educational, or informational publications; and media of all kinds. Also called **IMET.** See also **United States Military Service funded foreign training.** (JP 3-22)

interoperability — 1. The ability to operate in synergy in the execution of assigned tasks. (JP 3-0) 2. The condition achieved among communications-electronics systems or items of communications-electronics equipment when information or services can be exchanged directly and satisfactorily between them and/or their users. (JP 6-0)

interorganizational coordination — The interaction that occurs among elements of the Department of Defense; engaged United States Government agencies; state, territorial, local, and tribal agencies; foreign military forces and government agencies; intergovernmental organizations; nongovernmental organizations; and the private sector. (JP 3-08)

interpretation — A part of the analysis and production phase in the intelligence process in which the significance of information is judged in relation to the current body of knowledge. See also **intelligence process.** (JP 2-01)

interrogation — Systematic effort to procure information by direct questioning of a person under the control of the questioner. (JP 2-01.2)

inter-Service support — Action by one Service or element thereof to provide logistics and/or administrative support to another Service or element thereof. See also **support.** (JP 4-0)

intertheater airlift — The common-user airlift linking theaters to the continental United States and to other theaters as well as the airlift within the continental United States. See also **intratheater airlift.** (JP 3-17)

intertheater patient movement — Moving patients between, into, and out of the different theaters of the geographic combatant commands and into the continental United States

or another supporting theater. See also **en route care; evacuation; intratheater patient movement.** (JP 4-02)

in-transit visibility — The ability to track the identity, status, and location of Department of Defense units, and non-unit cargo (excluding bulk petroleum, oils, and lubricants) and passengers; patients; and personal property from origin to consignee or destination across the range of military operations. Also called **ITV.** (JP 4-01.2)

intratheater airlift — Airlift conducted within a theater with assets assigned to a geographic combatant commander or attached to a subordinate joint force commander. See also **intertheater airlift.** (JP 3-17)

intratheater patient movement — Moving patients within the theater of a combatant command or in the continental United States. See also **en route care; evacuation; intertheater patient movement.** (JP 4-02)

inventory control — That phase of military logistics that includes managing, cataloging, requirements determinations, procurement, distribution, overhaul, and disposal of materiel. Also called **inventory management; materiel control; materiel management; supply management.** (JP 4-09)

inventory control point — An organizational unit or activity within a Department of Defense supply system that is assigned the primary responsibility for the materiel inventory management of a group of items either for a particular Service or for the Defense Department as a whole. Also called **ICP.** (JP 4-09)

ionizing radiation — Particulate (alpha, beta, and neutron) and electromagnetic (X-ray and gamma) radiation of sufficient energy to displace electrons from atoms, producing ions. (JP 3-11)

irregular warfare — A violent struggle among state and non-state actors for legitimacy and influence over the relevant population(s). Also called **IW.** (JP 1)

isolated personnel — United States military, Department of Defense civilians and contractor personnel (and others designated by the President or Secretary of Defense) who are separated from their unit (as an individual or a group) while participating in a United States sponsored military activity or mission and are, or may be, in a situation where they must survive, evade, resist, or escape. See also **combat search and rescue; search and rescue.** (JP 3-50)

isolated personnel report — A Department of Defense form containing information designed to facilitate the identification and authentication of an isolated person by a recovery force. Also called **ISOPREP.** See also **authentication; evader.** (JP 3-50)

item manager — An individual within the organization of an inventory control point or other such organization assigned management responsibility for one or more specific items of materiel. (JP 4-09)

J

J-2X — The staff element of the intelligence directorate of a joint staff that combines and represents the principal authority for counterintelligence and human intelligence support. See also **counterintelligence; human intelligence.** (JP 2-01.2)

joint — Connotes activities, operations, organizations, etc., in which elements of two or more Military Departments participate. (JP 1)

joint air attack team — A combination of attack and/or scout rotary-wing aircraft and fixed-wing close air support aircraft operating together to locate and attack high priority targets and other targets of opportunity. Also called **JAAT.** See also **close air support.** (JP 3-09.3)

joint air component coordination element — A general term for the liaison element that serves as the direct representative of the joint force air component commander for joint air operations. Also called **JACCE.** (JP 3-30)

joint air-ground integration center — A staff organization designed to enhance joint collaborative efforts to deconflict joint air-ground assets in the division's airspace. Also called **JAGIC**. (JP 3-09.3)

joint air operations — Air operations performed with air capabilities/forces made available by components in support of the joint force commander's operation or campaign objectives, or in support of other components of the joint force. (JP 3-30)

joint air operations center — A jointly staffed facility established for planning, directing, and executing joint air operations in support of the joint force commander's operation or campaign objectives. Also called **JAOC.** See also **joint air operations.** (JP 3-30)

joint air operations plan — A plan for a connected series of joint air operations to achieve the joint force commander's objectives within a given time and joint operational area. Also called **JAOP.** See also **joint air operations.** (JP 3-30)

joint base — In base defense operations, a locality from which operations of two or more of the Military Departments are projected or supported and which is manned by significant elements of two or more Military Departments or in which significant elements of two or more Military Departments are located. See also **base.** (JP 3-10)

joint captured materiel exploitation center — An element responsible for deriving intelligence information from captured enemy materiel. It is normally subordinate to the intelligence directorate of a joint staff. Also called **JCMEC.** (JP 2-01)

joint civil-military operations task force — A joint task force composed of civil-military operations units from more than one Service. Also called **JCMOTF.** See also **civil-military operations; joint task force.** (JP 3-57)

joint combined exchange training — A program conducted overseas to fulfill United States forces training requirements and at the same time exchange the sharing of skills between United States forces and host nation counterparts. Also called **JCET.** (JP 3-05)

joint communications network — The aggregation of the joint multichannel trunking and switching system and the joint command and control communications system(s) in a theater. Also called **JCN.** (JP 6-0)

joint concept — Links strategic guidance to the development and employment of future joint force capabilities and serve as "engines for transformation" that may ultimately lead to doctrine, organization, training, materiel, leadership and education, personnel and facilities (DOTMLPF) and policy changes. (CJCSI 3010.02)

joint contracting support board — A board established to coordinate all contracting support and to determine specific contracting mechanisms to obtain commercially procured common logistic supplies and services within the operational area. Also called **JCSB.** See also **combatant commander logistic procurement support board; joint requirements review board.** (JP 4-10)

joint counterintelligence unit — An organization composed of Service and Department of Defense agency counterintelligence personnel, formed under the authority of the Secretary of Defense and assigned to a combatant commander, which focuses on combatant command strategic and operational counterintelligence missions. Also called **JCIU**. (JP 2-01.2)

joint data network operations officer — The joint task force operations directorate officer responsible to the commander for integrating data from supporting components into a common database used to generate the common tactical picture. Also called **JDNO.** (JP 3-01)

joint deployable intelligence support system — A transportable workstation and communications suite that electronically extends a joint intelligence center to a joint task force or other tactical user. Also called **JDISS.** (JP 2-0)

joint deployment and distribution enterprise — The complex of equipment, procedures, doctrine, leaders, technical connectivity, information, shared knowledge, organizations, facilities, training, and materiel necessary to conduct joint distribution operations. Also called **JDDE.** (JP 4-0)

joint deployment and distribution operations center — A combatant command movement control organization designed to synchronize and optimize national and theater multimodal resources for deployment, distribution, and sustainment, Also called **JDDOC.** (JP 4-09)

joint desired point of impact — A unique, alpha-numeric coded precise aimpoint associated with a target to achieve an explicit weaponeering objective, and identified by a three dimensional (latitude, longitude, elevation) mensurated coordinate. Also called a **JDPI.** See also **aimpoint; desired point of impact.** (JP 3-60)

joint distribution — The operational process of synchronizing all elements of the joint logistic system using the Joint Deployment and Distribution Enterprise for end-to-end movement of forces and materiel from point of origin to the designated point of need. (JP 4-09)

joint doctrine — Fundamental principles that guide the employment of United States military forces in coordinated action toward a common objective and may include terms, tactics, techniques, and procedures. See also **Chairman of the Joint Chiefs of Staff instruction; Chairman of the Joint Chiefs of Staff manual; doctrine; joint publication; joint test publication; multinational doctrine.** (CJCSI 5120.02)

joint doctrine development community — The Chairman of the Joint Chiefs of Staff, the Services, the combatant commands, the Joint Staff, the combat support agencies, the doctrine development agencies of the Services and the joint community, the National Defense University, the United States Element, North American Aerospace Defense Command, the National Guard Bureau, and Chairman of the Joint Chiefs of Staff controlled activities. Also called **JDDC**. (CJCSI 5120.02)

Joint Doctrine Development System — The system of lead agents, Joint Staff doctrine sponsors, primary review authorities, coordinating review authorities, technical review authorities, assessment agents, evaluation agents, Joint Doctrine Planning Conferences, procedures, and the hierarchical framework designed to initiate, develop, approve, and maintain joint publications. Also called **JDDS**. (CJCSI 5120.02)

Joint Doctrine Planning Conference — A forum convened by the Joint Staff Directorate for Joint Force Development that meets semiannually to address and vote on project proposals; discuss key joint doctrinal and operational issues; discuss potential changes to the joint doctrine development process; keep up to date on the status of the joint publication projects and emerging publications; and keep abreast of other initiatives of interest to the members. Also called **JDPC.** (CJCSM 5120.01)

joint document exploitation center — An element, normally subordinate to the intelligence directorate of a joint staff, responsible for deriving intelligence information from captured adversary documents including all forms of electronic data and other forms of stored textual and graphic information. Also called **JDEC.** See also **intelligence.** (JP 2-01)

joint duty assignment — An assignment to a designated position in a multi-Service, joint or multinational command or activity that is involved in the integrated employment or support of the land, sea, and air forces of at least two of the three Military Departments. Such involvement includes, but is not limited to, matters relating to national military strategy, joint doctrine and policy, strategic planning, contingency planning, and

command and control of combat operations under a unified or specified command. Also called **JDA.**

Joint Duty Assignment List — Positions designated as joint duty assignments are reflected in a list approved by the Secretary of Defense and maintained by the Joint Staff. The Joint Duty Assignment List is reflected in the Joint Duty Assignment Management Information System. Also called **JDAL.**

joint electromagnetic spectrum management operations — Those interrelated functions of frequency management, host nation coordination, and joint spectrum interference resolution that together enable the planning, management, and execution of operations within the electromagnetic operational environment during all phases of military operations. Also called **JEMSMO.** (JP 6-01)

joint electromagnetic spectrum operations — Those activities consisting of electronic warfare and joint electromagnetic spectrum management operations used to exploit, attack, protect, and manage the electromagnetic operational environment to achieve the commander's objectives. Also called **JEMSO.** (JP 6-01)

joint engagement zone — In air defense, that airspace of defined dimensions within which multiple air defense systems (surface-to-air missiles and aircraft) are simultaneously employed to engage air threats. Also called **JEZ.** (JP 3-01)

joint facilities utilization board — A joint board that evaluates and reconciles component requests for real estate, use of existing facilities, inter-Service support, and construction to ensure compliance with Joint Civil-Military Engineering Board priorities. Also called **JFUB.** (JP 3-34)

joint field office — A temporary multiagency coordination center established at the incident site to provide a central location for coordination of federal, state, local, tribal, nongovernmental, and private-sector organizations with primary responsibility for incident oversight, direction, or assistance to effectively coordinate protection, prevention, preparedness, response, and recovery actions. Also called **JFO.** (JP 3-28)

joint fires — Fires delivered during the employment of forces from two or more components in coordinated action to produce desired effects in support of a common objective. See also **fires.** (JP 3-0)

joint fires element — An optional staff element that provides recommendations to the operations directorate to accomplish fires planning and synchronization. Also called **JFE.** See also **fire support; joint fires.** (JP 3-60)

joint fires observer — A trained Service member who can request, adjust, and control surface-to-surface fires, provide targeting information in support of Type 2 and 3 close air support terminal attack control, and perform autonomous terminal guidance operations. Also called **JFO**. (JP 3-09.3)

joint fire support — Joint fires that assist air, land, maritime, and special operations forces to move, maneuver, and control territory, populations, airspace, and key waters. See also **fire support; joint fires.** (JP 3-0)

joint flow and analysis system for transportation — System that determines the transportation feasibility of a course of action or operation plan; provides daily lift assets needed to move forces and resupply; advises logistic planners of channel and port inefficiencies; and interprets shortfalls from various flow possibilities. Also called **JFAST.** See also **course of action; operation plan; system**. (JP 3-35)

joint force — A general term applied to a force composed of significant elements, assigned or attached, of two or more Military Departments operating under a single joint force commander. See also **joint force commander.** (JP 3-0)

joint force air component commander — The commander within a unified command, subordinate unified command, or joint task force responsible to the establishing commander for recommending the proper employment of assigned, attached, and/or made available for tasking air forces; planning and coordinating air operations; or accomplishing such operational missions as may be assigned. Also called **JFACC.** See also **joint force commander.** (JP 3-0)

joint force chaplain — The military chaplain designated by the joint force commander to serve as the senior chaplain for the joint force. Also called the **JFCH.** (JP 1-05)

joint force commander — A general term applied to a combatant commander, subunified commander, or joint task force commander authorized to exercise combatant command (command authority) or operational control over a joint force. Also called **JFC.** See also **joint force.** (JP 1)

joint force land component commander — The commander within a unified command, subordinate unified command, or joint task force responsible to the establishing commander for recommending the proper employment of assigned, attached, and/or made available for tasking land forces; planning and coordinating land operations; or accomplishing such operational missions as may be assigned. Also called **JFLCC.** See also **joint force commander.** (JP 3-0)

joint force maritime component commander — The commander within a unified command, subordinate unified command, or joint task force responsible to the establishing commander for recommending the proper employment of assigned, attached, and/or made available for tasking maritime forces and assets; planning and coordinating maritime operations; or accomplishing such operational missions as may be assigned. Also called **JFMCC.** See also **joint force commander.** (JP 3-0)

joint force special operations component commander — The commander within a unified command, subordinate unified command, or joint task force responsible to the

establishing commander for recommending the proper employment of assigned, attached, and/or made available for tasking special operations forces and assets; planning and coordinating special operations; or accomplishing such operational missions as may be assigned. Also called **JFSOCC.** See also **joint force commander.** (JP 3-0)

joint force surgeon — A general term applied to a Department of Defense medical department officer appointed by the joint force commander to serve as the joint force special staff officer responsible for establishing, monitoring, or evaluating joint force health service support. Also called **JFS.** See also **health service support; joint force.** (JP 4-02)

joint functions — Related capabilities and activities placed into six basic groups of command and control, intelligence, fires, movement and maneuver, protection, and sustainment to help joint force commanders synchronize, integrate, and direct joint operations. (JP 3-0)

joint individual augmentee — An unfunded temporary duty position (or member filling an unfunded temporary duty position) identified on a joint manning document by a supported combatant commander to augment headquarters operations during contingencies. Also called **JIA.** (JP 4-05)

joint integrated prioritized target list — A prioritized list of targets approved and maintained by the joint force commander. Also called **JIPTL**. See also **target.** (JP 3-60)

joint intelligence — Intelligence produced by elements of more than one Service of the same nation. (JP 2-0)

joint intelligence architecture — A dynamic, flexible structure that consists of the Defense Joint Intelligence Operations Center, combatant command joint intelligence operations centers, and subordinate joint task force intelligence operations centers or joint intelligence support elements to provide national, theater, and tactical commanders with the full range of intelligence required for planning and conducting operations. See also **intelligence.** (JP 2-0)

joint intelligence operations center — An interdependent, operational intelligence organization at the Department of Defense, combatant command, or joint task force (if established) level, that is integrated with national intelligence centers, and capable of accessing all sources of intelligence impacting military operations planning, execution, and assessment. Also called **JIOC.** (JP 2-0)

joint intelligence preparation of the operational environment — The analytical process used by joint intelligence organizations to produce intelligence estimates and other intelligence products in support of the joint force commander's decision-making process. Also called **JIPOE.** (JP 2-01.3)

joint intelligence support element — A subordinate joint force element whose focus is on intelligence support for joint operations, providing the joint force commander, joint staff, and components with the complete air, space, ground, and maritime adversary situation. Also called **JISE.** See also **intelligence; joint force; joint operations.** (JP 2-01)

joint interagency coordination group — A staff group that establishes regular, timely, and collaborative working relationships between civilian and military operational planners. Also called **JIACG.** (JP 3-08)

joint interface control officer — The senior interface control officer for multi-tactical data link networks in the joint force who is responsible for development and validation of the architecture, joint interoperability and management of the multi-tactical data link networks, and overseeing operations of a joint interface control cell. Also called **JICO.** (JP 3-01)

joint interrogation and debriefing center — Physical location for the exploitation of intelligence information from detainees and other sources. Also called **JIDC.** See also **intelligence.** (JP 2-01.2)

joint interrogation operations — 1. Activities conducted by a joint or interagency organization to extract information for intelligence purposes from enemy prisoners of war, dislocated civilians, enemy combatants, or other uncategorized detainees. 2. Activities conducted in support of law enforcement efforts to adjudicate enemy combatants who are believed to have committed crimes against US persons or property. Also called **JIO.** See also **enemy combatant.** (JP 2-01)

joint land operations — Land operations performed across the range of military operations with land forces made available by Service components in support of the joint force commander's operation or campaign objectives, or in support of other components of the joint force. (JP 3-31)

joint land operations plan — A plan for a connected series of joint land operations to achieve the joint force commander's objectives within a given time and operational area. (JP 3-31)

joint logistics — The coordinated use, synchronization, and sharing of two or more Military Departments' logistic resources to support the joint force. See also **logistics.** (JP 4-0)

joint logistics enterprise — A multi-tiered matrix of key global logistics providers cooperatively engaged or structured to achieve a common purpose without jeopardizing the integrity of their own organizational missions and goals. Also called **JLEnt.** (JP 4-0)

Joint Logistics Operations Center — The Joint Logistics Operations Center is the current operations division within the Logistics Directorate of the Joint Staff, which monitors

crises, exercises, and interagency actions and works acquisition and cross-servicing agreements as well as international logistics. Also called **JLOC.** See also **logistics.** (JP 4-01)

joint logistics over-the-shore commander — The commander selected by the joint force commander and tasked to organize the efforts of all elements participating in accomplishing the joint logistics over-the-shore mission. See also **joint logistics over-the-shore operations.** (JP 4-01.6)

joint logistics over-the-shore operations — Operations in which Navy and Army logistics over-the-shore forces conduct logistics over-the-shore operations together under a joint force commander. Also called **JLOTS operations**. See also **joint logistics; logistics over-the-shore operations.** (JP 4-01.6)

joint manpower program — The policy, processes, and systems used in determination and prioritization within and among joint Service manpower requirements. Also called **JMP.** (JP 1-0)

joint meteorological and oceanographic coordination cell — A subset of a joint meteorological and oceanographic coordination organization, which is delegated the responsibility of executing the coordination of meteorological and oceanographic support operations in the operational area. Also called **JMCC.** (JP 3-59)

joint meteorological and oceanographic coordination organization — A Service meteorological and oceanographic organization that is designated within the operations order as the lead organization responsible for coordinating meteorological and oceanographic operations support in the operational area. Also called **JMCO.** (JP 3-59)

joint meteorological and oceanographic officer — Officer designated to provide direct meteorological and oceanographic support to a joint force commander. Also called **JMO.** (JP 3-59)

joint mission-essential task — A mission task selected by a joint force commander deemed essential to mission accomplishment and defined using the common language of the Universal Joint Task List in terms of task, condition, and standard. Also called **JMET.** See also **condition, universal joint task list.** (JP 3-33)

joint mortuary affairs office — Plans and executes all mortuary affairs programs within a theater. Provides guidance to facilitate the conduct of all mortuary programs and to maintain data (as required) pertaining to recovery, identification, and disposition of all US dead and missing in the assigned theater. Serves as the central clearing point for all mortuary affairs and monitors the deceased and missing personal effects program. Also called **JMAO.** See also **mortuary affairs; personal effects.** (JP 4-06)

joint network operations control center — An element of the communications system directorate of a joint staff established as the single control agency for the management and direction of the joint force communications systems. Also called **JNCC.** (JP 6-0)

joint operation planning — Planning activities associated with joint military operations by combatant commanders and their subordinate joint force commanders in response to contingencies and crises. See also **execution planning; Joint Operation Planning and Execution System; joint operation planning process.** (JP 5-0)

Joint Operation Planning and Execution System — An Adaptive Planning and Execution system technology. Also called **JOPES.** See also **joint operation planning; joint operations; level of detail.** (JP 5-0)

joint operation planning process — An orderly, analytical process that consists of a logical set of steps to analyze a mission, select the best course of action, and produce a joint operation plan or order. Also called **JOPP.** See also **joint operation planning; Joint Operation Planning and Execution System.** (JP 5-0)

joint operations — A general term to describe military actions conducted by joint forces and those Service forces employed in specified command relationships with each other, which of themselves, do not establish joint forces. (JP 3-0)

joint operations area — An area of land, sea, and airspace, defined by a geographic combatant commander or subordinate unified commander, in which a joint force commander (normally a joint task force commander) conducts military operations to accomplish a specific mission. Also called **JOA.** See also **area of responsibility; joint special operations area.** (JP 3-0)

joint operations area forecast — The official baseline meteorological and oceanographic forecast for operational planning and mission execution within the joint operations area. Also called **JOAF.** (JP 3-59)

joint operations center — A jointly manned facility of a joint force commander's headquarters established for planning, monitoring, and guiding the execution of the commander's decisions. Also called **JOC**. (JP 3-41)

joint patient movement requirements center — A joint activity established to coordinate the joint patient movement requirements function for a joint task force operating within a unified command area of responsibility. Also called **JPMRC.** See also **health service support; joint force surgeon; joint operations area; medical treatment facility.** (JP 4-02)

joint patient movement team — Teams comprised of personnel trained in medical regulating and movement procedures. Also called **JPMT.** (JP 4-02)

joint personnel accountability reconciliation and reporting — A data repository developed and implemented by the Defense Manpower Data Center that consumes and reconciles data from existing Service deployment systems. Also called **JPARR.** (JP 1-0)

joint personnel reception center — A center established in an operational area by the appropriate joint force commander with the responsibility for the in-processing and out-processing of personnel upon their arrival in and departure from the theater. Also called **JPRC.** (JP 1-0)

joint personnel recovery center — The primary joint force organization responsible for planning and coordinating personnel recovery for military operations within the assigned operational area. Also called **JPRC.** See also **combat search and rescue; search and rescue.** (JP 3-50)

joint personnel training and tracking activity — The continental United States center established to facilitate the reception, accountability, processing, training, and onward movement of individual augmentees preparing for overseas movement to support a joint military operation. Also called **JPTTA.** (JP 1-0)

joint planning and execution community — Those headquarters, commands, and agencies involved in the training, preparation, mobilization, deployment, employment, support, sustainment, redeployment, and demobilization of military forces assigned or committed to a joint operation. Also called **JPEC.** (JP 5-0)

joint planning group — A planning organization consisting of designated representatives of the joint force headquarters principal and special staff sections, joint force components (Service and/or functional), and other supporting organizations or agencies as deemed necessary by the joint force commander. Also called **JPG.** See also **crisis action planning; joint operation planning.** (JP 5-0)

joint proponent — A Service, combatant command, or Joint Staff directorate assigned coordinating authority to lead the collaborative development and integration of joint capability with specific responsibilities designated by the Secretary of Defense. (SecDef Memo 03748-09)

Joint Public Affairs Support Element — A deployable unit assigned to assist a joint force commander in developing and training public affairs forces in joint, interagency, and multinational environments. Also called **JPASE.** (JP 3-61)

joint publication — A compilation of agreed to fundamental principles, considerations, and guidance on a particular topic, approved by the Chairman of the Joint Chiefs of Staff that guides the employment of a joint force toward a common objective. Also called **JP.** See also **Chairman of the Joint Chiefs of Staff instruction; Chairman of the Joint Chiefs of Staff manual; joint doctrine; joint test publication.** (CJCSI 5120.02)

joint reception coordination center — An organization that, when established, ensures that Department of Defense personnel and noncombatant evacuees receive adequate assistance and support for an orderly and expedient debarkation, movement to final destination in the United States, and appropriate follow-on assistance at the final destination. Also called **JRCC.** (JP 3-68)

joint reception, staging, onward movement, and integration — A phase of joint force projection occurring in the operational area during which arriving personnel, equipment, and materiel transition into forces capable of meeting operational requirements. Also called **JRSOI.** See also **integration; joint force; reception; staging**. (JP 3-35)

joint requirements review board — The joint task force or subunified commander's established board to review, validate, approve, and prioritize selected Service component contract support requests. Also called **JRRB.** See also **combatant commander logistic procurement support board; joint contracting support board.** (JP 4-10)

joint restricted frequency list — A time and geographically oriented listing of TABOO, PROTECTED, and GUARDED functions, nets, and frequencies and limited to the minimum number of frequencies necessary for friendly forces to accomplish objectives. Also called **JRFL.** See also **electronic warfare; guarded frequencies; protected frequencies; TABOO frequencies.** (JP 3-13.1)

joint security area — A specific surface area, designated by the joint force commander to facilitate protection of joint bases and their connecting lines of communications that support joint operations. Also called **JSA.** (JP 3-10)

joint security coordination center — A joint operations center tailored to assist the joint security coordinator in meeting the security requirements in the joint operational area. Also called **JSCC.** (JP 3-10)

joint security coordinator — The officer with responsibility for coordinating the overall security of the operational area in accordance with joint force commander directives and priorities. Also called **JSC.** (JP 3-10)

joint servicing — That function performed by a jointly staffed and financed activity in support of two or more Services. (JP 3-05)

joint special operations air component commander — The commander within a joint force special operations command responsible for planning and executing joint special operations air activities. Also called **JSOACC.** (JP 3-05)

joint special operations area — An area of land, sea, and airspace assigned by a joint force commander to the commander of a joint special operations force to conduct special operations activities. Also called **JSOA.** (JP 3-0)

joint special operations task force — A joint task force composed of special operations units from more than one Service, formed to carry out a specific special operation or prosecute special operations in support of a theater campaign or other operations. Also called **JSOTF.** (JP 3-05)

joint staff — 1. The staff of a commander of a unified or specified command, subordinate unified command, joint task force, or subordinate functional component (when a functional component command will employ forces from more than one Military Department), that includes members from the several Services comprising the force. 2. (capitalized as Joint Staff) The staff under the Chairman of the Joint Chiefs of Staff that assists the Chairman and the other members of the Joint Chiefs of Staff in carrying out their responsibilities. Also called **JS.** (JP 1)

Joint Staff doctrine sponsor — A Joint Staff directorate assigned to coordinate a joint doctrine project with the Joint Staff. Also called **JSDS.** See also **joint doctrine.** (CJCSM 5120.01)

Joint Strategic Capabilities Plan — A plan that provides guidance to the combatant commanders and the Joint Chiefs of Staff to accomplish tasks and missions based on current military capabilities. Also called **JSCP.** See also **combatant commander; joint.** (JP 5-0)

joint strategic exploitation center — Theater-level physical location for an exploitation facility that functions under the direction of the joint force commander and is used to hold detainees with potential long-term strategic intelligence value, deemed to be of interest to counterintelligence or criminal investigators, or who may be a significant threat to the United States, its citizens or interests, or US allies. Also called **JSEC.** (JP 2-01.2)

Joint Strategic Planning System — One of the primary means by which the Chairman of the Joint Chiefs of Staff, in consultation with the other members of the Joint Chiefs of Staff and the combatant commanders, carries out the statutory responsibilities to assist the President and Secretary of Defense in providing strategic direction to the Armed Forces. Also called **JSPS.** (JP 5-0)

joint table of distribution — A manpower document that identifies the positions and enumerates the spaces that have been approved for each organizational element of a joint activity for a specific fiscal year (authorization year), and those accepted for the four subsequent fiscal years (program years). Also called **JTD.** See also **joint manpower program.** (JP 1-0)

joint targeting coordination board — A group formed by the joint force commander to accomplish broad targeting oversight functions that may include but are not limited to coordinating targeting information, providing targeting guidance, synchronization, and priorities, and refining the joint integrated prioritized target list. Also called **JTCB.** See also **joint integrated prioritized target list; targeting.** (JP 3-60)

joint target list — A consolidated list of selected targets, upon which there are no restrictions placed, considered to have military significance in the joint force commander's operational area. Also called **JTL.** See also **joint; target.** (JP 3-60)

joint task force — A joint force that is constituted and so designated by the Secretary of Defense, a combatant commander, a subunified commander, or an existing joint task force commander. Also called **JTF.** (JP 1)

Joint Task Force-Civil Support — A standing joint task force established to plan and integrate Department of Defense support to the designated lead federal agency for domestic chemical, biological, radiological, nuclear, and high-yield explosives consequence management operations. Also called **JTF-CS.** (JP 3-41)

joint terminal attack controller — A qualified (certified) Service member who, from a forward position, directs the action of combat aircraft engaged in close air support and other offensive air operations. Also called **JTAC.** See also **terminal attack control.** (JP 3-09.3)

joint test publication — A proposed publication produced for field-testing an emergent concept that has been validated through the Joint Experimentation Program or a similar joint process. Also called **JTP.** See also **Chairman of the Joint Chiefs of Staff instruction; joint doctrine; joint publication.** (CJCSM 5120.01)

Joint Transportation Board — Responsible to the Chairman of the Joint Chiefs of Staff, the Joint Transportation Board assures that common-user transportation resources assigned or available to the Department of Defense are allocated to achieve maximum benefit in meeting Department of Defense objectives. Also called **JTB.** See also **common-user transportation.** (JP 4-01)

joint urban operations — Joint operations planned and conducted on, or against objectives within a topographical complex and its adjacent natural terrain, where man-made construction or the density of population are the dominant features. Also called **JUOs.** See also **joint operations.** (JP 3-06)

Joint Worldwide Intelligence Communications System — The sensitive compartmented information portion of the Defense Information Systems Network, which incorporates advanced networking technologies that permit point-to-point or multipoint information exchange involving voice, text, graphics, data, and video teleconferencing. Also called **JWICS.** (JP 2-0)

judge advocate — An officer of the Judge Advocate General's Corps of the Army, Air Force, Marine Corps, Navy, and the United States Coast Guard who is designated as a judge advocate. Also called **JA.** (JP 1-04)

jumpmaster — The assigned airborne qualified individual who controls paratroops from the time they enter the aircraft until they exit. (JP 3-17)

K

key position — A civilian position, public or private (designated by the employer and approved by the Secretary concerned), that cannot be vacated during war or national emergency. (JP 1-0)

keystone publications — Joint doctrine publications that establish the doctrinal foundation for a series of joint publications in the hierarchy of joint publications. See also **capstone publications; joint publication.** (CJCSM 5120.01)

key terrain — Any locality, or area, the seizure or retention of which affords a marked advantage to either combatant. (JP 2-01.3)

kill box — A three-dimensional permissive fire support coordination measure with an associated airspace coordinating measure used to facilitate the integration of fires. (JP 3-09)

Intentionally Blank

L

land control operations — The employment of land forces, supported by maritime and air forces (as appropriate) to control vital land areas. See also **sea control operations**. (JP 3-31)

land domain — The area of the Earth's surface ending at the high water mark and overlapping with the maritime domain in the landward segment of the littorals. (JP 3-31)

land forces — Personnel, weapon systems, vehicles, and support elements operating on land to accomplish assigned missions and tasks. (JP 3-31)

landing aid — Any illuminating light, radio beacon, radar device, communicating device, or any system of such devices for aiding aircraft in an approach and landing. (JP 3-04)

landing area — 1. That part of the operational area within which are conducted the landing operations of an amphibious force. 2. In airborne operations, the general area used for landing troops and materiel either by airdrop or air landing. 3. Any specially prepared or selected surface of land, water, or deck designated or used for takeoff and landing of aircraft. See also **airfield; amphibious force; landing beach; landing force.** (JP 3-02)

landing area diagram — A graphic means of showing, for amphibious operations, the beach designations, boat lanes, organization of the line of departure, scheduled waves, landing ship area, transport areas, and the fire support areas in the immediate vicinity of the boat lanes. (JP 3-02)

landing beach — That portion of a shoreline required for the landing of an amphibious force. (JP 3-02)

landing craft — A craft employed in amphibious operations, specifically designed for carrying troops and their equipment and for beaching, unloading, retracting, and resupply operations. (JP 3-02)

landing craft and amphibious vehicle assignment table — A table showing the assignment of personnel and materiel to each landing craft and amphibious vehicle and the assignment of the landing craft and amphibious vehicles to waves for the ship-to-shore movement. (JP 3-02)

landing craft availability table — A tabulation of the type and number of landing craft that will be available from each ship of the transport group. (JP 3-02)

landing diagram — A graphic means of illustrating the plan for the ship-to-shore movement. (JP 3-02)

landing force — A Marine Corps or Army task organization, which is part of the amphibious force, formed to conduct amphibious operations. Also called **LF.** See also **amphibious force; amphibious operation; amphibious task force; task organization.** (JP 3-02)

landing force operational reserve material — Package of contingency supplies pre-positioned and maintained onboard selected amphibious warfare ships to enhance reaction time and provide support for the embarked landing force in contingencies. Also called **LFORM.** (JP 3-02.1)

landing force support party — A temporary landing force organization composed of Navy and landing force elements, that facilitates the ship-to-shore movement and provides initial combat support and combat service support to the landing force. Also called **LFSP.** See also **combat service support; combat support; landing force; ship-to-shore movement.** (JP 3-02)

landing group — In amphibious operations, a subordinate task organization of the landing force capable of conducting landing operations, under a single tactical command, against a position or group of positions. (JP 3-02)

landing plan — In amphibious operations, a collective term referring to all individually prepared naval and landing force documents that, taken together, present in detail all instructions for execution of the ship-to-shore movement. (JP 3-02)

landing sequence table — A document that incorporates the detailed plans for ship-to-shore movement of nonscheduled units. (JP 3-02)

landing signalman enlisted — Enlisted man responsible for ensuring that helicopters/tiltrotor aircraft, on signal, are safely started, engaged, launched, recovered, and shut down. Also called **LSE.** (JP 3-04)

landing signals officer — Officer responsible for the visual control of aircraft in the terminal phase of the approach immediately prior to landing. Also called **LSO.** See also **terminal phase.** (JP 3-04)

landing site — 1. A site within a landing zone containing one or more landing points. See also airfield. 2. In amphibious operations, a continuous segment of coastline over which troops, equipment and supplies can be landed by surface means. (JP 3-02)

landing zone — Any specified zone used for the landing of aircraft. Also called **LZ.** See also **airfield.** (JP 3-17)

laser-guided weapon — A weapon that uses a seeker to detect laser energy reflected from a laser marked/designated target and through signal processing provides guidance commands to a control system, which guides the weapon to the point from which the laser energy is being reflected. Also called **LGW.** (JP 3-09)

laser rangefinder — A device that uses laser energy for determining the distance from the device to a place or object. (JP 3-09)

laser seeker — A device based on a direction-sensitive receiver that detects the energy reflected from a laser designated target and defines the direction of the target relative to the receiver. See also **laser-guided weapon.** (JP 3-09.3)

laser spot — The area on a surface illuminated by a laser. See also **spot.** (JP 3-09)

laser spot tracker — A device that locks on to the reflected energy from a laser-marked or designated target and defines the direction of the target relative to itself. Also called **LST.** (JP 3-09)

laser target designator — A device that emits a beam of laser energy which is used to mark a specific place or object. Also called **LTD.** See also **target.** (JP 3-09)

latest arrival date — A day, relative to C-Day, that is specified by the supported combatant commander as the latest date when a unit, a resupply shipment, or replacement personnel can arrive at the port of debarkation and support the concept of operations. Also called **LAD.** (JP 5-0)

law enforcement agency — Any of a number of agencies (outside the Department of Defense) chartered and empowered to enforce US laws in the United States, a state or territory (or political subdivision) of the United States, a federally recognized Native American tribe or Alaskan Native Village, or within the borders of a host nation. Also called **LEA.** (JP 3-28)

law of armed conflict — See **law of war**. (JP 1-04)

law of war — That part of international law that regulates the conduct of armed hostilities. Also called **the law of armed conflict.** See also **rules of engagement**. (JP 1-04)

lead — In intelligence usage, a person with potential for exploitation, warranting additional assessment, contact, and/or development. (JP 2-01.2)

lead agency — The US Government agency designated to coordinate the interagency oversight of the day-to-day conduct of an ongoing operation. (JP 3-08)

lead agent — 1. An individual Service, combatant command, or Joint Staff directorate assigned to develop and maintain a joint publication. (CJCSM 5120.01) 2. In medical materiel management, the designated unit or organization to coordinate or execute day-to-day conduct of an ongoing operation or function. Also called **LA.** (JP 4-02)

lead aircraft — 1. The airborne aircraft designated to exercise command of other aircraft within the flight. 2. An aircraft in the van of two or more aircraft. (JP 3-09.3)

lead federal agency — The federal agency that leads and coordinates the overall federal response to an emergency. Also called **LFA.** (JP 3-41)

lead nation — The nation with the will, capability, competence, and influence to provide the essential elements of political consultation and military leadership to coordinate the planning, mounting, and execution of a multinational operation. See also **logistic support; multinational force.** (JP 3-16)

lead Service or agency for common-user logistics — A Service component or Department of Defense agency that is responsible for execution of common-user item or service support in a specific combatant command or multinational operation as defined in the combatant or subordinate joint force commander's operation plan, operation order, and/or directives. See also **common-user logistics.** (JP 4-0)

letter of assist — A contractual document issued by the United Nations to a government authorizing it to provide goods or services to a peacekeeping operation. Also called **LOA.** See also **peacekeeping.** (JP 1-06)

letter of authorization — A document issued by the procuring contracting officer or designee that authorizes contractor personnel authorized to accompany the force to travel to, from, and within the operational area; and, outlines government furnished support authorizations within the operational area. Also called **LOA.** (JP 4-10)

letter of offer and acceptance — Standard Department of Defense form on which the United States Government documents its offer to transfer to a foreign government or international organization United States defense articles and services via foreign military sales pursuant to the Arms Export Control Act. Also called **LOA.** See also **foreign military sales.** (JP 4-08)

level of detail — Within the current joint planning and execution system, movement characteristics for both personnel and cargo are described at six distinct levels of detail. Levels I, V, and VI describe personnel and Levels I through IV and VI for cargo. Levels I through IV are coded and visible in the Joint Operation Planning and Execution System automated data processing. Levels V and VI are used by Joint Operation Planning and Execution System automated data processing feeder systems. a. **level I** - personnel: expressed as total number of passengers by unit line number. Cargo: expressed in total short tons, total measurement tons, total square feet, and total thousands of barrels by unit line number. Petroleum, oils, and lubricants is expressed by thousands of barrels by unit line number. b. **level II** - cargo: expressed by short tons and measurement tons of bulk, oversize, outsize, and non-air transportable cargo by unit line number. Also square feet for vehicles and non self-deployable aircraft and boats by unit line number. c. **level III** - cargo: detail by cargo category code expressed as short tons and measurement tons as well as square feet associated to that cargo category code for an individual unit line number. d. **level IV** - cargo: detail for individual dimensional data expressed in length, width, and height in number of inches, and weight/volume in short tons/measurement tons, along with a cargo description. Each cargo item is associated with a cargo category

code and a unit line number). e. **level V** - personnel: any general summarization/aggregation of level VI detail in distribution and deployment. f. **level VI** - personnel: detail expressed by name, Service, military occupational specialty and unique identification number. Cargo: detail expressed by association to a transportation control number or single tracking number or item of equipment to include federal stock number/national stock number and/or requisition number. Nested cargo, cargo that is contained within another equipment item, may similarly be identified. Also called **JOPES level of detail.** (CJCSM 3122.01A)

leverage — In the context of joint operation planning, a relative advantage in combat power and/or other circumstances against the adversary across one or more domains or the information environment sufficient to exploit that advantage. See also **operational art; operational design.** (JP 5-0)

L-hour — 1. The specific hour on C-day at which a deployment operation commences or is to commence. (JP 5-0) 2. In amphibious operations, the time at which the first helicopter or tiltrotor aircraft of the airborne ship-to-shore movement wave touches down or is scheduled to touch down in the landing zone (JP 3-02)

liaison — That contact or intercommunication maintained between elements of military forces or other agencies to ensure mutual understanding and unity of purpose and action. (JP 3-08)

life cycle — The total phases through which an item passes from the time it is initially developed until the time it is either consumed in use or disposed of as being excess to all known materiel requirements. (JP 4-02)

lighterage — The process in which small craft are used to transport cargo or personnel from ship-to-shore using amphibians, landing craft, discharge lighters, causeways, and barges. (JP 4-01.6)

limiting factor — A factor or condition that, either temporarily or permanently, impedes mission accomplishment. (JP 5-0)

line of communications — A route, either land, water, and/or air, that connects an operating military force with a base of operations and along which supplies and military forces move. Also called **LOC.** (JP 2-01.3)

line of demarcation — A line defining the boundary of a buffer zone used to establish the forward limits of disputing or belligerent forces after each phase of disengagement or withdrawal has been completed. See also **buffer zone; disengagement; peace operations.** (JP 3-07.3)

line of departure — 1. In land warfare, a line designated to coordinate the departure of attack elements. Also called **LD.** (JP 3-31) 2. In amphibious operations, a suitably marked offshore coordinating line, which is located at the seaward end of a boat lane, to assist in

the landing of landing craft and amphibious vehicles on designated beaches at the scheduled times. Also called **LOD.** (JP 3-02)

line of effort — In the context of joint operation planning, using the purpose (cause and effect) to focus efforts toward establishing operational and strategic conditions by linking multiple tasks and missions. Also called **LOE.** (JP 5-0)

line of operation — A line that defines the interior or exterior orientation of the force in relation to the enemy or that connects actions on nodes and/or decisive points related in time and space to an objective(s). Also called **LOO.** (JP 5-0)

link — 1. A behavioral, physical, or functional relationship between nodes. 2. In communications, a general term used to indicate the existence of communications facilities between two points. 3. A maritime route, other than a coastal or transit route, which links any two or more routes. See also **node.** (JP 3-0)

listening watch — A continuous receiver watch established for the reception of communication addressed to, or of interest to, the unit maintaining the watch, with complete log optional. (JP 3-50)

littoral — The littoral comprises two segments of operational environment: 1. Seaward: the area from the open ocean to the shore, which must be controlled to support operations ashore. 2. Landward: the area inland from the shore that can be supported and defended directly from the sea. (JP 2-01.3)

loading plan — All of the individually prepared documents which, taken together, present in detail all instructions for the arrangement of personnel, and the loading of equipment for one or more units or other special grouping of personnel or material moving by highway, water, rail, or air transportation. (JP 3-02.1)

load signal — In personnel recovery, a visual signal displayed in a covert manner to indicate the presence of an individual or object at a given location. See also **evasion; recovery operations.** (JP 3-50)

locate — In personnel recovery, the task where actions are taken to precisely find and authenticate the identity of isolated personnel. (JP 3-50)

lodgment — A designated area in a hostile or potentially hostile operational area that, when seized and held, makes the continuous landing of troops and materiel possible and provides maneuver space for subsequent operations. (JP 3-18)

logistics — Planning and executing the movement and support of forces. (JP 4-0)

logistics over-the-shore operation area — That geographic area required to conduct a logistics over-the-shore operation. Also called **LOA.** See also **logistics over-the-shore operations.** (JP 4-01.6)

logistics over-the-shore operations — The loading and unloading of ships without the benefit of deep draft-capable, fixed port facilities; or as a means of moving forces closer to tactical assembly areas dependent on threat force capabilities. Also called **LOTS operations**. See also **joint logistics over-the-shore operations.** (JP 4-01.6)

logistic support — Support that encompasses the logistic services, materiel, and transportation required to support the continental United States-based and worldwide deployed forces. (JP 4-0)

logistics supportability analysis — Combatant command internal assessment for the Joint Strategic Capabilities Plan on capabilities and shortfalls of key logistic capabilities required to execute and sustain the concept of support conducted on all level three plans with the time phased force deployment data. Also called **LSA**. (JP 4-0)

low-altitude missile engagement zone — In air defense, that airspace of defined dimensions within which the responsibility for engagement of air threats normally rests with low- to medium-altitude surface-to-air missiles. Also called **LOMEZ.** (JP 3-01)

low-level transit route — A temporary corridor of defined dimensions established in the forward area to minimize the risk to friendly aircraft from friendly air defenses or surface forces. Also called **LLTR.** (JP 3-52)

low velocity drop — A drop procedure in which the drop velocity does not exceed 30 feet per second. (JP 3-17)

low-visibility operations — Sensitive operations wherein the diplomatic-military restrictions inherent in covert and clandestine operations are either not necessary or not feasible; actions are taken as required to limit exposure of those involved and/or their activities and with the knowledge that the action and/or sponsorship of the operation may preclude plausible denial by the initiating power. (JP 3-05)

Intentionally Blank

M

magnetic mine — A mine that responds to the magnetic field of a target. (JP 3-15)

mail embargo — A temporary shutdown or redirection of mail flow to or from a specific location. (JP 1-0)

main operating base — A facility outside the United States and US territories with permanently stationed operating forces and robust infrastructure. Main operating bases are characterized by command and control structures, enduring family support facilities, and strengthened force protection measures. Also called **MOB.** See also **cooperative security location; forward operating site.** (CJCS CM-0007-05)

main supply route — The route or routes designated within an operational area upon which the bulk of traffic flows in support of military operations. Also called **MSR.** (JP 4-01.5)

maintenance — 1. All action, including inspection, testing, servicing, classification as to serviceability, repair, rebuilding, and reclamation, taken to retain materiel in a serviceable condition or to restore it to serviceability. 2. All supply and repair action taken to keep a force in condition to carry out its mission. 3. The routine recurring work required to keep a facility in such condition that it may be continuously used at its original or designed capacity and efficiency for its intended purpose. (JP 4-0)

major force — A military organization comprised of major combat elements and associated combat support, combat service support, and sustainment increments. (JP 5-0)

major operation — 1. A series of tactical actions (battles, engagements, strikes) conducted by combat forces of a single or several Services, coordinated in time and place, to achieve strategic or operational objectives in an operational area. 2. For noncombat operations, a reference to the relative size and scope of a military operation. See also **operation.** (JP 3-0)

maneuver — 1. A movement to place ships, aircraft, or land forces in a position of advantage over the enemy. 2. A tactical exercise carried out at sea, in the air, on the ground, or on a map in imitation of war. 3. The operation of a ship, aircraft, or vehicle, to cause it to perform desired movements. 4. Employment of forces in the operational area through movement in combination with fires to achieve a position of advantage in respect to the enemy. See also **mission; operation.** (JP 3-0)

manpower management — The means of manpower control to ensure the most efficient and economical use of available manpower. (JP 1-0)

manpower requirements — Human resources needed to accomplish specified work loads of organizations. (JP 1-0)

Marine air command and control system — A system that provides the aviation combat element commander with the means to command, coordinate, and control all air operations within an assigned sector and to coordinate air operations with other Services. Also called **MACCS.** See also **direct air support center; tactical air operations center.** (JP 3-09.3)

Marine Corps special operations forces — Those Active Component Marine Corps forces designated by the Secretary of Defense that are specifically organized, trained, and equipped to conduct and support special operations. Also called **MARSOF.** (JP 3-05)

Maritime Administration Ready Reserve Force — The surge sealift assets owned and operated by the United States Department of Transportation/Maritime Administration and Military Sealift Command (in contingency), crewed by civilian mariners. Also called **MARAD RRF**. See also **National Defense Reserve Fleet.** (JP 4-01.6)

maritime domain — The oceans, seas, bays, estuaries, islands, coastal areas, and the airspace above these, including the littorals. (JP 3-32)

maritime domain awareness — The effective understanding of anything associated with the maritime domain that could impact the security, safety, economy, or environment of a nation. Also called **MDA**. (JP 3-32)

maritime forces — Forces that operate on, under, or above the sea to gain or exploit command of the sea, sea control, or sea denial and/or to project power from the sea. (JP 3-32)

maritime interception operations — Efforts to monitor, query, and board merchant vessels in international waters to enforce sanctions against other nations such as those in support of United Nations Security Council Resolutions and/or prevent the transport of restricted goods. Also called **MIO.** (JP 3-03)

maritime power projection — Power projection in and from the maritime environment, including a broad spectrum of offensive military operations to destroy enemy forces or logistic support or to prevent enemy forces from approaching within enemy weapons' range of friendly forces. (JP 3-32)

maritime pre-positioning force operation — A rapid deployment and assembly of a Marine expeditionary force in a secure area using a combination of intertheater airlift and forward-deployed maritime pre-positioning ships. Also called **MPF operation**. See also **maritime pre-positioning ships.** (JP 4-01.6)

maritime pre-positioning ships — Civilian-crewed, Military Sealift Command-chartered ships that are usually forward-deployed and loaded with pre-positioned equipment and up to 30 days of supplies to support Marine expeditionary brigades. Also called **MPSs.** See also **Navy cargo handling battalion**. (JP 3-02.1)

maritime security operations — Those operations to protect maritime sovereignty and resources and to counter maritime-related terrorism, weapons proliferation, transnational crime, piracy, environmental destruction, and illegal seaborne immigration. Also called **MSO.** (JP 3-32)

Maritime Security Program — A program authorized in the Maritime Security Act of 2003 requiring the Secretary of Transportation, in consultation with the Secretary of Defense, to establish a fleet of active, commercially viable, militarily useful, privately-owned vessels to meet national defense and other security requirements. Also called **MSP.** (JP 4-01.2)

maritime superiority — That degree of dominance of one force over another that permits the conduct of maritime operations by the former and its related land, maritime, and air forces at a given time and place without prohibitive interference by the opposing force. (JP 3-32)

maritime terminal — A facility for berthing ships simultaneously at piers, quays, and/or working anchorages. Also called **water terminal.** (JP 4-01.5)

marking — To maintain contact on a target from such a position that the marking unit has an immediate offensive capability. (JP 3-09.3)

marshalling — 1. The process by which units participating in an amphibious or airborne operation group together or assemble when feasible or move to temporary camps in the vicinity of embarkation points, complete preparations for combat, or prepare for loading. 2. The process of assembling, holding, and organizing supplies and/or equipment, especially vehicles of transportation, for onward movement. See also **staging area.** (JP 3-17)

marshalling area — A location in the vicinity of a reception terminal or pre-positioned equipment storage site where arriving unit personnel, equipment, materiel, and accompanying supplies are reassembled, returned to the control of the unit commander, and prepared for onward movement. See also **marshalling.** (JP 3-35)

mass atrocity response operations — Military activities conducted to prevent or halt mass atrocities. Also called **MARO.** (JP 3-07.3)

mass casualty — Any large number of casualties produced in a relatively short period of time, usually as the result of a single incident such as a military aircraft accident, hurricane, flood, earthquake, or armed attack that exceeds local logistic support capabilities. Also called **MASCAL.** See also **casualty.** (JP4-02)

massed fire — 1. The fire of the batteries of two or more ships directed against a single target. 2. Fire from a number of weapons directed at a single point or small area. (JP 3-02)

master — The commander of a United States Naval Ship, a commercial ship, or a government-owned general agency agreement ship operated for the Military Sealift Command by a civilian company to transport Department of Defense cargo. (JP 3-02.1)

master air attack plan — A plan that contains key information that forms the foundation of the joint air tasking order. Also called **MAAP.** See also **target.** (JP 3-60)

materials handling equipment. Equipment used at air, ground, and sea ports to handle large cargo. Also called **MHE.** (JP 4-01.5)

materiel — All items necessary to equip, operate, maintain, and support military activities without distinction as to its application for administrative or combat purposes. See also **equipment; personal property.** (JP 4-0)

materiel inventory objective — The quantity of an item required to be on hand and on order on M-day in order to equip, provide a materiel pipeline, and sustain the approved United States force structure and those Allied forces designated for United States materiel support, through the period prescribed for war materiel planning purposes. (JP 4-09)

materiel planning — A subset of logistic planning consisting of the four-step process of: a. **requirements definition.** Requirements for significant items are calculated at item-level detail to support sustainability planning and analysis. b. **apportionment.** Items are apportioned to the combatant commanders based on a global scenario to avoid sourcing of items to multiple theaters. c. **sourcing.** Sourcing is the matching of available capabilities on a given date against item requirements to support sustainability analysis and the identification of locations to support transportation planning. d. **documentation.** Sourced item requirements are translated into movement requirements and documented in the Joint Operation Planning and Execution System database for transportation feasibility analysis. (JP 4-09)

materiel release order — An order issued by an accountable supply system manager directing a non-accountable activity within the same supply distribution complex to release and ship materiel. Also called **MRO.** (JP 4-09)

materiel requirements — Those quantities of items of equipment and supplies necessary to equip, provide a materiel pipeline, and sustain a Service, formation, organization, or unit in the fulfillment of its purposes or tasks during a specified period. (JP 4-09)

maximum ordinate — In artillery and naval gunfire support, the height of the highest point in the trajectory of a projectile above the horizontal plane passing through its origin. Also called **vertex height** and **MAXORD.** (JP 3-09.3)

M-day — Mobilization day; unnamed day on which mobilization of forces begins. (JP 4-06)

measurement and signature intelligence — Information produced by quantitative and qualitative analysis of physical attributes of targets and events to characterize, locate, and

identify targets and events, and derived from specialized, technically derived measurements of physical phenomenon intrinsic to an object or event. Also called **MASINT.** See also **intelligence; scientific and technical intelligence.** (JP 2-0)

Measurement and Signature Intelligence Requirements System — A system for the management of theater and national measurement and signature intelligence collection requirements, providing automated tools for users in support of submission, review, and validation of measurement and signature intelligence nominations of requirements to be tasked for national and Department of Defense measurement and signature intelligence collection, production, and exploitation resources. Also called **MRS.** See also **measurement and signature intelligence.** (JP 2-01)

measurement ton — The unit of volumetric measurement of equipment associated with surface-delivered cargo equal to the total cubic feet divided by 40. Also called **MTON.** (JP 4-01.5)

measure of effectiveness — A criterion used to assess changes in system behavior, capability, or operational environment that is tied to measuring the attainment of an end state, achievement of an objective, or creation of an effect. Also called **MOE.** See also **combat assessment; mission.** (JP 3-0)

measure of performance — A criterion used to assess friendly actions that is tied to measuring task accomplishment. Also called **MOP.** (JP 3-0)

mechanical sweep — In naval mine warfare, any sweep used with the object of physically contacting the mine or its appendages. (JP 3-15)

media operations center — A facility established by the commander to serve as the focal point for the interface between the military and the media during the conduct of military operations. Also called **MOC.** (JP 3-61)

media pool — A limited number of news media who represent a larger number of news media organizations for purposes of news gathering and sharing of material during a specified activity. See also **public affairs.** (JP 3-61)

medical civil-military operations — All military health-related activities in support of a joint force commander that establish, enhance, maintain or influence relations between the joint or multinational force and host nation, multinational governmental and nongovernmental civilian organizations and authorities, and the civilian populace in order to facilitate military operations, achieve United States operational objectives, and positively impact the health sector. Also called **MCMO.** (JP 4-02)

medical engagement protocols — Directives issued by competent military authority that delineate the circumstances and limitations under which United States medical forces will initiate medical care and support to those individuals that are not Department of

Defense health care beneficiaries or designated eligible for care in a military medical treatment facility by the Secretary of Defense. (JP 4-02)

medical intelligence — That category of intelligence resulting from collection, evaluation, analysis, and interpretation of foreign medical, bio-scientific, and environmental information that is of interest to strategic planning and to military medical planning and operations for the conservation of the fighting strength of friendly forces and the formation of assessments of foreign medical capabilities in both military and civilian sectors. Also called **MEDINT.** See also **intelligence.** (JP 2-01)

medical intelligence preparation of the operational environment — A systematic continuing process that analyzes information on medical and disease threats, enemy capabilities, terrain, weather, local medical infrastructure, potential humanitarian and refugee situations, transportation issues, and political, religious and social issues for all types of operations. Also called **MIPOE.** (JP 4-02)

medical logistics support — A functional area of logistics support for the joint force surgeon's health service support mission and that includes supplying Class VIII medical supplies (medical material to include medical peculiar repair parts used to sustain the health service support system), optical fabrication, medical equipment maintenance, blood storage and distribution, and medical gases. Also called **MEDLOG support.** (JP 4-02)

medical regulating — The actions and coordination necessary to arrange for the movement of patients through the roles of care and to match patients with a medical treatment facility that has the necessary health service support capabilities and available bed space. See also **health service support; medical treatment facility.** (JP 4-02)

medical surveillance — The ongoing, systematic collection, analysis, and interpretation of data derived from instances of medical care or medical evaluation, and the reporting of population-based information for characterizing and countering threats to a population's health, well-being and performance. See also **surveillance.** (JP 4-02)

medical treatment facility — A facility established for the purpose of furnishing medical and/or dental care to eligible individuals. Also called **MTF.** (JP 4-02)

medium-range ballistic missile. A ballistic missile with a range capability from about 600 to 1,500 nautical miles. Also called **MRBM.** (JP 3-01)

mensuration — The process of measurement of a feature or location on the earth to determine an absolute latitude, longitude, and elevation. (JP 3-60)

message — 1. Any thought or idea expressed briefly in a plain or secret language and prepared in a form suitable for transmission by any means of communication. (JP 6-0) 2. A narrowly focused communication directed at a specific audience to support a specific theme. Also called **MSG**. (JP 3-61)

meteorological and oceanographic — A term used to convey all environmental factors, from the sub-bottom of the Earth's oceans through maritime, land areas, airspace, ionosphere, and outward into space. Also called **METOC.** (JP 3-59)

meteorological and oceanographic data — Measurements or observations of meteorological and oceanographic variables. (JP 3-59)

meteorological and oceanographic environment — The surroundings that extend from the sub-bottom of the Earth's oceans, through maritime, land areas, airspace, ionosphere, and outward into space, which include conditions, resources, and natural phenomena, in and through which the joint force operates. (JP 3-59)

meteorological and oceanographic information — Actionable information to include meteorological, climatological, oceanographic, and space environment observations, analyses, prognostic data or products and meteorological and oceanographic effects. (JP 3-59)

meteorological and oceanographic operations support community — The collective of electronically connected, shore-based meteorological and oceanographic production facilities/centers, theater and/or regional meteorological and oceanographic production activities. Also called **MOSC.** See also **meteorological and oceanographic.** (JP 3-59)

meteorological watch — Monitoring the weather for a route, area, or terminal and advising concerned organizations when hazardous conditions that could affect their operations or pose a hazard to life or property are observed or forecast to occur. Also called **METWATCH.** (JP 3-59)

meteorology — The study dealing with the phenomena of the atmosphere including the physics, chemistry, and dynamics extending to the effects of the atmosphere on the Earth's surface and the oceans. (JP 3-59)

midcourse phase — That portion of the flight of a ballistic missile between the boost phase and the terminal phase. See also **boost phase; terminal phase.** (JP 3-01)

migrant — A person who (1) belongs to a normally migratory culture who may cross national boundaries, or (2) has fled his or her native country for economic reasons rather than fear of political or ethnic persecution. (JP 3-29)

military assistance advisory group — A joint Service group, normally under the military command of a commander of a unified command and representing the Secretary of Defense, which primarily administers the US military assistance planning and programming in the host country. Also called **MAAG**. (JP 3-22)

Military Assistance Program — That portion of the US security assistance authorized by the Foreign Assistance Act of l961, as amended, which provides defense articles and services to recipients on a nonreimbursable (grant) basis. Also called **MAP.** (JP 3-22)

military civic action — Programs and projects managed by United States forces but executed primarily by indigenous military or security forces that contribute to the economic and social development of a host nation civil society thereby enhancing the legitimacy and social standing of the host nation government and its military forces. Also called **MCA.** (JP 3-57)

military construction — Any construction, alteration, development, conversion, or extension of any kind carried out with respect to a military installation. Also called **MILCON.** (JP 3-34)

military deception — Actions executed to deliberately mislead adversary military, paramilitary, or violent extremist organization decision makers, thereby causing the adversary to take specific actions (or inactions) that will contribute to the accomplishment of the friendly mission. Also called **MILDEC.** (JP 3-13.4)

Military Department — One of the departments within the Department of Defense created by the National Security Act of 1947, which are the Department of the Army, the Department of the Navy, and the Department of the Air Force. Also called **MILDEP.** See also **Department of the Air Force; Department of the Army; Department of the Navy.** (JP 1)

military engagement — Routine contact and interaction between individuals or elements of the Armed Forces of the United States and those of another nation's armed forces, or foreign and domestic civilian authorities or agencies to build trust and confidence, share information, coordinate mutual activities, and maintain influence. (JP 3-0)

military government — The supreme authority the military exercises by force or agreement over the lands, property, and indigenous populations and institutions of domestic, allied, or enemy territory therefore substituting sovereign authority under rule of law for the previously established government. (JP 3-57)

military health system — A health system that supports the military mission by fostering, protecting, sustaining, and restoring health and providing the direction, resources, health care providers, and other means necessary for promoting the health of the beneficiary population. (JP 4-02)

military information support operations — Planned operations to convey selected information and indicators to foreign audiences to influence their emotions, motives, objective reasoning, and ultimately the behavior of foreign governments, organizations, groups, and individuals in a manner favorable to the originator's objectives. Also called **MISO.** (JP 3-13.2)

Military Intelligence Board — A decision-making forum which formulates Department of Defense intelligence policy and programming priorities. Also called **MIB.** See also **intelligence.** (JP 2-0)

military intervention — The deliberate act of a nation or a group of nations to introduce its military forces into the course of an existing controversy. (JP 3-0)

military occupation — A condition in which territory is under the effective control of a foreign armed force. See also **occupied territory.** (JP 3-0)

Military Postal Service — The command, organization, personnel, and facilities established to provide a means for the transmission of mail to and from the Department of Defense, members of the US Armed Forces, and other authorized agencies and individuals. Also called **MPS.** (JP 1-0)

Military Postal Service Agency — The single manager operating agency established to manage the Military Postal Service. Also called **MPSA.** (JP 1-0)

military post office — A branch of a designated US-based post office established by US Postal Service authority and operated by one of the Services. Also called **MPO.** (JP 1-0)

Military Sealift Command — A major command of the United States Navy reporting to Commander Fleet Forces Command, and the United States Transportation Command's component command responsible for designated common-user sealift transportation services to deploy, employ, sustain, and redeploy United States forces on a global basis. Also called **MSC.** See also **transportation component command.** (JP 4-01.2)

Military Sealift Command force — Common-user sealift consisting of three subsets: the Naval Fleet Auxiliary Force, common-user ocean transportation, and the special mission support force. See also **common-user sealift; Military Sealift Command.** (JP 4-01.2)

military source operations — The collection, from, by and/or via humans, of foreign and military and military-related intelligence. (JP 2-01.2)

military specification container — A container that meets specific written standards. Also called **MILSPEC container.** (JP 4-09)

military standard requisitioning and issue procedure — A uniform procedure established by the Department of Defense for use within the Department of Defense to govern requisition and issue of materiel within standardized priorities. Also called **MILSTRIP.** (JP 4-01)

military standard transportation and movement procedures — Uniform and standard transportation data, documentation, and control procedures applicable to all cargo

movements in the Department of Defense transportation system. Also called **MILSTAMP.** (JP 4-01.5)

military technician — A Federal civilian employee providing full-time support to a National Guard, Reserve, or Active Component organization for administration, training, and maintenance of the Selected Reserve. Also called **MILTECH.** (CJCSM 3150.13)

military van (container) — Military-owned, demountable container, conforming to United States and international standards, operated in a centrally controlled fleet for movement of military cargo. Also called **MILVAN.** (JP 4-02)

mine — 1. In land mine warfare, an explosive or other material, normally encased, designed to destroy or damage ground vehicles, boats, or aircraft, or designed to wound, kill, or otherwise incapacitate personnel and designed to be detonated by the action of its victim, by the passage of time, or by controlled means. 2. In naval mine warfare, an explosive device laid in the water with the intention of damaging or sinking ships or of deterring shipping from entering an area. See also **mine warfare.** (JP 3-15)

mine countermeasures — All methods for preventing or reducing damage or danger from mines. Also called **MCM.** (JP 3-15)

minefield — 1. In land warfare, an area of ground containing mines emplaced with or without a pattern. 2. In naval warfare, an area of water containing mines emplaced with or without a pattern. See also **mine; mine warfare.** (JP 3-15)

minefield record — A complete written record of all pertinent information concerning a minefield, submitted on a standard form by the officer in charge of the emplacement operations. (JP 3-15)

minefield report — An oral, electronic, or written communication concerning mining activities (friendly or enemy) submitted in a standard format by the fastest secure means available. (JP 3-15)

minehunting — Employment of sensor and neutralization systems, whether air, surface, or subsurface, to locate and dispose of individual mines in a known field, or to verify the presence or absence of mines in a given area. See also **minesweeping.** (JP 3-15)

minesweeping — The technique of clearing mines using either mechanical sweeping to remove, disturb, or otherwise neutralize the mine; explosive sweeping to cause sympathetic detonations, damage, or displace the mine; or influence sweeping to produce either the acoustic or magnetic influence required to detonate the mine. See also **minehunting.** (JP 3-15)

mine warfare — The strategic, operational, and tactical use of mines and mine countermeasures either by emplacing mines to degrade the enemy's capabilities to wage

land, air, and maritime warfare or by countering of enemy-emplaced mines to permit friendly maneuver or use of selected land or sea areas. Also called **MW.** (JP 3-15)

minimize — A condition wherein normal message and telephone traffic is drastically reduced in order that messages connected with an actual or simulated emergency shall not be delayed. (JP 6-0)

minimum force — Those minimum actions, including the use of armed force, sufficient to bring a situation under control or to defend against hostile act or hostile intent, where the firing of weapons is to be considered as a means of last resort. (JP 3-07.3)

minimum-risk route — A temporary corridor of defined dimensions recommended for use by high-speed, fixed-wing aircraft that presents the minimum known hazards to low-flying aircraft transiting the combat zone. Also called **MRR.** (JP 3-52)

missile defense — Defensive measures designed to destroy attacking enemy missiles, or to nullify or reduce the effectiveness of such attack. (JP 3-01)

missile engagement zone — In air defense, that airspace of defined dimensions within which the responsibility for engagement of air threats normally rests with surface-to-air missile systems. Also called **MEZ.** (JP 3-01)

mission — 1. The task, together with the purpose, that clearly indicates the action to be taken and the reason therefore. (JP 3-0) 2. In common usage, especially when applied to lower military units, a duty assigned to an individual or unit; a task. (JP 3-0) 3. The dispatching of one or more aircraft to accomplish one particular task. (JP 3-30)

mission assignment — The vehicle used by the Department of Homeland Security/Emergency Preparedness and Response/Federal Emergency Management Agency to support federal operations in a Stafford Act major disaster or emergency declaration that orders immediate, short-term emergency response assistance when an applicable state or local government is overwhelmed by the event and lacks the capability to perform, or contract for, the necessary work. (JP 3-28)

mission command — The conduct of military operations through decentralized execution based upon mission-type orders. (JP 3-31)

mission needs statement — A formatted non-system-specific statement containing operational capability needs and written in broad operational terms. Also called **MNS.** (CJCSI 3180.01)

mission-oriented protective posture — A flexible system of protection against chemical, biological, radiological, and nuclear contamination in which personnel are required to wear only that protective clothing and equipment appropriate to the threat level, work rate imposed by the mission, temperature, and humidity. Also called **MOPP.** See also **mission-oriented protective posture gear.** (JP 3-11)

mission-oriented protective posture gear — Military term for individual protective equipment including suit, boots, gloves, mask with hood, first aid treatments, and decontamination kits issued to military members. Also called **MOPP gear.** See also **decontamination; mission-oriented protective posture.** (JP 3-11)

mission statement — A short sentence or paragraph that describes the organization's essential task(s), purpose, and action containing the elements of who, what, when, where, and why. See also **mission.** (JP 5-0)

mission type order — 1. An order issued to a lower unit that includes the accomplishment of the total mission assigned to the higher headquarters. 2. An order to a unit to perform a mission without specifying how it is to be accomplished. (JP 3-50)

mobile security force — A highly mobile and dedicated security force with the capability to defeat Level I and II threats in a joint security area. Also called **MSF.** (JP 3-10)

mobility — A quality or capability of military forces which permits them to move from place to place while retaining the ability to fulfill their primary mission. (JP 3-17)

mobility air forces — Air components and Service components that are assigned and/or routinely exercise command authority over mobility operations. Also called **MAF**. (JP 3-17)

mobility corridor — Areas that are relatively free of obstacles where a force will be canalized due to terrain restrictions allowing military forces to capitalize on the principles of mass and speed. (JP 2-01.3)

mobilization — 1. The process of assembling and organizing national resources to support national objectives in time of war or other emergencies. See also **industrial mobilization.** 2. The process by which the Armed Forces of the United States or part of them are brought to a state of readiness for war or other national emergency, whichincludes activating all or part of the Reserve Component as well as assembling and organizing personnel, supplies, and materiel. Also called **MOB.** (JP 4-05)

mobilization base — The total of all resources available, or that can be made available, to meet foreseeable wartime needs. (JP 4-05)

mobilization site — The designated location where a Reserve Component unit or individual mobilizes or moves after mobilization for further processing, training, and employment. See also **mobilization; mobilization station; Reserve Component.** (JP 4-05)

mobilization station — The designated military installation to which a Reserve Component unit or individual is moved for further processing, organizing, equipping, training, and employment and from which the unit or individual may move to an aerial port of

embarkation or seaport of embarkation. See also **mobilization; mobilization site; Reserve Component.** (JP 4-05)

mode (identification, friend or foe) — The number or letter referring to the specific pulse spacing of the signals transmitted by an interrogator or transponder used for radar identification of aircraft. (JP 3-01)

mode of transport — One of, or a combination of, the following modes used for a movement: a. inland surface transportation (rail, road, and inland waterway); b. sea transport (coastal and ocean); c. air transportation; and d. pipelines. (JP 4-09)

Modernized Integrated Database — The national level repository for the general military intelligence available to the entire Department of Defense Intelligence Information System community and, through Global Command and Control System integrated imagery and intelligence, to tactical units. Also called **MIDB.** (JP 2-01)

modified combined obstacle overlay — A joint intelligence preparation of the operational environment product used to portray the militarily significant aspects of the operational environment, such as obstacles restricting military movement, key geography, and military objectives. Also called **MCOO.** See also **joint intelligence preparation of the operational environment**. (JP 2-01.3)

moored mine — A contact or influence-operated mine of positive buoyancy held below the surface by a mooring attached to a sinker or anchor on the bottom. See also **mine.** (JP 3-15)

morale, welfare, and recreation — The merging of multiple unconnected disciplines into programs which improve unit readiness, promote fitness, build unit morale and cohesion, enhance quality of life, and provide recreational, social, and other support services. Also called **MWR.** (JP 1-0)

mortuary affairs — Provides for the search for, recovery, identification, preparation, and disposition of human remains of persons for whom the Services are responsible by status and executive order. Also called **MA.** See also **joint mortuary affairs office.** (JP 4-06)

mounting —1. All preparations made in anticipation of an operation, including assembly in the mounting area, preparation and maintenance within the mounting area, movement to loading points, and subsequent embarkation into ships, craft, or aircraft if applicable. 2. A carriage or stand upon which a weapon is placed. (JP 3-02.1)

mounting area — A general locality where assigned forces of an amphibious or airborne operation, with their equipment, are assembled, prepared, and loaded in ships and/or aircraft preparatory to an assault. See also **embarkation area**. (JP 3-02.1)

movement control — The planning, routing, scheduling, and control of personnel and cargo movements over lines of communications; includes maintaining in-transit visibility of forces and material through the deployment and/or redeployment process. See also **line of communications; movement control teams; non-unit cargo; non-unit-related personnel.** (JP 4-01.5)

movement control team — An Army team used to decentralize the execution of movement responsibilities on an area basis or at key transportation nodes. Also called **MCT.** (JP 4-09)

movement data — Those essential elements of information to schedule lift, obtain transportation assets, manage movement of forces, and report in-transit visibility of movements and associated forces (people, equipment, and supplies). (JP 4-09)

movement group — Those ships and embarked units that load out and proceed to rendezvous in the objective area. (JP 3-02)

movement phase — In amphibious operations, the period during which various elements of the amphibious force move from points of embarkation to the objective area. See also **amphibious force; amphibious operation.** (JP 3-02)

movement plan — In amphibious operations, the naval plan providing for the movement of the amphibious task force to the objective area. See also **amphibious operation; amphibious task force.** (JP 3-02)

movement requirement — A stated movement mode and time-phased need for the transport of units, personnel, and/or materiel from a specified origin to a specified destination. (JP 4-09)

movement schedule — A timetable developed to monitor or track the movement of a separate entity, whether it is a force requirement, cargo or personnel increment, or lift asset, that reflects the assignment of specific lift resources, shows a flow and workload at each location, and supports plan implementation. (JP 4-09)

movement table — A table giving detailed instructions or data for a move. (JP 4-09)

movement to contact — A form of the offense designed to develop the situation and to establish or regain contact. (JP 3-50)

multinational — Between two or more forces or agencies of two or more nations or coalition partners. See also **alliance**; **coalition.** (JP 5-0)

multinational doctrine — The agreed upon fundamental principles that guide the employment of forces of two or more nations in coordinated action toward a common objective. See also **doctrine; joint doctrine.** (JP 3-16)

multinational force — A force composed of military elements of nations who have formed an alliance or coalition for some specific purpose. Also called **MNF.** See also **multinational force commander; multinational operations.** (JP 1)

multinational force commander — A general term applied to a commander who exercises command authority over a military force composed of elements from two or more nations. Also called **MNFC.** See also **multinational force.** (JP 3-16)

multinational integrated logistic unit — An organization resulting when two or more nations agree to provide logistics assets to a multinational logistic force under the operational control of a multinational commander for the logistic support of a multinational force. Also called **MILU.** See also **logistic support; multinational.** (JP 4-08)

multinational logistics — Any coordinated logistic activity involving two or more nations supporting a multinational force conducting military operations under the auspices of an alliance or coalition, including those conducted under United Nations mandate. Also called **MNL**. See also **logistics; multinational.** (JP 4-08)

multinational operations — A collective term to describe military actions conducted by forces of two or more nations, usually undertaken within the structure of a coalition or alliance. See also **alliance; coalition.** (JP 3-16)

multinational staff — A staff composed of personnel of two or more nations within the structure of a coalition or alliance. See also **integrated staff; joint staff.** (JP 3-16)

multipoint refueling system — KC-135 aircraft equipped with external wing-mounted pods to conduct drogue air refueling, while still maintaining boom air refueling capability on the same mission. Also called **MPRS.** See also **air refueling.** (JP 3-17)

multi-Service publication — A publication containing principles, terms, tactics, techniques, and procedures used and approved by the forces of two or more Services to perform a common military function consistent with approved joint doctrine. (CJCSM 5120.01)

multispectral imagery — The image of an object obtained simultaneously in a number of discrete spectral bands. Also called **MSI.** (JP 3-14)

multispot ship — Those ships certified to have two or more adjacent landing areas. See also **spot.** (JP 3-04)

munitions effectiveness assessment — Conducted concurrently and interactively with battle damage assessment, the assessment of the military force applied in terms of the weapon system and munitions effectiveness to determine and recommend any required changes to the methodology, tactics, weapon system, munitions, fusing, and/or weapon delivery parameters to increase force effectiveness. Munitions effectiveness assessment is primarily the responsibility of operations with required inputs and coordination from the

intelligence community. Also called **MEA.** See also **assessment; battle damage assessment.** (JP 2-01)

mutual support — That support which units render each other against an enemy, because of their assigned tasks, their position relative to each other and to the enemy, and their inherent capabilities. See also **close support; direct support; support.** (JP 3-31)

N

named area of interest — The geospatial area or systems node or link against which information that will satisfy a specific information requirement can be collected, usually to capture indications of adversary courses of action. Also called **NAI.** See also **area of interest.** (JP 2-01.3)

narcoterrorism — Terrorism that is linked to illicit drug trafficking. (JP 3-07.4)

National Capital Region — A geographic area encompassing the District of Columbia and eleven local jurisdictions in the State of Maryland and the Commonwealth of Virginia. Also called **NCR.** (JP 3-28)

National Communications System — The telecommunications system that results from the technical and operational integration of the separate telecommunications systems of the several executive branch departments and agencies having a significant telecommunications capability. Also called **NCS.** (JP 6-0)

National Defense Reserve Fleet — 1. Including the Maritime Administration Ready Reserve Force, a fleet composed of ships acquired and maintained by the Maritime Administration for use in mobilization or emergency. 2. Less the Maritime Administration Ready Reserve Force, a fleet composed of the older dry cargo ships, tankers, troop transports, and other assets in Maritime Administration's custody that are maintained at a relatively low level of readiness. Also called **NDRF.** See also **Maritime Administration Ready Reserve Force.** (JP 4-01.2)

national defense strategy — A document approved by the Secretary of Defense for applying the Armed Forces of the United States in coordination with Department of Defense agencies and other instruments of national power to achieve national security strategy objectives. Also called **NDS.** (JP 1)

National Detainee Reporting Center — The national-level center that accounts for all persons who pass through the care, custody, and control of the Department of Defense and that obtains and stores information concerning detainees and their confiscated personal property. Also called **NDRC.** (JP 3-63)

National Disaster Medical System — A coordinated partnership between Departments of Homeland Security, Health and Human Services, Defense, and Veterans Affairs established for the purpose of responding to the needs of casualties of a public health emergency. Also called **NDMS.** (JP 3-41)

national emergency — A condition declared by the President or the Congress by virtue of powers previously vested in them that authorize certain emergency actions to be undertaken in the national interest. See also **mobilization.** (JP 3-28)

National Incident Management System — A national crisis response system that provides a consistent, nationwide approach for federal, state, local, and tribal governments; the private sector; and nongovernmental organizations to work effectively and efficiently together to prepare for, respond to, and recover from domestic incidents, regardless of cause, size, or complexity. Also called **NIMS.** (JP 3-41)

national intelligence — All intelligence, regardless of the source from which derived, and including that which is gathered within or outside of the United States, that pertains to more than one agency, and involves (1) threats to the United States, its people, property, or interests, (2) the development, proliferation, or use of weapons of mass destruction, or (3) any other matter bearing on US national or homeland security. (JP 2-01)

national intelligence estimate — A strategic estimate of the capabilities, vulnerabilities, and probable courses of action of foreign nations produced at the national level as a composite of the views of the intelligence community. Also called **NIE.** (JP 2-01)

National Military Command System — The priority component of the Global Command and Control System designed to support the President, Secretary of Defense, and Joint Chiefs of Staff in the exercise of their responsibilities. Also called **NMCS.** (JP 6-0)

national military strategy — A document approved by the Chairman of the Joint Chiefs of Staff for distributing and applying military power to attain national security strategy and national defense strategy objectives. Also called **NMS.** See also n**ational security strategy; strategy; theater strategy.** (JP 1)

national operations center — The primary national hub for domestic incident management operational coordination and situational awareness. Also called **NOC.** (JP 3-28)

national policy — A broad course of action or statements of guidance adopted by the government at the national level in pursuit of national objectives. (JP 1)

national security — A collective term encompassing both national defense and foreign relations of the United States with the purpose of gaining: a. A military or defense advantage over any foreign nation or group of nations; b. A favorable foreign relations position; or c. A defense posture capable of successfully resisting hostile or destructive action from within or without, overt or covert. See also **security.** (JP 1)

National Security Agency/Central Security Service Representative — The senior theater or military command representative of the Director, National Security Agency/Chief, Central Security Service in a specific country or military command headquarters who provides the Director, National Security Agency, with information on command plans requiring cryptologic support. The National Security Agency/Central Security Service representative serves as a special advisor to the combatant commander for cryptologic matters, to include signals intelligence, communications security, and computer security. Also called **NCR.** See also **counterintelligence.** (JP 2-01.2)

National Security Council — A governmental body specifically designed to assist the President in integrating all spheres of national security policy. Also called **NSC.** (JP 1)

national security interests — The foundation for the development of valid national objectives that define United States goals or purposes. (JP 1)

national security strategy — A document approved by the President of the United States for developing, applying, and coordinating the instruments of national power to achieve objectives that contribute to national security. Also called **NSS.** See also n**ational military strategy; strategy; theater strategy.** (JP 1)

national shipping authority — The organization within each Allied government responsible in time of war for the direction of its own merchant shipping. Also called **NSA.** (JP 4-01.2)

national special security event — A designated event that, by virtue of its political, economic, social, or religious significance, may be the target of terrorism or other criminal activity. Also called **NSSE.** (JP 3-28)

national stock number — The 13-digit number that identifies a stock item consisting of the 4-digit federal supply classification code plus the 9-digit national item identification number and arranged as follows: 9999-00-999-9999. Also called **NSN.** (JP 4-09)

national support element — Any national organization or activity that supports national forces that are a part of a multinational force. See also **multinational force; support.** (JP 1)

National System for Geospatial Intelligence — The combination of technology, policies, capabilities, doctrine, activities, people, data, and organizations necessary to produce geospatial intelligence in an integrated, multi-intelligence environment. Also called **NSG.** (JP 2-03)

nation assistance — Assistance rendered to a nation by foreign forces within that nation's territory based on agreements mutually concluded between nations. (JP 3-0)

natural disaster — An emergency situation posing significant danger to life and property that results from a natural cause. See also **domestic emergencies.** (JP 3-29)

naval advanced logistic support site — An overseas location used as the primary transshipment point in the theater of operations for logistic support. Also called **NALSS.** See also **logistic support; naval forward logistic site; support; theater of operations.** (JP 3-35)

Naval Air Training and Operating Procedures Standardization manual — Series of general and specific aircraft procedural manuals that govern the operations of naval aircraft. Also called **NATOPS manual.** (JP 3-04)

naval beach group — A permanently organized naval command within an amphibious force composed of a commander and staff, a beachmaster unit, an amphibious construction battalion, and assault craft units, designed to provide an administrative group from which required naval tactical components may be made available to the attack force commander and to the amphibious landing force commander. Also called **NBG.** See also **shore party.** (JP 3-02)

naval construction force — The combined construction units of the Navy that are part of the operating forces and represent the Navy's capability for advanced base construction. Also called **NCF.** (JP 3-34)

naval forward logistic site — An overseas location, with port and airfield facilities nearby, which provides logistic support to naval forces within the theater of operations during major contingency and wartime periods. Also called **NFLS.** See also **logistic support; naval advanced logistic support site; staging.** (JP 3-35)

naval gunfire support — Fire provided by Navy surface gun systems in support of a unit or units tasked with achieving the commander's objectives. Also called **NGFS.** See also **naval surface fire support.** (JP 3-09)

naval operation — 1. A naval action (or the performance of a naval mission) that may be strategic, operational, tactical, logistic, or training. 2. The process of carrying on or training for naval combat in order to gain the objectives of any battle or campaign. (JP 3-32)

naval special warfare — A naval warfare specialty that conducts special operations with an emphasis on maritime, coastal, and riverine environments using small, flexible, mobile units operating under, on, and from the sea. Also called **NSW.** (JP 3-05)

naval special warfare group — A permanent Navy echelon III major command to which most naval special warfare forces are assigned for some operational and all administrative purposes. Also called **NSWG.** (JP 3-05)

naval special warfare task group — A provisional naval special warfare organization that plans, conducts, and supports special operations in support of fleet commanders and joint force special operations component commanders. Also called **NSWTG.** (JP 3-05)

naval special warfare task unit — A provisional subordinate unit of a naval special warfare task group. Also called **NSWTU.** See also **naval special warfare task group.** (JP 3-05)

naval surface fire support — Fire provided by Navy surface gun and missile systems in support of a unit or units. Also called **NSFS.** See also **fire support.** (JP 3-09.3)

navigation warfare — Deliberate defensive and offensive action to assure and prevent positioning, navigation, and timing information through coordinated employment of space, cyberspace, and electronic warfare operations. Also called **NAVWAR.** (JP-3-14)

Navy cargo-handling battalion — A mobile logistic support unit that is organized, trained, and equipped to: a. load and offload Navy and Marine Corps cargo carried in maritime pre-positioning ships and merchant breakbulk or container ships in all environments; b. operate an associated temporary ocean cargo terminal; c. load and off-load Navy and Marine Corps cargo carried in military-controlled aircraft; and d. operate an associated expeditionary air cargo terminal. Also called **NCHB.** See also **maritime pre-positioning ships.** (JP 3-02.1)

Navy expeditionary logistics support group — The quick response cargo-handling units of the Navy specialize in open ocean cargo handling. Also called **NAVELSG.** (JP 4-01.6)

Navy special operations forces — Those Active and Reserve Component Navy forces designated by the Secretary of Defense that are specifically organized, trained, and equipped to conduct and support special operations. Also called **NAVSOF.** (JP 3-05)

Navy support element — The maritime pre-positioning force element that is tasked to conduct the off-load and ship-to-shore movement of maritime pre-positioned equipment and/or supplies. Also called **NSE.** (JP 3-02.1)

Navy-unique fleet essential aircraft — Combatant commander-controlled airlift assets deemed essential for providing air transportation in support of naval operations' transportation requirements. Also called **NUFEA.** (JP 3-17)

N-day — Day an active duty unit is notified for deployment or redeployment.

need to know — A criterion used in security procedures that requires the custodians of classified information to establish, prior to disclosure, that the intended recipient must have access to the information to perform his or her official duties. (JP 2-01.2)

negation — In space operations, active and offensive measures to deceive, disrupt, degrade, deny or destroy space capabilities being used to interfere with or attack United States/allied systems. See also **space control.** (JP 3-14)

nerve agent — A potentially lethal chemical agent that interferes with the transmission of nerve impulses. (JP 3-11)

net explosive weight — 1. The actual weight in pounds of explosive mixtures or compounds, including the trinitrotoluene equivalent of energetic material, that is used in determination of explosive limits and explosive quantity data arcs. (JP 4-09) 2. The total weight of all explosives substances (i.e., high explosive weight, propellant weight, and pyrotechnic

weight) in the ammunition or explosive, expressed in pounds, used for transportation purposes. Also called **NEW.** (DODM 6055.09)

networked munitions. Remotely controlled, interconnected, weapons system designed to provide rapidly emplaced ground-based countermobility and protection capability through scalable application of lethal and nonlethal means. (JP 3-15)

neutral — In combat and combat support operations, an identity applied to a track whose characteristics, behavior, origin, or nationality indicate that it is neither supporting nor opposing friendly forces. See also **suspect; unknown.** (JP 3-0)

neutrality — In international law, the attitude of impartiality during periods of war adopted by third states toward a belligerent and subsequently recognized by the belligerent, which creates rights and duties between the impartial states and the belligerent. (JP 3-0)

neutralize — 1. As pertains to military operations, to render ineffective or unusable. 2. To render enemy personnel or materiel incapable of interfering with a particular operation. 3. To render safe mines, bombs, missiles, and booby traps. 4. To make harmless anything contaminated with a chemical agent. (JP 3-0)

night vision device — Any electro-optical device that is used to detect visible and infrared energy and provide a visible image. Also called **NVD.** See also **forward-looking infrared; night vision goggle.** (JP 3-09.3)

night vision goggle — An electro-optical image intensifying device that detects visible and near-infrared energy, intensifies the energy, and provides a visible image for night viewing. Also called **NVG.** See also **night vision device.** (JP 3-09.3)

node — 1. A location in a mobility system where a movement requirement is originated, processed for onward movement, or terminated. (JP 3-17) 2. In communications and computer systems, the physical location that provides terminating, switching, and gateway access services to support information exchange. (JP 6-0) 3. An element of a system that represents a person, place, or physical thing. (JP 3-0)

no-fire area — An area designated by the appropriate commander into which fires or their effects are prohibited. Also called **NFA.** See also **fires.** (JP 3-09.3)

nonappropriated funds — Funds generated by Department of Defense personnel and their dependents used to augment funds appropriated by the Congress to provide a comprehensive, morale-building welfare, religious, educational, and recreational programs. Also called **NAF.** (JP 1-0)

nonbattle injury — A person who becomes a casualty due to circumstances not directly attributable to hostile action or terrorist activity. Also called **NBI.** (JP 4-02)

noncombatant evacuation operation — An operation whereby noncombatant evacuees are evacuated from a threatened area abroad, which includes areas facing actual or potential danger from natural or manmade disaster, civil unrest, imminent or actual terrorist activities, hostilities, and similar circumstances, that is carried out with the assistance of the Department of Defense. Also called **NEO.** See also **evacuation; noncombatant evacuees; operation; safe haven.** (JP 3-68)

noncombatant evacuation operation tracking system — An automated data processing hardware and software package that has the capability to provide evacuee in-transit visibility to combatant commanders and senior leadership during the conduct of a noncombatant evacuation operation. Also called **NTS.** (JP 3-68)

noncombatant evacuees — 1. United States citizens who may be ordered to evacuate by competent authority, and who are civilian employees of all agencies of the United States Government and their dependents, excepting dependents who are residents in the country concerned of their own volition; military personnel of the Armed Forces of the United States specifically designated for evacuation as noncombatants; and dependents of members of the Armed Forces of the United States. 2. United States citizens and non-United States citizens who may be authorized or assisted to evacuate by competent authority, and who are civilian employees of United States Government agencies and their dependents who are residents in the country concerned of their own volition, but express the willingness to be evacuated; private United States citizens and their dependents; military personnel of the Armed Forces of the United States and their dependents; and designated personnel, including dependents of persons ordered to evacuate, as prescribed by the Department of State. See also **noncombatant evacuation operation.** (JP 3-68)

nonconventional assisted recovery — Personnel recovery conducted by indigenous/surrogate personnel that are trained, supported, and led by special operations forces, unconventional warfare ground and maritime forces, or other government agencies' personnel that have been specifically trained and directed to establish and operate indigenous or surrogate infrastructures. Also called **NAR.** (JP 3-50)

nondestructive electronic warfare — Those electronic warfare actions, not including employment of wartime reserve modes, that deny, disrupt, or deceive rather than damage or destroy. See also **electronic warfare.** (JP 3-13.1)

nongovernmental organization — A private, self-governing, not-for-profit organization dedicated to alleviating human suffering; and/or promoting education, health care, economic development, environmental protection, human rights, and conflict resolution; and/or encouraging the establishment of democratic institutions and civil society. Also called **NGO.** (JP 3-08)

nonlethal weapon — A weapon that is explicitly designed and primarily employed so as to incapacitate personnel or materiel, while minimizing fatalities, permanent injury to personnel, and undesired damage to property and the environment. Also called **NLW.** (JP 3-28)

nonpersistent agent — A chemical agent that when released dissipates and/or loses its ability to cause casualties after 10 to 15 minutes. (JP 3-11)

nonproliferation — Actions to prevent the acquisition of weapons of mass destruction by dissuading or impeding access to, or distribution of, sensitive technologies, material, and expertise. Also called **NP.** See also **counterproliferation.** (JP 3-40)

nonscheduled units — Units of the landing force held in readiness for landing during the initial unloading period, but not included in either scheduled or on-call waves. (JP 3-02)

non-unit cargo — All equipment and supplies requiring transportation to an operational area, other than those identified as the equipment or accompanying supplies of a specific unit. (JP 4-01.5).

non-unit-related personnel — All personnel requiring transportation to or from an operational area, other than those assigned to a specific unit. Also called **NRP** or **NUP.** (JP 1-0)

no-strike list — A list of objects or entities characterized as protected from the effects of military operations under international law and/or rules of engagement. Also called **NSL.** See also **law of armed conflict.** (JP 3-60)

not mission capable, supply — Material condition indicating that systems and equipment are not capable of performing any of their assigned missions because of maintenance work stoppage due to a supply shortage. Also called **NMCS.** (JP 4-09)

nuclear incident — An unexpected incident involving a nuclear weapon, facility, or component, but not constituting a nuclear weapon(s) accident, resulting in any of the following: a. an increase in the possibility of explosion or radioactive contamination; b. errors committed in the assembly, testing, loading, or transportation of equipment, and/or the malfunctioning of equipment and materiel which could lead to an unintentional operation of all or part of the weapon arming and/or firing sequence, or which could lead to a substantial change in yield, or increased dud probability; and c. any act of God, unfavorable environment, or condition resulting in damage to the weapon, facility, or component. (JP 3-41)

nuclear weapon(s) accident — An unexpected incident involving nuclear weapons or radiological nuclear weapon components that results in any of the following; a. accidental or unauthorized launching, firing, or use by United States forces or United States supported allied forces of a nuclear-capable weapon system that could create the risk of an outbreak of war; b. nuclear detonation; c. nonnuclear detonation or burning of a nuclear weapon or radiological nuclear weapon component; d. radioactive contamination; e. seizure, theft, loss, or destruction of a nuclear weapon or radiological nuclear weapon component, including jettisoning; and f. public hazard, actual or implied. (JP 3-41)

nuisance minefield — A minefield laid to delay and disorganize the enemy and to hinder the use of an area or route. See also **minefield**. (JP 3-15)

numbered beach — In amphibious operations, a subdivision of a colored beach, designated for the assault landing of a battalion landing team or similarly sized unit, when landed as part of a larger force. (JP 3-02)

numbered fleet — A major tactical unit of the Navy immediately subordinate to a major fleet command and comprising various task forces, elements, groups, and units for the purpose of prosecuting specific naval operations. See also **fleet.** (JP 3-32)

Intentionally Blank

O

objective — 1. The clearly defined, decisive, and attainable goal toward which every operation is directed. 2. The specific target of the action taken which is essential to the commander's plan. See also **target.** (JP 5-0)

objective area — A geographical area, defined by competent authority, within which is located an objective to be captured or reached by the military forces. Also called **OA.** (JP 3-06)

obstacle — Any natural or man-made obstruction designed or employed to disrupt, fix, turn, or block the movement of an opposing force, and to impose additional losses in personnel, time, and equipment on the opposing force. (JP 3-15)

obstacle belt — A brigade-level command and control measure, normally given graphically, to show where within an obstacle zone the ground tactical commander plans to limit friendly obstacle employment and focus the defense. See also **obstacle.** (JP 3-15)

obstacle clearing — The total elimination or neutralization of obstacles. (JP 3-15)

obstacle intelligence — Those collection efforts to detect the presence of enemy and natural obstacles, determine their types and dimensions, and provide the necessary information to plan appropriate combined arms breaching, clearance, or bypass operations to negate the impact on the friendly scheme of maneuver. Also called **OBSTINT.** (JP 3-15)

obstacle restricted areas — A command and control measure used to limit the type or number of obstacles within an area. See also **obstacle.** (JP 3-15)

obstacle zone — A division-level command and control measure, normally done graphically, to designate specific land areas where lower echelons are allowed to employ tactical obstacles. See also **obstacle.** (JP 3-15)

occupational and environmental health surveillance — The regular or repeated collection, analysis, archiving, interpretation, and dissemination of occupational and environmental health-related data for monitoring the health of, or potential health hazard impact on, a population and individual personnel, and for intervening in a timely manner to prevent, treat, or control the occurrence of disease or injury when determined necessary. (JP 4-02)

occupational and environmental health threats — Threats to the health of military personnel and to military readiness created by exposure to hazardous agents, environmental contamination, or toxic industrial materials. See also **health threat.** (JP 4-02)

occupied territory — Territory under the authority and effective control of a belligerent armed force and not being administered pursuant to peace terms, treaty, or other agreement, express or implied, with the civil authority of the territory. (JP 4-02)

oceanography — The study of the sea, embracing and integrating all knowledge pertaining to the sea and its physical boundaries, the chemistry and physics of seawater, and marine biology. (JP 3-59)

O-day — Off-load day.

offensive counterair — Offensive operations to destroy, disrupt, or neutralize enemy aircraft, missiles, launch platforms, and their supporting structures and systems both before and after launch, and as close to their source as possible. Also called **OCA.** See also **counterair; defensive counterair; operation.** (JP 3-01)

offensive counterair attack operations — Offensive action by any part of the joint force in support of the offensive counterair mission against surface targets which contribute to the enemy's air and missile capabilities. Also called **OCA attack operations.** See also **counterair; offensive counterair.** (JP 3-01)

offensive counterintelligence operation — A clandestine counterintelligence activity conducted for military, strategic, Department of Defense, or national counterintelligence and security purposes against a target having suspected or known affiliation with foreign intelligence entities, international terrorism, or other foreign persons or organizations, to counter terrorism, espionage, or other clandestine intelligence activities that threaten the security of the Department or the United States. The two types of offensive counterintelligence operations are double agent operation and controlled source operation. Also called **OFCO**. (JP 2-01.2)

offensive cyberspace operations — Cyberspace operations intended to project power by the application of force in or through cyberspace. Also called **OCO.** (JP 3-12)

offensive space control — Those operations to prevent an adversary's hostile use of United States/third-party space capabilities and services or negate (deceive, disrupt, degrade, deny, or destroy) an adversary's efforts to interfere with or attack United States/allied space systems. Also called **OSC**. (JP 3-14)

office — An enduring organization that is formed around a specific function within a joint force commander's headquarters to coordinate and manage support requirements. (JP 3-33)

officer in tactical command — In maritime usage, the senior officer present eligible to assume command, or the officer to whom the senior officer has delegated tactical command. Also called **OTC.** (JP 3-32)

officer of the deck — 1. When underway, the officer designated by the commanding officer to be in charge of the ship, including its safe and proper operation. 2. When in port or at anchor, the officer of the deck is designated by the command duty officer, has similar responsibilities, and may be enlisted. Also called **OOD.** (JP 3-04)

official information — Information that is owned by, produced for or by, or is subject to the control of the United States Government. (JP 3-61)

offset costs — Costs for which funds have been appropriated that may not be incurred as a result of a contingency operation. See also **contingency operation.** (JP 1-06)

offshore bulk fuel system — The system used for transferring fuel from points offshore to reception facilities on the beach. Also called **OBFS**. See also **amphibious bulk liquid transfer system; offshore petroleum discharge system.** (JP 4-01.6)

offshore petroleum discharge system — Provides bulk transfer of petroleum directly from an offshore tanker to a beach termination unit located immediately inland from the high watermark. Also called **OPDS.** See also **facility; petroleum, oils, and lubricants; single-anchor leg mooring.** (JP 4-03)

off-the-shelf item — An item that has been developed and produced to military or commercial standards and specifications, is readily available for delivery from an industrial source, and may be procured without change to satisfy a military requirement. (JP 4-10)

on-call — 1. A term used to signify that a prearranged concentration, air strike, or final protective fire may be called for. 2. Preplanned, identified force or materiel requirements without designated time-phase and destination information. (JP 3-01)

on-call target — Planned target upon which fires or other actions are determined using deliberate targeting and triggered, when detected or located, using dynamic targeting. See also **dynamic targeting; on-call; operational area; planned target; target.** (JP 3-60)

on hand — The quantity of an item that is physically available in a storage location and contained in the accountable property book records of an issuing activity. (JP 4-09)

on-scene commander — 1. An individual in the immediate vicinity of an isolating event who temporarily assumes command of the incident. 2. The federal officer designated to direct federal crisis and consequence management efforts at the scene of a terrorist or weapons of mass destruction incident. Also called **OSC.** (JP 3-50)

on-station time — The time an aircraft can remain on station, which may be determined by endurance or orders. (JP 3-50)

open ocean — Ocean limit defined as greater than 12 nautical miles from shore, as compared with high seas that are over 200 nautical miles from shore. See also **contiguous zone.** (JP 3-32)

open-source information — Information that any member of the public could lawfully obtain by request or observation as well as other unclassified information that has limited public distribution or access. (JP 2-0)

open-source intelligence — Relevant information derived from the systematic collection, processing, and analysis of publicly available information in response to known or anticipated intelligence requirements. Also called **OSINT.** See also **intelligence.** (JP 2-0)

operating stocks — Fuel required to sustain daily operations and ensure fuel availability to support United States military forces worldwide. Also called **OS.** (JP 4-03)

operation — 1. A sequence of tactical actions with a common purpose or unifying theme. (JP 1) 2. A military action or the carrying out of a strategic, operational, tactical, service, training, or administrative military mission. (JP 3-0).

operational approach — A description of the broad actions the force must take to transform current conditions into those desired at end state. (JP 5-0)

operational area — An overarching term encompassing more descriptive terms (such as area of responsibility and joint operations area) for geographic areas in which military operations are conducted. Also called **OA.** See also **amphibious objective area; area of operations; area of responsibility; joint operations area; joint special operations area; theater of operations; theater of war.** (JP 3-0)

operational art — The cognitive approach by commanders and staffs — supported by their skill, knowledge, experience, creativity, and judgment — to develop strategies, campaigns, and operations to organize and employ military forces by integrating ends, ways, and means. (JP 3-0)

operational chain of command — One of the two branches of the chain of command described in Joint Publication 1, *Doctrine for the Armed Forces of the United States*, through which command is exercised from the President through the Secretary of Defense to the combatant commanders, to whom forces are assigned and allocated via the global force management process. (DODI 8260.03)

operational characteristics — Those military characteristics that pertain primarily to the functions to be performed by equipment, either alone or in conjunction with other equipment; e.g., for electronic equipment, operational characteristics include such items as frequency coverage, channeling, type of modulation, and character of emission. (JP 5-0)

operational command structure — The organizational hierarchy through which operational authorities are exercised, as contrasted by the administrative command structure through which administrative leadership is exercised. (DODI 8260.03)

operational contract support — The process of planning for and obtaining supplies, services, and construction from commercial sources in support of joint operations. Also called **OCS**. (JP 4-10)

operational contract support integration cell — A cell established to coordinate, and integrate operational contract support actions across all primary and special staffs for an operational area. Also called **OCSIC.** (JP 4-10)

operational control — The authority to perform those functions of command over subordinate forces involving organizing and employing commands and forces, assigning tasks, designating objectives, and giving authoritative direction necessary to accomplish the mission. Also called **OPCON.** See also **combatant command; combatant command (command authority); tactical control.** (JP 1)

operational control authority — The naval commander responsible within a specified geographical area for the naval control of all merchant shipping under Allied naval control. Also called **OCA**. (JP 3-15)

operational decontamination — Decontamination carried out by an individual and/or a unit, restricted to specific parts of operationally essential equipment, materiel and/or working areas, in order to minimize contact and transfer hazards and to sustain operations. See also **decontamination; immediate decontamination; thorough decontamination.** (JP 3-11)

operational design — The conception and construction of the framework that underpins a campaign or major operation plan and its subsequent execution. See also **campaign; major operation.** (JP 5-0)

operational design element — A key consideration used in operational design. (JP 5-0)

operational energy — The energy required for training, moving, and sustaining military forces and weapons platforms for military operations. (JP 4-0)

operational environment — A composite of the conditions, circumstances, and influences that affect the employment of capabilities and bear on the decisions of the commander. Also called **OE.** (JP 3-0)

operational exposure guidance — The maximum amount of nuclear/external ionizing radiation that the commander considers a unit may be permitted to receive while performing a particular mission or missions. Also called **OEG.** See also **radiation exposure status.** (JP 3-11)

operational intelligence — Intelligence that is required for planning and conducting campaigns and major operations to accomplish strategic objectives within theaters or operational areas. See also **intelligence; strategic intelligence; tactical intelligence.** (JP 2-0)

operational level of war — The level of war at which campaigns and major operations are planned, conducted, and sustained to achieve strategic objectives within theaters or other operational areas. See also **strategic level of war; tactical level of war.** (JP 3-0)

operational limitation — An action required or prohibited by higher authority, such as a constraint or a restraint, and other restrictions that limit the commander's freedom of action, such as diplomatic agreements, rules of engagement, political and economic conditions in affected countries, and host nation issues. See also **constraint; restraint.** (JP 5-0)

operational necessity — A mission associated with war or peacetime operations in which the consequences of an action justify the risk of loss of aircraft and crew. See also **mission.** (JP 3-04)

operational pause — A temporary halt in operations. (JP 5-0)

operational preparation of the environment — The conduct of activities in likely or potential areas of operations to prepare and shape the operational environment. Also called **OPE**. (JP 3-05)

operational reach — The distance and duration across which a joint force can successfully employ military capabilities. (JP 3-0)

operational readiness — The capability of a unit/formation, ship, weapon system, or equipment to perform the missions or functions for which it is organized or designed. Also called **OR.** See also **combat readiness.** (JP 1-0)

operational reserve — An emergency reserve of men and/or materiel established for the support of a specific operation. (JP 5-0)

operational support airlift — Airlift movements of high-priority passengers and cargo with time, place, or mission-sensitive requirements. Also called **OSA.** (JP 3-17)

operational testing — A continuing process of evaluation that may be applied to either operational personnel or situations to determine their validity or reliability. (JP 4-02)

operation and maintenance — Maintenance and repair of real property, operation of utilities, and provision of other services such as refuse collection and disposal, entomology, snow removal, and ice alleviation. Also called **O&M.** (JP 3-34)

operation order — A directive issued by a commander to subordinate commanders for the purpose of effecting the coordinated execution of an operation. Also called **OPORD.** (JP 5-0)

operation plan — 1. Any plan for the conduct of military operations prepared in response to actual and potential contingencies. 2. A complete and detailed joint plan containing a full description of the concept of operations, all annexes applicable to the plan, and a time-phased force and deployment data. Also called **OPLAN.** See also **operation order.** (JP 5-0)

operations center — The facility or location on an installation, base, or facility used by the commander to command, control, and coordinate all operational activities. Also called **OC.** See also **base defense operations center.** (JP 3-07.2)

operations research — The analytical study of military problems undertaken to provide responsible commanders and staff agencies with a scientific basis for decision on action to improve military operations. Also called **operational research; operations analysis.** (JP 3-31)

operations security — A capability that identifies and controls critical information, indicators of friendly force actions attendant to military operations, and incorporates countermeasures to reduce the risk of an adversary exploiting vulnerabilities. Also called **OPSEC.** See also **operations security indicators; operations security measures; operations security planning guidance; operations security vulnerability.** (JP 3-13.3)

operations security assessment — An evaluative process to determine the likelihood that critical information can be protected from the adversary's intelligence. (JP 3-13.3)

operations security countermeasures — Methods and means to gain and maintain essential secrecy about critical information. (JP 3-13.3)

operations security indicators — Friendly detectable actions and open-source information that can be interpreted or pieced together by an adversary to derive critical information. (JP 3-13.3)

operations security planning guidance — Guidance that defines the critical information requiring protection from the adversary and outlines provisional measures to ensure secrecy. (JP 3-13.3)

operations security survey — A collection effort by a team of subject matter experts to reproduce the intelligence image projected by a specific operation or function simulating hostile intelligence processes. (JP 3-13.3)

operations security vulnerability — A condition in which friendly actions provide operations security indicators that may be obtained and accurately evaluated by an adversary in time to provide a basis for effective adversary decision making. (JP 3-13.3)

operations support element — An element that is responsible for all administrative, operations support and services support functions within the counterintelligence and human intelligence staff element of a joint force intelligence directorate. Also called **OSE.** (JP 2-01.2)

operations to restore order — Operations intended to halt violence and support, reinstate, or establish civil authorities so that indigenous police forces can effectively enforce the law and restore civil authority. See also **operation; peace operations.** (JP 3-07.3)

opportune lift — That portion of lift capability available for use after planned requirements have been met. (JP 4-02)

ordered departure — 1. A procedure by which the number of United States Government personnel, their dependents, or both are reduced at a foreign service post. 2. Mandatory departure of some or all categories of personnel and dependents to designated safe havens as directed by the Department of State, with the implementation of the theater evacuation plan. (JP 3-68)

order of battle — The identification, strength, command structure, and disposition of the personnel, units, and equipment of any military force. Also called **OB; OOB.** (JP 2-01.3)

ordnance — Explosives, chemicals, pyrotechnics, and similar stores, e.g., bombs, guns and ammunition, flares, smoke, or napalm. (JP 3-15)

ordnance handling — Applies to those individuals who engage in the breakout, lifting, or repositioning of ordnance or explosive devices in order to facilitate storage or stowage, assembly or disassembly, loading or downloading, or transporting. (JP 3-04)

organic — Assigned to and forming an essential part of a military organization as listed in its table of organization for the Army, Air Force, and Marine Corps, and are assigned to the operating forces for the Navy. (JP 1)

Organizational and Force Structure Construct — The standardized precepts for the digitization of hierarchical enterprise force structure data for Department of Defense-wide integration and use. Also called **OFSC**. (DODI 8260.03)

organization for combat — In amphibious operations, task organization of landing force units for combat, involving combinations of command, ground and aviation combat, combat support, and combat service support units for accomplishment of missions ashore. See also **amphibious operation; task organization.** (JP 3-02)

organization for embarkation — In amphibious operations, an organization consisting of temporary landing force task organizations established by the commander, landing force and a temporary organization of Navy forces established by the commander, amphibious task force for the purpose of simplifying planning and facilitating the execution of embarkation. See also **amphibious operation; embarkation; landing force; task organization.** (JP 3-02)

organization for landing — In amphibious operations, the specific tactical grouping of the landing force for the assault. (JP 3-02)

Organized Crime and Drug Enforcement Task Force — The network of regional task forces that coordinates federal law enforcement efforts to combat the national and international organizations that cultivate, process, and distribute illicit drugs. Also called **OCDETF.** (JP 3-07.4)

originating medical treatment facility — A medical facility that initially transfers a patient to another medical facility. (JP 4-02)

originator — The command by whose authority a message is sent, which includes the responsibility for the functions of the drafter and the releasing officer. (JP 2-01)

oscillating mine — A mine, hydrostatically controlled, which maintains a pre-set depth below the surface of the water independently of the rise and fall of the tide. See also **mine**. (JP 3-15)

other detainee — Person in the custody of the US Armed Forces who has not been classified as an enemy prisoner of war (article 4, Geneva Convention of 1949 Relative to the Treatment of Prisoners of War (GPW)), retained personnel (article 33, GPW), or civilian internee (article 78, Geneva Convention). Also called **OD.** See also **civilian internee; custody; detainee; prisoner of war; retained personnel.** (JP 1-0)

outer transport area — In amphibious operations, an area inside the antisubmarine screen to which assault transports proceed initially after arrival in the objective area. See also **inner transport area; transport area.** (JP 3-02)

outsized cargo — A single item that exceeds 1,000 inches long by 117 inches wide by 105 inches high in any one dimension. See also **oversized cargo.** (JP 4-01.6)

overhead persistent infrared — Those systems originally developed to detect and track foreign intercontinental ballistic missile systems. Also called **OPIR.** (JP 3-14)

overpressure — The pressure resulting from the blast wave of an explosion referred to as "positive" when it exceeds atmospheric pressure and "negative" during the passage of the wave when resulting pressures are less than atmospheric pressure. (JP 3-11)

Overseas Environmental Baseline Guidance Document — A set of objective criteria and management practices developed by the Department of Defense to protect human health and the environment. Also called **OEBGD.** (JP 3-34)

oversized cargo — 1. Large items of specific equipment such as a barge, side loadable warping tug, causeway section, powered, or causeway section, nonpowered that require transport by sea. 2. Air cargo exceeding the usable dimension of a 463L pallet loaded to the design height of 96 inches, but equal to or less than 1,000 inches in length, 117 inches in width, and 105 inches in height. See also **outsized cargo.** (JP 3-17)

over-the-horizon amphibious operation — An operational initiative launched from beyond visual and radar range of the shoreline. (JP 3-02)

overt — Activities that are openly acknowledged by or are readily attributable to the United States Government, including those designated to acquire information through authorized and open means without concealment. Overt information may be collected by observation, elicitation, or from knowledgeable human sources. (JP 2-01.2)

overt operation — An operation conducted openly, without concealment. See also **clandestine operation; covert operation.** (JP 2-01.2)

P

packup kit — Service-provided maintenance gear sufficient for a short-term deployment, including spare parts and consumables most commonly needed by the deployed helicopter detachment. Supplies are sufficient for a short-term deployment but do not include all material needed for every maintenance task. Also called **PUK.** (JP 3-04)

parallel chains of command — In amphibious operations, a parallel system of command, responding to the interrelationship of participating forces, wherein corresponding commanders are established at each subordinate level of all components to facilitate coordinated planning for, and execution of, the amphibious operation. (JP 3-02)

paramilitary forces — Forces or groups distinct from the regular armed forces of any country, but resembling them in organization, equipment, training, or mission. (JP 3-24)

partial mobilization — Expansion of the active Armed Forces resulting from action by Congress (up to full mobilization) or by the President (not more than 1,000,000 for not more than 24 consecutive months) to mobilize Ready Reserve Component units, individual reservists, and the resources needed for their support to meet the requirements of a war or other national emergency involving an external threat to the national security. (JP 4-05)

partner nation — A nation that the United States works with in a specific situation or operation. Also called **PN.** (JP 1)

passage of lines — An operation in which a force moves forward or rearward through another force's combat positions with the intention of moving into or out of contact with the enemy. (JP 3-18)

passive air defense — All measures, other than active air defense, taken to minimize the effectiveness of hostile air and missile threats against friendly forces and assets. See also **air defense.** (JP 3-01)

passive defense — Measures taken to reduce the probability of and to minimize the effects of damage caused by hostile action without the intention of taking the initiative. See also **active defense.** (JP 3-60)

passive mine — 1. A mine whose anticountermining device has been operated preventing the firing mechanism from being actuated. 2. A mine which does not emit a signal to detect the presence of a target. (JP 3-15)

patient movement — The act or process of moving a sick, injured, wounded, or other person to obtain medical and/or dental care or treatment. Functions include medical regulating, patient evacuation, and en route medical care. See also **patient movement items; patient movement requirements center.** (JP 4-02)

patient movement items — The medical equipment and supplies required to support patients during aeromedical evacuation, which is part of a standardized list of approved safe-to-fly equipment. Also called **PMIs.** (JP 4-02)

patient movement policy — Command decision establishing the maximum number of days that patients may be held within the command for treatment. See also **evacuation.** (JP 4-02)

patient movement requirements center — 1. A joint activity that coordinates patient movement by functionally merging of joint medical regulating processes, Services' medical regulating processes, and patient movement evacuation requirements planning (transport to bed plan). 2. Term used to represent any theater, joint or the Global Patient Movement Requirements Center function. Also called **PMRC.** (JP 4-02)

Patriot — A point and limited area defense surface-to-air missile system capable of intercepting aircraft and theater missiles, including short-, medium-, and intermediate-range ballistic missiles in the terminal phase. (JP 3-01)

peace building — Stability actions, predominately diplomatic and economic, that strengthen and rebuild governmental infrastructure and institutions in order to avoid a relapse into conflict. Also called **PB.** See also **peace enforcement; peacekeeping; peacemaking; peace operations.** (JP 3-07.3)

peace enforcement — Application of military force, or the threat of its use, normally pursuant to international authorization, to compel compliance with resolutions or sanctions designed to maintain or restore peace and order. See also **peace building; peacekeeping; peacemaking; peace operations.** (JP 3-07.3)

peacekeeping — Military operations undertaken with the consent of all major parties to a dispute, designed to monitor and facilitate implementation of an agreement (cease fire, truce, or other such agreement) and support diplomatic efforts to reach a long-term political settlement. See also **peace building; peace enforcement; peacemaking; peace operations.** (JP 3-07.3)

peacemaking — The process of diplomacy, mediation, negotiation, or other forms of peaceful settlements that arranges an end to a dispute and resolves issues that led to it. See also **peace building; peace enforcement; peacekeeping; peace operations.** (JP 3-07.3)

peace operations — A broad term that encompasses multiagency and multinational crisis response and limited contingency operations involving all instruments of national power with military missions to contain conflict, redress the peace, and shape the environment to support reconciliation and rebuilding and facilitate the transition to legitimate governance. Also called **PO.** See also **peace building; peace enforcement; peacekeeping; and peacemaking.** (JP 3-07.3)

performance work statement — A statement of work for performance based acquisitions that describe the results in clear, specific, and objective terms with measurable outcomes. Also called **PWS.** (JP 4-10)

period — The time it takes for a satellite to complete one orbit around the earth. (JP 3-14)

permissive environment — Operational environment in which host country military and law enforcement agencies have control as well as the intent and capability to assist operations that a unit intends to conduct. (JP 3-0)

persistent agent — A chemical agent that, when released, remains able to cause casualties for more than 24 hours to several days or weeks. (JP 3-11)

personal effects — All privately owned moveable, personal property of an individual. Also called **PE.** See also **mortuary affairs; personal property.** (JP 4-06)

personal locator beacon — An emergency device carried by individuals, to assist locating during personnel recovery. Also called **PLB.** See also **emergency locator beacon.** (JP 3-50)

personal property — Property of any kind or any interest therein, except real property, records of the United States Government, and naval vessels of the following categories: surface combatants, support ships, and submarines. (JP 4-06)

personal protective equipment — The protective clothing and equipment provided to shield or isolate a person from the chemical, physical, and thermal hazards that can be encountered at a hazardous materials incident. Also called **PPE.** See also **individual protective equipment.** (JP 3-11)

personal staff — Aides and staff officers handling special matters over which the commander wishes to exercise close personal control. (JP 3-33)

person authorized to direct disposition of human remains — A person, usually primary next of kin, who is authorized to direct disposition of human remains. Also called **PADD.** See also **mortuary affairs.** (JP 4-06)

person eligible to receive effects — The person authorized by law to receive the personal effects of a deceased military member. Receipt of personal effects does not constitute ownership. Also called **PERE.** See also **mortuary affairs; personal effects.** (JP 4-06)

personnel — Those individuals required in either a military or civilian capacity to accomplish the assigned mission. (JP 1-0)

personnel accountability — The process of identifying, capturing, and recording the personal identification information of an individual usually through the use of a database. (JP 1-0)

personnel effects inventory officer — An officer appointed to establish clear chain of custody for all personal effects of an individual from the time they establish control of the effects until they release the effect to mortuary affairs personnel. Also called **PEIO.** (JP 4-06)

personnel increment number — A seven-character, alphanumeric field that uniquely describes a non-unit-related personnel entry (line) in a Joint Operation Planning and Execution System time-phased force and deployment data. Also called **PIN.** (JP 5-0)

personnel recovery — The sum of military, diplomatic, and civil efforts to prepare for and execute the recovery and reintegration of isolated personnel. Also called **PR.** See also **combat search and rescue; evasion; personnel; recovery; search and rescue.** (JP 3-50)

personnel recovery coordination cell — The primary joint force component organization responsible for coordinating and controlling component personnel recovery missions. Also called **PRCC.** (JP 3-50)

personnel recovery reference product — A reference document for personnel recovery containing specific information on a particular country or region of interest. Also called **PRRP.** (JP 3-50)

personnel security investigation — An inquiry into the activities of an individual, designed to develop pertinent information pertaining to trustworthiness and suitability for a position of trust as related to loyalty, character, emotional stability, and reliability. Also called **PSI.** (JP 2-01)

personnel services support — Service-provided sustainment activities that support a Service member during both joint exercises and joint operations. Also called **PSS.** (JP 1-0)

petroleum, oils, and lubricants — A broad term that includes all petroleum and associated products used by the Armed Forces. Also called **POL.** (JP 4-01.6)

phase — In joint operation planning, a definitive stage of an operation or campaign during which a large portion of the forces and capabilities are involved in similar or mutually supporting activities for a common purpose. (JP 5-0)

phase line — A line utilized for control and coordination of military operations, usually an easily identified feature in the operational area. Also called **PL.** (JP 3-09)

phony minefield — An area free of live mines used to simulate a minefield, or section of a minefield, with the object of deceiving the enemy. See also **minefield.** (JP 3-15)

physical characteristics — Those military characteristics of equipment that are primarily physical in nature. (JP 3-60)

physical damage assessment — The estimate of the quantitative extent of physical damage to a target resulting from the application of military force. **See also battle damage assessment.** (JP 3-60)

physical security —1. That part of security concerned with physical measures designed to safeguard personnel; to prevent unauthorized access to equipment, installations, material, and documents; and to safeguard them against espionage, sabotage, damage, and theft. (JP 3-0) 2. In communications security, the component that results from all physical measures necessary to safeguard classified equipment, material, and documents from access thereto or observation thereof by unauthorized persons. See also **communications security; security.** (JP 6-0)

placement — An individual's proximity to information of intelligence interest. (JP 2-01.2)

plan for landing — In amphibious operations, a collective term referring to all individually prepared naval and landing force documents which, taken together, present in detail all instructions for execution of the ship-to-shore movement. (JP 3-02)

plan identification number — 1. A command-unique four-digit number followed by a suffix indicating the Joint Strategic Capabilities Plan year for which the plan is written. 2. A five-digit number representing the command-unique four-digit identifier, followed by a one-character, alphabetic suffix indicating the operation plan option, or a one-digit number numeric value indicating the Joint Strategic Capabilities Plan year for which the plan is written. Also called **PID.** (JP 5-0)

planned target — Target that is known to exist in the operational environment, upon which actions are planned using deliberate targeting, creating effects which support commander's objectives. There are two subcategories of planned targets: scheduled and on-call. See also **on-call target; operational area; scheduled target; target.** (JP 3-60)

planning and direction — In intelligence usage, the determination of intelligence requirements, development of appropriate intelligence architecture, preparation of a collection plan, and issuance of orders and requests to information collection agencies. See also **intelligence process.** (JP 2-01)

planning factor — A multiplier used in planning to estimate the amount and type of effort involved in a contemplated operation. (JP 5-0)

planning factors database — Databases created and maintained by the Services for the purpose of identifying all geospatial information and services requirements for emerging and existing forces and systems. Also called **PFDB.** See also **geospatial information and services.** (JP 2-03)

planning order — A planning directive that provides essential planning guidance and directs the initiation of execution planning before the directing authority approves a military course of action. Also called **PLANORD.** See also **execution planning.** (JP 5-0)

planning phase — In amphibious operations, the phase normally denoted by the period extending from the issuance of the initiating directive up to the embarkation phase. See also **amphibious operation.** (JP 3-02)

planning team — A functional element within a joint force commander's headquarters established to solve problems related to a specific task or requirement, and which dissolves upon completion of the assigned task. (JP 3-33)

point defense — The defense or protection of special vital elements and installations; e.g., command and control facilities or air bases. (JP 3-52)

pointee-talkee — A language aid containing selected phrases in English opposite a translation in a foreign language used by pointing to appropriate phrases. See also **evasion aid.** (JP 3-50)

point of employment — In distribution operations, a physical location designated by the commander at the tactical level where force employment, emplacement, or commodity consumption occurs. (JP 4-09)

point of need — In distribution operations, a physical location within a desired operational area designated by the geographic combatant commander or subordinate commander as a receiving point for forces or materiel, for subsequent use or consumption. (JP 4-09)

point of origin — In distribution operations, the beginning point of a deployment, redeployment, or movement where forces or materiel are located. (JP 4-09)

polar orbit — A satellite orbit that passes over the North and South Poles on each orbit, has an angle of inclination relative to the equator of 90 degrees, and eventually passes over all points on the earth. (JP 3-14)

population at risk — The strength in personnel of a given force structure in terms of which casualty rates are stated. Also called **PAR.** (JP 4-02)

port complex — One or more port areas in which activities are geographically linked either because these areas are dependent on a common inland transport system or because they constitute a common initial destination for convoys. (JP 4-01.5)

port of debarkation — The geographic point at which cargo or personnel are discharged. Also called **POD.** See also **port of embarkation.** (JP 4-0)

port of embarkation — The geographic point in a routing scheme from which cargo or personnel depart. Also called **POE.** See also **port of debarkation.** (JP 4-01.2)

port operations group — A task-organized unit, located at the seaport of embarkation and/or debarkation that assists and provides support in the loading and/or unloading and staging of personnel, supplies, and equipment from shipping. Also called **POG.** See also **landing force support party; task organization.** (JP 3-35)

port security — The safeguarding of vessels, harbors, ports, waterfront facilities, and cargo from internal threats such as destruction, loss, or injury from sabotage or other subversive acts; accidents; thefts; or other causes of similar nature. See also **physical security; security.** (JP 3-10)

port support activity — A tailorable support organization composed of mobilization station assets that ensures the equipment of the deploying units is ready to load. Also called **PSA.** See also **support.** (JP 3-35)

positive control — A method of airspace control that relies on positive identification, tracking, and direction of aircraft within an airspace, conducted with electronic means by an agency having the authority and responsibility therein. (JP 3-52)

positive identification — An identification derived from observation and analysis of target characteristics including visual recognition, electronic support systems, non-cooperative target recognition techniques, identification friend or foe systems, or other physics-based identification techniques. (JP 3-01)

post-launch abort — Deliberate action taken post-separation to cause a precision munition to miss its target. Also called **PLA**. (JP 3-09.3)

precipitation static — Charged precipitation particles that strike antennas and gradually charge the antenna, which ultimately discharges across the insulator, causing a burst of static. Also called **P-STATIC.** (JP 3-13.1)

precise time and time interval — A reference value of time and time interval (frequency). Also called **PTTI**. (JP 3-59)

precision-guided munition — A guided weapon intended to destroy a point target and minimize collateral damage. Also called **PGM, smart weapon, smart munition.** (JP 3-03)

prelanding operations — Operations conducted by the amphibious force upon its arrival in the amphibious objective area or operational area and prior to H-hour and/or L-hour. (JP 3-02)

preparation of the environment — An umbrella term for operations and activities conducted by selectively trained special operations forces to develop an environment for potential future special operations. Also called **PE.** (JP 3-05)

prepare to deploy order — An order issued by competent authority to move forces or prepare forces for movement (e.g., increase deployability posture of units). Also called **PTDO.** (JP 5-0)

preplanned air support — Air support in accordance with a program, planned in advance of operations. (JP 3-09.3)

pre-position — To place military units, equipment, or supplies at or near the point of planned use or at a designated location to reduce reaction time, and to ensure timely support of a specific force during initial phases of an operation. (JP 4-0)

pre-positioned war reserve stock — The assets that are designated to satisfy the pre-positioned war reserve materiel requirement. Also called **PWRS.** (JP 4-03)

presail — The time prior to a ship getting under way used to prepare for at-sea events. (JP 3-04)

Presidential Reserve Call-up — Provision of a public law (Title 10, United States Code, Section 12304) that provides the President a means to activate, without a declaration of national emergency, not more than 200,000 members of the Selected Reserve and the Individual Ready Reserve (of whom not more than 30,000 may be members of the Individual Ready Reserve), for not more than 365 days to meet the requirements of any operational mission, other than for disaster relief or to suppress insurrection. Also called **PRC.** See also **Individual Ready Reserve; mobilization; Selected Reserve.** (JP 4-05)

pressure mine — 1. In land mine warfare, a mine whose fuse responds to the direct pressure of a target. 2. In naval mine warfare, a mine whose circuit responds to the hydrodynamic pressure field of a target. See also **mine.** (JP 3-15)

prevention —In space usage, measures to preclude an adversary's hostile use of United States or third-party space systems and services. See also **space control.** (JP 3-14)

prevention of mutual interference — In submarine operations, procedures established to prevent submerged collisions between friendly submarines, between submarines and friendly surface ship towed bodies and arrays, and between submarines and any other hazards to submerged navigation. Also called **PMI**. (JP 3-32)

preventive maintenance — The care and servicing by personnel for the purpose of maintaining equipment and facilities in satisfactory operating condition by providing for systematic inspection, detection, and correction of incipient failures either before they occur or before they develop into major defects. (JP 4-02)

preventive medicine — The anticipation, communication, prediction, identification, prevention, education, risk assessment, and control of communicable diseases, illnesses and exposure to endemic, occupational, and environmental threats. Also called **PVNTMED.** (JP 4-02)

primary agency — The federal department or agency assigned primary responsibility for managing and coordinating a specific emergency support function in the National Response Framework. (JP 3-28)

primary control officer — In amphibious operations, the officer embarked in a primary control ship assigned to control the movement of landing craft, amphibious vehicles, and landing ships to and from a colored beach. Also called **PCO.** (JP 3-02)

primary control ship — In amphibious operations, a ship of the task force designated to provide support for the primary control officer and a combat information center control team for a colored beach. Also called **PCS.** (JP 3-02)

primary flight control — The controlling agency on air-capable ships that is responsible **for air traffic control of aircraft within 5 nautical miles of the ship. On most Coast** Guard cutters, primary flight control duties are performed by a combat information center, and the term "PRIFLY" is not used. Also called **PRIFLY.** (JP 3-04)

primary review authority — The organization, within the lead agent's chain of command, that is assigned by the lead agent to perform the actions and coordination necessary to develop and maintain the assigned joint publication under the cognizance of the lead agent. Also called **PRA.** See also **joint publication; lead agent.** (CJCSM 5120.01)

prime contract — A contract or contractual action entered into by the United States Government for the purpose of obtaining supplies, materials, equipment, or services of any kind. (JP 4-10)

prime vendor — A contracting process that provides commercial products to regionally grouped military and federal customers from commercial distributors using electronic commerce. Also called **PV.** See also **distribution system.** (JP 4-09)

principal federal official — The federal official designated by the Secretary of Homeland Security to act as his/her representative locally to oversee, coordinate, and execute the Secretary's incident management responsibilities under Homeland Security Presidential Directive 5. Also called **PFO.** (JP 3-41)

principal officer — The officer in charge of a diplomatic mission, consular office, or other Foreign Service post, such as a United States liaison office. (JP 3-08)

priority designator — A two-digit issue and priority code placed in military standard requisitioning and issue procedure requisitions to provide a means of assigning relative rankings to competing demands placed on the Department of Defense supply system. (JP 4-01)

priority intelligence requirement — An intelligence requirement, stated as a priority for intelligence support, that the commander and staff need to understand the adversary or

other aspects of the operational environment. Also called **PIR.** See also **information requirements; intelligence; intelligence process; intelligence requirement.** (JP 2-01)

prisoner of war — A detained person (as defined in Articles 4 and 5 of the Geneva Convention Relative to the Treatment of Prisoners of War of August 12, 1949) who, while engaged in combat under orders of his or her government, is captured by the armed forces of the enemy. Also called **POW or PW.** (JP 3-50)

private sector — An umbrella term that may be applied to any or all of the nonpublic or commercial individuals and businesses, specified nonprofit organizations, most of academia and other scholastic institutions, and selected nongovernmental organizations. (JP 3-57)

privity of contract — The legal relationship that exists between two contracting parties. (JP 4-10)

probability of damage — The probability that damage will occur to a target expressed as a percentage or as a decimal. Also called **PD.** (JP 3-60)

procedural control — A method of airspace control which relies on a combination of previously agreed and promulgated orders and procedures. (JP 3-52)

procedural identification — An identification based on observation and analysis of target behaviors including location and trajectory, as well as compliance with airspace control measures. (JP 3-01)

procedures — Standard, detailed steps that prescribe how to perform specific tasks. See also **tactics; techniques.** (CJCSM 5120.01)

procedure word — A word or phrase limited to radio telephone procedure used to facilitate communication by conveying information in a condensed standard form. Also called **proword.** (JP 3-09.3)

processing — A system of operations designed to convert raw data into useful information. (JP 2-0)

processing and exploitation — In intelligence usage, the conversion of collected information into forms suitable to the production of intelligence. See also **intelligence process.** (JP 2-01)

process owner — The head of a Department of Defense component assigned a responsibility by the Secretary of Defense when process improvement involves more than one Service or Department of Defense component. (JP 4-0)

procurement lead time — The interval in time between the initiation of procurement action and receipt of the products or services purchased as the result of such actions. (JP 4-10)

procuring contracting officer — A contracting officer who initiates and signs the contract. Also called **PCO.** See also **administrative contracting officer; contracting officer.** (JP 4-10)

production base — The total national industrial production capacity available for the manufacture of items to meet materiel requirements. (JP 4-05)

production logistics — That part of logistics concerning research, design, development, manufacture, and acceptance of materiel. In consequence, production logistics includes: standardization and interoperability, contracting, quality assurance, initial provisioning, transportability, reliability and defect analysis, safety standards, specifications and production processes, trials and testing (including provision of necessary facilities), equipment documentation, configuration control, and modifications.

production requirement — An intelligence requirement that cannot be met by current analytical products resulting in tasking to produce a new product that can meet this intelligence requirement. Also called **PR**. (JP 2-0)

proof — To verify that a breached lane is free of live mines by passing a mine roller or other mine-resistant vehicle through as the lead vehicle. (JP 3-15)

property — 1. Anything that may be owned. 2. As used in the military establishment, this term is usually confined to tangible property, including real estate and materiel. For special purposes and as used in certain statutes, this term may exclude such items as the public domain, certain lands, certain categories of naval vessels, and records of the Federal Government.

protected emblems — The red cross, red crescent, and other symbols that designate that persons, places, or equipment so marked have a protected status under the law of war. (JP 3-60)

protected frequencies — Friendly, generally time-oriented, frequencies used for a particular operation, identified and protected to prevent them from being inadvertently jammed by friendly forces while active electronic warfare operations are directed against hostile forces. See also **electronic warfare.** (JP 3-13.1)

protected persons/places — Persons (such as enemy prisoners of war) and places (such as hospitals) that enjoy special protections under the law of war. They may or may not be marked with protected emblems. (JP 1-04)

protection — 1. Preservation of the effectiveness and survivability of mission-related military and nonmilitary personnel, equipment, facilities, information, and infrastructure deployed or located within or outside the boundaries of a given operational area. (JP 3-0) 2. In space usage, active and passive defensive measures to ensure that United States and friendly space systems perform as designed by seeking to overcome an adversary's

attempts to negate them and to minimize damage if negation is attempted. See also **mission-oriented protective posture; space control.** (JP 3-14)

protection of shipping — The use of proportionate force, when necessary for the protection of US flag vessels and aircraft, US citizens (whether embarked in US or foreign vessels), and their property against unlawful violence. (JP 3-0)

protective clothing — Clothing especially designed, fabricated, or treated to protect personnel against hazards. (JP 3-11)

protective minefield — 1. In land mine warfare, a minefield employed to assist a unit in its local, close-in protection. 2. In naval mine warfare, a minefield emplaced in friendly territorial waters to protect ports, harbors, anchorages, coasts, and coastal routes. See also **minefield.** (JP 3-15)

provincial reconstruction team — A civil-military team designed to improve stability in a given area by helping build the legitimacy and effectiveness of a host nation local or provincial government in providing security to its citizens and delivering essential government services. Also called **PRT.** (JP 3-57)

public — In public affairs, a segment of the population with common attributes to which a military force can tailor its communication. See also **external audience; internal audience.** (JP 3-61)

public affairs — Communication activities with external and internal audiences. Also called **PA.** See also **command information; public information.** (JP 3-61)

public affairs assessment — An analysis of the news media and public environments to evaluate the degree of understanding about strategic and operational objectives and military activities and to identify levels of public support. See also **assessment; public affairs.** (JP 3-61)

public affairs guidance — Constraints and restraints established by proper authority regarding public communication activities. Also called **PAG.** See also **public affairs.** (JP 3-61)

public diplomacy — 1. Those overt international public information activities of the United States Government designed to promote United States foreign policy objectives by seeking to understand, inform, and influence foreign audiences and opinion makers, and by broadening the dialogue between American citizens and institutions and their counterparts abroad. 2. In peace building, civilian agency efforts to promote an understanding of the reconstruction efforts, rule of law, and civic responsibility through public affairs and international public diplomacy operations. (JP 3-07.3)

public information — Within public affairs, information of a military nature, the dissemination of which is consistent with security and approved for public release. (JP 3-61)

public key infrastructure — An enterprise-wide service that supports digital signatures and other public key-based security mechanisms for Department of Defense functional enterprise programs, including generation, production, distribution, control, and accounting of public key certificates. Also called **PKI.** (JP 2-03)

Intentionally Blank

Q

Q-route — A system of preplanned shipping lanes in mined or potentially mined waters used to minimize the area the mine countermeasures commander has to keep clear of mines in order to provide safe passage for friendly shipping. (JP 3-15)

quadruple container — A 57.5 inches x 96 inches x 96 inches container box with a metal frame, pallet base, and International Organization for Standardization corner fittings; four of these boxes can be lashed together to form a 20-foot American National Standards Institute or International Organization for Standardization intermodal container. Also called **QUADCON.** (JP 4-09)

qualifying entity — A non-governmental organization to which the Department of Defense may provide assistance for special events by virtue of statute, regulation, policy, or other approval by the Secretary of Defense or his or her authorized designee. (DODD 3025.18)

Intentionally Blank

R

radiation dose — The total amount of ionizing radiation absorbed by material or tissues. See also **exposure dose.** (JP 3-11)

radiation dose rate — Measurement of radiation dose per unit of time. (JP 3-11)

radiation exposure status — Criteria to assist the commander in measuring unit exposure to radiation based on total past cumulative dose, normally expressed in centigray. Also called **RES.** (JP 3-11)

radio frequency countermeasures — Any device or technique employing radio frequency materials or technology that is intended to impair the effectiveness of enemy activity, particularly with respect to precision guided weapons and sensor systems. Also called **RF CM.** (JP 3-13.1)

radiological dispersal device — An improvised assembly or process, other than a nuclear explosive device, designed to disseminate radioactive material in order to cause destruction, damage, or injury. Also called **RDD.** (JP 3-11)

radiological exposure device — A radioactive source placed to cause injury or death. Also called **RED.** (JP 3-11)

raid — An operation to temporarily seize an area in order to secure information, confuse an adversary, capture personnel or equipment, or to destroy a capability culminating with a planned withdrawal. (JP 3-0)

railhead — A point on a railway where loads are transferred between trains and other means of transport. (JP 4-09)

Rangers — Rapidly deployable airborne light infantry organized and trained to conduct highly complex joint direct action operations in coordination with or in support of other special operations units of all Services. (JP 3-05)

rapid global mobility — The timely movement, positioning, and sustainment of military forces and capabilities across the range of military operations. See also **mobility.** (JP 3-17)

rationalization — Any action that increases the effectiveness of allied forces through more efficient or effective use of defense resources committed to the alliance. (JP 3-16)

R-day — Redeployment day.

reachback — The process of obtaining products, services, and applications, or forces, or equipment, or material from organizations that are not forward deployed. (JP 3-30)

readiness — The ability of military forces to fight and meet the demands of assigned missions. See also **national military strategy.** (JP 1)

Ready Reserve — The Selected Reserve and Individual Ready Reserve liable for active duty as prescribed by law (Title 10, United States Code, Sections 10142, 12301, and 12302). See also **active duty; Individual Ready Reserve; Selected Reserve.** (JP 4-05)

ready-to-load date — The date when a unit will be ready to move from the origin, i.e., mobilization station. Also called **RLD.** (JP 5-0)

Realistic Military Training — Department of Defense training conducted off federal property utilizing private or non-federal public property and infrastructure. (DODI 1322.28)

real property — Lands, buildings, structures, utilities systems, improvements, and appurtenances, thereto that includes equipment attached to and made part of buildings and structures, but not movable equipment. (JP 3-34)

reattack recommendation — An assessment, derived from the results of battle damage assessment and munitions effectiveness assessment, providing the commander systematic advice on reattack of a target. Also called **RR.** See also **assessment; battle damage assessment; munitions effectiveness assessment; target.** (JP 3-60)

receiving ship — The ship in a replenishment unit that receives the rig(s). (JP 4-03)

reception — 1. All ground arrangements connected with the delivery and disposition of air or sea drops. 2. Arrangements to welcome and provide secure quarters or transportation for defectors, escapees, evaders, or incoming agents. 3. The process of receiving, off-loading, marshalling, accounting for, and transporting of personnel, equipment, and materiel from the strategic and/or intratheater deployment phase to a sea, air, or surface transportation point of debarkation to the marshalling area. (JP 3-35)

recognition — 1. The determination by any means of the individuality of persons, or of objects such as aircraft, ships, or tanks, or of phenomena such as communications-electronics patterns. 2. In ground combat operations, the determination that an object is similar within a category of something already known. (JP 3-01)

recognition signal — Any prearranged signal by which individuals or units may identify each other. (JP 3-50)

reconnaissance — A mission undertaken to obtain, by visual observation or other detection methods, information about the activities and resources of an enemy or adversary, or to secure data concerning the meteorological, hydrographic, or geographic characteristics of a particular area. Also called **RECON.** (JP 2-0)

recovery — 1. In air (aviation) operations, that phase of a mission that involves the return of an aircraft to a land base or platform afloat. (JP 3-52) 2. The retrieval of a mine from

the location where emplaced. (JP 3-15) 3. In personnel recovery, actions taken to physically gain custody of isolated personnel and return them to friendly control. (JP 3-50) 4. Actions taken to extricate damaged or disabled equipment for return to friendly control or repair at another location. See also **evader; evasion.** (JP 3-34)

recovery and reconstitution — 1. Those actions taken by one nation prior to, during, and following an attack by an enemy nation to minimize the effects of the attack, rehabilitate the national economy, provide for the welfare of the populace, and maximize the combat potential of remaining forces and supporting activities. 2. Those actions taken by a military force during or after operational employment to restore its combat capability to full operational readiness. See also **recovery.** (JP 3-35)

recovery mechanism — An indigenous or surrogate infrastructure that is specifically developed, trained, and directed by United States forces to contact, authenticate, support, move, and exfiltrate designated isolated personnel from uncertain or hostile areas back to friendly control. Also called **RM.** (JP 3-50)

recovery operations — Operations conducted to search for, locate, identify, recover, and return isolated personnel, human remains, sensitive equipment, or items critical to national security. (JP 3-50)

recovery site — In personnel recovery, an area from which isolated personnel can be recovered. See also **escapee; evader; evasion.** (JP 3-50)

recovery team — In personnel recovery, designated United States or United States-directed forces, that are specifically trained to operate in conjunction with indigenous or surrogate forces, and are tasked to contact, authenticate, support, move, and exfiltrate isolated personnel. Also called **RT.** (JP 3-50)

recovery vehicle — In personnel recovery, the vehicle on which isolated personnel are boarded and transported from the recovery site. (JP 3-50)

redeployment — The transfer or rotation of forces and materiel to support another joint force commander's operational requirements, or to return personnel, equipment, and materiel to the home and/or demobilization stations for reintegration and/or out-processing. See also **deployment.** (JP 3-35)

red team — An organizational element comprised of trained and educated members that provide an independent capability to fully explore alternatives in plans and operations in the context of the operational environment and from the perspective of adversaries and others. (JP 2-0)

reduced operating status — Military Sealift Command ships withdrawn from full operating status because of decreased operational requirements. Also called **ROS.** See also **Military Sealift Command.** (JP 4-01.2)

reduction — The creation of lanes through a minefield or obstacle to allow passage of the attacking ground force. (JP 3-15)

refraction — The process by which the direction of a wave is changed when moving into shallow water at an angle to the bathymetric contours. (JP 4-01.6)

refugee — A person who, owing to a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group, or political opinion, is outside the country of his or her nationality and is unable or, owing to such fear, is unwilling to avail himself or herself of the protection of that country. See also **dislocated civilian; displaced person; evacuee; stateless person.** (JP 3-29)

regimental landing team — A task organization for landing composed of an infantry regiment reinforced by those elements that are required for initiation of its combat function ashore. (JP 3-02)

regional air defense commander — Commander, subordinate to the area air defense commander, who is responsible for air and missile defenses in the assigned regionand exercises authorities as delegated by the area air defense commander. Also called **RADC.** (JP 3-01)

regional response coordination center — A standing facility that is activated to coordinate regional response efforts, until a joint field office is established and/or the principal federal official, federal or coordinating officer can assume their National Response Framework coordination responsibilities. Also called **RRCC.** (JP 3-28)

regional satellite communications support center — United States Strategic Command operational element responsible for providing the operational communications planners with a point of contact for accessing and managing satellite communications resources. Also called **RSSC.** (JP 3-14)

regional security officer — A security officer responsible to the chief of mission (ambassador), for security functions of all United States embassies and consulates in a given country or group of adjacent countries. Also called **RSO.** (JP 3-10)

rehabilitative care — Therapy that provides evaluations and treatment programs using exercises, massage, or electrical therapeutic treatment to restore, reinforce, or enhance motor performance and restores patients to functional health allowing for their return to duty or discharge from the Service. Also called **restorative care.** See also **patient movement policy; theater.** (JP 4-02)

rehearsal phase — In amphibious operations, the period during which the prospective operation is practiced. See also **amphibious operation.** (JP 3-02)

reinforcing obstacles — Those obstacles specifically constructed, emplaced, or detonated through military effort and designed to strengthen existing terrain to disrupt, fix, turn, or block enemy movement. See also **obstacle.** (JP 3-15)

reintegrate — In personnel recovery, the task of providing medical care and psychological decompression to allow the conduct of appropriate debriefings to ultimately return recovered personnel back to duty and their family. (JP 3-50)

release altitude — Altitude of an aircraft above the ground at the time of ordnance release. (JP 3-09.3)

relief in place — An operation in which, by direction of higher authority, all or part of a unit is replaced in an area by the incoming unit and the responsibilities of the replaced elements for the mission and the assigned zone of operations are transferred to the incoming unit. (JP 3-07.3)

religious advisement — The practice of informing the commander on the impact of religion on joint operations to include, but not limited to: worship, rituals, customs, and practices of US military personnel, international forces, and the indigenous population; as well as the impact of military operations on the religious and humanitarian dynamics in the operational area. (JP 1-05)

religious affairs — The combination of religious support and religious advisement. (JP 1-05)

religious support — Chaplain-facilitated free exercise of religion through worship, religious and pastoral counseling services, ceremonial honors for the fallen, crisis intervention, and advice to the commander on ethical and moral issues, and morale as affected by religion. Also called **RS.** See also **combatant command chaplain; command chaplain; religious support team.** (JP 1-05)

religious support team — A team, comprised of at least one chaplain and one enlisted support person, that works together in designing, implementing, and executing the command religious program. Also called **RST.** See also **combatant command chaplain; command chaplain; religious support.** (JP 1-05)

remain-behind equipment — Unit equipment left by deploying forces at their bases when they deploy. (JP 4-05)

render safe procedures — The portion of the explosive ordnance disposal procedures involving the application of special explosive ordnance disposal methods and tools to provide for the interruption of functions or separation of essential components of unexploded explosive ordnance to prevent an unacceptable detonation. (JP 3-15.1)

rendezvous area — In an amphibious operation, the area in which the landing craft and amphibious vehicles rendezvous to form waves after being loaded, and prior to movement to the line of departure. (JP 3-02)

repairable item — An item that can be reconditioned or economically repaired for reuse when it becomes unserviceable. (JP 4-09)

repair cycle — The stages through which a repairable item passes from the time of its removal or replacement until it is reinstalled or placed in stock in a serviceable condition. (JP 4-09)

repatriation — 1. The procedure whereby American citizens and their families are officially processed back into the United States subsequent to an evacuation. See also **evacuation.** (JP 3-68) 2. The release and return of enemy prisoners of war to their own country in accordance with the 1949 Geneva Convention Relative to the Treatment of Prisoners of War. (JP 1-0)

replacement in kind — The provision of material and services for a logistic exchange of materials and services of equal value between the governments of eligible countries. Also called **RIK.** (JP 1-06)

reportable incident — Any suspected or alleged violation of Department of Defense policy or of other related orders, policies, procedures or applicable law, for which there is credible information. (JP 3-63)

request for assistance — A request based on mission requirements and expressed in terms of desired outcome, formally asking the Department of Defense to provide assistance to a local, state, tribal, or other federal agency. Also called **RFA.** (JP 3-28)

request for information — 1. Any specific time-sensitive ad hoc requirement for intelligence information or products to support an ongoing crisis or operation not necessarily related to standing requirements or scheduled intelligence production. 2. A term used by the National Security Agency/Central Security Service to state ad hoc signals intelligence requirements. Also called **RFI.** See also **intelligence.** (JP 2-0)

required delivery date — The date that a force must arrive at the destination and complete unloading. Also called **RDD.** (JP 5-0)

requirements determination — All activities necessary to develop, consolidate, coordinate, validate, approve, and prioritize joint force contract support requirements. (JP 4-10)

requirements development — The process of defining actual contract support requirements and capturing these requirements in acquisition ready contract support requirements packages. (JP 4-10)

requirements management system — A system for the management of theater and national imagery collection requirements that provides automated tools for users in support of submission, review, and validation of imagery nominations as requirements to be tasked on national or Department of Defense imagery collection, production, and exploitation resources. Also called **RMS.** See also **imagery.** (JP 2-01)

requiring activity — A military or other designated supported organization that identifies and receives contracted support during military operations. See also **supported unit.** (JP 4-10)

rescue combat air patrol — An aircraft patrol provided over that portion of an objective area in which recovery operations are being conducted for the purpose of intercepting and destroying hostile aircraft. Also called **RESCAP.** See also **combat air patrol.** (JP 3-50)

rescue coordination center — A unit, recognized by International Civil Aviation Organization, International Maritime Organization, or other cognizant international body, responsible for promoting efficient organization of search and rescue services and coordinating the conduct of search and rescue operations within a search and rescue region. Also called **RCC.** (JP 3-50)

reserve — 1. Portion of a body of troops that is kept to the rear, or withheld from action at the beginning of an engagement, in order to be available for a decisive movement. 2. Members of the uniformed Services who are not in active service but who are subject to call to active duty. 3. Portion of an appropriation or contract authorization held or set aside for future operations or contingencies and, in respect to which, administrative authorization to incur commitments or obligations has been withheld. See also **operational reserve.** (JP 4-05)

Reserve Component — The Armed Forces of the United States Reserve Component consists of the Army National Guard of the United States, the Army Reserve, the Navy Reserve, the Marine Corps Reserve, the Air National Guard of the United States, the Air Force Reserve, and the Coast Guard Reserve. Also called **RC.** See also **component; reserve.** (JP 4-05)

reserved obstacles — Those demolition obstacles that are deemed critical to the plan for which the authority to detonate is reserved by the designating commander. See also **obstacle.** (JP 3-15)

reset — A set of actions to restore equipment to a desired level of combat capability commensurate with a unit's future mission. (JP 4-0)

resettled person — A refugee or an internally displaced person wishing to return somewhere other than his or her previous home or land within the country or area of original displacement. (JP 3-29)

residual forces — Undeployed United States forces that have an immediate combat potential for continued military operations, and that have been deliberately withheld from utilization. (JP 4-09)

residual radiation — Nuclear radiation caused by fallout, artificial dispersion of radioactive material, or irradiation that results from a nuclear explosion and persists longer than one minute after burst. See also **contamination; initial radiation.** (JP 3-11)

resistance movement — An organized effort by some portion of the civil population of a country to resist the legally established government or an occupying power and to disrupt civil order and stability. (JP 3-05)

resource management — A financial management function that provides advice and guidance to the commander to develop command resource requirements. Also called **RM.** See also **financial management.** (JP 1-06)

resources — The forces, materiel, and other assets or capabilities apportioned or allocated to the commander of a unified or specified command. (JP 1)

rest and recuperation — The withdrawal of individuals from combat or duty in a combat area for short periods of rest and recuperation. Also called **R&R.** (JP 1-0)

restraint — In the context of joint operation planning, a requirement placed on the command by a higher command that prohibits an action, thus restricting freedom of action. See also **constraint; operational limitation.** (JP 5-0)

restricted area — 1. An area (land, sea, or air) in which there are special restrictive measures employed to prevent or minimize interference between friendly forces. 2. An area under military jurisdiction in which special security measures are employed to prevent unauthorized entry. See also **restricted areas (air).** (JP 3-34)

restricted areas (air) — Designated areas established by appropriate authority over which flight of aircraft is restricted. See also **restricted area**. (JP 3-52)

restricted items list — A document listing those logistic goods and services for which nations must coordinate any contracting activity with a commander's centralized contracting organization. (JP 4-08)

restricted operations zone — Airspace reserved for specific activities in which the operations of one or more airspace users is restricted. Also called **ROZ.** (JP 3-52)

restricted reporting — Reporting option that allows sexual assault victims to confidentially disclose the assault to specified individual and receive medical treatment without triggering an official investigation. (JP 1-0)

restricted target — A valid target that has specific restrictions placed on the actions authorized against it due to operational considerations. See also **target.** (JP 3-60)

restricted target list — A list of restricted targets nominated by elements of the joint force and approved by the joint force commander or directed by higher authorities. Also called **RTL.** See also **restricted target; target.** (JP 3-60)

restrictive fire area — An area in which specific restrictions are imposed and into which fires that exceed those restrictions will not be delivered without coordination with the establishing headquarters. Also called **RFA.** See also **fires.** (JP 3-09)

restrictive fire line — A line established between converging friendly surface forces that prohibits fires or their effects across that line. Also called **RFL.** See also **fires.** (JP 3-09)

resupply — The act of replenishing stocks in order to maintain required levels of supply. (JP 4-09)

resuscitative care — Advanced emergency medical treatment required to prevent immediate loss of life or limb and to attain stabilization to ensure the patient could tolerate evacuation. (JP 4-02)

retained personnel — Detainees who fall into one of the following categories: a. Designated enemy medical personnel and medical staff administrators who are exclusively engaged in either the search for, collection, transport, or treatment of the wounded or sick, or the prevention of disease; b. Staff of National Red Cross and Red Crescent Societies and that of other volunteer aid societies, duly recognized and authorized by their governments to assist medical service personnel of their own armed forces, provided they are exclusively engaged in the search for, or the collection, transport or treatment of wounded or sick, or in the prevention of disease, and provided that the staff of such societies are subject to military laws and regulations; c. Chaplains attached to enemy armed forces. Also called **RP.** See also **personnel.** (JP 3-63)

Retired Reserve — All reserve members who receive retirement pay on the basis of their active duty and/or reserve service; those members who are otherwise eligible for retirement pay but have not reached age 60 and who have not elected discharge and are not voluntary members of the Ready Reserve or Standby Reserve. See also **active duty; Ready Reserve; Standby Reserve.** (JP 4-05)

retrograde — The process for the movement of non-unit equipment and materiel from a forward location to a reset (replenishment, repair, or recapitalization) program or to another directed area of operations to replenish unit stocks, or to satisfy stock requirements. (JP 4-09)

returned to military control — The status of a person whose casualty status of "duty status - whereabouts unknown" or "missing" has been changed due to the person's return or recovery by US military authority. Also called **RMC.**

returnee — A displaced person who has returned voluntarily to his or her former place of residence. (JP 3-29)

return to base — An order to proceed to the point indicated by the displayed information or by verbal communication. Also called **RTB.** (JP 3-01)

revolving fund account — An account authorized by specific provisions of law to finance a continuing cycle of business-type operations, and which are authorized to incur obligations and expenditures that generate receipts. (JP 1-06)

riot control agent — Any chemical, not listed in a schedule of the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction that can produce rapidly in humans sensory irritation or disabling physical effects that disappear within a short time following termination of exposure. Also called **RCA.** See also **chemical warfare.** (JP 3-11)

rising mine — In naval mine warfare, a mine having positive buoyancy which is released from a sinker by a ship influence or by a timing device. (JP 3-15)

risk — Probability and severity of loss linked to hazards. See also **hazard; risk management.** (JP 5-0)

risk assessment — The identification and assessment of hazards (first two steps of risk management process). Also called **RA.** (JP 3-07.2)

risk management — The process of identifying, assessing, and controlling risks arising from operational factors and making decisions that balance risk cost with mission benefits. Also called **RM.** See also **risk.** (JP 3-0)

riverine operations — Operations conducted by forces organized to cope with and exploit the unique characteristics of a riverine area, to locate and destroy hostile forces, and/or to achieve or maintain control of the riverine area. (JP 3-32)

role specialist nation — A nation that has agreed to assume responsibility for providing a particular class of supply or service for all or part of the multinational force. Also called **RSN.** See also **lead nation; multinational force.** (JP 4-08)

roll-on/roll-off discharge facility — A platform made up of causeway sections that provide a means of embarking and disembarking vehicles from a roll-on and roll-off ship at sea to lighterage. Also called **RRDF.** See also **facility; lighterage.** (JP 4-01.6)

rough terrain container handler — A piece of materials handling equipment used to pick up and move containers. Also called **RTCH.** (JP 4-01.6)

rules of engagement — Directives issued by competent military authority that delineate the circumstances and limitations under which United States forces will initiate and/or continue combat engagement with other forces encountered. Also called **ROE.** See also **law of war.** (JP 1-04)

ruse — In military deception, a trick of war designed to deceive the adversary, usually involving the deliberate exposure of false information to the adversary's intelligence collection system. (JP 3-13.4)

Intentionally Blank

S

sabotage — An act or acts with intent to injure, interfere with, or obstruct the national defense of a country by willfully injuring or destroying, or attempting to injure or destroy, any national defense or war materiel, premises, or utilities, to include human and natural resources. (JP 2-01.2)

safe haven — 1. Designated area(s) to which noncombatant evacuees of the United States Government's responsibility and commercial vehicles and materiel may be evacuated during a domestic or other valid emergency. (JP 3-68) 2. A protected body of water or the well deck of an amphibious ship used by small craft operating offshore for refuge from storms or heavy seas. (JP 4-01.6)

safe house — An innocent-appearing house or premises established by an organization for the purpose of conducting clandestine or covert activity in relative security. (JP 3-07.2)

safing — As applied to weapons and ammunition, the changing from a state of readiness for initiation to a safe condition. Also called **de-arming.** (JP 3-09.3)

salvage — 1. Property that has some value in excess of its basic material content but is in such condition that it has no reasonable prospect of use for any purpose as a unit and its repair or rehabilitation for use as a unit is clearly impractical. 2. The saving or rescuing of condemned, discarded, or abandoned property, and of materials contained therein for reuse, refabrication, or scrapping. (JP 4-0)

sanction enforcement — Operations that employ coercive measures to control the movement of certain types of designated items into or out of a nation or specified area. (JP 3-0)

scheduled target — Planned target upon which fires or other actions are scheduled for prosecution at a specified time. See also **planned target; target.** (JP 3-60)

schedule of fire — Groups or series of fires that are fired in a definite sequence according to a definite program. (JP 3-09)

scheme of fires — The detailed, logical sequence of targets and fire support events to find and engage targets to support the commander's objectives. (JP 3-09)

scheme of maneuver — The central expression of the commander's concept for operations that governs the design of supporting plans or annexes of how arrayed forces will accomplish the mission. (JP 5-0)

scientific and technical intelligence — The product resulting from the collection, evaluation, analysis, and interpretation of foreign scientific and technical information that covers: a. foreign developments in basic and applied research and in applied engineering techniques; and b. scientific and technical characteristics, capabilities, and limitations of all foreign military systems, weapons, weapon systems, and materiel; the research and development

related thereto; and the production methods employed for their manufacture. Also called **S&TI.** See also **intelligence; technical intelligence.** (JP 2-01)

screening — In intelligence, the evaluation of an individual or a group of individuals to determine their potential to answer collection requirements or to identify individuals who match a predetermined source profile coupled with the process of identifying and assessing the areas of knowledge, cooperation, and possible approach techniques for an individual who has information of intelligence value. (JP 2-01.2)

sea areas — Areas in the amphibious objective area designated for the stationing of amphibious task force ships. See also **amphibious objective area; fire support area; inner transport area; sea echelon area.** (JP 3-02)

sea barge — A type of barge-ship that can carry up to 38 loaded barges and also carry tugs, stacked causeway sections, various watercraft, or heavy-lift equipment to better support joint logistics over-the-shore operations. (JP 4-01.2)

seabasing — The deployment, assembly, command, projection, reconstitution, sustainment, and re-employment of joint power from the sea without reliance on land bases within the operational area. See also **amphibious operation.** (JP 3-02)

sea control operations — The employment of forces to destroy enemy naval forces, suppress enemy sea commerce, protect vital sea lanes, and establish local military superiority in vital sea areas. See also **land control operations.** (JP 3-32)

sea echelon — A portion of the amphibious warfare ships or other ships that withdraws from or remains out of the transport area during an amphibious landing and operates in designated areas to seaward in an on-call or unscheduled status. (JP 3-02)

sea echelon area — In amphibious operations, an area to seaward of a transport area from which ships are phased into the transport area, and to which ships withdraw from the transport area. (JP 3-02)

sea echelon plan — In amphibious operations, the distribution plan for amphibious shipping in the transport area to minimize losses due to enemy attack by weapons of mass destruction and to reduce the area to be swept of mines. See also **amphibious operation.** (JP 3-02)

SEAL delivery vehicle team — United States Navy forces organized, trained, and equipped to conduct special operations with SEAL delivery vehicles, dry deck shelters, and other submersible platforms. (JP 3-05)

sealift enhancement features — Special equipment and modifications that adapt merchant-type dry cargo ships and tankers to specific military missions. Also called **SEFs.** See also **Military Sealift Command; Ready Reserve.** (JP 4-01.2)

SEAL team — United States Navy forces organized, trained, and equipped to conduct special operations with an emphasis on maritime, coastal, and riverine environments. (JP 3-05)

seaport — A land facility designated for reception of personnel or materiel moved by sea, and that serves as an authorized port of entrance into or departure from the country in which located. See also **port of debarkation; port of embarkation.** (JP 4-01.2)

search — A systematic reconnaissance of a defined area, so that all parts of the area have passed within visibility. (JP 3-50)

search and rescue — The use of aircraft, surface craft, submarines, and specialized rescue teams and equipment to search for and rescue distressed persons on land or at sea in a permissive environment. Also called **SAR.** See also **combat search and rescue; isolated personnel; joint personnel recovery center; personnel recovery coordination cell.** (JP 3-50)

search and rescue numerical encryption grid — A predesignated ten-letter word without repeated letters used exclusively by recovery forces or isolated personnel to encrypt numerical data such as position, time, and/or headings in a covert manner. Also called **SARNEG.** (JP 3-50)

search and rescue point — A predesignated specific location, relative to which isolated personnel provide their position to recovery forces. Also called **SARDOT.** (JP 3-50)

search and rescue region — An area of defined dimensions, recognized by the International Civil Aviation Organization, International Maritime Organization, or other cognizant international body, and associated with a rescue coordination center within which search and rescue services are provided. **(**JP 3-50)

sea state — A scale that categorizes the force of progressively higher seas by wave height. (JP 4-01.6)

secondary loads — Unit equipment, supplies, and major end items that are transported in the beds of organic vehicles. (JP 3-02.1)

secret — Security classification that shall be applied to information, the unauthorized disclosure of which reasonably could be expected to cause serious damage to the national security that the original classification authority is able to identify or describe. (EO 13526)

SECRET Internet Protocol Router Network — The worldwide SECRET-level packet switch network that uses high-speed internet protocol routers and high-capacity Defense Information Systems Network circuitry. Also called **SIPRNET.** See also **Defense Information Systems Network.** (JP 6-0)

section — 1. As applied to ships or naval aircraft, a tactical subdivision of a division. 2. A subdivision of an office, installation, territory, works, or organization; especially a major subdivision of a staff. 3. A tactical unit of the Army and Marine Corps smaller than a platoon and larger than a squad. 4. An area in a warehouse extending from one wall to the next; usually the largest subdivision of one floor. (JP 3-33)

sector air defense commander — Commander subordinate to an area/regional air defense commander, who is responsible for air and missile defenses in the assigned sector and exercises authorities delegated by the area/regional air defense commander. Also called **SADC.** (JP 3-01)

security — 1. Measures taken by a military unit, activity, or installation to protect itself against all acts designed to, or which may, impair its effectiveness. (JP 3-10) 2. A condition that results from the establishment and maintenance of protective measures that ensure a state of inviolability from hostile acts or influences. (JP 3-10) 3. With respect to classified matter, the condition that prevents unauthorized persons from having access to official information that is safeguarded in the interests of national security. See also **national security.** (JP 2-0)

security assistance — Group of programs authorized by the Foreign Assistance Act of 1961, as amended, and the Arms Export Control Act of 1976, as amended, or other related statutes by which the United States provides defense articles, military training, and other defense-related services by grant, loan, credit, or cash sales in furtherance of national policies and objectives. Security assistance is an element of security cooperation funded and authorized by Department of State to be administered by Department of Defense/Defense Security Cooperation Agency. Also called **SA.** See also **security cooperation.** (JP 3-22)

security classification — A category to which national security information and material is assigned to denote the degree of damage that unauthorized disclosure would cause to national defense or foreign relations of the United States and to denote the degree of protection required. There are three such categories: **top secret**, **secret**, and **confidential**. See also **classification; security**. (EO 13526)

security clearance — An administrative determination by competent authority that an individual is eligible for access to classified information. (JP 1-0)

security cooperation — All Department of Defense interactions with foreign defense establishments to build defense relationships that promote specific US security interests, develop allied and friendly military capabilities for self-defense and multinational operations, and provide US forces with peacetime and contingency access to a host nation. Also called **SC**. See also **security assistance.** (JP 3-22)

security cooperation organization — All Department of Defense elements located in a foreign country with assigned responsibilities for carrying out security assistance/cooperation management functions. It includes military assistance

advisory groups, military missions and groups, offices of defense and military cooperation, liaison groups, and defense attaché personnel designated to perform security assistance/cooperation functions. Also called **SCO.** (JP 3-22)

security countermeasures — Those protective activities required to prevent espionage, sabotage, theft, or unauthorized use of classified or controlled information, systems, or material of the Department of Defense. See also **counterintelligence.** (JP 2-01.2)

security force assistance — The Department of Defense activities that contribute to unified action by the US Government to support the development of the capacity and capability of foreign security forces and their supporting institutions. Also called **SFA.** (JP 3-22)

security forces — Duly constituted military, paramilitary, police, and constabulary forces of a state. (JP 3-22)

security review — The process of reviewing information and products prior to public release to ensure the material will not jeopardize ongoing or future operations. See also **security.** (JP 3-61)

security sector reform — A comprehensive set of programs and activities undertaken to improve the way a host nation provides safety, security, and justice. Also called **SSR.** (JP 3-07)

security service — Entity or component of a foreign government charged with responsibility for counterespionage or internal security functions. (JP 2-01.2)

sedition — Willfully advocating or teaching the duty or necessity of overthrowing the US government or any political subdivision by force or violence. See also **counterintelligence.** (JP 2-01.2)

segregation — In detainee operations, the removal of a detainee from other detainees and their environment for legitimate purposes unrelated to interrogation, such as when necessary for the movement, health, safety, and/or security of the detainee, the detention facility, or its personnel. (JP 3-63)

seize — To employ combat forces to occupy physically and to control a designated area. (JP 3-18)

seizures — In counterdrug operations, includes drugs and conveyances seized by law enforcement authorities and drug-related assets confiscated based on evidence that they have been derived from or used in illegal narcotics activities. See also **counterdrug operations; law enforcement agency.** (JP 3-07.4)

Selected Reserve — Those units and individuals within the Ready Reserve designated by their respective Services and approved by the Joint Chiefs of Staff as so essential to initial

wartime missions that they have priority over all other reserves. See also **Ready Reserve.** (JP 4-05)

selective identification feature — A capability that, when added to the basic identification friend or foe system, provides the means to transmit, receive, and display selected coded replies. (JP 3-52)

selective loading — The arrangement and stowage of equipment and supplies aboard ship in a manner designed to facilitate issues to units. (JP 3-02.1)

selective mobilization — Expansion of the active Armed Forces resulting from action by Congress or the President to mobilize Reserve Component units, Individual Ready Reservists, and the resources needed for their support to meet the requirements of a domestic emergency that is not the result of an enemy attack. (JP 4-05)

selective off-loading — The capability to access and off-load vehicles, supplies, and equipment without having to conduct a major reconfiguration or total off-load; influenced by the number and types of ships allocated, and the space made available for the embarkation of the landing force. (JP 3-02.1)

selective unloading — In an amphibious operation, the controlled unloading from amphibious warfare ships, and movement ashore, of specific items of cargo at the request of the landing force commander. (JP 3-02)

senior airfield authority — An individual designated by the joint force commander to be responsible for the control, operation, and maintenance of an airfield to include the runways, associated taxiways, parking ramps, land, and facilities whose proximity directly affects airfield operations. Also called SAA. (JP 3-17)

senior contracting official — The staff official designated by a Service head of contracting activity to execute theater support contracting authority for a specific command and/or operational area. Also called **SCO.** (JP 4-10)

senior meteorological and oceanographic officer — Meteorological and oceanographic officer responsible for assisting the combatant commander and staff in developing and executing operational meteorological and oceanographic service concepts in support of a designated joint force. Also called **SMO.** See also **meteorological and oceanographic.** (JP 3-59)

sensitive — An agency, installation, person, position, document, material, or activity requiring special protection from disclosure that could cause embarrassment, compromise, or threat to the security of the sponsoring power. (JP 2-01)

sensitive compartmented information — All information and materials bearing special community controls indicating restricted handling within present and future community intelligence collection programs and their end products for which community systems of

compartmentation have been or will be formally established. (These controls are over and above the provisions of DOD 5200.1-R, Information Security Program Regulation.) Also called **SCI.** (JP 2-01)

sensitive compartmented information facility — An accredited area, room, group of rooms, or installation where sensitive compartmented information may be stored, used, discussed, and/or electronically processed, where procedural and physical measures prevent the free access of persons unless they have been formally indoctrinated for the particular sensitive compartmented information authorized for use or storage within the sensitive compartmented information facility. Also called **SCIF.** See also **sensitive compartmented information.** (JP 2-01)

sensitive site — A geographically limited area that contains, but is not limited to, adversary information systems, war crimes sites, critical government facilities, and areas suspected of containing high value targets. (JP 3-31)

sequel — The subsequent major operation or phase based on the possible outcomes (success, stalemate, or defeat) of the current major operation or phase. See also **branch.** (JP 5-0)

serial — 1. An element or a group of elements within a series that is given a numerical or alphabetical designation for convenience in planning, scheduling, and control. 2. A group of people, vehicles, equipment, or supplies and is used in airborne, air assault, amphibious operations, and convoys. (JP 3-02)

serial assignment table — A table that is used in amphibious operations and shows the serial number, the title of the unit, the approximate number of personnel; the material, vehicles, or equipment in the serial; the number and type of landing craft and/or amphibious vehicles required to boat the serial; and the ship on which the serial is embarked. (JP 3-02)

Service — A branch of the Armed Forces of the United States, established by act of Congress, which are: the Army, Marine Corps, Navy, Air Force, and Coast Guard. (JP 1)

Service-common — Equipment, material, supplies, and services including base operating support adopted by a Service to support its own forces and those assigned to the combatant commands; items and services defined as Service-common by one Service are not necessarily Service-common for all other Services. See also **special operations-peculiar.** (JP 3-05)

Service component command — A command consisting of the Service component commander and all those Service forces, such as individuals, units, detachments, organizations, and installations under that command, including the support forces that have been assigned to a combatant command or further assigned to a subordinate unified command or joint task force. See also **component; functional component command.** (JP 1)

Service-organic transportation assets — Transportation assets that are assigned to a Military Department for functions of the Secretaries of the Military Departments set forth in Title 10, United States Code, Sections 3013(b), 5013(b), and 8013(b). (JP 4-01)

Service-unique container — Any 20- or 40-foot International Organization for Standardization container procured or leased by a Service to meet Service-unique requirements. See also **common-use container; component-owned container.** (JP 4-09)

sexual assault forensic examination kit — The medical and forensic examination kit used to ensure controlled procedures and safekeeping of any bodily specimens in a sexual assault case. Also called **SAFE kit.** (JP 1-0)

sexual assault prevention and response program — A Department of Defense program for the Military Departments and Department of Defense components that establishes sexual assault prevention and response policies to be implemented worldwide. Also called **SAPR program.** (JP 1-0)

sexual assault response coordinator — The single point of contact at an installation or within a geographic area who overseas sexual assault awareness, prevention, and response. Also called **SARC.** (JP 1-0)

shelter — An International Organization for Standardization container outfitted with live- or work-in capability. (JP 4-09)

shielding — 1. Material of suitable thickness and physical characteristics used to protect personnel from radiation during the manufacture, handling, and transportation of fissionable and radioactive materials. 2. Obstructions that tend to protect personnel or materials from the effects of a nuclear explosion. (JP 3-11)

ship-to-shore movement — That portion of the action phase of an amphibious operation that includes the deployment of the landing force from ships to designated landing areas. (JP 3-02)

shore fire control party — A specially trained unit for control of naval gunfire in support of troops ashore. Also called **SFCP.** (JP 3-09)

shore party — A task organization of the landing force, formed for the purpose of facilitating the landing and movement off the beaches of troops, equipment, and supplies; for the evacuation from the beaches of casualties and enemy prisoners of war; and for facilitating the beaching, retraction, and salvaging of landing ships and craft. Also called **beach group.** See also **beachmaster unit; beach party; naval beach group.** (JP 3-02)

shortfall — The lack of forces, equipment, personnel, materiel, or capability, reflected as the difference between the resources identified as a plan requirement and those apportioned

to a combatant commander for planning, that would adversely affect the command's ability to accomplish its mission. (JP 5-0)

short-range air defense engagement zone — In air defense, that airspace of defined dimensions within which the responsibility for engagement of air threats normally rests with short-range air defense weapons and may be established within a low- or high-altitude missile engagement zone. Also called **SHORADEZ.** (JP 3-01)

short-range ballistic missile — A land-based ballistic missile with a range capability up to about 600 nautical miles. Also called **SRBM.** (JP 3-01)

short takeoff and landing — The ability of an aircraft to clear a 50-foot (15 meters) obstacle within 1,500 feet (450 meters) of commencing takeoff or in landing, to stop within 1,500 feet (450 meters) after passing over a 50-foot (15 meters) obstacle. Also called **STOL.** (JP 3-04)

short title — A short, identifying combination of letters, and/or numbers assigned to a document or device for purposes of brevity and/or security. (JP 2-01)

show of force — An operation designed to demonstrate US resolve that involves increased visibility of US deployed forces in an attempt to defuse a specific situation that, if allowed to continue, may be detrimental to US interests or national objectives. (JP 3-0)

signal operating instructions — A series of orders issued for technical control and coordination of the signal communication activities of a command. In Marine Corps usage, these instructions are designated communication operation instructions. Also called **SOI**. (JP 6-0)

signals intelligence — 1. A category of intelligence comprising either individually or in combination all communications intelligence, electronic intelligence, and foreign instrumentation signals intelligence, however transmitted. 2. Intelligence derived from communications, electronic, and foreign instrumentation signals. Also called **SIGINT.** See also **communications intelligence; electronic intelligence; foreign instrumentation signals intelligence; intelligence.** (JP 2-0)

signals intelligence operational control — The authoritative direction of signals intelligence activities, including tasking and allocation of effort, and the authoritative prescription of those uniform techniques and standards by which signals intelligence information is collected, processed, and reported. (JP 2-01)

signals intelligence operational tasking authority — A military commander's authority to operationally direct and levy signals intelligence requirements on designated signals intelligence resources; includes authority to deploy and redeploy all or part of the signals intelligence resources for which signals intelligence operational tasking authority has been delegated. Also called **SOTA.** (JP 2-01)

significant wave height — The average height of the third of waves observed during a given period of time. See also **surf zone.** (JP 4-01.6)

simultaneous engagement — The concurrent engagement of hostile targets by combination of interceptor aircraft and surface-to-air missiles. (JP 3-01)

single-anchor leg mooring — A mooring facility dedicated to the offshore petroleum discharge system, which permits a tanker to remain on station and pump in much higher sea states than is possible with a spread moor. Also called **SALM.** See also **offshore petroleum discharge system.** (JP 4-01.6)

single manager— A Military Department or agency designated by the Secretary of Defense to be responsible for management of specified commodities or common service activities on a Department of Defense-wide basis. (JP 4-01)

single manager for transportation — The United States Transportation Command is the Department of Defense single manager for transportation, other than Service-organic or theater-assigned transportation assets. See also **Service-organic transportation assets; theater-assigned transportation assets** (JP 4-01)

single port manager — The transportation component, designated by the Department of Defense through the United States Transportation Command, responsible for management of all common-user aerial and seaports worldwide. Also called **SPM.** See also **transportation component command.** (JP 4-01.5)

single-service manager — A Service component commander who is assigned the responsibility and delegated the authority to coordinate and/or perform specified personnel support or personnel service support functions in the theater of operations. See also **component.** (JP 1-0)

site exploitation — A series of activities to recognize, collect, process, preserve, and analyze information, personnel, and/or materiel found during the conduct of operations. Also called **SE.** (JP 3-31)

situation report — A report giving the situation in the area of a reporting unit or formation. Also called **SITREP.** (JP 3-50)

situation template — A depiction of assumed adversary dispositions, based on that adversary's preferred method of operations and the impact of the operational environment if the adversary should adopt a particular course of action. See also **adversary template; course of action.** (JP 2-01.3)

sociocultural analysis — The analysis of adversaries and other relevant actors that integrates concepts, knowledge, and understanding of societies, populations, and other groups of people, including their activities, relationships, and perspectives across time and space at varying scales. Also called **SCA.** (JP 2-0)

sociocultural factors — The social, cultural, and behavioral factors characterizing the relationships and activities of the population of a specific region or operational environment. (JP 2-01.3)

solatium — Monetary compensation given in areas where it is culturally appropriate to alleviate grief, suffering, and anxiety resulting from injuries, death, and property loss with a monetary payment. (JP 1-06)

sortie — In air operations, an operational flight by one aircraft. (JP 3-30)

sortie allotment message — The means by which the joint force commander allots excess sorties to meet requirements of subordinate commanders that are expressed in their air employment and/or allocation plan. Also called **SORTIEALOT.** (JP 3-30)

source — 1. A person, thing, or activity from which information is obtained. 2. In clandestine activities, a person (agent), normally a foreign national, in the employ of an intelligence activity for intelligence purposes. 3. In interrogation activities, any person who furnishes information, either with or without the knowledge that the information is being used for intelligence purposes. See also **agent; collection agency.** (JP 2-01)

source management — The process of registering and monitoring the use of sources involved in counterintelligence and human intelligence operations to protect the security of the operations and avoid conflicts among operational elements. (JP 2-01.2)

source registry — A source record/catalogue of leads and sources acquired by collectors and centralized for management, coordination and deconfliction of source operations. (JP 2-01.2)

space asset — Equipment that is an individual part of a space system, which is or can be placed in space or directly supports space activity terrestrially. (JP 3-14)

space assignment — An assignment to the individual Military Departments/Services by the appropriate transportation operating agency of movement capability, which completely or partially satisfies the stated requirements of the Military Departments/Services for the operating month and that has been accepted by them without the necessity for referral to the Joint Transportation Board for allocation. (JP 4-01)

space capability — 1. The ability of a space asset to accomplish a mission. 2. The ability of a terrestrial-based asset to accomplish a mission in or through space. See also **space asset.** (JP 3-14)

space control — Operations to ensure freedom of action in space for the United States and its allies and, when directed, deny an adversary freedom of action in space. See also **combat service support; combat support; negation; space systems.** (JP 3-14)

space coordinating authority — A commander or individual assigned responsibility for planning, integrating, and coordinating space operations support in the operational area. Also called **SCA.** (JP 3-14)

space environment — The environment corresponding to the space domain, where electromagnetic radiation, charged particles, and electric and magnetic fields are the dominant physical influences, and that encompasses the earth's ionosphere and magnetosphere, interplanetary space, and the solar atmosphere. (JP 3-59)

space force application — Combat operations in, through, and from space to influence the course and outcome of conflict by holding terrestrial targets at risk. See also **ballistic missile; force protection.** (JP 3-14)

space force enhancement — Combat support operations and force-multiplying capabilities delivered from space systems to improve the effectiveness of military forces as well as support other intelligence, civil, and commercial users. See also **combat support .** (JP 3-14)

space forces — The space and terrestrial systems, equipment, facilities, organizations, and personnel necessary to access, use and, if directed, control space for national security. See also **national security; space systems.** (JP 3-14)

space power — The total strength of a nation's capabilities to conduct and influence activities to, in, through, and from space to achieve its objectives. (JP 3-14)

space situational awareness — Cognizance of the requisite current and predictive knowledge of the space environment and the operational environment upon which space operations depend. (JP 3-14)

space superiority — The degree of dominance in space of one force over any others that permits the conduct of its operations at a given time and place without prohibitive interference from space-based threats. (JP 3-14)

space support — Launching and deploying space vehicles, maintaining and sustaining spacecraft on-orbit, rendezvous and proximity operations, disposing of (including deorbiting and recovering) space capabilities, and reconstitution of space forces, if required. See also **combat service support.** (JP 3-14)

space surveillance — The observation of space and of the activities occurring in space. See also **space control.** (JP 3-14)

space systems — All of the devices and organizations forming the space network. (JP 3-14)

space weather — The conditions and phenomena in space and specifically in the near-Earth environment that may affect space assets or space operations. See also **space asset.**

(JP 3-59)

special access program — A sensitive acquisition, intelligence, or operations and support program, that imposes need-to-know and access controls beyond those normally provided for access to confidential, secret, or top secret information. Also called **SAP.** (JP 3-05)

special cargo — Cargo that requires special handling or protection, such as pyrotechnics, detonators, watches, and precision instruments. (JP 4-01.5)

special event — An international or domestic event, contest, activity, or meeting, which by its very nature, or by specific statutory or regulatory authority, may warrant security, safety, and/or other logistical support or assistance from the Department of Defense. (DODD 3025.18)

special forces — United States Army forces organized, trained, and equipped to conduct special operations with an emphasis on unconventional warfare capabilities. Also called **SF.** (JP 3-05)

special forces group — The largest Army combat element for special operations consisting of command and control, special forces battalions, and a support battalion capable of long duration missions. Also called **SFG.** (JP 3-05)

specialization — An arrangement within an alliance wherein a member or group of members most suited by virtue of technical skills, location, or other qualifications assume(s) greater responsibility for a specific task or significant portion thereof for one or more other members. (JP 3-16)

special mission unit — A generic term to represent an organization composed of operations and support personnel that is task-organized to perform highly classified activities. Also called **SMU.** (JP 3-05)

special operations — Operations requiring unique modes of employment, tactical techniques, equipment and training often conducted in hostile, denied, or politically sensitive environments and characterized by one or more of the following: time sensitive, clandestine, low visibility, conducted with and/or through indigenous forces, requiring regional expertise, and/or a high degree of risk. (JP 3-05)

special operations command and control element — A special operations element that is the focal point for the synchronization of special operations forces activities with conventional forces activities. Also called **SOCCE**. See also **command and control; joint force special operations component commander; special operations; special operations forces**. (JP 3-05)

special operations forces — Those Active and Reserve Component forces of the Services designated by the Secretary of Defense and specifically organized, trained, and equipped

to conduct and support special operations. Also called **SOF.** See also **Air Force special operations forces; Army special operations forces; Navy special operations forces.** (JP 3-05)

special operations joint task force — A modular, tailorable, and scalable special operations task force designed to provide integrated, fully-capable, and enabled joint special operations forces to geographic combatant commanders and joint force commanders. Also called **SOJTF.** (JP 3-05)

special operations liaison element — A special operations liaison team provided by the joint force special operations component commander to coordinate, deconflict, and synchronize special operations air, surface, and subsurface operations with conventional air operations. Also called **SOLE.** See also **joint force air component commander; joint force special operations component commander; special operations.** (JP 3-05)

special operations-peculiar — Equipment, material, supplies, and services required for special operations missions for which there is no Service-common requirement. See also **Service-common; special operations.** (JP 3-05)

special operations task force — A scalable unit, normally of battalion size, in charge of the special operations element, organized around the nucleus of special operations forces and support elements. Also called **SOTF.** (JP 3-05)

special operations weather team — A task organized team of Air Force personnel organized, trained, and equipped to collect critical environmental information from data sparse areas. Also called **SOWT.** (JP 3-05)

special operations wing — An Air Force special operations wing. Also called **SOW.** (JP 3-05)

special reconnaissance — Reconnaissance and surveillance actions conducted as a special operation in hostile, denied, or diplomatically and/or politically sensitive environments to collect or verify information of strategic or operational significance, employing military capabilities not normally found in conventional forces. Also called **SR.** (JP 3-05)

special tactics team — An Air Force task-organized element of special tactics that may include combat control, pararescue, tactical air control party, and special operations weather personnel. Also called **STT.** See also **combat search and rescue; special operations; special operations forces; terminal attack control.** (JP 3-05)

specified combatant command — A command, normally composed of forces from a single Military Department, that has a broad, continuing mission, normally functional, and is established and so designated by the President through the Secretary of Defense with the advice and assistance of the Chairman of the Joint Chiefs of Staff. (JP 1)

specified task — In the context of joint operation planning, a task that is specifically assigned to an organization by its higher headquarters. See also **essential task; implied task.** (JP 5-0)

split-mission oriented protective posture — The concept of maintaining heightened protective posture only in those areas (or zones) that are contaminated, allowing personnel in uncontaminated areas to continue to operate in a reduced posture. Also called **split-MOPP.** (JP 3-11)

spoke — The portion of the hub and spoke distribution system that refers to transportation mode operators responsible for scheduled delivery to a customer of the "hub". See also **distribution; distribution system; hub; hub and spoke distribution.** (JP 4-09)

spot — 1. To determine by observation, deviations of ordnance from the target for the purpose of supplying necessary information for the adjustment of fire. 2. To place in a proper location. 3. An approved shipboard helicopter landing site. See also **ordnance.** (JP 3-04)

spot net — Radio communication net used by a spotter in calling fire. (JP 3-09.3)

spot report — A concise narrative report of essential information covering events or conditions that may have an immediate and significant effect on current planning and operations that is afforded the most expeditious means of transmission consistent with requisite security. Also called **SPOTREP.** (Note: In reconnaissance and surveillance usage, spot report is not to be used.) (JP 3-09.3)

spotter — 1. An observer stationed for the purpose of observing and reporting results of naval gunfire to the firing agency and who also may be employed in designating targets. (JP 3-09) 2. In intelligence, an agent or illegal assigned to locate and assess individuals in positions of value to an intelligence service. (JP 2-01.2)

spotting — Parking aircraft in an approved shipboard landing site. (JP 3-04)

spreader bar — A device specially designed to permit the lifting and handling of containers or vehicles and breakbulk cargo. (JP 4-01.6)

squadron — 1. An organization consisting of two or more divisions of ships, or two or more divisions (Navy) or flights of aircraft. 2. The basic administrative aviation unit of the Army, Navy, Marine Corps, and Air Force. 3. Battalion-sized ground or aviation units. (JP 3-32)

stability operations — An overarching term encompassing various military missions, tasks, and activities conducted outside the United States in coordination with other instruments of national power to maintain or reestablish a safe and secure environment, provide essential governmental services, emergency infrastructure reconstruction, and humanitarian relief. (JP 3-0)

stabilized patient — A patient whose airway is secured, hemorrhage is controlled, shock treated, and fractures are immobilized. (JP 4-02)

stable patient — A patient for whom no inflight medical intervention is expected but the potential for medical intervention exists. (JP 4-02)

staff judge advocate — A judge advocate so designated in the Army, Air Force, or Marine Corps, and the principal legal advisor of a Navy, Coast Guard, or joint force command who is a judge advocate. Also called **SJA.** (JP 1-04)

staging — Assembling, holding, and organizing arriving personnel, equipment, and sustaining materiel in preparation for onward movement. See also **staging area.** (JP 3-35)

staging area — 1. **Amphibious or airborne** — A general locality between the mounting area and the objective of an amphibious or airborne expedition, through which the expedition or parts thereof pass after mounting, for refueling, regrouping of ships, and/or exercise, inspection, and redistribution of troops. 2. **Other movements** — A general locality established for the concentration of troop units and transient personnel between movements over the lines of communications. Also called **SA.** See also **airborne; marshalling; staging.** (JP 3-35)

staging base — 1. An advanced naval base for the anchoring, fueling, and refitting of transports and cargo ships as well as replenishment of mobile service squadrons. (JP 4-01.2) 2. A landing and takeoff area with minimum servicing, supply, and shelter provided for the temporary occupancy of military aircraft during the course of movement from one location to another. (JP 3-18)

stakeholder — In public affairs, an individual or group that is directly impacted by military operations, actions, and/or outcomes, and whose interests positively or negatively motivate them toward action. (JP 3-61)

standardization — The process by which the Department of Defense achieves the closest practicable cooperation among the Services and Department of Defense agencies for the most efficient use of research, development, and production resources, and agrees to adopt on the broadest possible basis the use of: a. common or compatible operational, administrative, and logistic procedures; b. common or compatible technical procedures and criteria; c. common, compatible, or interchangeable supplies, components, weapons, or equipment; and d. common or compatible tactical doctrine with corresponding organizational compatibility. (JP 4-02)

standard operating procedure — A set of instructions applicable to those features of operations that lend themselves to a definite or standardized procedure without loss of effectiveness. Also called **SOP**; **standing operating procedure.** (JP 3-31)

standard use Army aircraft flight route — Route established below the coordination level to facilitate the movement of Army aviation assets; it is normally located in the corps through brigade rear areas of operation and does not require approval by the airspace control authority. Also called **SAAFR.** (JP 3-52)

Standby Reserve — Those units and members of the Reserve Component (other than those in the Ready Reserve or Retired Reserve) who are liable for active duty only, as provided in Title 10, United States Code, Sections 10151, 12301, and 12306. See also **active duty; Ready Reserve; Reserve Component; Retired Reserve.** (JP 4-05)

standing joint force headquarters — A staff organization operating under a flag or general officer providing a combatant commander with a full-time, trained joint command and control element integrated into the combatant commander's staff whose focus is on contingency and crisis action planning. Also called **SJFHQ.** (JP 3-0)

standing rules for the use of force — Preapproved directives to guide United States forces on the use of force during various operations. Also called **SRUF.** (JP 3-28)

stateless person — A person who is not considered as a national by any state under the operation of its law. See also **dislocated civilian; displaced person; evacuee; refugee.** (JP 3-29)

station time — In air transport operations, the time at which crews, passengers, and cargo are to be on board and ready for the flight. (JP 3-17)

status-of-forces agreement — A bilateral or multilateral agreement that defines the legal position of a visiting military force deployed in the territory of a friendly state. Also called **SOFA.** (JP 3-16)

sterilizer — In mine warfare, a device included in mines to render the mine permanently inoperative on expiration of a pre-determined time after laying. (JP 3-15)

stockage objective — The maximum quantities of materiel to be maintained on hand to sustain current operations, which will consist of the sum of stocks represented by the operating level and the safety level. (JP 4-08)

Stock Number — See **national stock number.**

stockpile to target sequence — 1. The order of events involved in removing a nuclear weapon from storage and assembling, testing, transporting, and delivering it on the target. 2. A document that defines the logistic and employment concepts and related physical environments involved in the delivery of a nuclear weapon from the stockpile to the target. It may also define the logistic flow involved in moving nuclear weapons to and from the stockpile for quality assurance testing, modification and retrofit, and the recycling of limited life components.

stop-loss — Presidential authority under Title 10, United States Code, Section 12305, to suspend laws relating to promotion, retirement, or separation of any member of the Armed Forces determined essential to the national security of the United States, to include reservists if serving on active duty under Title 10, United States Code authorities for Presidential Reserve Call-up, partial mobilization, or full mobilization. See also **mobilization; partial mobilization; Presidential Reserve Call-up.** (JP 4-05)

stowage — The placement of cargo into a hold, compartment, or on a deck of a ship in such a way as to prevent damage from load shifts while the ship is underway. (JP 3-02.1)

stowage factor — The number that expresses the space, in cubic feet, occupied by a long ton of any commodity as prepared for shipment, including all crating or packaging. (JP 4-01.2)

stowage plan — A completed stowage diagram showing what materiel has been loaded and its stowage location in each hold, between-deck compartment, or other space in a ship, including deck space. (JP 4-01.5)

strategic communication — Focused United States Government efforts to understand and engage key audiences to create, strengthen, or preserve conditions favorable for the advancement of United States Government interests, policies, and objectives through the use of coordinated programs, plans, themes, messages, and products synchronized with the actions of all instruments of national power. Also called **SC.** (JP 5-0)

strategic concept — The course of action accepted as the result of the estimate of the strategic situation which is a statement of what is to be done in broad terms. (JP 5-0)

strategic debriefing — Debriefing activity conducted to collect information or to verify previously collected information in response to national or theater level collection priorities. (JP 2-01.2)

strategic direction — The processes and products by which the President, Secretary of Defense, and Chairman of the Joint Chiefs of Staff provide strategic guidance to the Joint Staff, combatant commands, Services, and combat support agencies. (JP 5-0)

strategic estimate — The broad range of strategic factors that influence the commander's understanding of its operational environment and its determination of missions, objectives, and courses of action. See also **estimate; national intelligence estimate.** (JP 5-0)

strategic intelligence — Intelligence required for the formation of policy and military plans at national and international levels. Strategic intelligence and tactical intelligence differ primarily in level of application, but may also vary in terms of scope and detail. See also **intelligence; operational intelligence; tactical intelligence.** (JP 2-01.2)

strategic level of war — The level of war at which a nation, often as a member of a group of nations, determines national or multinational (alliance or coalition) strategic security objectives and guidance, then develops and uses national resources to achieve those objectives. See also **operational level of war; tactical level of war.** (JP 3-0)

strategic mobility — The capability to deploy and sustain military forces worldwide in support of national strategy. (JP 4-01)

strategic plan — A plan for the overall conduct of a war. (JP 5-0)

strategic sealift — The afloat pre-positioning and ocean movement of military materiel in support of United States and multinational forces. (JP 4-01.5)

strategic sealift forces — Sealift forces composed of ships, cargo handling and delivery systems, and the necessary operating personnel. See also **force.** (JP 4-01.6)

strategic sealift shipping — Common-user ships of the Military Sealift Command force, including pre-positioned ships after their pre-positioning mission has been completed and they have been returned to the operational control of the Military Sealift Command. See also **Military Sealift Command; Military Sealift Command force.** (JP 4-01.2)

strategy — A prudent idea or set of ideas for employing the instruments of national power in a synchronized and integrated fashion to achieve theater, national, and/or multinational objectives. (JP 3-0)

strike — An attack to damage or destroy an objective or a capability. (JP 3-0)

strike coordination and reconnaissance — A mission flown for the purpose of detecting targets and coordinating or performing attack or reconnaissance on those targets. Also called **SCAR.** (JP 3-03)

stuffing — Packing of cargo into a container. See also **unstuffing.** (JP 4-09)

submarine operating authority — The naval commander exercising operational control of submarines. Also called **SUBOPAUTH.** (JP 3-32)

subordinate campaign plan — A combatant command prepared plan that satisfies the requirements under a Department of Defense campaign plan, which, depending upon the circumstances, transitions to a supported or supporting plan in execution. (JP 5-0)

subordinate command — A command consisting of the commander and all those individuals, units, detachments, organizations, or installations that have been placed under the command by the authority establishing the subordinate command. (JP 1)

subordinate unified command — A command established by commanders of unified commands, when so authorized by the Secretary of Defense through the Chairman of the

Joint Chiefs of Staff, to conduct operations on a continuing basis in accordance with the criteria set forth for unified commands. See also **area command; functional component command; operational control; subordinate command; unified command.** (JP 1)

subsidiary landing — In an amphibious operation, a landing usually made outside the designated landing area, the purpose of which is to support the main landing. (JP 3-02)

subversion — Actions designed to undermine the military, economic, psychological, or political strength or morale of a governing authority. See also **unconventional warfare.** (JP 3-24)

sun-synchronous orbit — An orbit in which the satellite's orbital plane is at a fixed orientation to the sun, i.e., the orbit precesses about the earth at the same rate that the earth orbits the sun. (JP 3-14)

supercargo — Personnel that accompany cargo on board a ship for the purpose of accomplishing en route maintenance and security. (JP 4-01.5)

supplies — In logistics, all materiel and items used in the equipment, support, and maintenance of military forces. See also **component; equipment.** (JP 4-0)

supply — The procurement, distribution, maintenance while in storage, and salvage of supplies, including the determination of kind and quantity of supplies. a. **producer phase**—That phase of military supply that extends from determination of procurement schedules to acceptance of finished supplies by the Services. b. **consumer phase**—That phase of military supply that extends from receipt of finished supplies by the Services through issue for use or consumption. (JP 4-0)
